Density profiles for neutral impurity atoms and impurity ions of a single charge state are calculated as functions of radius in a 1 1/2 D transport calculation for the ELMO bumpy torus (EBT) toroidal plasma. Ad hoc energies and transport rates are assumed for the impurity ions consistent with spectroscopic measurement. Ambipolar transport rates are rederived to include impurity transport in the flux of positive particles, and the electric field is computed self-consistently. Steady state solutions show potential well depths on the order of the impurity ion temperature divided by its charge. Also, due to the large gyroradius of the impurity ions, viscosity limits shear in the poloidal drift velocity. Thus, potential profiles tend to be more parabolic, and the plasma rotates more nearly as a rigid body than would be expected from simple neoclassical theory with no impurities present.

FIELD ERRORS IN EBT AND THEIR EFFECTS ON THE AMBIPOLAR POTENTIAL

T. Uckan, F. M. Bieniosek, and L. Solensten *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 205-232 refs (For primary document see N82-16877 07-75)
(Contract W-7405-eng-26)
Avail: NTIS HC A20/MF A01

Because the ELMO Bumpy Torus (EBT) is a closed field line device, it is very sensitive to small magnetic field asymmetries. If the inherent error field of the device is large enough, it causes: a distortion of the poloidal symmetry of the potential profile and even a total disappearance of the ambipolar potential well, leading in turn to a deterioration of the plasma confinement parameters; the establishment of a toroidal current and, therefore, enhancement of fluctuations; and an opening of the confined closed drift surfaces that increases particle diffusion. The critical error field is estimated. For EBT-I/S the critical error field is comparable to the inherent field error of the device. Externally, about the same order of magnetic field correction is applied by two pairs of current loops in order to cancel the error field and reduce the toroidal current. The cancellation of the toroidal current provides better confinement parameters and the density fluctuations are reduced.

AMBIPOLAR POTENTIAL AND ITS EFFECTS ON THE CONFINEMENT PARAMETERS OF THE EBT PLASMA

T. Uckan, R. J. Colchin, W. A. Davis, G. R. Haste, D. L. Hillis, and L. Solensten (Rensselaer Polytechnic Inst.) *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 233-266 refs (For primary document see N82-16877 07-75)
(Contract W-7405-eng-26)
Avail: NTIS HC A20/MF A01

The microwave heating power the neutral gas pressure and the ambipolar potential well were used in transport modeling to predict the scaling of the density and of the electron and ion temperatures with these quantities. The scaling calculations are based on neoclassical theory of transport coefficients and experimental observations. A quadratic potential profile and almost flat density and electron temperature profiles were assumed. However, to satisfy the ambipolarity condition, the ion temperature profile was retained. Experimentally, the electrons are observed to be in the collisionless regime and the ions have a non-Maxwellian distribution, transport coefficients developed by Spong, are employed. The ambipolarity condition and the particle and energy balance equations can be satisfied by modeling the experimentally observed potential well and ion tail. The temperature and density scalings obtained show qualitative agreement between this calculation and experimental observations. Results of this model are presented for typical EBT-I/S operations.

POWER REQUIREMENTS FOR ION TAIL FORMATION IN EBT

J. S. Tolliver, E. F. Jaeger, and C. L. Hedrick *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 267-276 refs (For primary document see N82-16877 07-75)
(Contract W-7405-eng-26)
Avail: NTIS HC A20/MF A01

Experimental evidence suggests the possible presence of an enhanced high energy tail on the ion distribution function, and a simple theoretical analysis indicates that an ion tail may be a major contributor to neoclassical losses which in turn influence the ambipolar potential. In order to study these effects, a kinetic model for neoclassical transport is developed using a Fokker-Planck collision operator and assuming isotropic electron and ion velocity distributions. Three coupled nonlinear integrodifferential equations are solved numerically. The solution shows a non-Maxwellian lowest order ion distribution function. This non-Maxwellian solution leads to higher core ion temperatures and larger ion diffusion rates than those obtained when a Maxwellian distribution is assumed. If the ion tail is further enhanced by a small amount of ad hoc heating, even higher core temperatures and loss rates are obtained.

EFFECTS OF FLUCTUATING ELECTRIC FIELDS ON HYDROGEN AND IMPURITY IONS IN EBT

L. W. Owen *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 277-292 refs (For primary document see N82-16877 07-75)
(Contract W-7405-eng-26)
Avail: NTIS HC A20/MF A01

The effects of fluctuating poloidal electric fields on the orbits and on the heating and loss rates of ions and impurities in EBT are examined. The equations of motion for particles confined to a sector midplane are numerically integrated to yield the temporal behavior of the velocity and position coordinates in the presence of the vacuum magnetic field, a realistic steady state ambipolar electric field, and the sinusoidally varying electric field of a wave propagating in the poloidal direction. It is shown that a wave of modest amplitude, and frequency comparable to typical fluctuation frequencies (10-150-KHz) measured in EBT, can lead to large excursions in the kinetic energy and radial position of the hydrogen or impurity ion. The possible relevance of the results of these calculations to the behavior of impurity ions as functions of the mass, charge state, fluctuation level, steady-state potential, etc., is discussed.

ANOMALOUS TRANSPORT AND THE AMBIPOLAR FIELD IN EBT

N. A. Krall and H. H. Klein *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 293-310 refs (For primary document see N82-16877 07-75)
Avail: NTIS HC A20/MF A01

Elmo bumpy torus equilibria in present experiments have negative ambipolar potential (electron rich). Results of earlier studies in negative potential - equilibria are being used in the consideration of two specific mechanisms for anomalous transport: the diffusion due to trapped ion instability, and ion tail formation. Ion tails may form: (1) in response to instability (lower hybrid or ion sound); (2) in response to the thermal level of ion waves in a plasma; and (3) directly by ion heating in ICRH experiments. Calculations using neoclassical transport and those using neoclassical transport and ion tail formation are discussed.

THE EFFECT OF TRANSITING ELECTRONS ON THE AMBIPOLAR POTENTIAL IN A TANDEM MIRROR PLASMA

D. L. Galbraith and T. Kammash *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 317-328 refs Sponsored by DOE (For primary document see N82-16877 07-75)
Avail: NTIS HC A20/MF A01

In a standard tandem mirror device, the electrons trapped in the plugs generally have a temperature which is distinct from that of the central cell electrons. The latter, however, are not restrained by the electrostatic forces from entering the plug region. These electrons which enter the plug are accelerated by the potential across this region to the end of the device where the potential drops below its value in the central cell. At that point most central cell electrons are reflected back across the plug into the central cell once more. These 'passing' electrons exchange energy with the plug electrons while transiting, and for reactor grade plasmas the energy transferred to the plug electrons by these particles can be as large as 60 percent of the energy flow from the plugs to the central cell. This can result in widening the electron temperature difference between the plug and the central cell which in turn may affect the confining potential.

CENTRAL CELL CONFINEMENT IN MFTF-B

R. A. Jong *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 329-340 refs (For primary document see N82-16877 07-75)
(Contract W-7405-eng-48)
Avail: NTIS HC A20/MF A01

The point model code TANDEM was used to survey the range of plasma parameters which can be attained in MFTF-B. The code solves for the electron and ion densities and temperatures in the central cell, yin-yang, barrier, and A-cell regions as well as the plasma potential in each region. In these studies, the A-cell sloshing ion beams were fixed while the neutral beams in the yin-yang and central cell, the gas feed in the central cell, and the applied ECRH power in the barrier region were varied. The variations of the central cell beta, central cell ion density and temperature, and the confining potential are discussed. The calculations indicate that large changes in the central cell beta cannot be achieved by varying the central cell gas or neutral beams or the yin-yang beams. Changes in these beam and gas feeds have the greatest effect on the central cell ion temperature and generally degrade the central cell confinement. Increasing the ECRH power applied to the barrier region causes an improvement in the central cell confinement and a linear increase (with applied power) of the central cell beta.

INSTABILITIES IN A SMALL AXISYMMETRIC MIRROR

Michael Wickham *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 341-359 Sponsored by DOE (For primary document see N82-16877 07-75)
Avail: NTIS HC A20/MF A01

Both the interchange instability and a microinstability which is consistent with the drift cone mode were observed in an ICRH barium plasma in which T sub i was 3.5 ev and T sub e was .25 ev. The ICRH heating process was studied with the aid of laser induced fluorescence techniques, by measuring the ion velocity distribution in detail as a function of time that the ICRH was on and as a function of the mirror ratio. There is evidence that the heating process exhibits a very coherent coupling between the RF field and the ion motion. The interchange mode was consistent with a theory which included effects due to electric field, FLR, line tying and a radial conducting wall. A finite k parallel was observed in the mirror throat. The drift cone mode observed was restricted to a radial position of strong density gradient. The initial velocity distribution was measured and used in the linear stability analysis. The mode also exhibited an axial phase shift in the mirror throat. A.R.H.

EFFECTS DUE TO THE LARGE AMBIPOLAR POTENTIAL IN TMX

E. B. Hooper, Jr., S. L. Allen, P. Coakley (Iowa Univ., Iowa City), D. L. Correll, R. P. Drake, J. H. Foote, D. P. Grubb, G. A. Halluck (Rensselaer Polytechnic Inst.), G. D. Porter, and T. D. Rognlien *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 365-380 refs Prepared in cooperation with Johns Hopkins Univ. (For primary document see N82-16877 07-75)
(Contract W-7405-eng-48)
Avail: NTIS HC A20/MF A01

The large potentials and potential gradients in tandem mirrors have several effects. Some of these are discussed, together with supporting data from TMX. These include: aximuthal averaging by the E x B rotation, reduction of radial outward drifts (from high order multipoles) by the rapid E x B azimuthal velocity, neoclassical resonant diffusion, Joule heating of central cell ions due to nonambipolar transport in the radial electric field, low frequency instabilities, and differences between the details of the electron behavior and theory. FORMATION AND CONTROL OF PLASMA POTENTIALS IN TMX UPGRADE

T. C. Simonen, T. J. Orzecnowski, M. Porkolab (MIT), and S. W. Stallard *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 381-406 (For primary document see N82-16877 07-75)
(Contract W-7405-eng-48)
Avail: NTIS HC A20/MF A01

The methods to be employed to form and control plasma potentials in the TMX upgrade tandem mirror with thermal barriers are described. Some ECRI generated mirror confined electron plasmas were used to establish a negative potential region to isolate the end plug and central cell electrons. This thermal isolation allows a higher end plug electron temperature and an increased central cell confining potential. Improved axial control cell ion confinement results because higher temperature central-cell ions can be confined. Calculations of the sensitivity of barrier formation to vacuum conditions and to the presence of impurities in the neutral beams, calculations of microwave penetration and absorption used to design the ECRI system, and techniques to limit electron runaway to high energies by localized microwave beams and by relativistic detuning are described. AMBIPOLAR POTENTIAL CONTROL BY FAST WAVE HEATING IN BUMPY TORI

R. B. Campbell, R. J. Kashuba (McDonnell Douglas Corp., St. Louis), and T. Kammash (Michigan Univ., Ann Arbor) *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 407-422 refs Sponsored in part by TRW and McDonnell Douglas (For primary document see N82-16877 07-75)
Avail: NTIS HC A20/MF A01

The ambipolarity condition in a bumpy torus heated by fast waves is modified because of the neoclassical ion flux produced by wave particle scatterings. The condition is applied to a case in which the bulk ion species is heated by the fast wave at omega = 2 omega (sub ci). It is found that the radial profile of ambipolar potential may be modified by introducing the effects of the wave energy deposition profile. Results are presented to support this claim. Author

EFFECT ON AMBIPOLAR POTENTIAL OF ION CYCLOTRON HEATING

T. Snoji and F. Tsuboi *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 423-439 refs (For primary document see N82-16877 07-75)
Avail: NTIS HC A20/MF A01

Variation of ambipolar potential accompanied with ion cyclotron heating was studied. The ion cyclotron heating was carried out in Nagoya bumpy torus by using a half turn antenna which is installed near the mirror throat. The frequency of the RF oscillator is chosen to excite a slow wave mode to heat ions. In typical T mode operation, an increase in ambipolar potential and forming a positive potential hill is observed by using heavy ion beam probe and Langmuir probe. Change in potential is found to be affected by error field and has its maximum value when the field correction current is adjusted so as to minimize the toroidal current. Author

INITIAL ICRH EXPERIMENTS ON EBT-S

F. W. Baity, O. C. Eldridge, T. L. Owens, J. H. Mullen, and A. L. Henderson *In* ORNL Ambipolar Potential Formation and Control in Bumpy Tori and Mirrors Sep. 1981 p 441-446 Prepared in cooperation with McDonnell Douglas Astronautics Co., St. Louis (For primary document see N82-16877 07-75)
Avail: NTIS HC A20/MF A01

Steady state, fast wave ion cyclotron resonant heating experiments were performed at power levels up to 10 kW on EBT-S using an all metal, double Faraday shielded 120 deg loop antenna located in a cavity midplane. A broadband matching circuit was used covering the frequency range of 10 MHz to 50 MHz. The experiments show (1) fairly high antenna loading for majority deuterium, minority hydrogen plasmas; (2) somewhat weaker coupling for pure hydrogen plasmas; (3) strongly damped but apparently propagating waves around the torus; and (4) production of substantial energetic ion tails (from charge exchange measurements). The effect of the ICRH power on other plasma parameters appear to be slight. No major problems are foreseen to the application of increased power levels in future experiments. A.R.H.

TECHNICAL SUPPORT FOR OPEN-CYCLE MHD PROGRAM Progress Report, Jan. - Mar. 1980

G. F. Berry, ed. Jul. 1981 110 p refs
(Contract W-31-109-eng-38)
(DE82-001955; ANL/MHD-80-6) Avail: NTIS HC A06/MF A01

The development of analytical tools needed for investigating the performance of the major components in the combined cycle MHD/steam power system is described. The analytical effort is centered on the primary components of the system that are unique to MHD and, also, on the integration of these analytical models into a model for the entire power producing system. The present project activities include modeling of the secondary combustor, generator, radiant boiler, and formation and decomposition of NO. The results of preliminary off design studies and of system optimization studies are presented, and analysis of the U-25B generator performance, which was done in support of the proposed test plan, is included. Refinements and improvements in the MHD systems code and executive program are considered. DOE

PROGRESS IN THE TANDEM MIRROR PROGRAM

T. K. Fowler and R. R. Borchers 13 Sep. 1981 25 p refs Presented at the 10th European Conf. on Controlled Fusion and Plasma Phys., Moscow, 13-19 Sep. 1981 Submitted for publication

(Contract W-7405-eng-48)

(DE81-030303; UCRL-86588; CONF-810906-9) Avail: NTIS HC A02/MF A01

Experimental results in TMX have confirmed the basic principles of the tandem mirror concept. A center cell particle confinement parameter eta tau approximately one hundred billion cu cm obtained at ion temperatures around 100 eV, which is a hundred fold improvement over single mirrors at the same temperatures. For TMX these results were obtained at peak beta values in the center cell in the range 10 to 40%, not yet limited by MHD activity, and ion cyclotron resonant heating in the Phaedrus tandem mirror experiment has produced beta values approximately 25%, which is several times the ideal MHD limit for that device. In addition, it was demonstrated that the end fan chambers of TMX simultaneously isolate the hot electrons from the end walls, provide adequate pumping and conveniently dispose of the exhaust plasma energy either by thermal deposition on the end wall or by direct conversion to electricity (at 48% efficiency in agreement with calculations). THEORY OF ELECTRON-AVALANCHE BREAKDOWN IN SOLIDS Final Report

M. Sparks, D. L. Mills, R. Warren, T. Holstein, and A. A. Maradudin Mar. 1981 71 p refs

(Contract F49620-79-C-0061)

(AD-A106751; PSR-1110) Avail: NTIS HC A04/MF A01 CSCL 09/3

Electron-avalanche breakdown in solids is explained by a theory that is predictive and agrees with experimental results for the magnitude of the breakdown field and its temperature dependence, pulse-duration dependence, material-to-material variation, and wavelength dependence for delta > or = 1 micron. The good agreement between experiment and theory with no parameters adjusted is obtained by using improved magnitudes and energy dependences of the electron-phonon relaxation frequencies. The contributions of both optical and acoustical phonons to electron loss and energy-space diffusion must be included. The breakdown field E(B) is calculated by solving an eigenvalue equation obtained from the diffusion transport equation. Simple models and interpretations of the diffusion equation afford physical insight into breakdown and render the breakdown conditions predictable. Preliminary results indicate that the diffusion approximation fails for wavelengths considerably shorter than 1 micron, where multiphoton absorption must also be considered. Author (GRA)

The defect structure in CVD Si layers on sapphire were investigated before and after scanning laser annealing. Prior to laser annealing, the films were characterized by the presence of stacking faults, twinning zones dislocation lines producing large regions of high disorder. Subsequent to laser annealing under conditions to produce total melting of the Si layers it was shown that liquid phase epitaxial regrowth occurred resulting in regions of defect-free Si and a total absence of twinning regions. Correlated Rutherford backscattering, channeling and transmission electron microscopic analyses showed a dramatic improvement in crystalline perfection relative to the results obtained from films grown by any other technique on sapphire substrates. In separate collaborative experiments with Stanford University, it was also shown that scanning CW laser irradiation could be used to produce diffusion and activation of Sn from a spin-on SnO2/SiO2 source. The formation of a Sn3As2 alloy has been shown to be related to the observed n+ activity. Author (GRA)

HETEROJUNCTIONS IN SEMICONDUCTORS Final Report, 15 Sep. 1977 - 31 Dec. 1979

S. J. T. Owen 1 Aug. 1981 105 p refs

(Contract N00014-77-C-0608; Grants NSF SER-78-14683; NSF ENG-78-11650)

(AD-A106546) Avail: NTIS HC A06/MF A01 CSCL 20/12

Liquid phase epitaxial growth of Ge onto single crystal GaAs substrates has resulted in the growth of p+Ga-n GaAs semiconductor heterojunctions. The structures have been examined by Auger spectroscopy and their current voltage characteristics are dominated by intra-band tunneling in the low voltage region. A qualitative model for the tunneling process is introduced. Heterojunctions of n ZnO with both p and n Si have been prepared by reactive R.F. sputtering. Both n-n and p-n diodes rectify and the low forward bias characteristics show large ideality factors. The results are interpreted by a model in which macroscopic mobility, controlled by intergranular barriers, is coupled with an interface state dominated band profile. Information is given concerning technical papers and conference presentations which have been partly supported by this contract. Reprints are included of two papers which deal with the evaluation of In(1-x)Ga(x)As(y)P(1-y)/InP heterostructures. Several electron and hole traps have been identified and the growth, transport properties, defects and heterostructure device performance has been evaluated. Author (GRA)

ESTER LIQUID CRYSTAL MIXTURES FOR DYNAMIC SCATTERING AT ELEVATED TEMPERATURES

J. David Margerum and Anna M. Lackner Oct. 1981 33 p refs

(Contract N00014-79-C-524)

(AD-A106790; TR-2) Avail: NTIS HC A03/MF A01 CSCL 07/4

Studies are made on the effect of elevated temperature on the properties, thermal stability, and dynamic scattering (DS) of liquid crystal, ester mixtures. Six eutectic nematic mixtures are formulated with clearpoints in the range of 72 to 81C; structural effects are evaluated by using different combinations of components from eight classes of esters, including phenyl benzoates, phenyl thiobenzoates, phenyl cyclohexanecarboxylates, phenyl acloxybenzoates, as well as a phenyl benzoyloxybenzoate and a phenyl biphenylcarboxylate structure. The mixtures are characterized at 25 C, and their viscosity, dielectric anisotropy, conductivity anisotropy, and dc-activated DS effects are studied as a function of temperature. Thermal instabilities are studied at 100 C, with and without redox conductivity dopants. The DS stability with 20 V dc is studied at 55C for three of the more stable mixtures, both in transparent cells and in cells with reflective metal electrodes. Author (GRA)

DELIBERATE MODIFICATION OF THE BEHAVIOR OF N-TYPE CADMIUM TELLURIDE/ELECTROLYTE INTERFACES BY SURFACE ETCHING: REMOVAL OF FERMI LEVEL PINNING Interim Technical Report

Shinichi Tanaka, James A. Bruce, and Mark S. Wrighton 2 Sep. 1981 44 p refs Submitted for publication
(Contract N00014-75-C-0880; NR Proj. 051-579)
(AD-A106382; TR-29) Avail: NTIS HC A03/MF A01 CSCL 20/12

Single crystal, n-type CdTe (E sub g = 1.4 eV) has been studied with respect to barrier height, E sub B, when contacting a liquid electrolyte solution containing a fast, one-electron, outer-sphere redox reagent. We approximate E sub B as equal to the photovoltage measured by cyclic voltammetry of various redox couples at illuminated n-CdTe vs. a reversible electrode. N-CdTe surfaces pretreated with an oxidizing etch give an E sub B of approximately 0.5 V + or - 0.1 V in H2O/0.1 M NaClO4 or CH3CN/0.1 M (n-Bu4N)ClO4 that is independent of the E sub 1/2 of the added redox couple. A reducing etch pretreatment gives an E sub B in either of the electrolyte solutions that depends on E sub 1/2 of the redox couple in a manner consistent with a nearly ideal semiconductor. The reduced CdTe exhibits an E sub B of up to 0.9 V for a redox couple having E sub 1/2 near 0.0V vs. SCE, whereas couples having E sub 1/2 negative of approx. -1.0 V vs. SCE give zero photovoltage. Auger and X-ray photoelectron spectroscopy of the reduced and oxidized surfaces are qualitatively different. The reduced surface exhibits signals for Cd and Te in relative intensities that are consistent with a close to stoichiometric (1/1) surface. The oxidized surface exhibits little or no detectable Cd signal and the Te signal is consistent with a thick overlayer of elemental Te. GRA

DEEP IMPURITY STATES IN GALLIUM ARSENIDE Final Report, 1 Jun. 1976 - 31 May 1980

Claude M. Penchina Oct. 1981 94 p refs
(Contract N00014-76-C-0890)
(AD-A106695; CMP811015) Avail: NTIS HC A05/MF A01 CSCL 07/4

We have studied opto-electronic properties of semi-insulating gallium arsenide, including oxygen doped, chromium doped, undoped, and ion-bombarded materials. We have found that the luminescence from chromium-doped samples has much find structure which had not been previously seen; this led to a better understanding of chromium complexing and of local lattice vibration and Fano anti-resonance at a substitutional Cr site. We have identified two other luminescence bands as related to oxygen and native defects respectively. Photoconductivity and photo-Hall studies have elucidated some of the optical transitions and showed evidence that much of the spectral shape is due to quenching effects. DLTS and thermally-stimulated current measurements were used to study oxygen doped and 'undoped' semi-insulating GaAs, revealing a variety of deep and medium-deep levels. A combination of theory and experiment has proved valuable to the understanding of the photoionization cross sections, Fano anti-resonance, and local mode coupling of the deep impurity states., Author (GRA)

RESEARCH ON DEVELOPMENT OF LOW-RESISTANCE p-n JUNCTIONS IN ZnSe Final Report

B. Fitzpatrick Oct. 1981 19 p refs
(Contract N00173-80-C-0175)
(AD-A108008; PL-48-PN81-1014) Avail: NTIS HC A02/MF A01 CSCL 20/12

The doping problems associated with making a low-resistance p-n junction in ZnSe were investigated using modern epitaxial and implantation techniques. Substantial evidence for the role of nitrogen as a 'new' shallow acceptor with an ionization energy of 85 + or - 5 meV was found, and a number of other acceptors were characterized. The behavior of background donors was studied; silicon and aluminum were found to be especially harmful contaminants. A ZnSe layer with a p-type conductivity of 1.5 x 10,000 ohm-cm was made. This is the lowest p-type resistivity in ZnSe for the case where the p-type character was definitely established. Author (GRA)

(Grant AF-AFOSR-2990-76; AF Proj. 2306)
(AD-A107598; AFOSR-81-0746TR) Avail: NTIS HC A06/MF A01 CSCL 20/12

This is a report of a detailed and quantitative study of the influence of changes in specific defect concentrations on the microstructure and the electrical, optical and mechanical properties of Si-doped GaAs. Evidence for the GaAs: Si system demonstrates that quantitative correlations between Si-related defect concentrations and a diverse set of physical properties are observed. The measured changes in properties are large and have been employed to construct appropriate defect models. GaAs is a material of interest to the electronics community as it is used in a number of devices. The role of defects in affecting transport properties is of fundamental importance. The goal of this research is to obtain a more complete understanding of the defect structure of Si-doped GaAs through a quantitative correlation of various physical properties and concentrations of Si-related defects and also to track the effect of defect species such as solute vacancy pairs on several different physical properties. This final report summarizes the work of a 5 year study. Author (GRA)

PHOTOACOUSTIC SPECTROSCOPY OF DIELECTRIC AND SEMICONDUCTING SOLIDS Final Scientific Report, 1 Oct. 1976 - 30 Sep. 1981

Sinclair S. Yee Sep. 1981 90 p refs
(Grant AF-AFOSR-3120-77; AF Proj. 2301)
(AD-A107613; AFOSR-81-0747TR) Avail: NTIS HC A05/MF A01 CSCL 20/12

The recently developed techniques of solid state photoacoustic spectroscopy have been applied to the study of absorption processes in dielectric and semiconducting solids which are of interest in high power laser or electronic applications. The photoacoustic effect involves the irradiation, using a modulated light source, of a material in a closed cell. Incident photons which convert to heat in the sample by nonradiative processes result in temperature and pressure fluctuations in the coupling gas in the cell synchronous with the modulated source. Through the use of appropriate pulsed and chopped cw infrared and visible wavelength sources, these investigations have provided new information about a wide range of absorption effects including optical absorption in highly transparent materials, nonlinear absorption, localized defect characterization, spectroscopy of absorbed surface impurities, and semiconductor absorption processes. The photoacoustic method has high sensitivity, good spatial and temporal resolution, and the ability to separately detect nonradiative processes, which have made it uniquely suited for these investigations. RESEARCH ON LONG WAVELENGTH BIAS-ASSISTED PHOTOEMITTERS Final Report, Sep. 1978 - Sep. 1981

P. E. Gregory 1 Oct. 1981 40 p refs
(Contract DAAG29-78-C-0035)
(AD-A107815; ARO-15848.6-EL) Avail: NTIS HC A03/MF A01 CSCL 20/12

The infrared threshold for photoemission has been extended to 2.1 microns by use of a bias-assisted lattice-mismatched In.77Ga.23As/InAsP/InP photocathode. Quantum yield at 1.9 microns was .002 electrons/incident photon, for 2.4V bias and a temperature of approximately 125K. This photocathode structure was grown by vapor phase epitaxy. Molecular beam epitaxy (MBE) has also been used to grow In.77Ga.23As/buffer/InP structures. The effect of different buffer layer schemes, including a superlattice structure, on MBE-grown In.77Ga.23As

mobility and photoluminescence was investigated. Infrared imaging was demonstrated out to 1.65 microns using an In.53Ga.47As/InP bias-assisted photocathode operating in the transmission mode. Good reduction and sensitivity were obtained, indicating the potential usefulness of bias-assisted photocathodes for infrared imaging.

HIGH-PRESSURE GRADIENT-FREEZE GROWTH OF SINGLE CRYSTALS OF INDIUM PHOSPHIDE Final Technical Report, 1 Apr. 1979 - 31 Dec. 1980

Worth P. Allred Griffiss AFB, N.Y. RADC Oct. 1981 24 p refs
(Contract F19628-79-C-0096; AF Proj. 4600)
(AD-A107731; RADC-TR-81-277) Avail: NTIS HC A02/MF A01 CSCL 20/2

A gradient-freeze growth system for the growth of large single crystals of InP is described. The system synthesizes and grows InP without reloading. Large poly ingots weighing up to 2,000 gms can be compounded by this method in a few hours. Ingots grown in the system have an impurity level of about 2 x 10 to the 16th power atoms/cu cm. This technique promises to be a method by which large single crystals can be grown at a reasonable cost.

REACTIONS OF METAL IONS AND THEIR CLUSTERS IN THE GAS PHASE USING LASER IONIZATION: ION CYCLOTRON RESONANCE SPECTROSCOPY Progress Report, 1 Jul. 1980 - 30 Jun. 1981

Ben S. Freiser Apr. 1981 31 p refs Presented at 29th Ann. Conf. on Mass Spectry., Minneapolis,
(Contract DE-AC02-80ER-10689)
(DE81-029015; DOE/ER-10689/1; CONF-810548-8) Avail: NTIS HC A03/MF A01

Advances in proposed studies on metal ion chemistry and expansion of laboratory facilities are discussed. The development of a combined pulsed laser source-ion cyclotron resonance spectrometer proved to be a convenient and powerful method for generating metal ions and for studying their subsequent chemistry in the gas phase. The application of metal ions as a selective chemical ionization reagents and progress in this area are discussed. Mechanisms useful in interpreting the chemical ionization spectra of unknown compounds and tests for the functional group selectivity of the various metal ions are emphasized. Preliminary results on sulfur containing compounds and a metallic ions were obtained. Laboratory facilities were expanded from one ion cyclotron resonance spectrometer to two, plus a third instrument the Fourier Transform Ion Cyclotron Resonance spectrometer.

PHONONS IN ALKALI GRAPHITE INTERCALATION COMPOUNDS

H. Zabel and A. Magerl (Inst. Max von Laue/Paul Langevin) 1981 4 p refs Presented at the Intern. Conf. on Phonon Phys., Bloomington, Ind., 30 Aug. 1981
(Contract DE-AC02-76ER-01198)
(DE82-000059; DOE/ER-01198/1365; CONF-810872-2) Avail: NTIS HC A02/MF A01

The (001)L phonon branches of alkali-graphite intercalation compounds C/sub x/M (x = 8, 24, 36; M = K, Rb, Cs) have been measured by means of inelastic neutron scattering experiments. In all cases the phonon branches show zone folding effects, due to the enlarged unit cell as compared to pristine graphite, along with opening of frequency gaps at the center and boundary of the Brillouin zone. All measured (001)L phonon dispersions are describable by one dimensional shell models with different masses and force constants to account for the graphite and alkali area-mass densities along the c-axis and their interplanar interactions.

STUDY OF SHOCK-INDUCED SIGNALS AND COHERENT EFFECTS IN SOLIDS BY MOLECULAR DYNAMICS

Arnold M. Karo, Franklin E. Walker, Warren G. Cunningham, and John R. Hardy (Nebraska Univ., Lincoln) 31 Aug. 1981 22 p Presented at the 8th Intern. Colloq. on Gasdyn. of Explosions and Reactive Systems, Minsk, 23-26 Aug. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-030412; UCRL-85576; CONF-810874-1) Avail: NTIS HC A02/MF A01

Molecular dynamics calculations are presented that address the extent of microscopic detail that can be deduced from macroscopic gauge measurements of shock propagation in condensed systems. Large asymmetrically shock-loaded lattices were simulated varying the initial temperature of both the loading plates and the lattice. Specifically: triple shock loading of a thin lattice; double shock loading of the same lattice; and triple shock loading of a thick lattice were studied. In all cases strong memory effects in that the spall pattern always mirrors the loading history were found. This is a direct consequence of two basic results: (a) the energy in finite width shocks is only weakly coupled to motions transverse to their direction of propagation; and (b) coupling between shock motion and random thermal motion is relatively weak, even in lattices that are near their melting temperatures.

EFFECT OF THERMOMECHANICAL PROPERTIES ON INITIAL CAVITY GROWTH

R. E. Glass 1981 21 p refs Presented at the 7th Underground Coal Conversion Symp., Fallen Leaf Lake, Calif., 8 Sep. 1981
(Contract DE-AC04-76DP-00789)
(DE81-030839; SAND-81-1941C; CONF-810923-9) Avail: NTIS HC A02/MF A01

Recent field and laboratory studies in UCG have indicated that the thermomechanical properties of coals may be the controlling parameters in determining initial cavity growth. To examine this possibility laboratory and modeling efforts are being directed at determining these properties and incorporating them in a cavity growth model. The results of the work emphasize the critical role that anisotropic strengths play in determining the shape of the cavity.

RANDOM ANISOTROPY EFFECTS IN ISING SPIN GLASS M.S. Thesis [EFEITOS DE ANISOTROPIA ALEATORIA EM UM SPIN GLASS DE ISING]
Maria Cristina Forti Aug. 1981 50 p refs In PORTUGUESE; ENGLISH abstract
(INPE-2194-TDL/061) Avail: NTIS HC A03/MF A01

The thermodynamic properties of an Ising model for a spin glass are studied by mean field theory. Crystal field effects are considered and the crystal field parameter fluctuates about a mean value. The exchange is random with finite range but has a mean value equal to zero. This model exhibits paramagnetic and spin glass phases. The free energy is calculated by means of replica procedure. Then, the order parameter, the parallel and perpendicular susceptibilities and the specific heat are obtained as functions of temperature; these curves show a phase transition at the critical temperature. Imagine a crystalline world of tiny, discrete 'cells', each knowing only what its nearest neighbors do. Each volume of space contains only a finite amount of information, because space and time come in discrete units. In such a universe, we'll construct analogs of particles and fields, and ask what it would mean for these to satisfy constraints like conservation of momentum. In each case classical mechanics will break down, on scales both small and large, and strange phenomena emerge: a maximal velocity, a slowing of internal clocks, a bound on simultaneous measurement, and quantum-like effects in very weak, or intense fields. ELECTRONIC INFORMATION SYSTEMS AND USER CONTEXTS: EMERGING SOCIAL SCIENCE ISSUES
Tora K. Bikson Sep. 1981 13 p refs
(RAND/P-6690) Avail: NTIS HC A02/MF A01

The search for more rapid error-free communication as well as the growing need to link information processing systems to large or remote databases and other equipment is creating a burgeoning demand for local networks. A new eight-year forecast from International Resource Development, Inc. predicts local networks will represent a $3.2 billion market by 1990, even though only rudimentary short-range networks are presently available. The introduction of electronic information systems in myriad user settings, comprises a trend of long-term national significance. Clearly alternative choices in the management of that process can have substantially different economic and social impacts. With the technological barriers to such change being rapidly eliminated, a number of issues emerge for social research. The policy issues concern the kinds of choices that should be made during the implementation of electronic information systems in varied user settings. L.F.M.

THE 1977 CENSUS OF MINERAL INDUSTRIES. WEST NORTH CENTRAL DIVISION
Mar. 1981 51 p ref
(PB81-243081; MIC77-A-4) Avail: NTIS MF A01; SOD HC CSCL 05C

From a universe of approximately 29,000 mining establishments in the 1977 Census of Mineral Industries, approximately 11,000 small single-establishment companies were excused from filing reports. Selection of the single-establishment nonmail cases was done on an industry-by-industry basis. A variable cutoff was used to determine those establishments for which administrative records were to be used in place of a census report. The cutoffs were selected so that the administrative records cases would account for approximately 3 percent of the value of shipments for the industry. These cutoffs were then adjusted so that all single-establishment companies with fewer than 5 employees were excluded from the mail canvass, while all establishments with more than 20 employees were included. An abbreviated census form was used for the crushed stone

and construction sand and gravel industries, in which most establishments in the 5 to 20 employee size range were included.

ANALYSIS OF FEDERAL INCENTIVES USED TO STIMULATE ENERGY CONSUMPTION
R. J. Cole, B. W. Cone, J. C. Emery, M. Huelshoff, D. E. Lenerz, A. Marcus, F. A. Morris, W. J. Sheppard, and P. Sommers Aug. 1981 266 p refs
(Contract DE-AC06-76RL-01830)
(DE81-031928; PNL-3558) Avail: NTIS HC A12/MF A01

Federal incentives that have increased the consumption of coal, oil, natural gas and electricity are identified. The stimulus comes through changing values of variables included in energy demand functions, thereby inducing energy consumers to move along the function in the direction of greater quantity of energy demanded, or through inducing a shift of the function to a position where more energy will be demanded at a given price. The demand variables fall into one of six categories: price of the energy form, price of complements, price of substitutes, preferences, income, and technology. The government can provide such incentives using six different policy instruments: taxation, disbursements, requirements, nontraditional services, traditional services, and market activity. The four major energy forms were examined. Six energy consuming sectors were examined: residential, commercial, industrial, agricultural, transportation, and public.

(Contract DEN3-151; DE-AI01-77CS-51044)
(NASA-CR-165536; DOE/NASA/0151-1; BCS-40357) Avail: NTIS HC A05/MF A01 CSCL 13F

A computer program to simulate hybrid and electric advanced vehicle systems (HEAVY) is described. It is intended for use early in the design process: concept evaluation, alternative comparison, preliminary design, control and management strategy development, component sizing, and sensitivity studies. It allows the designer to quickly, conveniently, and economically predict the performance of a proposed drive train. The user defines the system to be simulated using a library of predefined component models that may be connected to represent a wide variety of propulsion systems. The development of three models are discussed as examples.

TECHNOLOGY TRANSFER OF COMPUTER-AIDED ENGINEERING TO THE UNIVERSITY COMMUNITY

W. J. Comfort, III, B. E. Brown, B. R. Bowman, and A. Harral, III Apr. 1981 17 p refs Presented at the Winter Ann. Meeting of the ASME Technol. and Soc. Div., Washington, D.C., 15-20 Nov. 1981
(Contract W-7405-eng-48)
(UCRL-85694; CONF-811101-1) Avail: NTIS
HC A02/MF A01

Computer aided engineering, which includes modeling, analysis, and design, with graphical representation for both input and output, is becoming an increasingly important contributor to national productivity. The demand for persons skilled in the field is growing rapidly. It is expected that the needs for such skills will far exceed the ability of the university community to supply them, unless something is done now. The Lawrence Livermore National Laboratory (LLNL) has initiated a new project, in cooperation with the university community, to increase the student's use of and familiarity with the computer in engineering schools. The ultimate objective is increasing the national productivity. DOE

SYSTEMS STUDIES OF WASTE TRANSPORTATION
G. C. Allen, J. W. Cashwell, C. G. Shirley, and M. G. Vigil 1981 11 p refs Presented at the NWTS Program Inform. Meeting, Columbus, Ohio, 17-19 Nov. 1981 Sponsored by DOE
(DE81-030840; SAND-81-1966C; CONF-811119-2; TTC-0244) Avail: NTIS HC A02/MF A01

The National Waste Terminal Storage transportation technology task is a combination of activities directed at both Test and Evaluation Facility (TEF) and future Full Scale Repositories (FSR), however, prime emphasis is being placed on TEF tasks. In response to the redirection of the NWTS program, TTC activities in FY 1982 will focus on transportation of commercial high level and transuranic waste, although spent fuel will still be considered. Consistent with the TEF and FSR design development schedules, the transportation system and receiving facility interface technology task will receive increased emphasis in FY 1983, while the logistics and NEPA compliance tasks will continue to be major program areas. HC A06/MF A01

A system was developed for utilizing nearby low temperature geothermal energy to heat two high rate primary anaerobic digesters. The geothermal fluid would replace the methane currently burned to fuel the digesters. The design and operation of the facility are examined and potentially viable applications selected for additional study. Results of these investigations and system descriptions and equipment specifications for utilizing geothermal energy in the selected processes are presented. The economic analyses conducted on the six engineering design cases are discussed. The environmental setting of the project and an analysis of the environmental impacts that will result from construction and operation of the geothermal heating system are discussed. DOE

ELECTRIC CAR: IS IT STILL THE VEHICLE OF THE FUTURE
R. L. Graves, C. D. West, and E. C. Fox Aug. 1981 29 p refs
(Contract W-7405-eng-26)
(DE81-030437; ORNL/TM-7904) Avail: NTIS
HC A03/MF A01

An analysis of electric and internal combustion engine (ICE) cars of equivalent performance shows that, even with advanced batteries, the electric vehicle would be much more costly to run (23 cents/mile vs 16 cents/mile) than the ICE car. The electric vehicle, of course, would not use gasoline, thus reducing the nation's dependence on imported oil; however, the cost of oil saved in this way would be about $190/bbl, and the same result could be achieved at about one quarter the cost by manufacturing synfuels from domestic coal or oil shale. A similar analysis of some proposed hybrid electric vehicles indicates that they are also more costly to operate than an equivalent conventional vehicle, although by a smaller margin. The cost of oil saved by the use of hybrid vehicles is also lower, although it is still much more than the projected cost of synthetic fuels. The key to improving the economics of the electric vehicle is to increase battery life or lower battery costs. DOE

A series of studies was conducted in support of the Office of Research and Development of the NHTSA in areas of automotive design and technology that could affect fuel economy. Nine such studies were carried out and included assessments of spark ignition engine; fuel economy improvement potential; potential of changes in rolling resistance, aerodynamic drag, accessory load and lubricants. Other studies included a study of the potential of alternative engines, a compilation of literature, and a preliminary assessment of diesel particulates. In addition to conducting studies based on a literature review and analysis, there were two hardware studies conducted in the form of teardown studies of selected passenger car (Ford Fairmont) and light truck (Chevy Luv)z models. DEVELOPMENT OF ADJUSTMENT FACTORS FOR ON ROAD FUEL ECONOMY Final Report
Robert Crawford, Peter Forshay, and Robert Dulla Mar. 1981 219 p refs
(Contract EPA-68-03-2888)
(PB81-241986; EPA-460/3-81-003) Avail: NTIS HC A10/MF A01 CSCL 13F

The differences between EPA test-measured and actual on-road fuel economy were evaluated. It is expected that the methodology and the adjustment factors developed will form the basis for a labeling system that in future model years, will discount the EPA test measurements of new cars to estimate on road fuel economy. Because new cars employ a growing percentage of fuel efficient technologies having distinctly lower levels of shortfall than traditional ones, this analysis has carefully evaluated and to the extent that available data permit, quantified the shortfall of the alternative technologies. AN INVESTIGATION OF TRUCK SIZE AND WEIGHT LIMITS: TECHNICAL SUPPLEMENT. VOLUME 3: TRUCK AND RAIL FUEL EFFECTS OF TRUCK SIZE AND WEIGHT LIMITS Final Report, Oct. 1978 - Jun. 1981
David A. Knapton Jul. 1981 142 p refs
(PB82-100538; DOT-TSC-OST-81-2) Avail: NTIS HC A07/MF A01 CSCL 13E

Data and analytical methods to estimate probable changes in direct and indirect fuel consumption for new truck size and weight limits are presented. These effects are examined in terms of changes in the competitive relationships between highway and rail services. The method for estimating fuel consumption includes line haul and access fuel and makes allowance for the system fuel requirements of empty backhaul and circuitry. Single unit trucks, conventional tractor-semi-trailer, Western Doubles, Turnpike Doubles, and Triple Trailer combination rigs as well as the competitive carload boxcar and TOFC rail services are considered. Truck service (i.e., van, reefer, household moving van, flat bed, tanker and dump), and the competitive rail services are disaggregated. Author

EVALUATION OF THE IMPACT ON EMISSIONS AND FUEL ECONOMY OF CONVERTING TWO VEHICLES TO COMPRESSED NATURAL GAS FUEL

Thomas J. Penninga Jun. 1981 18 p
(PB81-245714; EPA-AA-TEB-81-19) Avail: NTIS
HC A02/MF A01 CSCL 13F

The EPA was requested by the Department of Energy to perform testing on two late model vehicles which were converted with on-the-market systems to run on compressed natural gas (CNG). The EPA was requested to measure vehicle emissions, fuel economy, and acceleration characteristics of the vehicles in stock configuration, modified running on gasoline, and modified-running on natural gas. The testing was run over a three week period with triplicate tests run in each condition. The results of the testing are reported. It does not attempt to analyze the feasibility of CNG powered vehicles in the market place. GRA

N82-16960# Environmental Protection Agency, Ann Arbor, Mich. Test and Evaluation Branch.

THE EFFECTS OF THE MOLECULETOR FUEL ENERGIZER ON EMISSIONS AND FUEL ECONOMY

Gary T. Jones May 1981 22 p refs
(PB81-244998; EPA-AA-TEB-81-18) Avail: NTIS
HC A02/MF A01 CSCL 13F

A program designed to evaluate the effects of the Moleculetor Fuel Energizer on exhaust emissions and fuel economy is described. Three late model passenger cars were subjected to a series of test sequences both before and after installation of the device. Each test sequence included the current Federal Test Procedure (for exhaust emissions only) and the Highway Fuel Economy test. Test vehicles were selected on the basis of high sales volume and were set to manufacturer's specifications before entering the program. Based on the results of this testing, there is no reason to believe that the Molculetor conclusively had an effect on the fuel economy and emission levels of the test vehicles. The changes that were shown were quite small and were not inconsistent with trends found by EPA on other fleets of test vehicles which were subjected to mileage accumulation. GRA

EMISSION AND FUEL ECONOMY OF FUEL-MAX, A RETROFIT DEVICE

F. Peter Hutchins and John T. White May 1981 13 p
(PB81-244162; EPA-AA-TEB-81-15) Avail: NTIS
HC A02/MF A01 CSCL 13F

Results of testing the 'FUEL-MAX' device are presented. The FUEL-MAX is an air-bleed device which replaces a vehicle's Exhaust Gas Recirculation (EGR) valve and is claimed to conserve fuel. The purpose of this project was to evaluate the effect of the FUEL-MAX on exhaust emissions and fuel economy. Testing of three typical 1979 model year passenger cars was conducted. The basic test sequence included the Federal Test Procedure (FTP) and the Highway Fuel Economy Test (HFET). Tests were performed before and after installation of the FUEL-MAX. Average hydrocarbon and carbon monoxide emissions decreased somewhat while oxides of nitrogen displayed substantial increases. Fuel economy increased approximately three percent on the FTP but exhibited no change over the HFET. EPA's Office of Enforcement has determined that the FUEL-MAX can violate the anti-tampering provisions of the Clean Air Act. GRA

N82-16962# Environmental Protection Agency, Ann Arbor, Mich. Control Technology Assessment and Characterization Branch.
CARBON MONOXIDE AND NON-FTP (FEDERAL TEST PROCEDURES) AMBIENT TEMPERATURE
Robert I. Bruetsch Feb. 1981 90 p refs
(PB81-243180; EPA/AA/CTAB/TA/81-7) Avail: NTIS HC A05/MF A01 CSCL 13F

The objectives of this report were to summarize the available information regarding motor vehicle emissions under non-FTP temperature conditions, investigate ambient air quality data to determine the extent to which CO emissions must be reduced to achieve ambient air quality standards, evaluate vehicle test data under non-FTP temperature conditions, estimate the difference between in-use vehicle emission levels and certification laboratory emission levels. Conclusions and recommendations based on these objectives were also considered to provide a baseline from which to assess the need for development of regulations or guidelines for motor vehicle operation under non-FTP temperature conditions and future testing procedure revisions.

COMPUTER SIMULATION OF THE EFFECT OF ROAD ROUGHNESS ON TIRE-PAVEMENT FORCES FOR AN ARTICULATED VEHICLE PERFORMING BRAKING AND CORNERING MANEUVERS Phase Report, Sep. 1977 - Apr. 1980
C. S. Kuehne and P. F. Bohn Apr. 1981 95 p refs
(PB81-238461; BCE-V-270; FHWA/RD-80/029) Avail: NTIS HC A05/MF A01 CSCL 13F

An investigation of how road roughness affects the tire-pavement interface for an articulated vehicle was completed. A modified version of the three dimensional vehicle simulation was used to simulate braking and cornering maneuvers for an articulated vehicle on different road surfaces of varying severity. The results of this investigation show that the effects of road roughness are greatest when the vehicle is performing maneuvers near its performance limit. These extreme effects were not manifested for less severe cornering or braking maneuvers that would typically be encountered in nominal driving situations.

LOS ANGELES DOWNTOWN PEOPLE MOVER (DPM) OPERATIONAL ANALYSIS Final Report, Jul. - Oct. 1979
Arthur S. Priver and Thomas M. Dooley Jun. 1981 40 p
(PB81-241416; DOT-TSC-UMTA-80-4;
UMTA-MA-06-0081-81-1) Avail: NTIS HC A03/MF A01 CSCL 13B

The ability of the planned Los Angels Downtown People Mover (DPM) to handle the projected passenger demand for the year 2000 was studied. The question of whether the approximately 100,000 passengers per day in the year 2000 can be handled if the system headway is reduced to 60 seconds was addressed. Train capacities required at different headways to handle the demand with alternative passenger waiting time goals were examined. The approach used to analyze each issue is given, along with the underlying assumptions that were made. The results are then presented and conclusions drawn.

A FOKKER-PLANCK MODEL FOR THE STELLAR INITIAL MASS FUNCTION c90
H. Zinnecker, S. Drapatz, and R. Cowsik *In its* Astron. Soc. Inform. No. 50 1980 p 64-68 refs (For primary document see N82-16967 07-88)
Avail: NTIS HC A09/MF A01

A statistical model for distribution function for the masses of stars at birth, i.e., the Initial Mass Function, is presented. The interaction of an ensemble of quasistatic fragments (preprotostars) with their parent cloud is studied. The nuclei of fragmentation, being in magnetogravitational equilibrium, accrete material from their gaseous surroundings for an extended period until they start to collapse dynamically. A log-normal mass spectrum of fragments developed during this accretion period is shown.

THE GALACTIC CENTRE AND AQUILA REGIONS IN THE NEAR INFRARED c89
A. W. Harris, W. Hofmann, and D. Lemke *In its* Astron. Soc. Inform. No. 50 1980 p 75-76 refs (For primary document see N82-16967 07-88)
Avail: NTIS HC A09/MF A01

Observations at 2.4 microns in the near infrared with large field-of-view (approx. 1 deg) balloon-borne telescopes to provide insight to the large scale structures of the inner region of the Galaxy are summarized. Irregularities in the density of obscuring interstellar material in front of the bright Galactic center region are given in possible explanation of the 2.4 micron features. A mass to luminosity ratio for the central bulge of the Galaxy of 4.0 is estimated. Sharp decreases in 2.4 micron emission in the Galactic plane just beyond l = 30 deg and l = 50 deg are observed, suggesting sudden decreases in stellar density at these longitudes. A 5 GHz scan of this region was carried out, but no corresponding radio source was found. The nature of this source, therefore, remains unknown.

THE DYNAMICS OF MOLECULAR GAS IN THE GALACTIC CENTER **c90**
R. Guesten and D. Downes *In its* Astron. Soc. Inform. No. 50 1980 p 76-79 refs (For primary document see N82-16967 07-88)
Avail: NTIS HC A09/MF A01

Results of a 6 cm H2CO survey in the galactic center region are briefly summarized. Three giant molecular clouds at velocities of + 20, + 40, and + 25 km/s were seen in absorption against the continuum sources of the galactic center region. The high hydrogen-to-formaldehyde column density in the 20 km/s cloud yields 2 2 microns extinction of 5 < A sub 2.2 microns < 10 magnitudes. The H2CO maps and the submillimeter and HCN observations are compared, indicating that the + 40 km/s cloud lies on the far side of the galactic center between Sgr A West and Sgr A East. Stabilizing the clouds against tidal disruption is explained. N.W.

SOLAR ROTATION AND ACTIVITY IN THE PAST AND THEIR POSSIBLE INFLUENCE UPON THE EVOLUTION OF LIFE **c92**
E. H. Geyer *In* Astronomische Gesselschaft Astron. Soc. Inform. No. 50 1980 p 101-104 refs (For primary document see N82-16967 07-88)
Avail: NTIS HC A09/MF A01

Observations of enhanced spot active main sequence stars of solar type led to the formulation of the hypothesis which states that the rotational angular momentum, J sub r, of stars with spectral types later than F5 determines the intensity of their magnetic activity, bar A. Such very spot active stars are exclusively found as the components of fairly close binary stars, and show rotation periods smaller or more or less synchronous to the orbital period. Single stars of the lower main sequence are generally slow rotators, and do not show detectable activity in optical spectral regions, similar to the Sun if observed from stellar distances. Author

FAR INFRARED BALLOON-BORNE OBSERVATIONS **c89**
S. Drapatz, L. Haser, R. Hofmann, and H. Rothermel *In its* Astron. Soc. Inform. No. 50 1980 p 109-115 refs (For primary document see N82-16967 07-88)
Avail: NTIS HC A09/MF A01

The Infrared Balloon Gondola developed at the institute was flown successfully (pointing stability achieved + or - 15 arcsec). Photometric observations (lambda > 50 microns) of the central region of the Milky Way (Sgr B2) and of another Galaxy (M 101) were carried through with high spatial resolution (beam width 1.4 arcmin obtained by the observation of Saturn). A three-axis stabilized balloon-gondola, developed for a 1-meter telescope to perform far infrared spectroscopy of astronomical sources, is discussed. In a first step this gondola was flown with a 40 cm telescope and a photometry-experiment. The main purpose of this flight (7 hrs at appox. 35 km float altitude) was to test the performance of the new balloon system with a payload which represents future experiments with the 1-m mirror in all essential details (mass distribution, power, etc). At the same time some photometry observations in the far infrared region were carried through. Author

THE GENERATION OF SPIRAL WAVES IN GALAXIES **c90**
K. O. Thielheim *In its* Astron. Soc. Inform. No. 50 1980 p 161-164 refs (For primary document see N82-16967 07-88)
Avail: NTIS HC A02/MF A01

The literature of 'gravitational' density wave theory is reviewed. The theory's basic assumption, that the spiral pattern is generated by the mutual gravitational interaction of stars inside stellar disks, is examined. N-body simulations were performed. The gravitational field inside the fictitious galaxy was determined by a central oval mass distribution, which was allowed to increase slowly with time as by accretion of stars from the surrounding disk. The gravitational field was determined by an axial symmetric background, consistent with the initial mass distribution of stars inside the disk. Nevertheless, long-living spiral shaped trailing density waves were found again. It is conjectured that the oval shaped equilbrium configuration found in N-body simulation is what is otherwise observed as elliptical galaxies. N.W.

ISOTOPIC ANOMALIES AND THE EARLY HISTORY OF THE SOLAR SYSTEM **c90**
Friedrich Begemann *In* Astronomische Gesellschaft Astron. Soc. Inform. No. 51 1981 p 49-62 refs In GERMAN; ENGLISH summary (For primary document see N82-16975 07-88)
Avail: NTIS HC A08/MF A01

Isotopic heterogeneities found in carbonaceous chondrites are discussed in some detail. Specifically, three elements are considered: (1) inclusions from carbonaceous chondrites contain quite normal minerals where the oxygen is enriched by up to 5% in 16O; (2) the xenon in acid unsoluble residues from carbonaceous chondrites contains at least two distinct anomalous components; and (3) neon being more than 99% pure Ne is most convincingly accounted for by in situ decay of 2 6a Na which implies a condensation of Na bearing host phases within ten years or so of the production of Na. FORMATION OF THE PLANETARY SYSTEM **c90**
H. J. Volk *In* Astronomische Gesellschaft Astron. Soc. Inform. No. 51 1981 p 63-80 refs (For primary document see N82-16975 07-88)
Avail: NTIS HC A08/MF A01

The formation of planets by gravitational fragmentation of a flattened rotating solar nebula by collisional coagulation in a cool gas/dust mixture, or by recondensation and coagulation out of a hot vaporized state of the preplanetary material is discussed. The cool formation appears as the most attractive mechanism, whereas significant arguments from planetary observations and cosmochemistry can be brought forward against the two other possibilities, even if they are supported by very serious ideas. It is concluded that turbulent angular momentum and mass transport must play an important role in planet formation. Analytical estimates for the development of the dust component under these conditions suggest this cool formation to be possible within major constraints. At present the different processes are identified and reasonably carefully worked out individually, but they need to be put into a self consistent approximate model. J.M.S.

TIDAL FRICTION IN THE EARTH-MOON SYSTEM **c90**

Peter Brosche *In* Astronomische Gesellschaft Astron. Soc. Inform. No. 51 1981 p 81-102 refs In GERMAN; ENGLISH summary (For primary document see N82-16975 07-88)
Avail: NTIS HC A08/MF A01

A deceleration of the Earth's rotation and also a deceleration in the mean orbital angular velocity of the moon is deduced. From ancient solar elipses, transits of Mercury, Lunar laser, Ranging and the growth rhythms of fossil animals is discussed. The corresponding decrease in the Earth's angular momentum and the increase in the angular momentum of the lunar orbit match each other. Therefore, both seem to be expressions of one and the same interaction. Of several possibilities, tidal friction connected with oceanic tides appears to be the most plausible candidate for this interaction process. Oceanographic computations reproduce the observed value of tidal friction. This provides a possible way out of the dilemma of schematic backward integrations - to reach a narrow situation between Earth and Moon. Characteristic numerical values of tidal friction are expressed by several parameters. J.M.S.

EARLY PHASES OF STELLAR FORMATION c90
Verner M. Tscharmuter *In* Astronomische Gesellschaft Astron. Soc. Inform. No. 51 1981 p 103-116 refs In GERMAN; ENGLISH summary (For primary document see N82-16975 07-88)
Avail: NTIS HC A08/MF A01

Processes that promote gravitational collapse and star formation in interstellar clouds are discussed. For example, the increase of the external pressure by passing through the galactic shock, or by compression due to an expanding HII region, supernova shell, etc., may cause a cloud to become gravitationally unstable. Obstacles to star formation are mentioned: thermal pressure, angular momentum, magnetic fields. Processes are proposed to solve the angular momentum problem. In addition to magnetic braking of rotating clouds, magnetic fields are shown to stabilize clouds very effectively. From these properties some speculative conclusions concerning the initial conditions for the presolar nebula and the formation of the cometary cloud are drawn. Numerical examples carried out for self gravitating flows in two and three spatial dimensions are given. They indicate the possibility of converting a cloud's spin into orbital angular momentum by a special fragmentation process. Thus the angular momentum problem is solved by the formation of a binary (or multiple) stellar system. Models including angular momentum transport by turbulent friction and then application to the theoretical evolution of the solar nebula are also briefly mentioned. J.M.S.

THE FORMATION OF COMPACT OBJECTS IN BINARY SYSTEMS c90
E. P. J. vandenHeuvel *In* Astronomische Gesellschaft Astron. Soc. Inform. No. 51 1981 p 121-122 (For primary document see N82-16975 07-88)
Avail: NTIS HC A08/MF A01

The observational evidence on compact objects in binary systems is summarized. Apart from the massive and the low-mass X-ray binaries, three binary radio pulsars are now known, PSR 1913 + 16, PSR 0656 + 64, and PSR 0820 + 02. The various ways in which compact objects can be formed in interacting binary systems are outlined. Massive interacting binary systems are, after the first phase of mass transfer expected to leave either: (1) Wolf-Rayet binaries, with a wide range of orbital periods, as a result of quasi-conservative mass transfer; or (2) systems with short orbital periods as remnants of highly nonconservative evolution (spiral-in during the first phase of mass transfer). From the fact that over 2/3 of all mass stars are members of binaries with P < or = 10 yrs, it is argued that over 2/3 of all single pulsars are expected to have high runaway velocities, since they originate from disrupted post-spiral-in systems. J.M.S.

WOLF-RAYET STARS WITH COMPACT COMPANIONS c89
Wilhelm Seggewiss *In* Astronomische Gesellschaft Astron. Soc. Inform. No. 51 1981 p 123-138 refs In GERMAN; ENGLISH summary (For primary document see N82-16975 07-88)
Avail: NTIS HC A08/MF A01

The spectral characteristics of the Wolf-Rayet (WR) stars are discussed. It is stressed that central hydrogen and helium absorption lines do not necessarily prove the binary nature of the WR star but might indicate the presence of intrinsic photospheric lines. A short summary of the main physical data of the WR stars is given. The consensus on the effective temperatures tends to stabilize at the lower limit of earlier determinations, i.e., near 30000 K corresponding to the temperature of O9 V stars. The luminosities are quite high, whereas the masses are normally in the range of only 10 solar masses. During its life a massive OB binary may undergo two Wolf-Rayet phases. The first phase will occur after Roche lobe overflow (or stellar wind mass loss) when the hydrogen rich layers are transported to the companion or lost from the stellar system and nuclear processed material is exposed. A second phase may occur when the primary star has already ended its life as a compact object (after supernova explosion) while the former secondary develops into WR star. A number of observational arguments are discussed which show that the six WR binaries with small mass functions are just in the second WR phase, i.e., are candidates for binaries with compact secondaries. J.M.S.

STRUCTURE AND DYNAMICS OF THE LARGE MAGELLANIC CLOUD c90
J. V. Feitzinger *In* Astronomische Gesellschaft Astron. Soc. Inform. No. 51 1981 p 159-174 refs In GERMAN; ENGLISH summary (For primary document see N82-16975 07-88)
Avail: NTIS HC A08/MF A01

The basic kinematics and dynamics of the Large Magellanic Cloud are deduced. Three main disturbances are found: a warp of the southern side of the Large Magellanic Cloud, streaming

motions in and around the bar, and streaming motions in the 30 Doradus region. By comparison of eight mass models, taking into account thickness effects and controlled by surface photometric data, the mass of the Large Magellanic Cloud is found to be (5 + or - 1) 10 to the 9th power solar mass. Dynamically the Large Magellanic Cloud is described by a dominating disk potential with an additional bar potential as a disturbance. The stochastic self-propagating star formation model is applied to the Large Magellanic Cloud. Numerical simulations produce large, irregular, and symmetric regions of massive stars which form partially ordered structures on the scale of the whole galaxy, including spiral arm filaments. The simulations also generate tremendous perturbations in the gaseous component of the Large Magellanic Cloud, the most dramatic being large holes and shells, for which there is observational evidence.

NON-STATIONARY VISCOUS GASEOUS DISKS IN NUCLEI OF DENSE STELLAR SYSTEMS c90
W. Glatzel and K. J. Fricke *In its* Astron. Soc. Inform. No. 52 1981 p 74-75 Sponsored in part by the German Science Foundation (For primary document see N82-16986 07-88)
Avail: NTIS HC A08/MF A01

Evolutionary mass loss from stars and the production of gas in stellar collisions within a rotating star cluster leads to the formation of a gaseous disk at the center if the cooling of the gas is sufficiently fast. It is concluded that due to the time scales involved the disk cannot have reached a stationary state during the Hubble time. The outer region of the disk is dominated by pure mass inflow. In the center the density grows exponentially with time. This growth is universal and it may be indicative for the formation of a compact object at the center. T.M.

X-RAY ASTRONOMY INSTRUMENTATION STUDIES Final Report

John C. Gregory Nov. 1981 6 p refs

(Contract NAS8-33977)

(NASA-CR-161948) Avail: NTIS HC A02/MF A01 CSCL 03A

Preliminary designs were made for a multiplane, multiwire position sensitive proportional counter for X-ray use. Anode spacing was 2 mm and cathode spacing 1 mm. Assistance was provided in setting up and operating two multiwire proportional counters, one with 5 mm anode spacing, and the other with 2 mm spacing. Argon-based counter gases were used for preliminary work in assembling a working experimental system to measure xenon fluorescence yields. The design and specification of a high purity gas filling system capable of supplying mixtures of xenon and other gases to proportional counters was also performed. The system is mounted on a cart, is fully operational, and is flexible enough to be easily used as a pumping station for other clean applications. When needed, assistance was given to put into operation various computer-related pieces of equipment. A.R.H.

FABRICATION OF X-RAY TELESCOPES FOR SOUNDING ROCKET FLIGHTS Final Report

11 Sep. 1981 21 p refs

(Grant NGR-05-002-284)

(NASA-CR-165112) Avail: NTIS HC A02/MF A01 CSCL 03A

Two X-ray telescopes and two detector systems were fabricated, and one of the telescopes (15 in. diameter, Wolter type I telescope) was flown on two sounding rocket flights. The telescopes were fabricated using the diamond point technique which provided the accurate figure of the mirrors to about a focal plane blur of 0.5 arc minutes. The 15 in. telescope mirrors were polished using standard polishing techniques to remove tooling marks from the diamond turning, then chemically polished to bring the X-ray reflectivity up to nearly the theoretical values. The optical image formed by the 15 in. telescope was found to produce a blur of about 40 arc seconds for a parallel beam of incoming laser light. The first flight of the telescope produced an X-ray image of Capella which indicated that the X-ray image was blurred to the extent of about 2 arc minutes. This additional image degradation was due to a slight error in focusing the X-ray image onto the detector. S.L.

THERMONUCLEAR MODEL FOR GAMMA-RAY BURSTS

Stanford E. Woosley 26 Aug. 1981 23 p refs Presented at the Workshop on Gamma Ray Transients and Related Astrophys.

Phenomena, La Jolla, Calif., 5-8 Aug. 1981 Submitted for publication Prepared in cooperation with Calif. Univ., Lawrence Livermore Lab.
(Contract W-7405-eng-48; Grants NSF AST-79-09102; NSF AST-81-08509)
(DE81-030835; UCRL-86611; CONF-810871-2) Avail: NTIS HC A02/MF A01

The evolution of magnetized neutron stars with field strengths of approx. 10 to the 12th power gauss that are accreting mass onto kilometer-sized polar regions at a rate of approx 10 to the 13th power solar mass/yr is examined. Based on the results of one dimensional calculations, one finds that stable hydrogen burning, mediated by the 'hot' CNO-cycle, will lead to a critical helium mass in the range 10 to the 20th to 22nd power g km(-2). Owing to the extreme degeneracy of the electron gas providing pressure support, helium burning occurs as a violent thermonuclear runaway which may propagate either as a convective deflagration or as a detonation wave. Complete combustion of helium into (56)Ni pushes hot plasma above the surface of the neutron star. Rapid expansion of the plasma channels a substantial fraction of the explosion energy into magnetic field stress. The hard gamma-outburst of several seconds softens as the event proceeds and is followed by a period, typically of several minutes duration, of softer X-ray emission as the subsurface ashes of the thermonuclear explosion cool. THE 3-D ON THE 7600-STAR-CRAY
V. Kransky 17 Sep. 1981 18 p Presented at the CRAY User Conf., Schliersee, West Germany, 28 Sep. - 1 Oct. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-030889; UCRL-96693; CONF-810960-1) Avail: NTIS HC A02/MF A01

COM3 is a large three dimensional Eulerian Program (over 2500 vector flops per cycle) which was formulated to make use of vectors entirely (> 99%). CCM3 was programmed to make use of Class VI computers efficiently and achieves Class VI high performance execution rates on both the Star and Cray computers (28 to 32 megaflops net rate). A comparison of the COM3 performance on the 7600, Star and Cray computers is given with emphasis on how the program achieved its current execution rate on the Cray. DOE

THE EVOLUTION OF DENSITY PERTURBATION IN AN OPEN UNIVERSE
I. K. Rozgacheva 1981 32 p refs Submitted for publication
(Rept-670) Copyright. Avail: Issuing Activity

The evolution of density perturbations in an open Universe is considered. Numerical computations take into account the presence of the microwave background radiation and massless weakly interacting particles. It is shown that in the case of an open Universe omega H(2) < 0.3 observational data contradict modern theories of the formation of galaxies. M.G.

THE ROLE OF THE CRITICAL IONIZATION VELOCITY PHENOMENA IN THE PRODUCTION OF INNER COMA COMETARY PLASMA
V. Formisano (European Space Research and Technology Center, Noordwijk, Netherlands), A. A. Galeev, and R. Z. Sagdeev 1981 23 p refs
(Rept-626) Copyright Avail: Issuing Activity

The critical velocity required to trigger the anomalous ionization of a neutral gas by plasma flow is theoretically calculated for a model based on lower hybrid instability. It depends strongly on the plasma and gas parameters, defining the instability development of the ionized atoms beam in the counter-streaming plasma. In particular, the possible role of a critical ionization mechanism for Halley's comet is examined. The fulfillment of both the Townsand condition for the self-sustained beam plasma discharge and the Alfven condition for the critical velocity mechanism indicates that this mechanism may work only within 10,000 km from the cometary nucleus and gives the ion production rate close to that observed for the Kohoutek comet. An inexpensive method of baking large (8- by 10-inch) IIIa-J plates in 2 percent forming gas was found and successfully tested. The large storage capacity and fine grain structure of the emulsion made the sky fog negligible on plates of one-hour exposure at Link. Plates were taken through the end of October 18, 1981 on various asteroids from the recent critical lists published in the Minor Planet Circulars and the Russian Ephemeris of Minor Planets. A.R.H.

THE STOCHASTIC EVOLUTION OF ASTEROIDAL REGOLITHS AND THE ORIGIN OF BRECCIATED AND GAS-RICH METEORITES Ph.D. Thesis
Kevin Richard Housen *In* NASA. Washington Advan. in Planetary Geol. Nov. 1981 p 1-218 refs (For primary document see N82-17010 07-91)
Avail: NTIS HC A99/MF A01 CSCL 03B

A model is constructed which views regolith evolution on asteroids as a stochastic process. Average values are shown to be poor descriptors of regolith depth. The utility of the average depth is not significantly increased by avoiding large craters or thick ejecta deposits, a procedure adopted in previous regolith studies. The statistical uncertainty associated with regolith depth severely limits the power of regolith models in predicting parent-body size for brecciated meteorites. A Monte Carlo algorithm was used to simulate the random walks and corresponding charged-particle irradiation histories of grains in regoliths. On rocky asteroids, only about 20 percent of the grains was exposed to solar cosmic ray ions. Results based on present-day conditions in the asteroid belt agree well with irradiation features observed in gas-rich meteorites. An origin during epochs of early solar system evolution is not required. N.W.

RIDGE SYSTEMS OF MARS M.S. Thesis
Ann Windslow Gifford *In* NASA. Washington Advan. in Planetary Geol. Nov. 1981 p 222-364 refs (For primary document see N82-17010 07-91)
Avail: NTIS HC A99/MF A01 CSCL 03B

Mare-type ridges on the Planet Mars were mapped and described based on Viking images. The ridges mapped range from 5 to 400 km long and 1 to 8 km wide. Most ridges on Mars are on plains and plateau units; 4,321 ridges with a total length of 153,835 km were mapped on these unit types. Ridges which resemble lunar mare ridges were also mapped in craters, basins, and several volcanic calderas on Mars. Mapping of ridges on a global scale reveals that they are preferentially developed in older, thinner plains units probably of flood basalt origin. Measuring the trends of ridges in plains units on Mars shows that there is a planetwide predominance of north, northwest and northeast trends. It is proposed that ridges are compressional tectonic features which have formed in response to changes in the planet's rotational equilibrium figure early in its history. In addition, the Tharsis uplift has created a regional stress system which accounts for the trends of ridges in areas near by. Ridges in craters and basins are similarly caused by shortening across the basin in response to regional stresses. N.W.

THE MORPHOLOGY AND EVOLUTION OF GANYMEDE AND CALLISTO Ph.D. Thesis

Steven Weldon Squyres *In* NASA. Washington Advan. in Planetary Geol. Nov. 1981 p 369-718 refs (For primary document see N82-17010 07-91)

Avail: NTIS HC A99/MF A01 CSCL 03B

Images of Ganymede and Callisto, Jupiter's two largest moons, among the largest known predominantly icy planetary objects, were obtained by the two Voyager spacecraft. Voyager images were used to investigate the surface characteristics, geologic processes, and internal evolution of Ganymede and Callisto. Ganymede shows two principal types of terrain: one dark, old, and heavily cratered; and another brighter, younger, and characterized by complex patterns of grooves. Voyager imagers were used to determine photometric properties of surface features on both bodies at phase angles up to 120 deg. Surface temperatures are calculated for the major terrain types. Callisto is found to be somewhat warmer than Ganymede. The temperature difference between grooved and cratered terrain on Ganymede is small. A model for the origin of grooved terrain is considered in which extension creates broad, downdropped rift zones in the crust that are filled with water or ice from below. N.W.

THE VARIABILITY OF THE SOLAR OUTPUT

Claus Froehlich *In* NASA. Goddard Space Flight Center Variations of the Solar Constant Dec. 1981 p 37-44 refs Sponsored by the Swiss National Science Foundation (For primary document see N82-17014 07-92)

Avail: NTIS HC A13/MF A01 CSCL 03B

A review of solar constant determinations and measurements of its spectral distribution is presented. For the period from 1966 to 1980 a mean value of 1367 Wm-2 was determined. Within the corresponding uncertainty, no significant change of both the integral value and the spectral distribution can be detected. However, short term solar variations and their spectral dependence were deduced from measurements during four hours on June 20, 1980 from 34 km altitude with amplitudes of + or - 500 ppm at 368 nm, of 200 ppm at 500 nm and + or - 150 ppm at 778 nm. Comparison with simultaneous total irradiance data of the Solar Maximum Mission (SMM) shows a high correlation which indicates the solar origin. The power spectrum shows a weak peak at about 3.2 mHz, which corresponds to the frequency of the 5 minutes solar oscillation. T.M.

Avail: NTIS HC A13/MF A01 CSCL 03B

Three rocket flights to measure the solar constant and provide calibration data for sensors aboard Nimbus 6, 7, and Solar Maximum Mission (SMM) spacecraft were accomplished. The values obtained by the rocket instruments for the solar constant in SI units are: 1367 w/sq m on 29 June 1976; 1372 w/sq m on 16 November 1978; and 1374 w/sq m on 22 May 1980. The uncertainty of the rocket measurements is + or - 0.5%. The values obtained by the Hickey-Frieden sensor on Nimbus 7 during the second and third flights was 1376 w/sq m. The value obtained by the Active Cavity Radiometer Model IV (ACR IV) on SMM during the flight was 1368 w/sq m. T.M.

Avail: NTIS HC A13/MF A01 CSCL 03B

The difference between the methods that measure delta S, and those that measure variations in the solar luminosity, delta L, is discussed. It is shown that the past practice of simply relating delta S to delta L by geometrical arguments is not valid because of anisotropy of the solar radiation. It is concluded that direct techniques prove the existence of short term variability that is fully explainable in terms of the passage of active regions (spots and faculae) on the face of the Sun. The obervations of changes in the solar diameter support the existence of structurally induced variations of the solar luminosity on timescales of tens of years, which are significant in the understanding of climatic variations. OBSERVED VARIABILITY IN THE FRAUNHOFER LINE SPECTRUM OF SOLAR FLUX, 1975 - 1980
William Livingston, H. Holweger (Inst. fuer Theoretische Physik und Sternwarte, Kiel, West Germany), and O. R. White (National Center for Atmospheric Research) *In* NASA. Goddard Space Flight Center Variations of the Solar Constant Dec. 1981 p 95-109 refs Sponsored by NSF (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

Over the five years double-pass spectrometer observations of the Sun-as-a-star revealed significant changes in line intensities. The photospheric component weakened linearly with time 0 to 2.3%. From a lack of correlation between these line weakenings and solar activity indicators like sunspots and plage, a global variation of surface properties is inferred. Model-atmosphere analysis suggests a slight reduction in the lower-photospheric temperature gradient corresponding to a 15% increase in the mixing length within the granulation layer. Chromospheric lines such as Ca II H and K, Ca II 8543 and the CN band head weaken synchronously with solar activity. Thus, the behavior of photospheric and chromospheric lines is markedly different, with the possibility of secular change for the former. T.M.

THE HORIZONTAL AND VERTICAL SEMI-DIAMETERS OF THE SUN OBSERVED AT THE CAPE OF GOOD HOPE (1834 - 1887) AND PARIS (1837 - 1906): A REPORT ON WORK IN PROGRESS
Clayton Smith and Dan Messina (Maryland Univ.) *In* NASA. Goddard Space Flight Center Variations of the Solar Constant Dec. 1981 p 111-116 refs Sponsored by NASA (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

Cape and Paris meridian observations of the solar limbs which permit an estimate to be made of the solar semi-diameter were surveyed, sampled, and compared with Greenwich and U.S. Naval Observatory observations. Significant systematic errors were found in the Paris work and have been correlated with changes of instruments and observers. Results from the Cape series indicate that work should continue on the compilation of data from Cape observations of the Sun. T.M.

ESTIMATING SHORT-TERM SOLAR VARIATIONS BY A SIMPLE ENVELOPE MATCHING TECHNIQUE
Kwing L. Chan and Sabatino Sofia *In its* Variations of the Solar Constant Dec. 1981 p 131-136 refs (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

A simple matching technique is explained which allows the computation of the response of the solar surface to perturbations which occur at any depth within the convective envelope of the Sun. This technique was applied to a perturbation of the convective efficiency (alpha-mechanism), and of the non-gas component of the pressure (beta-mechanism) in different regions of the convection zone. The results indicate that either perturbation affects the solar luminosity. However, the alpha-mechanism has little effect in the solar radius, regardless of the location of the perturbed region, whereas the beta-mechanism produces radius changes that become quite large if the location of the perturbed region is deep within the solar convection zone. THERMAL PERTURBATION OF THE SUN

L. W. Twigg and A. S. Endal *In* NASA. Goddard Space Flight Center Variations of the Solar Constant Dec. 1981 p 137-142 refs (For primary document see N82-17014 07-92)
(Grant NAG5-13)
Avail: NTIS HC A13/MF A01 CSCL 03B

An investigation of thermal perturbations of the solar convective zone via changes in the mixing length parameter were carried out, with a view toward understanding the possible solar radius and luminosity changes cited in the literature. The results show that: (a) a single perturbation of alpha is probably not the cause of the solar radius change and (b) the parameter W = d lambda nR/d lambda nL can not be characterized by a single value, as implied in recent work. Author

EFFECTS OF CHANGES IN CONVECTIVE EFFICIENCY ON THE SOLAR RADIUS AND LUMINOSITY

A. V. Sweigart *In its* Variations of the Solar Constant Dec. 1981 p 143-164 refs (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

A sequence of solar models has been constructed in order to investigate the sensitivity of the solar radius and luminosity to small changes in the ratio alpha of the mixing length lambda to the pressure-scale height Hp throughout the solar convective envelope. The basic procedure for determining this sensitivity was to impose a perturbation in alpha within the convective envelope and then to follow the resulting changes in the solar radius delta R and luminosity delta L for the next 10 to the 6th power yrs. These calculations gave the following results. (1) A perturbation in alpha produces immediate changes in the solar radius and luminosity. Initially delta L and delta alpha are related by delta L/L = 0.30 delta alpha/alpha. (2) The value of the ratio w = delta log R/delta log L is strongly time dependent. Its value just after the perturbation in alpha is 6.5 x 10 to the minus 4th power. (3) The ratio H = (delta log L) d delta log R/dt is much less time dependent and is a more suitable means for relating the changes in the solar radius and luminosity. (4) Both of these ratios imply that for any reasonable change in the solar luminosity the corresponding change in the solar radius is negligible. Author

This instrument, at the present time in development, will fly on board Spacelab I in May 1983. Other flights are foreseen during the following missions. The instrument is composed of three double monochromators covering the range 170 to 3200 nm. The spectrometers have bandpasses of 1 nm up to 900 nm and 20 nm from 850 to 3200 nm with an accuracy 1/100 nm. Calibration lamps are included in the instrument to monitor any change of its sensitivity and wavelength scale. Author

Theoretical arguments for a 30% increase in the solar luminosity over the past 4.7 billion years are reviewed. A scaling argument shows that this increase can be predicted without detailed numerical calculations. The magnitude of the increase is independent of nuclear reaction rates, as long as conversion of hydrogen to helium provides the basic energy source of the Sun. The effect of the solar luminosity increase on the terrestrial climate is briefly considered. It appears unlikely that an enhanced greenhouse effect, due to reduced gases (NH3, CH4), can account for the long-term paleoclimatic trends. Author

ON THE SEAT OF THE SOLAR CYCLE

Douglas Gough *In* NASA. Goddard Space Flight Center Variations of the Solar Constant Dec. 1981 p 185-206 refs (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

A discussion of some of the issues raised in connection with the seat of the solar cycle are presented. Is the cycle controlled by a strictly periodic oscillator that operates in the core, or is it a turbulent dynamo confined to the convection zone and possibly a thin boundary layer beneath it? Sunspot statistics are discussed, with a view to ascertaining the length of the memory of the cycle, without drawing a definitive conclusion. Also discussed are some of the processes that might bring about variations delta L and delta R in the luminosity and the radius of the photosphere. It appears that the ratio W = delta lnR/delta lnL increases with the depth of the disturbance that produces the variations, so that imminent observations might determine whether or not the principal dynamical processes are confined to only the outer layers of the Sun. SHORT AND LONG TERM VARIATIONS IN THE SOLAR CONSTANT

Kenneth H. Schatten *In its* Variations of the Solar Constant Dec. 1981 p 207-217 refs (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

Short and long term variations in the solar constant are examined theoretically. The variations observed by the Solar Maximum Mission, lasting several days and associated with the passage of sunspot groups, strikingly demonstrates the well known lack of a bright ring effect around sunspots. This suggests that sunspot magnetic fields do not simply block the heat flowing upward into the photosphere. Rather, it is suggested that gravitational draining occurs; this cools sunspots and transports downward the heat that would otherwise flow into the photosphere. A model of sunspot temperature with depth shows modest support when compared with the empirical model of Van't Veer. Secular trends in the solar constant may occur and be associated with the influence of the convection zone magnetic field upon convective heat transport. As a start to understanding this problem, the Schwarzschild criterion has been modified to include the effects of magnetic field. Author

THE COMBINED SOLAR AND TIDAL INFLUENCE IN CLIMATE

P. R. Bell *In* NASA. Goddard Space Flight Center Variations of the Solar Constant Dec. 1981 p 241-255 refs (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

To provide an early warning indication of the CO2 warming signal, we are searching for periodic or projectable trends in climate. The strong 20.5 year oscillation in Eastern North American January temperature found by Mock and Hibler shows evidence of a beat between waves with periods of 22.36 (22.21 to 22.55) years and 18.64 (18.45 to 18.79) years with an opposition at about 1880. These are interpreted to be the 22.279 year solar Hale magnetic cycle and the 18.61 year lunar nodal tidal cycle. The lunar nodal cycle is known to produce changes in the sea surface temperature through increased mixing of the mixed layer of the ocean. This beat note is shown to be evident in the Western High Plains drought record of Mitchell, Stockton and Meko and to provide a better bit to the drought series, especially at the beat oppositions in 1880 and 1770. Author

PREDOMINANT PERIODS IN THE TIME SERIES OF DROUGHT AREA INDEX FOR THE WESTERN HIGH PLAINS AD 1700 TO 1962

P. R. Bell *In* NASA. Goddard Space Flight Center Variations of the Solar Constant Dec. 1981 p 257-264 refs (For primary document see N82-17014 07-92)
Avail: NTIS HC A13/MF A01 CSCL 03B

The detection of the combined presence of the Hale magnetic sunspot cycle (22.28 years) and the lunar nodal tidal cycle (18.61 years) in both the Eastern North American January air temperatures and the Western U.S. High Plains drought series led to an extended analysis of the Drought Area Index time series. This analysis indicated that the mean dominant period of the drought series should be 20.0 to 20.5 years and that the principal period should be resolvable into two components of about 22.28 and 18.61 years. This note details the successful accomplishment of this task. Author

A PROSPECTUS FOR A THEORY OF VARIABLE VARIABILITY

S. Childress and E. A. Spiegel (Columbia Univ., New York) *In* NASA. Goddard Space Flight Center Variables of the Solar Constants Dec. 1981 p 273-291 refs (For primary document see N82-17014 07-92)
(Grants NSF PHY-77-27086; NSF MCS-79-02766)
Avail: NTIS HC A13/MF A01 CSCL 03B

It is proposed that the kind of stellar variability exhibited by the Sun in its magnetic activity cycle should be considered as a prototype of a class of stellar variability. The signature includes long 'periods' (compared to that of the radial fundamental model), erratic behavior, and intermittency. As other phenomena in the same variability class we nominate the liminosity fluctuations of ZZ Ceti stars and the solar 160 m oscillation. We discuss the possibility that analogous physical mechanisms are at work in all these cases, namely instabilities driven in a thin layer. These instabilities should be favorable to grave modes (in angle) and should arise in conditions that may allow more than one kind of instability to occur at once. The interaction of these competing instabilities produces complicated temporal variations. Given suitable idealizations, it is shown how to begin to compute solutions of small, but finite, amplitude. DEVELOPMENT OF TOUGHENED EPOXY POLYMERS FOR HIGH PERFORMANCE COMPOSITE AND ABLATIVE APPLICATIONS c27
Vernon R. Allen *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 17 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 07C

A survey of current procedures for the assessment of state of cure in epoxy polymers and for the evaluation of polymer toughness as related to nature of the crosslinking agent was made to facilitate a cause-effect study of the chemical modification of epoxy polymers. Various conformations of sample morphology were examined to identify testing variables and to establish optimum conditions for the selected physical test methods. Dynamic viscoelasticity testing was examined in conjunction with chemical analyses to allow observation of the extent of the curing reaction with size of the crosslinking agent the primary variable. Specifically the aims of the project were twofold: (1) to consider the experimental variables associated with development of 'extent of cure' analysis, and (2) to assess methodology of fracture energy determination and to prescribe a meaningful and reproducible procedure. The following is separated into two categories for ease of presentation. M.D.K.

FUEL OPTIMAL MANEUVERS FOR SPACECRAFT WITH FIXED THRUSTERS c18
Thomas C. Carter *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 21 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 22B

Several mathematical models, including a minimum integral square criterion problem, were used for the qualitative investigation of fuel optimal maneuvers for spacecraft with fixed thrusters. The solutions consist of intervals of 'full thrust' and 'coast' indicating that thrusters do not need to be designed as 'throttleable' for fuel optimal performance. For the primary model considered, singular solutions occur only if the optimal solution is 'pure translation'. 'Time optimal' singular solutions can be found which consist of intervals of 'coast' and 'full thrust'. The shape of the optimal fuel consumption curve as a function of flight time was found to depend on whether or not the initial state is in the region admitting singular solutions. Comparisons of fuel optimal maneuvers in deep space with those relative to a point in circular orbit indicate that qualitative differences in the solutions can occur. Computation of fuel consumption for certain 'pure translation' cases indicates that considerable savings in fuel can result from the fuel optimal maneuvers. M.D.K.

SOLIDIFICATION PHENOMENA OF BINARY ORGANIC MIXTURES c23
Kichoon Chang *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 20 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 07A

The coalescence rates and motion of liquid bubbles in binary organic mixtures were studied. Several factors such as temperature gradient, composition gradient, interfacial tension, and densities of the two phases play important roles in separation of phases of immiscible liquids. An attempt was made to study the effect of initial compositions on separation rates of well-dispersed organic mixtures at different temperatures and, ultimately, on the homogeneity of solidification of the immiscible binary organic liquids. These organic mixtures serve as models for metallic pseudo binary systems under study. Two specific systems were investigated: ethyl salicylate - diethyl glycol and succinonitrile - water. M.D.K.

TOLERANCE ANALYSIS OF OPTICAL TELESCOPES USING COHERENT ADDITION OF WAVEFRONT ERRORS c74
John W. Davenport *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Feb. 1982 19 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 20F

A near diffraction-limited telescope requires that tolerance analysis be done on the basis of system wavefront error. One method of analyzing the wavefront error is to represent the wavefront error function in terms of its Zernike polynomial expansion. A Ramsey-Korsch ray trace package, a computer program that simulates the tracing of rays through an optical telescope system, was expanded to include the Zernike polynomial expansion up through the fifth-order spherical term. An option to determine a 3 dimensional plot of the wavefront error function was also included in the Ramsey-Korsch package. Several assimulation runs were analyzed to determine the particular set of coefficients in the Zernike expansion that are effected by various errors such as tilt, decenter and despace. A 3 dimensional plot of each error up through the fifth-order spherical term was also included in the study. Tolerance analysis data are presented. M.D.K.

DEVELOPMENT OF PHOTOMULTIPLIER ELECTRONICS AND COMPUTER INTERFACING SOFTWARE FOR A HIGH SPEED PHOTOELECTRIC PHOTOMETER-STOKE'S METER c61

Terry R. Flesch *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 21 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 09B

Preliminary stages in the design, construction, and development of a photoelectric photometer system interfaced with an IMSAI 8080 microcomputer. The instrument will also include magnetic tape and magnetic disk storage capabilities to enable rapid data storage. The capability of the instrument to make observations with very high time resolution, as high as 10 msec, and measure the intensity and polarization of radiation emitted by objects which show very rapid light variations, pulsars and optical counterparts of X-ray sources was of concern. A better understanding of the magnetic fields and interstellar material which characterize the immediate environment of these stellar systems and an expansion of the observational capabilities of even modest-sized telescopes are expected. M.D.K.

DEVELOPMENT OF HIGH STRENGTH, HIGH TEMPERATURE CERAMICS c27

William B. Hall *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 11 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 07C

Improvement in the high-pressure turbopumps, both fuel and oxidizer, in the Space Shuttle main engine were considered. The operation of these pumps is limited by temperature restrictions of the metallic components used in these pumps. Ceramic materials that retain strength at high temperatures and appear to be promising candidates for use as turbine blades and impellers are discussed. These high strength materials are sensitive to many related processing parameters such as impurities, sintering aids, reaction aids, particle size, processing temperature, and post thermal treatment. The specific objectives of the study were to: (1) identify and define the processing parameters that affect the properties of Si3N4 ceramic materials, (2) design and assembly equipment required for processing high strength ceramics, (3) design and assemble test apparatus for evaluating the high temperature properties of Si3N4, and (4) conduct a research program of manufacturing and evaluating Si3N4 materials as applicable to rocket engine applications. A PRELIMINARY STUDY OF THE PARTICULATE FALLOUT FROM THE SPACE SHUTTLE (STS-1) c16

G. Martin Hudson *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 8 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 22B

Prediction of acid fallout and the dry deposition of Al2O3 was the objective of this investigation. Sampling was done at the Kennedy Space Center in Florida. The models available were not appropriate and the data available was negligible. Thus, a bimodal particle distribution was assumed normalized to the few existing data points and used as a foundation for a crude zeroth order approximation for the acid fallout. In addition, a settling spectrum for the Al2O3 particles was devised as a table look-up since the graphs in the literature at first pass could not be fitted with reasonable analytic functions. Consulting services were rendered to researchers. Special emphasis was placed on improving current techniques and adding LIDAR (Light Radar). Suggestions for future studies are made. M.D.K.

DETECTION AND ANALYSIS OF RADIO FREQUENCY LIGHTNING EMISSIONS c33

Fereydoun Jalali *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 20 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 09C

The feasibility study of detection of lightning discharges from a geosynchronous satellite requires adequate ground-based information regarding emission characteristics. In this investigation, a measurement system for collection of S-band emission data is set up and calibrated, and the operations procedures for rapid data collection during a storm activity developed. The system collects emission data in two modes: a digitized, high-resolution, short duration record stored in solid-state memory, and a continuous long-duration record on magnetic tape. Representative lightning flash data are shown. Preliminary results indicate appreciable RF emissions at 2 gHz from both the leader and return strokes portions of the cloud-to-ground discharge with strong peaks associated with the return strokes. A STUDY OF THE VENT PIPE FOR THE GRAVITY PROBE-B c15

Ronald N. Knoshaug *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 19 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 22B

The Gravity Probe B experiment to test Einstein's relativity theory is a possible Space Shuttle project. Cooling of the gyroscopes and thrusting of the Probe into a zero-drag environment is accomplished by vaporizing liquid helium and venting the gas from the Probe through a nozzle system. In order to avoid malfunctioning of this cooling-thruster system, the pressure difference across the vent pipe-thruster system must be maintained to be less than the vapor pressure of liquid helium at the given temperature. This study investigated helium gas flow through the vent pipe for various configurations, mass flow rates, and pipe diameters. In addition, pertinent properties of both liquid and gaseous helium were investigated. It was observed that helical coiling of the pipe about the Dewar caused less frictional drag and less pressure change than did sharp pipe bending. Also, for various flow rates and nozzle throat area sizes, the system would malfunction for a given bath temperature. Author

A STUDY OF COMPONENT DESIGN LOADS DUE TO DYNAMIC ENVIRONMENT c39

Rajinder S. Mehta *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 12 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 20K

The random vibration of the components of the space shuttle causing internal cargo bay acoustic impingement on the payload was investigated. The import factors to be considered in the design of acoustically loaded structures are the prediction of acoustic environment, prediction of structural response to this environment, and to determine the effect of the response on the structural strength requirements. Two basic responses were analyzed. The primary structure response due to random vibration is first analyzed. The output of primary structure response is used as an input to the secondary structure to calculate the component response. J.D.H.

ATTITUDE CONTROL OF THE SPACE CONSTRUCTION BASE: A MODULAR APPROACH
c18

Daniel A. OConnor *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 35 p (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 22B

A planar model of a space base and one module is considered. For this simplified system, a feedback controller which is compatible with the modular construction method is described. The systems dynamics are decomposed into two parts corresponding to base and module. The information structure of the problem is non-classical in that not all system information is supplied to each controller. The base controller is designed to accommodate structural changes that occur as the module is added and the module controller is designed to regulate its own states and follow commands from the base. Overall stability of the system is checked by Liapunov analysis and controller effectiveness is verified by computer simulation. J.D.H.

A STUDY OF THE GEOGRAPHIC COVERAGE PROPERTIES OF A SATELLITE BORNE DOPPLER LIDAR WIND VELOCITY MEASURING SYSTEM
c47

Thomas H. Pate *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 26 p (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 04B

Geographic coverage frequency and geographic shot density for a satellite borne Doppler lidar wind velocity measuring system are measured. The equations of motion of the light path on the ground were derived and a computer program devised to compute shot density and coverage frequency by latitude-longitude sections. The equations for the coverage boundaries were derived and a computer program developed to plot these boundaries, thus making it possible, after an application of a map coloring algorithm, to actually see the areas of multiple coverage. A theoretical cross-swath shot density function that gives close approximations in certain cases was also derived. This information should aid in the design of an efficient data-processing system for the Doppler lidar. J.D.H.

THE DESIGN AND EVALUATION OF SUPERCONDUCTING CONNECTORS
c33

James E. Payne *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 10 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 09A

The development of a superconducting connector for superconducting circuits on space flights is described. It is proposed that such connectors be used between the superconducting readout loop and the SQUID magnetometer in the Gravity Probe B experiment. Two types of connectors were developed. One type employs gold plated niobium wires making pressure connections to gold plated niobium pads. Lead-plated beryllium-copper spring contacts can replace the niobium wires. The other type is a rigid solder or weld connection between the niobium wires and the niobium pads. A description of the methods used to produce these connectors is given and their performance analyzed. J.D.H.

RAY TRACING STUDIES OF JUPITER'S MAGNETOSPHERE
c91

N. Frank Six *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 16 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 03B

Raypaths for decametric wavelength radiation in Jupiter's magnetosphere were calculated. The model-dependent raypaths with the Voyager observations were compared. Characteristics of the source regions and the influence of propagation effects were deduced. A three dimensional ray tracing program was employed to calculate the raypaths. Families of rays were launched at particular angles with respect to the magnetic field lines to generate conical sheets of radiation for various frequencies and various source locations. As the planet's magnetic field rotates, these warped sheets of radiation sweep past the observer, producing signatures in frequency versus time plots. These signatures match some of those found in the Voyager data. The greatest propagation effects occur in and around the source regions in the Io auroral oval. N.W.

THUNDERSTORM ELECTRIC FIELD MODELLING c47

Arjun Tan *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 10 p refs (For primary document see N82-17043 07-99)

Avail: NTIS HC A25/MF A01 CSCL 04B

Calculation of electric field vectors within and near an isolated thundercloud (which has a given volume charge distribution) is envisaged. The maximum field strength within the thundercloud is calculated. The effects of screening layers, both above and below the thundercloud may be investigated, as well time-dependent potential problem. The study can lead to a better understanding of the charge distributions in a thundercloud, which in turn may shed some light on the actual mechanism of charging of a thundercloud. N.W.

N82-17066*# Alabama A & M Univ., Huntsville. Dept. of Physics.

DETERMINATION OF THE EFFICIENCY OF A PROPORTIONAL COUNTER FOR DETECTING X-RAYS c35

Alton C. Williams *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 6 p (For primary document see N82-17043 07-99)

Avail: NTIS HC A25/MF A01 CSCL 14B

A parallel beam of X-rays (approximately monoenergetic) passing through a rectangular slit and scattering from two flat mirrors comprise the X-ray test. The two mirrors are arranged in a periscope geometry so that the final reflected beam is parallel to the incident beam but displaced laterally by given amount. One of the detectors used to intercept the reflected X-rays is a one dimensional gas-filled proportional counter which is sensitive to the position (in 1 dimension) at which the X-rays are incident within its detecting 'window'. The total length of the anode wire of the proportional counter is 120 mm and this length can be divided electronically into a maximum of 1,024 parts. Hence, the output of an experimental run would be the number of incident X-rays that registered on each of the 1,024 channels. Each channel would represent an X-ray at a different spatial location and, hence, at a different scattering angle. In order to look at a wider range of scattering angles, the detector is placed on an optical table which can be rotated. N.W.

SOLIDIFICATION OF A BINARY MIXTURE c26

Basil N. Antar *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 15 p refs (For primary document see N82-17043 07-99)

Avail: NTIS HC A25/MF A01 CSCL 11F

The time dependent concentration and temperature profiles of a finite layer of a binary mixture are investigated during solidification. The coupled time dependent Stefan problem is solved numerically using an implicit finite differencing algorithm with the method of lines. Specifically, the temporal operator is approximated via an implicit finite difference operator resulting in a coupled set of ordinary differential equations for the spatial distribution of the temperature and concentration for each time. Since the resulting differential equations set form a boundary value problem with matching conditions at an unknown spatial point, the method of invariant imbedding is used for its solution. N.W.

DIGITAL COMPENSATION TECHNIQUES FOR THE EFFECTS OF TIME LAG IN CLOSED-LOOP SIMULATION USING THE 6 DOF MOTION SYSTEM c61

Richard Brown *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 30 p refs (For primary document see N82-17043 07-99)

Avail: NTIS HC A25/MF A01 CSCL 09B

Efforts are continued to develop digital filter compensation schemes for the correction of momentum gains observed in the closed loop simulation of the docking of two satellites using the 6 DOF motion system. Several filters that work well for small delays (< 100ms) and a non-preloaded probe are discussed. N.W.

N82-17070*# Alabama Univ. in Huntsville. Dept. of Physics.

A NEW SPS ANTENNA DESIGN TO REDUCE GRATING LOBES c32

C. H. Chan *In its* The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 14 p refs (For primary document see N82-17043 07-99)

Avail: NTIS HC A25/MF A01 CSCL 20N

In the Solar Power Satellite system, the antenna's misalignment will produce well defined grating lobes. These gratings lobe peaks occur every 440 km and are potentially hazardous to the environment. One way to suppress these peaks is to phase control every power module. The cost due to the increase in receiving electronics and processors, however, could prove to be prohibitive. A new design of the antenna involving the addition of two broad gaps, one along the x axis and another along the y axis is proposed. The gap distance is exactly one half of the distance between the center of two neighboring subarrays. Calculation of far field radiation patterns shows that the design reduces grating lobe peaks without sacrificing power in the main lobe. N.W.

N82-17071*# Alabama Univ. in Huntsville. Dept. of Physics.

ALUMINUM AND CHROMIUM ION PARTICLE STUDIES FOR ENHANCEMENT OF SURFACE PROPERTIES c26

In its the 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 12 p refs (For primary document see N82-17043 07-99)

Avail: NTIS HC A25/MF A01 CSCL 11F

An experimental project was undertaken which produced ion plated coatings on steel substrates. About twenty tensile samples of 4340 steel were ion plated in the Denton system with aluminum using resistance heating evaporation boats. In the V.T.A. 7375 system, ten samples were chromium ion plated; four on 4340 steel disks and the other six onto 440-C stainless steel rods for roller bearing wear improvement testing. Each of the samples was plated on a separate run to correlate the film parameters with the run parameters. Some of the chromium literature was reviewed, and improvements to the vacuum system were made. Author

N82-17072*# Alabama Univ. in Huntsville. Dept. of Mathematics.

STATISTICAL ANALYSIS OF DAILY MEAN TEMPERATURES c47

Deva C. Ross *In its* The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1980 13 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 04B

Data of daily mean temperatures recorded at the Kennedy Center during the period of 1957-1977 were analyzed to forecast daily mean temperatures and their thirty-day moving averages for a period of ten to fifteen days in a given month. Since it is found that the standard deviation is linear in the mean, a logarithmic transformation of the data is used for finding an integrated moving average process IMA by the Box-Jenkins aproach. The first differences of the transformed data seem to fit a moving average model with parameter value 2, MA(2). The consideration of seasonality factor makes the fit worse. J.M.S.

AN INVESTIGATION OF THE UNIFORM RANDOM NUMBER GENERATOR

c64

Enoch C. Temple *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 9 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 12A

Most random number generators that are in use today are of the congruential form X(i+1) + AX(i) + C mod M where A, C, and M are nonnegative integers. If C=O, the generator is called the multiplicative type and those for which C/O are called mixed congruential generators. It is easy to see that congruential generators will repeat a sequence of numbers after a maximum of M values have been generated. The number of numbers that a procedure generates before restarting the sequence is called the length or the period of the generator. Generally, it is desirable to make the period as long as possible. A detailed discussion of congruential generators is given. Also, several promising procedures that differ from the multiplicative and mixed procedure are discussed. J.M.S.

N82-17078*# Clemson Univ., S.C. Materials Engineering Program.

ON RELATIONSHIP BETWEEN MICROFISSURING AND MICROSTRUCTURE IN THE HAZ OF INCONEL 718

c26

Raymond G. Thompson *In* Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 24 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 11F

Inconel 718, as well as many other metals, is susceptible to intergranular hot cracking in the weld heat-affected-zone (HAZ). These cracks form near the solidus temperature of the metal during the welding process. This problem is of particular concern to NASA/MSFC because the SSME is primarily constructed of welded Inconel 718. The present program studied microfissuring in the weld HAZ of Inconel 718 by simulating HAZ thermal cycles with the Gleeble machine. Previous researchers have studied the instantaneous mechanical properties of the HAZ using the Gleeble. The present study examines the instantaneous microstructure of the HAZ. This approach showed that second phase structures, high in niobium, melt and wet the grain boundaries in the HAZ during welding. It is postulated that the resultant HAZ grain boundaries, enriched in niobium, act as preferred sites for microfissure nucleation as the weld zone cools. J.M.S.

HEAT LOSS AND DRAG OF SPHERICAL DROP TUBE SAMPLES

c34

Donald B. Wallace *In its* the 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 31 p refs (For primary document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 20D

Analysis techniques for three aspects of the performance of the NASA/MSFC 32 meter drop tube are considered. Heat loss through the support wire in a pendant drop sample, temperature history of a drop falling through the drop tube when the tube is filled with helium gas at various pressures, and drag and resulting g-levels experienced by a drop falling through the tube when the tube is filled with helium gas at various pressures are addressed. The developed methods apply to systems with sufficiently small Knudsen numbers for which continuum theory may be applied. Sample results are presented, using niobium drops, to indicate the magnitudes of the effects. Helium gas at one atmosphere pressure can approximately double the amount of possible undercooling but it results in an apparent gravity levels of up to 0.1 g. J.M.S.

INCIPIENT FAILURE DETECTION (IFD) OF SSME BALL BEARINGS

c37

In Alabama Univ. in Huntsville The 1981 NASA/ASEE Summer Fac. Fellowship Program Jan. 1982 20 p refs (For primary

document see N82-17043 07-99)
Avail: NTIS HC A25/MF A01 CSCL 13H

Because of the immense noise background during the operation of a large engine such as the SSME, the relatively low level unique hall bearing signatures were often buried by the overall machine signal. As a result, the most commonly used bearing failure detection technique, pattern recognition using power spectral density (PSD) constructed from the extracted bearing signals, is rendered useless. Data enhancement techniques were carried out by using a HP5451C Fourier Analyzer. The signal was preprocessed by a Digital Audio Crop. DAC-1024I noise cancelling filter in order to estimate the desired signal corrupted by the backgound noise. Reference levels of good bearings were established. Any deviation of bearing signals from these reference levels indicate the incipient bearing failures.

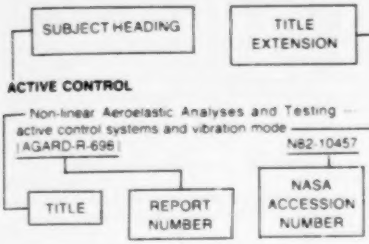
The document presents an overview of the four Technical Planning Objectives (TPO) and supporting data for each. These are extracted from the technical plan of the Flight Dynamics Laboratory (FDL). Information is largely based on FDL fiscal 1982 technology plan omitting specific funding and timing information of an 'Official Use Only' nature. Technical objectives are described for the technical areas of Structures and Dynamics, Vehicle Equipment/Subsystems, Flight Control and Aeromechanics. Points of contact for more information in each of the areas are identified. GRA

END OF R

SUBJECT INDEX

Typical Subject Index Listing



The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

A

A STARS
Infrared-excess of peculiar B- and A-stars
N82-16996

ABEL FUNCTION
Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

ABERRATION
Reduction of anisoplanatic errors
[AD-A106689] N82-16855

ABILITIES
Ability differences and cognitive mapping skill
[AD-A106389] N82-16741

ABRASION RESISTANCE
Heat sealable, flame and abrasion resistant coated fabric -- clothing and containers for space exploration
[NASA-CASE-MSC-18382-1] N82-16238

ABSORBERS (MATERIALS)
Nanosecond and picosecond spectroscopy and kinetics of dynamic absorbing materials
[AD-A107733] N82-16403

ABSORPTANCE
Analysis of results of mini round robin reflectance test
[PB81-244873] N82-16394

ABSORPTION COOLING
Simple predictive model for performance of desiccant beds for solar dehumidification
[DE81-023606] N82-16500

ACCELERATION (PHYSICS)
Acceleration measures and motion sickness incidence
[AD-A107996] N82-16734
Comparison of energy-storage devices for use in future automobiles
[DE81-026530] N82-16945

ACCELERATION STRESSES (PHYSIOLOGY)
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714
Condition of meningeal nervous system during repeated exposure to transverse accelerations
N82-16730

ACCELERATION TOLERANCE
Acceleration measures and motion sickness incidence
[AD-A107996] N82-16734

ACCELEROMETERS
Advanced recorder design and development
[PB81-244105] N82-16385

ACCESS CONTROL
A translator for the high level language sequel 2/query statement
[INPE-2184-RPE/395] N82-16757

ACCIDENTS
Gravitational agglomeration of post-HCDA LMFBR nonspherical aerosols
[AD-A106766] N82-16641

ACCURACY
NBS phase angle calibration standard
[PB81-244899] N82-16390

ACETATES
Behavior of construction adhesives under long-term load
[AD-A106565] N82-16240
Substitutes for paraformaldehyde hardener and zinc acetate as an accelerator in Wattle-Tannin based adhesives for exterior grade particle board
[PB81-245755] N82-16253

ACID RAIN
Modifications of trajectory models needed for pollutant source-receptor analysis
[DE81-029915] N82-16553
Acid rain and forest productivity
[DE81-030916] N82-16555
Atmospheric deposition of heavy metals and their interaction with acid precipitation in a North American deciduous forest
[DE81-032004] N82-16556

ACOUSTIC DELAY LINES
The 403 MHz SAW oscillator
[AD-A107588] N82-16378

ACOUSTIC MEASUREMENT
Comparison of acoustic data from a 102 mm conic nozzle as measured in the RAE 24-foot wind tunnel and the NASA Ames 40- by 80-foot wind tunnel
[NASA-TM-81343] N82-16083
The ARL/FED anechoic chamber

AIRCRAFT DESIGN

Configuration Development System/NAVAIR Report
[AD-A106727] N82-16072

AIRCRAFT DETECTION

Passive trilateration positioning procedure error analysis
[AD-A106690] N82-16061

AIRCRAFT ENGINES

Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093

Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850

AIRCRAFT EQUIPMENT

System for providing an integrated display of instantaneous information relative to aircraft attitude, heading, altitude, and horizontal situation
[NASA-CASE-FRC-11005-1] N82-16075

Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850

AIRCRAFT FUELS

Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] N82-16057

AIRCRAFT GUIDANCE

Automation of on-board flightpath management
[NASA-TM-84212] N82-16088

AIRCRAFT HAZARDS

The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data
[AD-A106419] N82-16644

Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850

AIRCRAFT INSTRUMENTS

Advanced recorder design and development
[PB81-244105] N82-16385

AIRCRAFT LANDING

An investigation of automatic guidance concepts to steer a VTOL aircraft to a small aviation facility ship
[NASA-CR-152407] N82-16087

AIRCRAFT MODELS

Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801

Analytical study of twin-jet shielding
[NASA-CR-165103] N82-16802

Analytical study of twin-jet shielding
[NASA-CR-165104] N82-16803

Analytical study of twin-jet shielding
[NASA-CR-165105] N82-16804

Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805

Analytical study of twin-jet shielding two-dimensional model
[NASA-CR-165107] N82-16806

AIRCRAFT NOISE

Community sensitivity to changes in aircraft noise exposure
[NASA-CR-3490] N82-16807

A shock wave approach to the noise of supersonic propellers
[NASA-TM-82752] N82-16809

AIRCRAFT PILOTS

The prevalence of visual deficiencies among 1979 general aviation accident airmen
[AD-A106489] N82-16054

Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706

AIRCRAFT SAFETY

Test and evaluation of improved aircrew restraint systems
[AD-A107578] N82-16056

AIRCRAFT STRUCTURES

Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-3502] N82-16178

AIRFOIL PROFILES

The boundary layer on compressor cascade blades
[NASA-CR-165079] N82-16045

AIRFOILS

CAS22 - FORTRAN program for fast design and analysis of shock-free airfoil cascades using fictitious-gas concept
[NASA-CR-3507] N82-16044

Some experimental investigations on transonic flutter characteristics of thin plate wing models with sweptback and tapered tips
[NAL-TR-662] N82-16050

The analysis and design of two-element airfoil configuration in transonic flow
[AD-A107547] N82-16052

AIRLINE OPERATIONS

Air service, airport access and future technology
[PB82-105958] N82-16100

AIRPORTS

Air service, airport access and future technology
[PB82-105958] N82-16100

Winter and summer measurements of European very low altitude volume scattering coefficients
[AD-A106363] N82-16666

Community sensitivity to changes in aircraft noise exposure
[NASA-CR-3490] N82-16807

AIRSHIPS

Study of ground handling characteristics of a maritime patrol airship
[NASA-CR-166253] N82-16090

ALABAMA

Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] N82-16537

ALGAE

Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae
N82-16720

ALGEBRA
The H-function and probability density functions of certain algebraic combinations of independent random variables with H-function probability distribution
[AD-A106768] N82-16777

ALGOL
A high level language for data acquisition and process control
[INPE-2173-RPE/389] N82-16758

ALGORITHMS
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 3: A comparison of waypoint guidance algorithms for RNAV/MLS transition
[NASA-CR-3512] N82-16060
Construction of large reaction mechanisms
[AD-A106139] N82-16197
The optimal planning of computerized manufacturing systems --- data flow CMS control system architecture
[PB81-241564] N82-16310
Research on algorithms for adaptive antenna arrays
[AD-A106684] N82-16321
A modified Dodge algorithm for the parabolized Navier-Stokes equation and compressible duct flows
[NASA-CR-165060] N82-16363
Simplified algorithm for calculating radiative transfer in satellite images
[INPE-2169-RPE/385] N82-16450
Digital correlation of DDRS data
[NASA-CR-167494] N82-16452
NOSS altimeter algorithm specifications
[NASA-RP-1083] N82-16683
Multiple microcomputer control algorithm feasibility breadboard
[AD-A107940] N82-16753
Sparse matrices
[AD-A105187] N82-16775
Nonpolynomial and inverse interpolation for line search: Synthesis and convergence rates
[AD-A106680] N82-16776
Systolic algorithms for running order statistics in signal and image processing
[AD-A106555] N82-16787
An interactive approach to multiple criteria decision making based on statistical inference
[PB82-108747] N82-16924

ALIGNMENT
Low-energy ion pitch-angle distribution in the outer magnetosphere: Ion zipper distributions
[AD-A106153] N82-16646
Transient magnetic-field calculations with TRIDIF
[DE81-030843] N82-16785

ALKALIES
Phonons in alkali graphite intercalation compounds
[DE82-000059] N82-16916

ALKYLATION
Macromolecular structural changes in bituminous coals during extraction and solubilization
[DE82-000687] N82-16830

ALLOCATIONS
Analysis of state-energy-program capabilities
[DE82-001963] N82-16523

ALLOYS
An experimental evaluation of tearing instability using the compact specimen
[AD-A107633] N82-16218

ALTERNATIVES
An interactive approach to multiple criteria decision making based on statistical inference
[PB82-108747] N82-16924

ALTITUDE ACCLIMATIZATION
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

ALTITUDE SIMULATION
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

ALUMINUM
Electrorefining of aluminum
[PB81-243693] N82-16230
Plating on aluminum
[PB81-239501] N82-16235
Mechanical properties of adhesively bonded aluminum structures protected with hydrated inhibitors
[AD-A106222] N82-16241
Temperature and concentration transients in the aluminum-air battery --- application to electric vehicles
[DE81-030338] N82-16512
Aluminum impurity ions and the ambipolar potential in EBT N82-16885

ALUMINUM ALLOYS
Effects of environmental variables on the crack initiation stages of corrosion fatigue of high strength aluminum alloys
[NASA-CR-165115] N82-16216
Crevice corrosion and metal-ion concentration cell-corrosion resistance of candidate materials for OTEC heat exchangers, parts 1 and 2
[DE82-000909] N82-16227

ALUMINUM CHLORIDES
Electrorefining of aluminum
[PB81-243693] N82-16230

ALUMINUM COATINGS
Aluminum and chromium ion particle studies for enhancement of surface properties N82-17071

ALUMINUM COMPOUNDS
A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

ALUMINUM GALLIUM ARSENIDES
High resistivity molecular beam epitaxial AlGaAs for device applications
[AD-A107597] N82-16819

ALUMINUM OXIDES
Conservation of cooling water by silica removal with activated alumina
[PB81-247959] N82-16570

AMBIENT TEMPERATURE
Carbon monoxide and non-FTP (Federal Test Procedures) ambient temperature
[PB81-243180] N82-16962

AMBIPOLAR DIFFUSION
Multi-species ambipolar phenomena in the ELMO Bumpy Torus N82-16878
Ambipolar potential and its effects on the confinement parameters of the EBT plasma
N82-16886
Anomalous transport and the ambipolar field in EBT N82-16891
The effect of transiting electrons on the ambipolar potential in a tandem mirror plasma N82-16892
Effcts due to the large ambipolar potential in TMX
N82-16895
Ambipolar potential control by fast wave heating in Bumpy Tori N82-16897
Effect on ambipolar potential of ion cyclotron heating N82-16898

AMINES
Synthesis of aminosilane and aromatic diamine intermediates for polymerization N82-17055

AMINO ACIDS
Plasma chemistry and organic synthesis
[NASA-TM-75843] N82-16175

AMMONIA
Effects of ammonia contamination by water on OTEC power system performance
[DE82-001832] N82-16535

AMMUNITION
QOT and E of the F-16 20mm ammunition loading system's ability to upload/download A-7D aircraft
[AD-A108007] N82-16099

AMPLIFICATION
Gain uncertainty of arrayed antennas N82-16122

AMPLITUDE MODULATION
Digital single sideband modulators for analog signals
[IND-FB-105] N82-16316

AMPLITUDES
NBS phase angle calibration standard
[PB81-244899] N82-16390

ANAEROBES
Density levels of pathogenic organisms in municipal wastewater sludge, a literature review
[PB82-102286] N82-16619

ANALOG CIRCUITS
Digital single sideband modulators for analog signals
[IND-FB-105] N82-16316

ANALOG DATA
Digital single sideband modulators for analog signals
[IND-FB-105] N82-16316

ANALOG TO DIGITAL CONVERTERS
Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096
A calibration service for analog-to-digital and digital-to-analog converters
[PB81-243404] N82-16395

ANALYZERS
Feasibility of interfacing a microcomputer with a multichannel analyzer to perform gamma ray spectroscopy
[AD-A106176] N82-16194

ANECHOIC CHAMBERS
Calibration of the Ames Anechoic Facility. Phase 1: Short range plan
[NASA-TM-84081] N82-16091
The ARL/FED anechoic chamber
[AD-A106352] N82-16376

ANGLES (GEOMETRY)
Effects of strong turbulence on short wavelength laser: Experimental determination of mean square wander angle
[AD-A106776] N82-16652

ANGULAR RESOLUTION
Angular interferometry-resolution enhancement using half-wave plates
[AD-A107974] N82-16860

ANGULAR VELOCITY
Tidal friction in the Earth-Moon system
N82-16978

ANISOTROPIC MEDIA
Random anisotropy effects in Ising spin glass
[INPE-2194-TDL/061] N82-16919

ANNUAL VARIATIONS
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516
Performance of trickling filter plants: Reliability, stability, variability
[PB82-108143] N82-16603

ANNULAR SUSPENSION AND POINTING SYSTEM
Adaptive control system for large annular momentum control device N82-16165

ANODES
Preparation and characterization of conducting iron tungstates
[AD-A106541] N82-16193
Study of the secondary Li electrode in organic electrolyte
[DE82-001508] N82-16209
Calcium inorganic electrolyte battery development
[AD-A106199] N82-16497

ANTENNA ARRAYS
Gain uncertainty of arrayed antennas N82-16122
The effect of partial coherence in receiving system noise temperature on array gain for telemetry and radio frequency carrier reception for similar receiving systems N82-16127
High-resolution passive microwave imaging of the surface of the Earth N82-16156
Electromagnetic design of a microwave radiometer antenna system N82-16162
Research on algorithms for adaptive antenna arrays
[AD-A106684] N82-16321
A study of eigenvalue behavior in adaptive arrays
[AD-A106544] N82-16322
Advanced adaptive antenna techniques
[AD-A106545] N82-16323

ANTENNA COMPONENTS
Thermal measurement technique of rib elements on DSN antenna structure N82-16112
Antenna azimuth bearing model experiment
N82-16132

ANTENNA DESIGN
Design of a 1.5-m, 32-GHz, clear aperture antenna
N82-16114
The microwave radiometer spacecraft: A design study
[NASA-RP-1079] N82-16153
The microwave radiometer spacecraft. A design study: Executive summary N82-16154
High-resolution passive microwave imaging of the surface of the Earth N82-16156
Radiometer design concepts for large aperture microwave radiometer spacecraft N82-16157
Evolution and design characteristics of the microwave radiometer spacecraft N82-16158
Systems design and analysis of the microwave radiometer spacecraft N82-16159

Biaxial and electrostatic tensioning effects on thin membrane materials N82-16166
Bootlace catenary concept for antenna shape control N82-16167
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports [NASA-CR-161855] N82-17043
Surface contour of a biaxially strained, doubly curved antenna reflective mesh N82-17063
A new SPS antenna design to reduce grating lobes --- solar power satellites N82-17070

ANTENNA FEEDS
Effects of antenna blockage on radio frequency performance of the microwave radiometer spacecraft N82-16164
Microwave switching power divider --- antenna feeds [NASA-CASE-GSC-12420-1] N82-16340

ANTENNA RADIATION PATTERNS
Goldstone STDN 9-meter radiation test N82-16137
Radiometer design concepts for large aperture microwave radiometer spacecraft N82-16157
Effects of random distortions on the surface accuracy of a large antenna N82-16163
Effects of antenna blockage on radio frequency performance of the microwave radiometer spacecraft N82-16164
A study of eigenvalue behavior in adaptive arrays [AD-A106544] N82-16322
Advanced adaptive antenna techniques [AD-A106545] N82-16323

ANTENNAS
Kafjord, Norway transmission line VLF antenna tests, 1979 - 1980 [AD-A106430] N82-16325
Multipole expansion for transient electric and magnetic fields in an internally excited spherical cavity contaning dampers of finite thickness with distributed electrical properties [AD-A106384] N82-16329

APERTURES
Design of a 1.5-m, 32-GHz, clear aperture antenna N82-16114

APPLICATIONS OF MATHEMATICS
Analytical study of twin-jet shielding [NASA-CR-165102] N82-16801

APPROACH
Spectrally balanced chromatic landing approach lighting system [NASA-CASE-ARC-10990-1] N82-16059

APPROPRIATIONS
Analysis of state-energy-program capabilities [DE82-001963] N82-16523
Appropriation reimbursements [PB81-245409] N82-16925

APPROXIMATION
Calculations of elastic wave scattering from voids and crack-like defects by the method of optimal truncation [DE81-030770] N82-16428
Density estimation and projection pursuit methods [AD-A107816] N82-16779
Approximate fluid-structure interaction theories for acoustic echo signal predictions [AD-A106349] N82-16812

AQUEOUS SOLUTIONS
Aqueous dissolution of calcium metaphosphate glasses [DE81-030130] N82-16248
Research in nuclear chemistry [DE81-030542] N82-16847

AQUICULTURE
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-17), NOAA ship George B. Kelez, April 1978 [PB82-100983] N82-16576
MESA (Marine Ecosystem Analysis) New York Bight projcet. Expanded water column characterization cruise (XWCC-18), NOAA ship George B. Kelez, Jun. 1978 [PB82-100991] N82-16577
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-19), NOAA ship George B. Kelez, July 1978 [PB82-101007] N82-16578
MESA (Marine Ecosystem Analysis) New York Bight project. Expanded water column characterization cruise (XWCC-20), NOAA ship George B. Kelez, July-August 1978 [PB82-101015] N82-16579
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-21), NOAA ship George B. Kelez, April 1979 [PB82-101023] N82-16580
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-22), NOAA ship George B. Kelez, May-June 1979 [PB82-101031] N82-16581
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-24), NOAA ship George B. Kelez, August 1979 [PB82-101056] N82-16583

AQUIFERS
Analysis of stream-aquifer system interrelationships in the Big Blue and Little Blue River Basins in Gage and Jefferson Counties, Nebraska [PB81-245870] N82-16466
The source and transport of arsenic in northeastern Ohio groundwaters [PB81-240525] N82-16471
Compressed air energy storage preliminary design and site development program in an aquifer. Turbomachinery design [DE82-000672] N82-16524

ARC HEATING
ARC control experiments using a high performance arc heater [AD-A106140] N82-16098

ARCHITECTURE
Building technology project summaries, 1980 - 1981 [PB82-106105] N82-16296
Passive-solar multi-family concepts [DE82-000456] N82-16499
Daylighting [DE82-000930] N82-16515
The Class C Passive Performance Evaluation Program [DE82-000454] N82-16533

ARCHITECTURE (COMPUTERS)
The optimal planning of computerized manufacturing systems --- data flow CMS control system architecture [PB81-241564] N82-16310
Simple computer program to model 3-dimensional underground heat flow with realistic boundary conditions [DE81-030213] N82-16373

ARCTIC REGIONS
A VLBI survey of the northern polar cap region N82-16108

ARGENTINA
Transport and energy [DE81-030287] N82-16946

ARRESTING GEAR
Test and evaluation of improved aircrew restraint systems [AD-A107576] N82-16056

ARTIFICIAL CLOUDS
Determination of upper atmospheric winds and turbulent diffusion and dissipation from artificial cloud expansion and growth [AD-A106387] N82-16638

ARTIFICIAL INTELLIGENCE
The heuristic of George Polya and its relation to artificial intelligence [AD-A106557] N82-16771
The knowledge level [AD-A106556] N82-16772

ARTILLERY FIRE
The zero-Doppler positioning system [AD-A107606] N82-16064

ASHES
Factors affecting the soundness of blended cements [PB82-104746] N82-16299
Investigation of the use of coal refuse-fly ash compositions as highway base course material [PB82-101940] N82-16301

ASPHALT
Laboratory pavement polishing device (wear machine) versus field friction test units and accumulative traffic (ADT). Phase 2. Correlation study [PB81-233256] N82-16293

ASPHALTENES
Reversibility of coal liquefaction [DE81-027604] N82-16277

ASSESSMENTS
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2 [PB82-103573] N82-16616

ASSURANCE
Solar consumer assurance: An assessment of mechanisms in the northeast [DE81-030052] N82-16538

ASTEROIDS
Reconnaissance and recovery of the brighter asteroids. Brief summary of the entire project [NASA-CR-165101] N82-17008
The stochastic evolution of asteroidal regoliths and the origin of brecciated and gas-rich meteorites N82-17011

ASTROMETRY
Reconnaissance and recovery of the brighter asteroids. Brief summary of the entire project [NASA-CR-165101] N82-17008

ASTRONOMICAL COORDINATES
Auxiliary subprograms for calculating the navigational parameters of artificial Earth satellites. FORTRAN IV [NASA-TM-75684] N82-16140

ASTRONOMICAL PHOTOGRAPHY
Reconnaissance and recovery of the brighter asteroids. Brief summary of the entire project [NASA-CR-165101] N82-17008

ASTRONOMICAL PHOTOMETRY
Star populations in the galactic halo N82-16988
The new optical (300 nm less than lambda lambda less than 1000 nm) ESO photometer N82-16998

ASTRONOMY
Astronomical Society Information no. 50. Reports of the Scientific Meetings [REPT-50] N82-16967

ASTROPHYSICS
Kinetic theory in astrophysics and cosmology N82-17062

ASYMPTOTIC METHODS
Large deformations near the tips of an interface-crack between two neo-hookean sheets [AD-A106147] N82-16425

ATLANTIC OCEAN
An observational study of blocking [AD-A106739] N82-16670
Annual data and verification tabulation Atlantic tropical cyclones, 1980 [PB81-246050] N82-16681
Frequency and motion of Atlantic tropical cyclones [PB81-247256] N82-16682

ATMOSPHERIC ATTENUATION
Change in the solar constant between 1966 and 1978 N82-17017

ATMOSPHERIC BOUNDARY LAYER
An overview, current status, and future plans for the DOE atmospheric studies in complex terrain (ASCOT) program [DE91-024417] N82-16651

ATMOSPHERIC CHEMISTRY
Air pollution and related phenomena in South Africa [SR-APRG-12] N82-16551

ATMOSPHERIC CIRCULATION
Impact of topographic circulations on the transport and dispersion of air pollutants [PB82-102435] N82-16584
An overview, current status, and future plans for the DOE atmospheric studies in complex terrain (ASCOT) program [DE91-024417] N82-16651
Effects of diabatic heating on the ageostrophic circulation of an upper tropospheric jet streak [NASA-CR-3497] N82-16658
Severe storms and local weather research N82-16663
Ice crystal processes in Colorado, upslope snowstorms. Article 1: Case study of an upslope snowstorm [PB82-109547] N82-16676

ATMOSPHERIC COMPOSITION
Analysis of data for the development of density and composition models of the upper atmosphere
[AD-A106420] N82-16650

ATMOSPHERIC DENSITY
Auxiliary subprograms for calculating the navigational parameters of artificial Earth satellites. FORTRAN IV
[NASA-TM-75684] N82-16140
Analysis of data for the development of density and composition models of the upper atmosphere
[AD-A106420] N82-16650

ATMOSPHERIC DIFFUSION
Demonstration of a long-range atmospheric tracer system using perfluorocarbons
[PB82-106246] N82-16613
Reeds computer code
[NASA-CR-161956] N82-16760

ATMOSPHERIC EFFECTS
Effects of environmental variables on the crack initiation stages of corrosion fatigue of high strength aluminum alloys
[NASA-CR-165115] N82-16216
Reduction of anisoplanatic errors
[AD-A106669] N82-16855

ATMOSPHERIC HEATING
Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A106386] N82-16640
Comparison of the dynamic processes during major and minor stratospheric warmings in a numerical model
[AD-A106371] N82-16645

ATMOSPHERIC MODELS
A model to calculate EM fields in tropospheric duct environments at frequencies through SHF
[AD-A107710] N82-16335
Air pollution and related phenomena in South Africa
[SR-APRG-12] N82-16551
Analysis of data for the development of density and composition models of the upper atmosphere
[AD-A106420] N82-16650
An overview, current status, and future plans for the DOE atmospheric studies in complex terrain (ASCOT) program
[DE91-024417] N82-16651
Global weather research N82-16662
Reeds computer code
[NASA-CR-161956] N82-16760

ATMOSPHERIC PRESSURE
An observational study of blocking
[AD-A106739] N82-16670

ATMOSPHERIC REFRACTION
A model to calculate EM fields in tropospheric duct environments at frequencies through SHF
[AD-A107710] N82-16335

ATMOSPHERIC SCATTERING
Models of weather environments adverse to electro-optical systems
[AD-A107637] N82-16859

ATMOSPHERIC TEMPERATURE
Statistical Analysis of daily mean temperatures N82-17072

ATMOSPHERIC TIDES
Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A106386] N82-16640

ATMOSPHERIC TURBULENCE
Advanced Space Shuttle simulation model
[NASA-CR-161958] N82-16143
Determination of upper atmospheric winds and turbulent diffusion and dissipation from artificial cloud expansion and growth
[AD-A106387] N82-16638

ATOMIC COLLISIONS
Energetics and collision dynamics of electronic transition lasers
[AD-A107591] N82-16404
The study of atom-atom electron-molecule and photon-molecule processes
[AD-A107991] N82-16820

ATOMIC EXCITATIONS
Electron-impact excitation of ions
[DE81-030806] N82-16825

ATOMIZERS
Study to perform preliminary experiments to evaluate particle generation and characterization techniques for zero-gravity cloud physics experiments
[NASA-CR-3486] N82-16657

ATS 6
ATS-6 engineering performance report. Volume 2: Orbit and attitude controls
[NASA-RP-1080-VOL-2] N82-16148
ATS-6 engineering performance report. Volume 3: Telecommunications and power
[NASA-RP-1080-VOL-3] N82-16149
ATS-6 engineering performance report. Volume 4: Television experiments
[NASA-RP-1080-VOL-4] N82-16150
ATS-6 engineering performance report. Volume 5: Propagation experiments
[NASA-RP-1080-VOL-5] N82-16151
ATS-6 engineering performance report. Volume 6: Scientific experiments
[NASA-RP-1080-VOL-6] N82-16152

ATTITUDE (INCLINATION)
Phenomena of fluctuation of human reaction to antiorthostatic position N82-16721

ATTITUDE CONTROL
Variable gain for a wind turbine pitch control
[NASA-TM-82751] N82-16478

AUDIO FREQUENCIES
Method to treat picture and sound carriers to obtain a constant and adjustable level spacing between the picture carrier and the second carrier of a TV signal when there are variations of field intensity between the carriers
[BMFT-FB-T-81-041] N82-16336

AUGER SPECTROSCOPY
Oxidation of polycrystalline boron: The interpretation of AES and ELS results
[DE82-000087] N82-16201

AUGMENTATION
Enhanced oil recovery by CO2 foam flooding
[DE82-000949] N82-16484

AURORAS
Double layers on auroral field lines
[NASA-CR-165113] N82-16835

AUSTENITIC STAINLESS STEELS
Swelling and microstructure of HFIR irradiated austenitic stainless steels
[DE82-000158] N82-16219
Influence of irradiation on the tensile properties of austenitic stainless steel weldments
[DE81-032002] N82-16222
Chromium substitution in stainless steels
[PB81-235475] N82-16231

AUSTRALIA
Climatic conditions at Air Force bases in Australia
[AD-A106275] N82-16664

AUTOMATED GUIDEWAY TRANSIT VEHICLES
A survey of electric propulsion motors for automated guideway transit vehicles
[PB82-109307] N82-16360

AUTOMATIC CONTROL
DSS 13 unattended operations station controller N82-16118
Potential economic benefits from process control of coal preparation plants
[DE82-000681] N82-16263
Dimensions, volume 65, number 4, May/June 1981
[PB82-106006] N82-16956

AUTOMATIC FLIGHT CONTROL
An investigation of automatic guidance concepts to steer a VTOL aircraft to a small aviation facility ship
[NASA-CR-152407] N82-16087
Automation of on-board flightpath management
[NASA-TM-84212] N82-16088
A program to evaluate a control system based on feedback of aerodynamic pressure differentials
[NASA-CR-163466] N82-16089

AUTOMATIC LANDING CONTROL
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 3: A comparison of waypoint guidance algorithms for RNAV/MLS transition
[NASA-CR-3512] N82-16060

AUTOMATIC TEST EQUIPMENT
NBS phase angle calibration standard
[PB81-244899] N82-16390
Microprocessor digital fault
[AD-A106707] N82-16752

AUTOMOBILE ACCIDENTS
Review of literature and regulation relating to thoracic impact toleance and injury criteria
[PB82-108697] N82-16736

AUTOMOBILE ENGINES
Acoustic and emission characteristics of small, high-speed internal combustion engines
[PB82-104225] N82-16416
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] N82-16417
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] N82-16485
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] N82-16937

AUTOMOBILE FUELS
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] N82-16259
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] N82-16595
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] N82-16947
Development of adjustment factors for on road fuel economy
[PB81-241986] N82-16950
Evaluation of the Moleculetor Fuel Energizer under section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-247942] N82-16958
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] N82-16959
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] N82-16966

AUTOMOBILES
Exhaust emissions from high-mileage catalyst-equipped passenger cars
[PB82-103326] N82-16586
Carbon monoxide commuter exposure data base: A 5-day study in Los Angeles
[PB82-103607] N82-16589
Emission characteristics of 1979 and 1980 California passenger cars equipped with three-way catalysts
[PB82-105073] N82-16594
Unregulated exhaust emissions from noncatalyst baseline cars under malfunction conditions
[PB82-101130] N82-16596
Comparison of energy-storage devices for use in future automobiles
[DE81-026530] N82-16945
Consumar behavior towards fuel efficient vehicles, volume 2
[PB81-246654] N82-16948
Development of adjustment factors for on road fuel economy
[PB81-241986] N82-16950
Evaluation of retro-reflective measurement devices
[PB81-243602] N82-16952

AUTOREGRESSIVE PROCESSES
ARMA spectral estimation: An efficient closed form procedure
[AD-A106753] N82-16788

AVAILABILITY
The wind characteristics program element
[DE82-004676] N82-16673

AVERAGE
ARMA spectral estimation: An efficient closed form procedure
[AD-A106753] N82-16788

AVIONICS
Digital Avionics Information System (DAIS): Development and demonstration
[AD-A107906] N82-16079
Software considerations in airborne systems and equipment certification
[RTCA/DO-178] N82-16759

AXIAL FLOW TURBINES
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)
[PB81-239568] N82-16547

AZIMUTH
Use of back azimuth measurements in seismic event location with regional data
[AD-A106429] N82-16639

AZOLES
Synthesis of articulated all-para polymers
[AD-A107554] N82-16247

B

B STARS
Infrared-excess of peculiar B- and A-stars
N82-16996

BACKLOBES
A new SPS antenna design to reduce grating lobes — solar power satellites N82-17070

BALANCE
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713

BALL BEARINGS
Incipient failure detection (IFD) of SSME ball bearings N82-17080

BALLOON-BORNE INSTRUMENTS
The Galactic centre and Aquila regions in the near infrared N82-16969
Far infrared balloon-borne observations
N82-16972

BALMER SERIES
Nuclear activity in SO, SBO - galaxy nuclei
N82-16999

BAND STRUCTURE OF SOLIDS
Studies of the effect of orientation on the elastic constants of stretched and hydrostatically extruded poly(chlorotrifiouroethylene): A model of affine orientation in semi-crystalline polymers
[AD-A107909] N82-16245

BARIUM TITANATES
Study of the photovoltaic effect in thin film barium titanate
[NASA-CR-165061] N82-16479

BARLEY
Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] N82-16448

BARRELS (CONTAINERS)
Evaluation of three partially volatile neutron shields for high-performance shipping casks
[DE82-000245] N82-16831

BASIC (PROGRAMMING LANGUAGE)
A determination of the current density in electron beams N82-17045

BAYES THEOREM
Statistical data analysis for reliability tests
[AD-A105188] N82-16786

BAYS (TOPOGRAPHIC FEATURES)
Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] N82-16439
MESA (Marine Ecosystem Analysis) New York Bight project: Winkler oxygen data, expanded water column characterization cruises (XWCC-2 to SWCC-24), NOAA ships Researcher and George B. Kelez, 1975 - 1979
[PB82-100975] N82-16575
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-17), NOAA ship George B. Kelez, April 1978
[PB82-100983] N82-16576
MESA (Marine Ecosystem Analysis) New York Bight projcet. Expanded water column characterization cruise (XWCC-18), NOAA ship George B. Kelez, Jun. 1978
[PB82-100991] N82-16577
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-19), NOAA ship George B. Kelez, July 1978
[PB82-101007] N82-16578
MESA (Marine Ecosystem Analysis) New York Bight project. Expanded water column characterization cruise (XWCC-20), NOAA ship George B. Kelez, July-August 1978
[PB82-101015] N82-16579
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-21), NOAA ship George B. Kelez, April 1979
[PB82-101023] N82-16580
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-22), NOAA ship George B. Kelez, May-June 1979
[PB82-101031] N82-16581
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-23), NOAA ship George B. Kelez, July 1979
[PB82-101049] N82-16582
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-24), NOAA ship George B. Kelez, August 1979
[PB82-101056] N82-16583

BEAM INJECTION
Neutral-beam systems for magnetic-fusion reactors
[DE81-027940] N82-16876

BEAMS (SUPPORTS)
Strength and stiffness of small glued-laminated beams with different qualities of tension laminations
[AD-A106562] N82-16421
Evaluation of the fracture behavior of concrete with the J-integral
[PB81-235855] N82-16433
Experiments on continuous composite beams
[PB81-247116] N82-16434
Bolted connections in composite structures
[PB81-247124] N82-16435

BEARING (DIRECTION)
System for providing an integrated display of instantaneous information relative to aircraft attitude, heading, altitude, and horizontal situation
[NASA-CASE-FRC-11005-1] N82-16075

BEARINGS
Antenna azimuth bearing model experiment
N82-16132

BENZENE
Vibrational overtone spectroscopy of benzene and pyridine on Ag(111)
[AD-A106396] N82-16191

BERYLLIUM ISOTOPES
Neutron capture gamma-ray spectroscopic measurements in the actinide region
[DE81-030316] N82-16832

BETA FACTOR
High-beta studies with beam-heated, non-circuler plasmas in ISX-B
[DE81-032003] N82-16874
Central call confinement in MFTF-B N82-16893

BIBLIOGRAPHIES
Aeronautical Engineering. A continuing bibliography with indexes, supplement 141, November 1981
[NASA-SP-7037(141)] N82-16040
Aeronautical Engineering. A continuing bibliography with indexes, supplement 142 — December 1981
[NASA-SP-7037(142)] N82-16041
Earth Resources: A continuing bibliography, with indexes, issue 31
[NASA-SP-7041(31)] N82-16436
Density levels of pathogenic organisms in municipal wastewater sludge, a literature review
[PB82-102286] N82-16619
Aerospace Medicine and Biology. A continuing bibliography (Supplement 226)
[NASA-SP-7011(226)] N82-16731
Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature
[PB82-102567] N82-16737
Fiscal year 1981 scientific and technical reports, articles, papers, and presentations
[NASA-TM-82445] N82-16927

BILLETS
Skid-test evaluation of protective coverings for explosive billets
[DE82-000072] N82-16258

BINARY MIXTURES
Solidification phenomena of binary organic mixtures N82-17047
Solidification of a binary mixture N82-17067

BINARY STARS
The formation of compact objects in binary systems N82-16981
Wolf-Rayet stars with compact companions
N82-16982

BIOASTRONAUTICS
USSR report: Space biology and aerospace medicine, volume 15, no. 6, November - December 1981
[JPRS-79849] N82-16704
Question of redistribution of blood in orthostatic position N82-16705
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706
Systemic and cerebral hemodynamics in flight personnel exposed to moderate hypoxia
N82-16707
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711
Simulation of some of man's movements in different gravity fields N82-16712
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
Hygienic principles of ongoing monitoring of quality of recycled water during space flights N82-16717
Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine
N82-16718
Possible use of house fly larvae for utilization of organic waste in biological life-support systems
N82-16719
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae
N82-16720
Phenomena of fluctuation of human reaction to antiorthostatic position N82-16721
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight N82-16722

BIOCHEMICAL FUEL CELLS
Compatibility and accelerated aging study for Li(Si)/FeS2 thermally activated batteries
[DE81-030210] N82-16503

BIODEGRADATION
Engineering and economic assessment of autoheated thermophilic aerobic digestion with air aeration
[PB82-102310] N82-16620

BIOELECTRICITY
Electrode unit for testing human H reflex
N82-16728

BIOGEOCHEMISTRY
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711

BIOLOGICAL EFFECTS
Studies on toxicity of OTEC plant components on marine animals from the Gulf of Mexico
[DE81-030167] N82-16564
Aerospace Medicine and Biology. A continuing bibliography (Supplement 226)
[NASA-SP-7011(226)] N82-16731

BIOLOGICAL EVOLUTION
Solar rotation and activity in the past and their possible influence upon the evolution of life
N82-16971

BIOLOGICAL MODELS (MATHEMATICS)
Simulation of some of man's movements in different gravity fields N82-16712

BIOMASS ENERGY PRODUCTION
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 1: Project conceptual design
[DE82-000474] N82-16260
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 2: Project marketing/economic/financial and organization
[DE82-000472] N82-16261
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 3: Project environmental/health/safety and socioeconomics
[DE82-000473] N82-16262
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 1: Executive summary
[DE82-000294] N82-16265

Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 2: Technical analysis
[DE82-000479] N82-16266

Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 3: Procurement analysis, marketing analysis, and environmental and regulatory analysis
[DE82-000478] N82-16267

Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 4: Economic and financial analysis, management analysis
[DE82-000477] N82-16268

Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 1
[DE81-903753] N82-16273

Proceedings of the 4th International Symposium on Alcohol fuels Technology, volume 2
[DE81-903754] N82-16274

Small-scale fuel-alcohol plant. Volume 2: Detailed equipment information
[DE82-001037] N82-16278

Environmental impacts associated with using peat for energy
[DE81-032000] N82-16463

Some employment and earnings implications of regional biomass energy utilization: New England and the Cornbelt States
[DE81-030689] N82-16520

Development of hydroconversion of biomass to synethetic fuels. Project 61042 technical report
[DE82-000874] N82-16529

BIRDS

Remote sensing applications to resource problems in South Dakota
[E82-10027] N82-16445

BISMUTH COMPOUNDS

Experimental work related to two bismuth sulfate cycles and their possible improvement. Outline of a possible antimonyl sulfate cycle with separate evolution of sulfur dioxide and oxygen
[DE81-030236] N82-16206

BISMUTH SULFIDES

Alternate thermochemical cycles
[DE81-030248] N82-16502

BITUMENS

Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] N82-16210

BL LACERTAE OBJECTS

IUE observations of a new BL lac object from the S5 radio catalogue N82-16990

BLANKETS (FUSION REACTORS)

Calculated neutron and gamma-ray energy spectra from 14-MeV neutrons streaming through an iron duct: Comparison with experiment --- blanke-shield assemblies of fusion reactors
[DE81-030626] N82-16824

Fusion-reactor blanket and coolant material compatibility
[PB81-030018] N82-16869

BLAST LOADS

Far field overpressure from TNT explosions: A survey of available models
[AD-A107952] N82-16370

BLOCK DIAGRAMS

Incomplete block cyclic reduction
[UCRL-85837] N82-16784

BLOOD CIRCULATION

Question of redistribution of blood in orthostatic position N82-16705

Systemic and cerebral hemodynamics in flight personnel exposed to moderate hypoxia
N82-16707

Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight N82-16722

BLOOD FLOW

In vivo recording of blood velocity profiles and studies in vitro of profile alterations induced by known stenoses
[PB81-244139] N82-16738

BOARDS (PAPER)

Overall effective thermal resistance of corrugated fiberboard containers
[AD-A106569] N82-16183

Effect of paperboard stress-strain characteristics on strength of singlewall corrugated fiberboard: A theoretical approach
[AD-A106566] N82-16184

Substitutes for paraformaldehyde hardener and zinc acetate as an accelerator in Wattle-Tannin based adhesives for exterior grade particle board
[PB81-245755] N82-16253

BODY KINEMATICS

Simulation of some of man's movements in different gravity fields N82-16712

Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713

BODY TEMPERATURE

Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706

BOILERS

Potential for using parabolic trough collectors to supplement power cycle boilers
[SAND-81-0572C] N82-16505

Industrial steam supply system characteristics program. Phase 2: Low- and medium-Btu gas-fired boilers with associated gasification plants
[DE82-000535] N82-16517

MHD Heat and Seed Recovery Technology Project
[DE82-001608] N82-16900

BOLOMETERS

WR 10 millimeter wave microcalorimeter
[PB81-246639] N82-16392

BONDING

Fabrication of boron/aluminum fan blades for SCR engines
[NASA-CR-165294] N82-16176

Analysis of bonded joints in composite materials structures involving hygrothermal effects
[AD-A106720] N82-16188

Surface studies of plastic-bonded PETN and RDX by X-ray Photoelectron Spectroscopy (XPS) and Ion-Scattering Spectroscopy (ISS)
[DE81-030402] N82-16207

A study of optically contacted quartz at cryogenic temperatures N82-17060

BORESIGHT ERROR

Wave propagation through axially symmetric dielectric shells
[AD-A106762] N82-16326

BORON

Oxidation of polycrystalline boron: The interpretation of AES and ELS results
[DE82-000087] N82-16201

BOSONS

Oasis in the desert: Weakly broken parity in grand unified theories
[DE81-031963] N82-16826

BOUNDARY LAYER EQUATIONS

A prediction method for turbulent boundary layers in adverse pressure gradients
[AD-A107849] N82-16371

BOUNDARY LAYER FLOW

Nonlinear analysis of interfering bodies in supersonic flow
[AD-A108071] N82-16053

BOUNDARY LAYER STABILITY

Impact of topographic circulations on the transport and dispersion of air pollutants
[PB82-102435] N82-16584

BOUNDARY LAYERS

The boundary layer on compressor cascade blades
[NASA-CR-165079] N82-16045

BOUNDARY VALUE PROBLEMS

Generation of orthogonal boundary fitted coordinate systems
[AD-A107851] N82-16783

BOXES (CONTAINERS)

Overall effective thermal resistance of corrugated fiberboard containers
[AD-A106569] N82-16183

BRAIN

Condition of meningeal nervous system during repeated exposure to transverse accelerations
N82-16730

BRAZIL

CNPq/INPE: LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] N82-16441

Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024] N82-16442

Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil
[E82-10025] N82-16443

Brazilian remote sensing activities, current and prospective needs
[E82-10026] N82-16444

Synoptic scenario of the invasion of cold air during the freeze of May 1979 and frost mapping to forecast areas of major risk
[INPE-2166-RPE/383] N82-16654

BREADBOARD MODELS

Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953] N82-16170

The 403 MHz SAW oscillator
[AD-A107588] N82-16378

BRECCIA

The stochastic evolution of asteroidal regoliths and the origin of brecciated and gas-rich meteorites
N82-17011

BRICKS

Investigation of reinforced brick masonry buildings undamaged by the San Fernando earthquake
[PB82-104217] N82-16432

BRIDGES (STRUCTURES)

Residual stress measurements in structural steels
[PB81-241499] N82-16229

BRIDGMAN METHOD

Surface control temperatures for the Bridgman-Stockbarger and float zone techniques
N82-17073

BRIGHTNESS

The 1 mm observations of optically selected quasars N82-17000

BRIGHTNESS TEMPERATURE

Proper frequencies of a down-looking water-vapor radiometer over sea surface N82-16103

BRILLOUIN ZONES

Assignment of an anomalous peak in the Brillouin spectrum of oriented polymer films
[AD-A107897] N82-16246

BRINES

Design, construction, and initial operation of the ANL research
[DE82-001961] N82-16528

BRITTLE MATERIALS

Brittle materials design, high temperature gas turbine
[AD-A106670] N82-16085

Crack branching in brittle materials. Part 1: Analytical aspects
[PB81-243735] N82-16255

BROMIDES

Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions
[AD-A107718] N82-16198

BROMINE COMPOUNDS

Flame inhibition by methyl bromide
[DE81-030995] N82-16204

BUBBLES

Solidification phenomena of binary organic mixtures N82-17047

BUFFER STORAGE

A classic example of PRODUCER/CONSUMER implemented in LANAC language
[INPE-2185-RPE/396] N82-16756

BUMPY TORUSES

Ambipolar potential formation and control in bumpy tori and mirrors: Proceedings of workshop
[CONF-810511] N82-16877

Multi-species ambipolar phenomena in the ELMO Bumpy Torus N82-16878

Experimental measurement of plasma space potential N82-16879

Space potential measurements on EBT
N82-16883

Potential formation in Nagoya Bumpy Torus
N82-16884

Aluminum impurity ions and the ambipolar potential in EBT N82-16885

EBT transport and ambipolar potential formation with rapid loss of high energy impurity ions N82-16886
Field errors in EBT and their effects on the ambipolar potential N82-16887
Ambipolar potential and its effects on the confinement parameters of the EBT plasma N82-16888
Power requirements for ion tail formation in EBT N82-16889
Effects of fluctuating electric fields on hydrogen and impurity ions in EBT N82-16890
Anomalous transport and the ambipolar field in EBT N82-16891
Ambipolar potential control by fast wave heating in Bumpy Tori N82-16897
Initial ICRH experiments on EBT-S N82-16899

BUNCHING
Diagnostic device for bunched electron beams [DE82-000639] N82-16844

C

CADMIUM
Atmospheric deposition of heavy metals and their interaction with acid precipitation in a North American deciduous forest [DE81-032004] N82-16556
Restoring hazardous spill-damaged areas: Technique identification/assessment [PB82-103870] N82-16591
Mechanisms of cadmium absorption in rats [PB82-108184] N82-16703

CADMIUM TELLURIDES
Deliberate modification of the behavior of n-type cadium telluride/electrolyte interfaces by surface etching: Removal of fermi level pinning [AD-A106382] N82-16907

CALCIUM COMPOUNDS
Aqueous dissolution of calcium metaphosphate glasses [DE81-030130] N82-16248

CALCIUM SILICATES
Development of strength in cements [P382-103979] N82-16300

CALCULATORS
Instructions for TI-59 combined card/module calculations for in-plane and flexural properties of symmetric laminates --- programmable calculator operations [AD-A107984] N82-16189

CALIBRATING
Ground calibration of a strain-gauged CT-4A aircraft (1979) [AD-A107847] N82-16073
NBS phase angle calibration standard [PB81-244899] N82-16390
A calibration service for analog-to-digital and digital-to-analog converters [PB81-243404] N82-16395
Numerical and flight simulator test of the flight deterioration concept [NASA-CR-3500] N82-16655
A summary of results from solar monitoring rocket flights N82-17019

CALLISTO
The morphology and evolution of Ganymede and Calisto N82-17013

CALORIMETERS
WR 10 millimeter wave microcalorimeter [PB81-246639] N82-16392

CANOPIES (VEGETATION)
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation [E82-10029] N82-16447
Thermal vegetation canopy model studies [AD-A106422] N82-16455

CANS
Development of in-can melting process and equipment, 1979 and 1980 [DE82-001050] N82-16834

CAPACITORS
Partial discharge characteristics of liquid-impregnated laminate dielectric structures [DE81-028745] N82-16356
Seminar: Energy conservation. Role of power capacitors: Concepts and Policy Issues [PB81-247967] N82-16359

CARBON
Deposition and characterization of pyrocarbon coatings produced by use of CO2 dilution [PB82-000900] N82-16190
Carbon vapor pressure in the range 3450 to 4500 K and evidence for melting at approximately 3800 K [AD-A106134] N82-16196
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst [DE81-029631] N82-16210

CARBON COMPOUNDS
Sulfur gas emissions from stored flue gas desulfurization solids [DE82-900859] N82-16568

CARBON DIOXIDE
Enhanced oil recovery by CO2 foam flooding [DE82-000949] N82-16464
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720
The combined solar and tidal influence in climate N82-17038

CARBON DIOXIDE CONCENTRATION
Deposition and characterization of pyrocarbon coatings produced by use of CO_2 dilution [PB82-000900] N82-16190

CARBONACEOUS CHONDRITES
Isotopic anomalies and the early history of the solar system N82-16976

CARBONACEOUS ROCKS
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs [DE82-000896] N82-16465

CARDIOVASCULAR SYSTEM
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight N82-16722

CARGO AIRCRAFT
Turboprop cargo aircraft systems study [NASA-CR-165813] N82-16070

CARRIER FREQUENCIES
Sine wave ranging revisited N82-16124

CARRIER MOBILITY
Improved carrier tracking performance with coupled phase-locked loops N82-16120

CARRIER TO NOISE RATIOS
Improved carrier tracking performance with coupled phase-locked loops N82-16120

CARRIER WAVES
Method to treat picture and sound carriers to obtain a constant and adjustable level spacing between the picture carrier and the second carrier of a TV signal when there are variations of field intensity between the carriers [BMFT-FB-T-81-041] N82-16336

CASCADE FLOW
CAS22 - FORTRAN program for fast design and analysis of shock-free airfoil cascades using fictitious-gas concept [NASA-CR-3507] N82-16044
The boundary layer on compressor cascade blades [NASA-CR-165079] N82-16045

CASE HISTORIES
Energy and environmental quality: Case histories of impact management [DE81-026435] N82-16565
Synoptic climatology of bell-shaped thunderstorms [AD-A106158] N82-16668

CASSEGRAIN ANTENNAS
An FM/CW method for the measurements of time delays of large Cassegrain antennas N82-16110

CATALOGS (PUBLICATIONS)
Passive solar products catalog, 1981 [DE82-000292] N82-16540

CATALYSIS
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis [DE82-004221] N82-16275
Concepts of fundamental processes related to gasification of coal [DE82-000763] N82-16282
Demonstration of catalytic combustion with residual fuel [NASA-CR-165369] N82-16484
Fuel NO_x control by catalytic combustion [PB82-102351] N82-16623

CATALYSTS
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst [DE81-029631] N82-16210
Catalytic hydrogenation of coal-derived liquids [DE82-003250] N82-16212
Concepts of fundamental processes related to gasification of coal [DE82-000763] N82-16282
Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases [DE82-000274] N82-16284
Exhaust emissions from high-mileage catalyst-equipped passenger cars [PB82-103326] N82-16586
Emission characteristics of 1979 and 1980 California passenger cars equipped with three-way catalysts [PB82-105073] N82-16594
Unregulated exhaust emissions from noncatalyst baseline cars under malfunction conditions [PB82-101130] N82-16596

CATALYTIC ACTIVITY
Emission characteristics of 1979 and 1980 California passenger cars equipped with three-way catalysts [PB82-105073] N82-16594
Fuel NO_x control by catalytic combustion [PB82-102351] N82-16623

CATHODE RAY TUBES
Manufacturing Methods and Technology (MM&T) specification for miniature cathode ray tube [AD-A106433] N82-16345
Manufacturing Methods and Technology (MM&T) specifications for miniature cathode ray tube [AD-A106432] N82-16346

CATHODES
Reductions in aprotic media. 1: Cathodic reduction limits in acetonitrile at a platinum electrode [AD-A106615] N82-16195

CATS
Condition of meningeal nervous system during repeated exposure to transverse accelerations N82-16730

CAVITIES
Effects of gas-flow pattern on cavity shape [DE82-000347] N82-16375
Handbook of geophysical cavity-locating techniques with emphasis on electrical resistivity [PB81-242711] N82-16653
Effect of thermomechanical properties on initial cavity growth [DE81-030839] N82-16918
A determination of the current density in electron beams N82-17045

CELESTIAL MECHANICS
Galaxies in the light of the 21 cm line N82-16984
Subroutines for celestial mechanics and orbit generation [INPE-2180-RPE/392] N82-17006

CELLS (BIOLOGY)
A hydrodynamic model of an outer hair cell [NASA-TM-82773] N82-16743

CELLULOSE
Smoldering combustion hazards of thermal insulation materials [PB82-107046] N82-16215
Preparation of multishell ICF target plastic-foam cushion materials by thermally induced phase-inversion processes [DE82-000574] N82-16249

CEMENTS
Experimental pavement delineation treatments [PB81-249161] N82-16292
Factors affecting the soundness of blended cements [PB82-104746] N82-16299
Development of strength in cements [PB82-103979] N82-16300

CENSUS
The 1977 census of mineral industries: West North Central division [PB81-243081] N82-16933
The 1977 census of mineral industries: South Atlantic division [PB81-243099] N82-16934

CENTRAL NERVOUS SYSTEM
Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems N82-16725

CEPHEID VARIABLES
Temperature change, period/amplitude relation for classical cepheids N82-16989
CERAMICS
Brittle materials design, high temperature gas turbine
[AD-A106670] N82-16085
Development of high strength, high temperature ceramics N82-17050
CERTIFICATION
Software considerations in airborne systems and equipment certification
[RTCA/DO-178] N82-16759
CESIUM COMPOUNDS
Thermal expansion of alkali-graphite intercalation compounds
[DE82-000060] N82-16429
CHANNEL CAPACITY
The 2.5-bit/detected photon demonstration program: Description, analysis and phase 1 results N82-16117
CHANNEL NOISE
Analysis of maximin matched-filter design for communication through a nonlinearly distorting channel
[AD-A106789] N82-16327
CHARGE COUPLED DEVICES
Microcomputer based test system for charge coupled devices
[DE81-029660] N82-16357
CHARGE DISTRIBUTION
Thunderstorm electric field modelling N82-17065
CHARGE EXCHANGE
Optically pumped polarized ion sources
[DE81-026306] N82-16798
Collisions of fast multicharged ions in gas targets: Charge transfer and ionization
[DE81-030541] N82-16823
CHECKOUT
Advanced electronic technology
[AD-A106671] N82-16348
CHEMICAL ANALYSIS
Coal-gasification instrumentation program (PR 11734)
[DE82-001153] N82-16381
Northern Gulf of Mexico topographic features study. Volume 2: Methods, fossil coccoliths, chemical analyses
[PB81-248668] N82-16693
CHEMICAL BONDS
Rate enhancement resulting from reagent vibrational excitation as estimated by the BEBO method
[AD-A106431] N82-16400
CHEMICAL CLEANING
Oil slick dispersal mechanics
[PB82-105560] N82-16610
Guidelines for the use of chemicals in removing hazardous substance discharges
[PB82-107483] N82-16615
CHEMICAL COMPOSITION
Corrosive effects of condensate
[PB81-244782] N82-16233
Chemicals Identified in Human Biological Media
[DE81-030813] N82-16735
CHEMICAL LASERS
Rate enhancement resulting from reagent vibrational excitation as estimated by the BEBO method
[AD-A106431] N82-16400
CHEMICAL PROPERTIES
Technical activities 1980: Center for Materials Science
[PB81-245318] N82-16391
CHEMICAL REACTIONS
Plasma chemistry and organic synthesis
[NASA-TM-75843] N82-16175
Experimental work related to two bismuth sulfate cycles and their possible improvement. Outline of a possible antimonyl sulfate cycle with separate evolution of sulfur dioxide and oxygen
[DE81-030236] N82-16206
Calcium inorganic electrolyte battery development
[AD-A106199] N82-16497
Guidelines for the use of chemicals in removing hazardous substance discharges
[PB82-107483] N82-16615
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700
Research in nuclear chemistry
[DE81-030642] N82-16847
CHEMICAL REACTORS
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] N82-16210
Dynamic behavior of moving-bed coal-gasification reactors
[DE82-000595] N82-16285
Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] N82-16475
Development of a polysilicon process based on chemical vapor deposition (phase 1)
[NASA-CR-163475] N82-16488
Alternate thermochemical cycles
[DE81-030248] N82-16502
CHEMICAL STERILIZATION
Evaluation of on-site wastewater treatment and disposal options
[PB82-101635] N82-16616
CHEMILUMINESCENCE
Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions
[AD-A107718] N82-16198
CHLORIDES
Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236
Control of fractionation-area corrosion at SRC pilot plants
[DE82-001949] N82-16280
CHLORINE
Wastewater dechlorination state-of-the-art field survey and pilot studies
[PB82-102336] N82-16621
CHLOROSILANES
Silicon production process evaluations
[NASA-CR-163470] N82-16486
CHOLESKY FACTORIZATION
Incomplete block cyclic reduction
[UCRL-85837] N82-16784
CHOLINERGICS
Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems N82-16725
CHROMATOGRAPHY
Applications of DHDECMP extraction chromatography to nuclear analytical chemistry
[DE81-030134] N82-16202
CHROMIUM
Chromium substitution in stainless steels
[PB81-235475] N82-16231
Aluminum and chromium ion particle studies for enhancement of surface properties N82-17071
CHROMIUM ALLOYS
Fracture toughness testing on ferritic alloys using the electropotential technique
[DE81-029776] N82-16224
CHROMIUM STEELS
Effect of microstructure on the mechanical properties of a commercial 12Cr-1Mo steel (HT-9)
[DE82-000082] N82-16225
CHROMOSOMES
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700
CHROMOSPHERE
Observed variability in the Fraunhofer line spectrum of solar flux, 1975 - 1980 N82-17023
CIRCUIT RELIABILITY
Microprocessor digital fault
[AD-A106707] N82-16752
CITIES
Carbon monoxide commuter exposure data base: A 5-day study in Los Angeles
[PB82-103607] N82-16589
CIVIL AVIATION
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] N82-16057
Causes of fatigue among crews of civil aviation helicopters N82-16706
CLASSICAL MECHANICS
Nature abhors an empty vacuum — the possibility of satisfying classical mechanics in a quantized world
[AD-A106362] N82-16920
CLASSIFICATIONS
Remote sensing data applied to land-use survey at the Paraiba Valley — Brazil
[E82-10025] N82-16443
CLIMATE
Indoor climate, outdoor climate and energy consumption: A new approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings based on methods of statistical analysis N82-16476
A climate index derived from satellite measured spectral infrared radiation
[AD-A106733] N82-16648
A climatology of a newly defined tropopause using simultaneous ozone temperature profiles
[AD-A106399] N82-16671
Sensitivity of the Earth's climate to changes N82-17015
An instrument to measure the solar spectrum from 170 to 3200 nm on board Spacelab N82-17031
Evolutionary variations of solar luminosity N82-17032
The combined solar and tidal influence in climate N82-17038
Predominant periods in the time series of drought area index for the Western High Plains AD 1700 to 1962 N82-17039
CLIMATOLOGY
Pennsylvania baseline
[PB82-101742] N82-16617
Climatic conditions at Air Force bases in Australia
[AD-A106275] N82-16684
CLOCKS
Operational VLBI clock synchronization and platform parameter determination N82-16133
CLOUD DISPERSAL
Study to perform preliminary experiments to evaluate particle generation and characterization techniques for zero-gravity cloud physics experiments
[NASA-CR-3486] N82-16657
CLOUD GLACIATION
Ice crystal processes in Colorado, upslope snowstorms. Article 1: Case study of an upslope snowstorm
[PB82-109547] N82-16676
CLOUD PHOTOGRAPHY
Global weather research N82-16662
On the analysis of Seasat winds
[PB81-245649] N82-16675
CLOUD PHYSICS
Design of prototype charged particle fog dispersal unit
[NASA-CR-3481] N82-16659
Development of a large scale cloud system, 23-27 March 1976
[AD-A106417] N82-16665
Ice crystal processes in Colorado, upslope snowstorms. Article 1: Case study of an upslope snowstorm
[PB82-109547] N82-16676
Satellite cloud analysis over the GATE area on 4 August 1974
[PB82-107582] N82-16678
CLOUDS (METEOROLOGY)
A climate index derived from satellite measured spectral infrared radiation
[AD-A106733] N82-16648
Development of a large scale cloud system, 23-27 March 1976
[AD-A106417] N82-16665
CMOS
Advanced electronic technology
[AD-A106671] N82-16348
Semiconductor measurement technology: The design, testing, and analysis of a comprehensive test pattern for measuring CMOS/SOS process performance and control
[PB81-245342] N82-16361
COAGULATION
Gravitational agglomeration of post-HCDA LMFBR nonspherical aerosols
[AD-A106766] N82-16641
COAL
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] N82-16210
Potential economic benefits from process control of coal preparation plants
[DE82-000881] N82-16263

Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] N82-16275

Investigation of the use of coal refuse-fly ash compositions as highway base course material
[PB82-101940] N82-16301

Underground coal mining section data
[NASA-CR-166393] N82-16454

Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] N82-16557

Combustion enhancement and pollutant-control research with acoustically induced mixing
[DE82-001100] N82-16567

Surface chemical technology for improved wetting of coal dust
[PB82-104654] N82-16608

Environmental assessment, source test and evaluation report: Coal preparation plant no. 2
[PB82-103573] N82-16618

Macromolecular structural changes in bituminous coals during extraction and solubilization
[DE82-000667] N82-16830

Effect of thermomechanical properties on initial cavity growth
[DE81-030839] N82-16918

COAL DERIVED LIQUIDS

Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] N82-16228

Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol
[PB81-242562] N82-16286

COAL GASIFICATION

Bi-Gas pilot plant operation
[DE82-000223] N82-16271

Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] N82-16281

Concepts of fundamental processes related to gasification of coal
[DE82-000763] N82-16282

Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases
[DE82-000274] N82-16284

Dynamic behavior of moving-bed coal-gasification reactors
[DE82-000595] N82-16285

Coal-gasification instrumentation program (PR 11734)
[DE82-001153] N82-16381

Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] N82-16462

Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] N82-16475

Advanced Environmental Control Technology Program
[DE82-000898] N82-16562

Effect of thermomechanical properties on initial cavity growth
[DE81-030839] N82-16918

COAL LIQUEFACTION

Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] N82-16210

Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] N82-16228

Reversibility of coal liquefaction
[DE81-027604] N82-16277

Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] N82-16281

Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] N82-16283

Advanced Environmental Control Technology Program
[DE82-000898] N82-16562

Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] N82-16566

COAL UTILIZATION

Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] N82-16213

Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] N82-16275

Coal development in rural America: The resources at risk
[PB81-243313] N82-16545

Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] N82-16560

COASTAL PLAINS

An observational study of blocking
[AD-A106739] N82-16670

COATINGS

A process for the production of a scale-proof and corrosion-resistant coating on graphite and carbon bodies
[NASA-TM-76785] N82-16179

Method of preventing oxidation of graphite fireproof material
[NASA-TM-76786] N82-16180

Deposition and characterization of pyrocarbon coatings produced by use of CO2 dilution
[PB82-000900] N82-16190

Metal-containing plasma-polymerized coatings for laser-fusion targets
[DE82-000346] N82-16251

COBALT OXIDES

Catalytic hydrogenation of coal-derived liquids
[DE82-003250] N82-16212

COCKPITS

Threat perception while viewing single intruder conflicts on a cockpit display of traffic information
[NASA-TM-81341] N82-16076

Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

CODERS

A calibration service for analog-to-digital and digital-to-analog converters
[PB81-243404] N82-16395

COGENERATION

Cogeneration potential: Enhanced oil recovery
[DE81-904202] N82-16539

COGNITION

An analysis of cognitive mapping skill
[AD-A106145] N82-16740

The knowledge level
[AD-A106556] N82-16772

COHERENT ELECTROMAGNETIC RADIATION

The effect of partial coherence in receiving system noise temperature on array gain for telemetry and radio frequency carrier reception for similar receiving systems N82-16127

COHERENT RADIATION

An M-ary coherent optical receiver for the free-space channel N82-16111

COHERENT SCATTERING

Coherent scatter of microwaves from moderately rough surfaces
[AD-A106133] N82-16331

COLD WATER

Current measurements off Keahole Point, Hawaii: Application to OTEC-1
[DE81-030539] N82-16686

COLLIMATORS

Theory of a modified Wadsworth monochromator matched to a low energy storage ring source
[DE81-030034] N82-16379

COLLISION AVOIDANCE

Threat perception while viewing single intruder conflicts on a cockpit display of traffic information
[NASA-TM-81341] N82-16076

COLLISIONAL PLASMAS

Quark-gluon plasma and the little bang
[DE81-030320] N82-16840

COLOR

Spectrally balanced chromatic landing approach lighting system
[NASA-CASE-ARC-10990-1] N82-16059

COLOR CODING

Application of image processing techniques to fluid flow data analysis
[NASA-TM-82760] N82-16049

COLUMNS (PROCESS ENGINEERING)

MESA (Marine Ecosystem Analysis) New York Bight project: Winkler oxygen data, expanded water column characterization cruises (XWCC-2 to SWCC-24). NOAA ships Researcher and George B. Kelez, 1975 - 1979
[PB82-100975] N82-16575

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-23). NOAA ship George B. Kelez, July 1979
[PB82-101049] N82-16582

COMBINED CYCLE POWER GENERATION

Technical support for open-cycle MHD program — combined cycle mhd/steam power system analysis
[DE82-001955] N82-16801

COMBUSTION

Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] N82-16213

COMBUSTION CHAMBERS

A computer code for swirling turbulent axisymmetric recirculating flows in practical isothermal combustor geometries
[NASA-CR-3442] N82-16082

Thermionic-combustor combined-cycle system. Volume 3: A thermionic converter design for gas-turbine combined-cycle systems
[DE82-000729] N82-16509

Combustion enhancement and pollutant-control research with acoustically induced mixing
[DE82-001100] N82-16567

COMBUSTION EFFICIENCY

Demonstration of catalytic combustion with residual fuel
[NASA-CR-165369] N82-16484

Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516

Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] N82-16947

Development of adjustment factors for on road fuel economy
[PB81-241966] N82-16950

Evaluation of the Moleculetor Fuel Energizer under section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-247942] N82-16958

Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] N82-16965

Consumer orientations toward fuel efficient vehicles
[PB81-245367] N82-16966

COMBUSTION PRODUCTS

Corrosive effects of condensate
[PB81-244762] N82-16233

Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] N82-16557

Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] N82-16560

Exhaust emissions from high-mileage catalyst-equipped passenger cars
[PB82-103326] N82-16586

COMBUSTION STABILITY

Time- and space-dependence of particulate effluent in the exhaust plume of a pulsed liquid bipropellant engine
[AD-A106525] N82-16173

Smoldering combustion hazards of thermal insulation materials
[PB82-107046] N82-16215

COMETARY ATMOSPHERES

The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma
[REPT-626] N82-17007

COMMAND AND CONTROL

The design, development, demonstration, and transfer of advanced command and control (C2) computer-based systems
[AD-A106787] N82-16319

Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants
[AD-A107552] N82-16552

COMMERCIAL AIRCRAFT

Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] N82-16057

COMMERCIAL ENERGY

Assessment of emerging energy sources
[DE82-900318] N82-16519

Code workbook for active and passive solar design: Single-family residential construction
[DE82-000637]
N82-16531
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047]
N82-16563

COMMUNICATION CABLES
Enhancing technology transfer to state and local government utilizing on-line information retrieval services and on-line communications systems
[PB81-246241]
N82-16949

COMMUNICATION NETWORKS
Computer simulator for a mobile telephone system
[NASA-CR-164808]
N82-16314
Use of a microprocessor to implement an ADCCP protocol with reject and selective reject (Federal standard 1003)
[AD-A107769]
N82-16754
Electronic information systems and user contexts: Emerging social science issues
[RAND/P-6690]
N82-16926

COMMUNICATION SATELLITES
Satellite options for rural telecommunications in developing countries
[PB81-244766]
N82-16339

COMPANION STARS
Wolf-Rayet stars with compact companions
N82-16982

COMPILERS
A high level language for data acquisition and process control
[INPE-2173-RPE/389]
N82-16758

COMPLEX COMPOUNDS
Synthesis of polyformals
[NASA-CASE-ARC-11244-1]
N82-16174
Research in nuclear chemistry
[DE81-030542]
N82-16847

COMPLEX SYSTEMS
A manual for designing and implementing a process to monitor complex system developments
[PB82-104308]
N82-16923

COMPONENT RELIABILITY
Aircraft alerting systems standardization study. Volume 2: Aircraft alerting system design guidelines
[AD-A106732]
N82-16077
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533]
N82-16080
Design of first walls and beam dumps for tandem mirror experiment upgrade
[DE81-030888]
N82-16875

COMPOSITE MATERIALS
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-3502]
N82-16178
Nonlinear finite element analysis of sandwich composites
[AD-A106378]
N82-16187
Analysis of bonded joints in composite materials structures involving hygrothermal effects
[AD-A106720]
N82-16188
Characterization of microstructures
[AD-A106351]
N82-16217
Tribological characteristics of a composite total-surface hip replacement
[NASA-TP-1853]
N82-16230
Interferometric study of epoxy resin gelation
[DE81-030128]
N82-16252
Analysis of strain distribution for fiber reinforced composites by Moire method
[NAL-TR-681]
N82-16420
Experiments on continuous composite beams
[PB81-247116]
N82-16434
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855]
N82-17043

COMPOSITE STRUCTURES
Development of an engineering analysis of progressive damage in composites during low velocity impact
[NASA-CR-165778]
N82-16177
Composite structural materials --- fiber reinforced composites for aircraft structures
[NASA-CR-165121]
N82-16182
Analysis of bonded joints in composite materials structures involving hygrothermal effects
[AD-A106720]
N82-16188
Bolted connections in composite structures
[PB81-247124]
N82-16435

COMPOSTING
Composting processes to stabilize and disinfect municipal sewage sludge
[PB81-240509]
N82-16629

COMPRESSED AIR
Compressed air energy storage preliminary design and site development program in an aquifer. Turbomachinery design
[DE82-000672]
N82-16524

COMPRESSED GAS
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714]
N82-16959

COMPRESSIBLE FLOW
A modified Dodge algorithm for the parabolized Navier-Stokes equation and compressible duct flows
[NASA-CR-165080]
N82-16363

COMPRESSION LOADS
Failure loads for model adhesive joints subjected to tension, compression or torsion
[AD-A106724]
N82-16424

COMPRESSION TESTS
Evaluation of three partially volatile neutron shields for high-performance shipping casks
[DE82-000245]
N82-16831

COMPRESSIVE STRENGTH
Effect of paperboard stress-strain characteristics on strength of singlewall corrugated fiberboard: A theoretical approach
[AD-A106566]
N82-16184

COMPRESSOR BLADES
The boundary layer on compressor cascade blades
[NASA-CR-165079]
N82-16045

COMPRESSORS
A study pertaining to inertial energy storage machine designs for space applications
[NASA-CR-163465]
N82-16489

COMPUTATION
Merging on parallel models of computation
[AD-A106169]
N82-16750
Sparse matrices
[AD-A105187]
N82-16775

COMPUTER ASSISTED INSTRUCTION
Technology transfer and development of computer-aided engineering with the university community
[DE81-022408]
N82-16940

COMPUTER COMPATIBLE TAPES
Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications
[E82-10020]
N82-16438

COMPUTER GRAPHICS
Configuration Development System/NAVAIR Report
[AD-A106727]
N82-16072
A technical briefing on the Initial Graphics Exchange Specification (IGES)
[PB81-238719]
N82-16766
Technology transfer of computer-aided engineering to the university community
[UCRL-85694]
N82-16939
Technology transfer and development of computer-aided engineering with the university community
[DE81-022408]
N82-16940
The 3-D on the 7600-Star-Cray
[DE81-030889]
N82-17004

COMPUTER NETWORKS
Three papers of network programs
[AD-A106799]
N82-16769
Long-range prediction of network traffic --- in computer systems
[DE81-030241]
N82-16770
Electronic information systems and user contexts: Emerging social science issues
[RAND/P-6690]
N82-16926

COMPUTER PROGRAM INTEGRITY
Writing efficient code
[AD-A106553]
N82-16764

COMPUTER PROGRAMMING
Programs for the transonic wind tunnel data processing installation. Part 9: Pressure measurements updated
[AD-A106271]
N82-16095
The design, development, demonstration, and transfer of advanced command and control (C2) computer-based systems
[AD-A106787]
N82-16319
Simple computer program to model 3-dimensional underground heat flow with realistic boundary conditions
[DE81-030213]
N82-16373
Writing efficient code
[AD-A106553]
N82-16764
Three papers of network programs
[AD-A106799]
N82-16769
User considerations in computer-based information system
[AD-A106194]
N82-16928

COMPUTER PROGRAMS
CAS22 - FORTRAN program for fast design and analysis of shock-free airfoil cascades using fictitious-gas concept
[NASA-CR-3507]
N82-16044
Calculation of three-dimensional, inviscid, supersonic, steady flows
[NASA-CR-165110]
N82-16047
A generalized escape system simulation computer program: A user's manual
[AD-A106152]
N82-16055
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533]
N82-16080
A computer code for swirling turbulent axisymmetric recirculating flows in practical isothermal combustor geometries
[NASA-CR-3442]
N82-16082
The DSN programming system N82-16105
Implications of the Putnam software equation on confidence levels for project success N82-16121
New S-band transmitter automation software
N82-16126
ACOSS nine (Active Control Of Space Structures)
[AD-A106686]
N82-16168
Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953]
N82-16170
Simple computer program to model 3-dimensional underground heat flow with realistic boundary conditions
[DE81-030213]
N82-16373
The APRAC-3/MOBILE 1 emissions and diffusion modeling package: User's manual
[PB82-103763]
N82-16468
Solar energy systems simulation and analysis
[DE81-026975]
N82-16542
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 2: Appendices
[NASA-CR-165539]
N82-16746
Software considerations in airborne systems and equipment certification
[RTCA/DO-178]
N82-16759
Writing efficient code
[AD-A106553]
N82-16764
Transient magnetic-field calculations with TRIDIF
[DE81-030843]
N82-16785
Random network generation
[AD-A106369]
N82-16796
Prediction of sound radiation from different practical jet engine inlets
[NASA-CR-165120]
N82-16810
Molecular dynamics calculations for sodium using pseudopotential theory
[AD-A106014]
N82-16821
STAFF-5, a two-dimensional computer model for simulation of the performance of spent fuel in storage/disposal
[DE82-000043]
N82-16838
Central cell confinement in MFTF-B N82-16893
Hybrid and electric advanced vehicle systems (heavy) simulation
[NASA-CR-165536]
N82-16936
A determination of the current density in electron beams
N82-17045
Development of photomultiplier electronics and computer interfacing software for a high speed photoelectric photometer-Stoke's meter N82-17049

COMPUTER SYSTEMS DESIGN
Digital Avionics Information System (DAIS): Development and demonstration
[AD-A107906]
N82-16079

The design, development, demonstration, and transfer of advanced command and control (C2) computer-based systems [AD-A106787] N82-16319
User considerations in computer-based information system [AD-A106194] N82-16928

COMPUTER SYSTEMS PERFORMANCE
GCF-NOCC reconfiguration N82-16131
Transient error reliability models based on data analysis [AD-A106554] N82-16751
Microprocessor digital fault [AD-A106707] N82-16752
User considerations in computer-based information system [AD-A106194] N82-16928

COMPUTER SYSTEMS PROGRAMS
Use of a microprocessor to implement an ADCCP protocol with reject and selective reject (Federal standard 1003) [AD-A107769] N82-16754
Three papers of network programs [AD-A106799] N82-16769

COMPUTER SYSTEMS SIMULATION
Long-range prediction of network traffic --- in computer systems [DE81-030241] N82-16770

COMPUTER TECHNIQUES
Potential economic benefits from process control of coal preparation plants [DE82-000881] N82-16263
Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin [E82-10019] N82-16437
Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data [E82-10030] N82-16448
Sparse matrices [AD-A105187] N82-16775

COMPUTERIZED DESIGN
CAS22 - FORTRAN program for fast design and analysis of shock-free airfoil cascades using fictitious-gas concept [NASA-CR-3507] N82-16044
Integration of a code for aeroelastic design of conventional and composite wings into ACSYNT, an aircraft synthesis program --- wing aeroelastic design (WADES) [NASA-CR-137805] N82-16069
Configuration Development System/NAVAIR Report [AD-A106727] N82-16072
A computer program for variable-geometry single-stage axial compressor test data analysis (UD0400) [AD-A106676] N82-16086
The optimal planning of computerized manufacturing systems --- data flow CMS control system architecture [PB81-241564] N82-16310
The optimal planning of computerized manufacturing systems --- process planning automation, a recursive approach [PB81-245276] N82-16311
The optimal planning computerized manufacturing systems [PB81-245284] N82-16312
The complexity of manipulating hierarchically defined sets of rectangles [AD-A106552] N82-16350
A technical briefing on the Initial Graphics Exchange Specification (IGES) [PB81-238719] N82-16768
Compact Commercial Tokamak Reactor (CCTR): A concept for a 500-MWe commercial-Tokamak fusion system [DE81-030406] N82-16871
Technology transfer and development of computer-aided engineering with the university community [DE81-022408] N82-16940

COMPUTERIZED SIMULATION
A generalized escape system simulation computer program: A user's manual [AD-A106152] N82-16055
Research through simulation --- simulators and research applications at Langley [NASA-FACTS-125] N82-16092
Implementation of the recommendations made on the technical report titled analysis of advanced simulator for pilot training [AD-A106779] N82-16094
Construction of large reaction mechanisms [AD-A106139] N82-16197
Computer simulator for a mobile telephone system [NASA-CR-164808] N82-16314
Nocturnal drainage flow over complex terrain using a generalized shallow-fluid approximation [DE81-028693] N82-16460
New features and applications of PRESTO, a computer code for the performance of regenerative, superheated steam turbine cycles [NASA-TP-1954] N82-16477
Solar energy systems simulation and analysis [DE81-026975] N82-16542
Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail [NASA-CR-168508] N82-16634
The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data [AD-A106419] N82-16644
Multiple microcomputer control algorithm feasibility breadboard [AD-A107940] N82-16753
Models in the policy process: Past, present, and future [RAND/P-6654] N82-16795
Analytical study of twin-jet shielding [NASA-CR-165105] N82-16804
Computational study of magnetic dam effects in a high impedance diode [AD-A106154] N82-16816
STAFF-5, a two-dimensional computer model for simulation of the performance of spent fuel in storage/disposal [DE82-000043] N82-16838
Numerical simulation of the Beta 2 experiment [DE81-030884] N82-16867
Technical support for open-cycle MHD program --- combined cycle mhd/steam power system analysis [DE82-001955] N82-16901
Hybrid and electric advanced vehicle systems (heavy) simulation [NASA-CR-165536] N82-16938
Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers [PB81-238461] N82-16963
Eclipse radius measurements N82-17025
Tolerance analysis of optical telescopes using coherent addition of wavefront errors N82-17048
Digital compensation techniques for the effects of time lag in closed-loop simulation using the 6 DOF motion system N82-17069

CONCENTRATION (COMPOSITION)
Temperature and concentration transients in the aluminum-air battery --- application to electric vehicles [DE81-030338] N82-16512
Solidification of a binary mixture N82-17067

CONCENTRATORS
A conceptual design study of point focusing thin-film solar concentrators [NASA-CR-163472] N82-16492
Design, construction, and initial operation of the ANL research [DE82-001961] N82-16528

CONCENTRIC SPHERES
Electromagnetic design of a microwave radiometer antenna system N82-16162

CONCRETE STRUCTURES
Evaluation of the fracture behavior of concrete with the J-integral [PB81-235855] N82-16433

CONCRETES
Evaluation of super-water reducers for highway applications [PB82-101106] N82-16302
Thin, applied surfacing for improving skid resistance of concrete pavements [PB81-247744] N82-16307

CONDENSATES
Corrosive effects of condensate [PB81-244782] N82-16233
MHD Heat and Seed Recovery Technology Project [DE82-001608] N82-16900

CONDENSERS (LIQUIFIERS)
OTEC performance tests of the Trane plate-fin heat exchanger [DE82-001833] N82-16541

CONFERENCES
Symposium on commercial-aviation energy-conservation strategies [DE81-028406] N82-16057
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 1 [DE81-903753] N82-16273
Proceedings of the 4th International Symposium on Alcohol fuels Technology, volume 2 [DE81-903754] N82-16274
Energy in the 1980s: A call for leadership. The Public Awareness Symposium [DE81-027613] N82-16504
Proceedings of the Conference on Innovation in the Environmental Technology Industry [PB82-109588] N82-16606
Proceedings of the Gulf Circulation Studies Workshop [PB81-248254] N82-16690
Astronomical Society Information no. 50. Reports of the Scientific Meetings [REPT-50] N82-16967
Astronomical society information no. 52. Report of the meeting --- conferences [ISSN-0374-1958] N82-16986
Variations of the Solar Constant --- conference [NASA-CP-2191] N82-17014
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports [NASA-CR-161855] N82-17043

CONFIDENCE LIMITS
Implications of the Putnam software equation on confidence levels for project success N82-16121

CONGRESSIONAL REPORTS
Earthquake hazards reduction program and fire prevention and control program [GPO-78-756] N82-16631
Long-term planning for national science policy [GPO-68-603] N82-16936

CONGRUENCES
An investigation of the uniform random number generator N82-17077

CONICAL BODIES
Multipole expansion for transient electric and magnetic fields in an internally excited spherical cavity contaning dampers of finite thickness with distributed electrical properties [AD-A106384] N82-16329

CONICAL NOZZLES
Comparison of acoustic data from a 102 mm conic nozzle as measured in the RAE 24-foot wind tunnel and the NASA Ames 40- by 80-foot wind tunnel [NASA-TM-81343] N82-16083

CONSTRAINTS
Exploratory study of constraints on design by functional requirements and manufacturing [PB82-101858] N82-16304

CONSTRUCTION
Development of advanced building materials for the passive solar application [DE81-032009] N82-16288
Building technology project summaries, 1980 - 1981 [PB82-106105] N82-16296
Design, construction, and initial operation of the ANL research [DE82-001961] N82-16528
Progress and prospects at the National Synchrotron Light Source (NSLS) [DE81-030738] N82-16861

CONSUMERS
Consumer orientations toward fuel efficient vehicles. Executive summary [PB81-245359] N82-16965
Consumer orientations toward fuel efficient vehicles [PB81-245367] N82-16966

CONTACT RESISTANCE
Surface chemical technology for improved wetting of coal dust [PB82-104654] N82-16608

CONTAMINANTS
Restoring hazardous spill-damaged areas: Technique identification/assessment [PB82-103870] N82-16591

Guidelines for the use of chemicals in removing hazardous substance discharges
[PB82-107483] N82-16615
Aluminum impurity ions and the ambipolar potential in EBT N82-16885
EBT transport and ambipolar potential formation with rapid loss of high energy impurity ions N82-16886

CONTAMINATION
Effects of ammonia contamination by water on OTEC power system performance
[DE82-001832] N82-16535

CONTENT
Relationships between soil moisture-holding properties and soil texture, organic matter content, and bulk density
[NASA-TM-76674] N82-16451

CONTINENTAL SHELVES
Proceedings of the Gulf Circulation Studies Workshop
[PB81-248254] N82-16690
Northern Gulf of Mexico topographic features study. Volume 2: Methods, fossil coccoliths, chemical analyses
[PB81-248668] N82-16693

CONTINUUM MECHANICS
Critical angles and grazing incidence: The breakdown of regular shock reflection in solids
[AD-A107665] N82-16426

CONTOURS
Surface conforming thermal/pressure seal — tail assemblies of space shuttle orbiters
[NASA-CASE-MSC-18422-1] N82-16408

CONTROL
Federal initiative for clean air: Inspection and maintenance
[PB82-102500] N82-16585

CONTROL EQUIPMENT
Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096
Techniques for handling landborne spills of volatile hazardous substances
[PB82-105230] N82-16609

CONTROL STICKS
Ground calibration of a strain-gauged CT-4A aircraft (1979)
[AD-A107847] N82-16073

CONTROL SURFACES
A program to evaluate a control system based on feedback of aerodynamic pressure differentials
[NASA-CR-163466] N82-16089

CONVECTION
Thermal perturbation of the Sun N82-17029

CONVECTION CLOUDS
Mesoscale Aspects of Convective Storms
[PB81-247249] N82-16679

CONVECTION CURRENTS
Precipitation field and intrastorm flow of supercell convective storms
[AD-A106752] N82-16667
Mesoscale Aspects of Convective Storms
[PB81-247249] N82-16679

CONVECTIVE FLOW
Observations of large-scale motions of the Sun N82-17037

CONVECTIVE HEAT TRANSFER
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] N82-16511
Short and long term variations in the solar constant N82-17034

CONVERGENCE
Nonpolynomial and inverse interpolation for line search: Synthesis and convergence rates
[AD-A106680] N82-16776

COOK INLET (AK)
Cook inlet circulatory survey: 1973-75
[PB81-245235] N82-16686

COOLANTS
Fusion-reactor blanket and coolant material compatibility
[PB81-030018] N82-16869

COOLING SYSTEMS
Developments in solar-powered air conditioning: State-of-the-art and prospects for South Africa
[PB81-248076] N82-16544

COORDINATE TRANSFORMATIONS
Auxiliary subprograms for calculating the navigational parameters of artificial Earth satellites. FORTRAN IV
[NASA-TM-75684] N82-16140

COORDINATES
Generation of orthogonal boundary fitted coordinate systems
[AD-A107851] N82-16783

COPPER
Copper-coated laser-fusion targets using molecular-beam levitation
[DE82-000644] N82-16841

COPPER ALLOYS
Crevice corrosion and metal-ion concentration cell-corrosion resistance of candidate materials for OTEC heat exchangers, parts 1 and 2
[DE82-000909] N82-16227
Investigation of by-product molybdenum recovery
[PB81-246514] N82-16232
The determination of the stacking fault energy in copper-nickel alloys N82-17054

CORE SAMPLING
Hydrogeologic setting of the Glacial Lake Agassiz Peatlands, Northern Minnesota
[PB81-249328] N82-16473

CORES
Equilibrium and stability of rotating stellar cores with finite entropy N82-16995

CORONAS
Variation of the solar He I 1830 A line: 1977 - 1980 N82-17040

CORROSION
Corrosive effects of condensate
[PB81-244782] N82-16233
Control of fractionator-area corrosion at SRC pilot plants
[DE82-001949] N82-16280

CORROSION PREVENTION
Mechanical properties of adhesively bonded aluminum structures protected with hydrated inhibitors
[AD-A106222] N82-16241

CORROSION RESISTANCE
Crevice corrosion and metal-ion concentration cell-corrosion resistance of candidate materials for OTEC heat exchangers, parts 1 and 2
[DE82-000909] N82-16227
Chromium substitution in stainless steels
[PB81-235475] N82-16231

CORROSION TESTS
Chromium substitution in stainless steels
[PB81-235475] N82-16231
MHD Heat and Seed Recovery Technology Project
[DE82-001608] N82-16900

CORRUGATING
Overall effective thermal resistance of corrugated fiberboard containers
[AD-A106569] N82-16183
Effect of paperboard stress-strain characteristics on strength of singlewall corrugated fiberboard: A theoretical approach
[AD-A106566] N82-16184

COSMOLOGY
The evolution of density perturbation in an open universe
[REPT-670] N82-17005
Kinetic theory in astrophysics and cosmology N82-17062

COSMONAUTS
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706

COST ANALYSIS
A computerized life-cycle cost methodology for engineering analysis N82-16130
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] N82-16521
Operation and maintenance costs for municipal wastewater facilities
[PB81-249971] N82-16626

COST ESTIMATES
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] N82-16481

COUPLING
Dynamics of magnetosphere-ionosphere coupling including turbulent transport
[NASA-CR-165098] N82-16636

CRACK GEOMETRY
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] N82-16918

CRACK INITIATION
Effects of environmental variables on the crack initiation stages of corrosion fatigue of high strength aluminum alloys
[NASA-CR-165115] N82-16216
Evaluation of flexible pavement crack sealing methods used in Utah
[PB81-239469] N82-16290
Elevated temperature fatigue testing of metals
[NASA-TM-82745] N82-16419
Static stress-intensity factors and dynamic crack propagation in pipes
[DE82-900365] N82-16431

CRACK PROPAGATION
An experimental evaluation of tearing instability using the compact specimen
[AD-A107633] N82-16218
Crack branching in brittle materials. Part 1: Analytical aspects
[PB81-243735] N82-16255
Use of weight functions to determine the stress intensity for a cracked thick-walled cylinder
[AD-A106270] N82-16423
Large deformations near the tips of an interface-crack between two neo-hookean sheets
[AD-A106147] N82-16425
Static stress-intensity factors and dynamic crack propagation in pipes
[DE82-900365] N82-16431

CRACKING (FRACTURING)
An experimental evaluation of tearing instability using the compact specimen
[AD-A107633] N82-16218
Crack branching in brittle materials. Part 1: Analytical aspects
[PB81-243735] N82-16255

CRASHES
Advanced recorder design and development
[PB81-244105] N82-16385
Review of literature and regulation relating to thoracic impact toleance and injury criteria
[PB82-108697] N82-16736

CREEP TESTS
Behavior of construction adhesives under long-term load
[AD-A106565] N82-16240

CREW PROCEDURES (INFLIGHT)
Mathematical programming techniques for scheduling Spacelab crew activities and experiment operations N82-17075
A study of the relativistic rise in ionization as measured by ion chambers of different design N82-17076

CRITICAL MASS
Improvements in explosive charges
[DE81-028977] N82-16276

CRITICAL TEMPERATURE
Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093

CRITICAL VELOCITY
The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma
[REPT-626] N82-17007

CROP CALENDARS
The application of remote sensing to resource management and environmental quality programs in Kansas — Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

CROP GROWTH
The application of remote sensing to resource management and environmental quality programs in Kansas — Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

CROP IDENTIFICATION
Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] N82-16448

CROP INVENTORIES
Brazilian remote sensing activities, current and prospective needs
[E82-10026] N82-16444

CROP VIGOR
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] N82-16487
CROSS FLOW
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672
CRUDE OIL
Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702
CRYOGENIC EQUIPMENT
Feasibility study for long lifetime helium dewar
[NASA-CR-166254] N82-16145
CRYOGENIC FLUIDS
Cryogenic fluids density reference system: Provisional accuracy statement (1980)
[PB81-244865] N82-16388
CRYSTAL DEFECTS
Void swelling in the molybdenum alloy TZM irradiated to high fluences
[DE81-029802] N82-16223
The effect of solute-vacancy pairs on the physical properties of Si doped GaAs and other compound semiconductor systems
[AD-A107598] N82-16910
CRYSTAL GROWTH
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] N82-16491
High-pressure gradient-freeze growth of single crystals of indium phosphide
[AD-A107731] N82-16913
Surface control temperatures for the Bridgman-Stockbarger and float zone techniques
N82-17073
CRYSTAL LATTICES
Lattice dynamics of graphite intercalation compounds: Modelled by the phonon dispersion of linear chains
[PB82-000061] N82-16914
CRYSTALLIZATION
Preparation and characterization of conducting iron tungstates
[AD-A106541] N82-16193
Temperature and concentration transients in the aluminum-air battery --- application to electric vehicles
[DE81-030338] N82-16512
CURING
Development of toughened epoxy polymers for high performance composite and ablative applications
N82-17044
CURRENT AMPLIFIERS
Multi-channel temperature measurement amplification system --- solar heating systems
[NASA-CASE-MFS-23775-1] N82-16474
CURRENT DENSITY
A determination of the current density in electron beams N82-17045
CURRENT DISTRIBUTION
A determination of the current density in electron beams N82-17045
CYANIDES
Solidification phenomena of binary organic mixtures N82-17047
CYCLES
Predominant periods in the time series of drought area index for the Western High Plains AD 1700 to 1962 N82-17039
CYCLIC ACCELERATORS
Progress and prospects at the National Synchrotron Light Source (NSLS)
[DE81-030738] N82-16861
CYCLONES
Tropical cyclone intensity change: A quantitative forecasting scheme
[AD-A106157] N82-16669
Annual data and verification tabulation Atlantic tropical cyclones, 1980
[PB81-246050] N82-16681
Frequency and motion of Atlantic tropical cyclones
[PB81-247256] N82-16682
CYCLOTRON FREQUENCY
Initial ICRH experiments on EBT-S N82-16899
CYCLOTRON RESONANCE
The role of hiss in magnetospheric chorus emissions
[AD-A106479] N82-16643
Reactions of metal ions and their clusters in the gas phase using laser ionization: Ion cyclotron resonance spectroscopy
[DE81-029015] N82-16915
CYLINDRICAL BODIES
Use of weight functions to determine the stress intensity for a cracked thick-walled cylinder
[AD-A106270] N82-16423
CYTOCHROMES
Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723
CYTOLOGY
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

D

DAMPING
Natural modes and real modal variables for flexible spacecraft
[CRC-1348] N82-16146
DAMS
Closed-system freezing of soils in linings and earth embankment dams
[PB81-240491] N82-16289
DATA ACQUISITION
Programs for the transonic wind tunnel data processing installation. Part 9: Pressure measurements updated
[AD-A106271] N82-16095
A versatile data acquisition system for a low speed wind tunnel
[AD-A106269] N82-16097
Voyager mission support, 1 N82-16106
Voyager mission support, 2 N82-16107
Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171
OTEC performance tests of the Trane plate-fin heat exchanger
[DE82-001833] N82-16541
Measurements and analysis of acoustic bottom interaction in the Northwestern Mexican Basin
[AD-A107551] N82-16813
Detection and analysis of radio frequency lightning emissions N82-17052
DATA BASE MANAGEMENT SYSTEMS
The DSN programming system N82-16105
DATA BASES
The defense mapping agency's pilot digital operations
[AD-A106092] N82-16457
A translator for the high level language sequel 2/query statement
[INPE-2184-RPE/395] N82-16757
DATA COMPRESSION
Compression of meteorological satellite images
[INPE-2182-RPE/393] N82-16656
DATA CONVERTERS
Fiber Optic Translator Unit (FOTU), volume 1
[AD-A106131] N82-16853
DATA LINKS
Advanced underwater telemetry and voice links for inland and coastal waters research
[PB81-241406] N82-16144
ATS-6 engineering performance report. Volume 5: Propagation experiments
[NASA-RP-1080-VOL-5] N82-16151
DATA MANAGEMENT
The complexity of manipulating hierarchically defined sets of rectangles
[AD-A106552] N82-16350
DATA PROCESSING
A versatile data acquisition system for a low speed wind tunnel
[AD-A106269] N82-16097
Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171
Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications
[E82-10020] N82-16438
A technical briefing on the initial Graphics Exchange Specification (IGES)
[PB81-238719] N82-16766
DATA PROCESSING EQUIPMENT
The DSN programming system N82-16105
GCF-NOCC reconfiguration N82-16131
DATA RECORDING
Tape recording and triggering systems
[PB81-243248] N82-16382
DATA REDUCTION
Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171
Digital correlation of DDRS data
[NASA-CR-167494] N82-16452
DATA RETRIEVAL
A translator for the high level language sequel 2/query statement
[INPE-2184-RPE/395] N82-16757
The K-D-B-tree: A search structure for large multidimensional dynamic indexes
[AD-A106550] N82-16773
DATA SAMPLING
Research in multirate estimation and control optimal sample rate selection --- application to aircraft control
[AD-A106043] N82-16792
DATA SMOOTHING
Systolic algorithms for running order statistics in signal and image processing
[AD-A106555] N82-16787
DATA TRANSMISSION
The 2.5-bit/detected photon demonstration program: Description, analysis and phase 1 results
N82-16117
Use of a microprocessor to implement an ADCCP protocol with reject and selective reject (Federal standard 1003)
[AD-A107769] N82-16754
DAWN CHORUS
The role of hiss in magnetospheric chorus emissions
[AD-A106479] N82-16643
DAYTIME
Evaluation of retro-reflective measurement devices
[PB81-243602] N82-16952
DEACTIVATION
Vibrational relaxation of DF (v = 1 and 3) in H2, D2, N2, and HF at 200 K
[AD-A106142] N82-16401
DECELERATION
Tidal friction in the Earth-Moon system
N82-16978
DECIDUOUS TREES
Atmospheric deposition of heavy metals and their interaction with acid precipitation in a North American deciduous forest
[DE81-032004] N82-16556
DECISION MAKING
An application of decision analysis to technology assessment: An assessment of decentralized waste treatment methods
[PB82-109018] N82-16605
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements
[AD-A106143] N82-16739
The knowledge level
[AD-A106556] N82-16772
The design of multiactivity multifacility systems
[AD-A107670] N82-16791
An interactive approach to multiple criteria decision making based on statistical inference
[PB82-108747] N82-16924
DECISION THEORY
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements
[AD-A106143] N82-16739
DECODERS
Fiber Optic Translator Unit (FOTU), volume 1
[AD-A106131] N82-16853
DECOMPOSITION
Upper atmospheric section N82-16661
DEEP SPACE NETWORK
The telecommunications and data acquisition report
[NASA-CR-165111] N82-16101
Radio astronomy N82-16102
Block 1 phase 2 very long baseline interferometry implementation N82-16104
The DSN programming system N82-16105
Voyager mission support, 1 N82-16106

Voyager mission support, 2 N82-16107

A VLBI survey of the northern polar cap region N82-16108

Arcsecond positions for millisecond VLBI nuclei of extragalactic radio souces. Part 1: 546 sources N82-16109

An FM/CW method for the measurements of time delays of large Cassegrain antennas N82-16110

Energy consumption for the echo station (DSS 12) N82-16139

DEFECTS

NDI of composite materials [AD-A106278] N82-16186

An experimental evaluation of tearing instability using the compact specimen [AD-A107633] N82-16218

DEFLECTION

Mechanistic interpretation of nondestructive pavement testing deflections [PB82-107095] N82-16303

DEFORMATION

Natural modes and real modal variables for flexible spacecraft [CRC-1348] N82-16146

DEGRADATION

A test and instrumentation system for the investigation of degradation of electrical insulating materials [NASA-CR-165109] N82-16341

Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite N82-16716

DEGREES OF FREEDOM

Investigations of nonreactive vibrational and rotational excitation in small, potentially reactive ion molecule systems at energies below 6eV [MPIS-4/1981] N82-16816

DEHUMIDIFICATION

Simple predictive model for performance of desiccant beds for solar dehumidification [DE81-023606] N82-16500

DEICERS

Ice phobics blade tracking and comparison of vibration analysis techniques [AD-A108121] N82-16074

DELAMINATING

Development of an engineering analysis of progressive damage in composites during low velocity impact [NASA-CR-165778] N82-16177

DEMAND (ECONOMICS)

Adequacy and economics of water supply in northeastern Illinois, 1985 - 2010 [PB82-105495] N82-16469

QUSER user's guide [DE81-030681] N82-16767

Analysis of federal incentives used to stimulate energy consumption [DE81-031928] N82-16935

Los Angeles Downtown People Mover (DPM) operational analysis [PB81-241416] N82-16964

Consumer orientations toward fuel efficient vehicles: Executive summary [PB81-245359] N82-16965

Consumer orientations toward fuel efficient vehicles [PB81-245367] N82-16966

DEMODULATION

Analysis of maximin matched-filter design for communication through a nonlinearly distorting channel [AD-A106789] N82-16327

DENSITY (MASS/VOLUME)

Relationships between soil moisture-holding properties and soil texture, organic matter content, and bulk density [NASA-TM-76674] N82-16451

Density levels of pathogenic organisms in municipal wastewater sludge, a literature review [PB82-102286] N82-16619

DENSITY DISTRIBUTION

The evolution of density perturbation in an open universe [REPT-670] N82-17005

DENSITY MEASUREMENT

Precision measurements on fibrous glass insulation [PB81-239634] N82-16308

Cryogenic fluids density reference system: Provisional accuracy statement (1980) [PB81-244865] N82-16388

Neutral density measurements in Doublet 3 [DE82-000497] N82-16629

DENSITY WAVE MODEL

The generation of spiral waves in galaxies N82-16974

DESICCANTS

Simple predictive model for performance of desiccant beds for solar dehumidification [DE81-023606] N82-16500

DESIGN

Exploratory study of constraints on design by functional requirements and manufacturing [PB82-101858] N82-16304

Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC) [NASA-TM-82734] N82-16481

DESIGN ANALYSIS

Pre-design study for a modern four-bladed rotor for the Rotor System Research Aircraft (RSRA) --- integrating the YAH-64 main rotor [NASA-CR-166154] N82-16043

Study of controlled diffusion stator blading. 1. Aerodynamic and mechanical design report [NASA-CR-165500] N82-16081

Brittle materials design, high temperature gas turbine [AD-A106670] N82-16085

A computerized life-cycle cost methodology for engineering analysis N82-16130

Design for manufacturability: Design for forging, part 2 [PB82-101692] N82-16297

Semiconductor measurement technology: The design, testing, and analysis of a comprehensive test pattern for measuring CMOS/SOS process performance and control [PB81-245342] N82-16361

Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC) [NASA-TM-82734] N82-16481

Thermionic-combustor combined-cycle system. Volume 3: A thermionic converter design for gas-turbine combined-cycle systems [DE82-000729] N82-16509

Modeling and Analysis of Power Processing Systems (MAPPS). Volume 2: Appendices [NASA-CR-165539] N82-16748

DESORPTION

Air desorption from a water film [DE81-031961] N82-16203

DESULFURIZING

Thermodynamic data for flue-gas desulfurization processes [DE81-030545] N82-16557

Flue-gas desulfurization: Review of selected commercial and advanced technologies [DE82-001960] N82-16559

Sulfur gas emissions from stored flue gas desulfurization solids [DE82-900659] N82-16568

DETECTION

Development of a pipe location system [PB81-246530] N82-16386

Test and evaluation of UV fiber optics for application for aircraft fire detector systems [AD-A106129] N82-16850

DETONATION

Critical parameters for detonation propagation and initiation of solid explosives [AD-A106485] N82-16365

DEUTERIUM FLUORIDES

Vibrational relaxation of DF (v=1 and 3) in H2, D2, N2, and HF at 200 K [AD-A106142] N82-16401

DEVELOPING NATIONS

International market assessment of stand-alone photovoltaic power systems for cottage industry applications [NASA-CR-165287] N82-16494

DF LASERS

Vibrational relaxation of DF (v=1 and 3) in H2, D2, N2, and HF at 200 K [AD-A106142] N82-16401

DIAGNOSIS

Detection of amblyopia utilizing generated retinal reflexes [NASA-CR-161944] N82-16732

Microprocessor digital fault [AD-A106707] N82-16752

DIAMINES

Synthesis of aminosilane and aromatic diamine intermediates for polymerization N82-17055

DICHLORIDES

Silicon production process evaluations [NASA-CR-163470] N82-16486

Development of a polysilicon process based on chemical vapor deposition (phase 1) [NASA-CR-163475] N82-16488

DIELECTRICS

Wave propagation through axially symmetric dielectric shells [AD-A106762] N82-16326

Partial discharge characteristics of liquid-impregnated laminate dielectric structures [DE81-028745] N82-16356

Theory of electron-avalanche breakdown in solids [AD-A106751] N82-16903

Photoacoustic spectroscopy of dielectric and semiconducting solids [AD-A107613] N82-16911

DIESEL ENGINES

Acoustic and emission characteristics of small, high-speed internal combustion engines [PB82-104225] N82-16416

Development of adjustment factors for on road fuel economy [PB81-241986] N82-16950

DIESEL FUELS

Sunflower seed oil as an extender for diesel fuel in agricultural tractors [DE81-903440] N82-16264

Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol [PB81-242562] N82-16286

DIFFERENTIAL AMPLIFIERS

Multi-channel temperature measurement amplification system --- solar heating systems [NASA-CASE-MFS-23775-1] N82-16474

DIFFERENTIAL EQUATIONS

Applications of random differential equations to engineering science. Wave propagation in turbulent media and random linear hyperbolic systems [AD-A108020] N82-16782

DIFFERENTIAL PRESSURE

A program to evaluate a control system based on feedback of aerodynamic pressure differentials [NASA-CR-163466] N82-16089

DIFFRACTION

UTD analysis of electromagnetic scattering by flat structures [NASA-CR-165099] N82-16313

DIFFUSION

Study of controlled diffusion stator blading. 1. Aerodynamic and mechanical design report [NASA-CR-165500] N82-16081

DIGITAL COMPUTERS

The defense mapping agency's pilot digital operations [AD-A108092] N82-16457

DIGITAL DATA

Digital single sideband modulators for analog signals [IND-FB-105] N82-16316

DIGITAL FILTERS

A digital filter implementation of the deep space transponder phase lock loop integrator N82-16119

Systolic algorithms for running order statistics in signal and image processing [AD-A106555] N82-16787

Digital compensation techniques for the effects of time lag in closed-loop simulation using the 6 DOF motion system N82-17069

Incipient failure detection (IFD) of SSME ball bearings N82-17080

DIGITAL INTEGRATORS

A digital filter implementation of the deep space transponder phase lock loop integrator N82-16119

DIGITAL SYSTEMS

Digital Avionics Information System (DAIS): Development and demonstration [AD-A107906] N82-16079

Voice flow control in integrated packet networks [AD-A106722] N82-16330
Novel digital signal processing and detection techniques [AD-A106774] N82-16347
Memory-based frame synchronizer --- for digital communication systems [NASA-CASE-GSC-12430-1] N82-16747
Three-dimensional digital line segments [AD-A106813] N82-16766

DIGITAL TECHNIQUES
Novel digital signal processing and detection techniques [AD-A106774] N82-16347
NBS phase angle calibration standard [PB81-244899] N82-16390
Digital correlation of DDRS data [NASA-CR-167494] N82-16452
Three-dimensional digital line segments [AD-A106813] N82-16766

DIGITAL TO ANALOG CONVERTERS
A calibration service for analog-to-digital and digital-to-analog converters [PB81-243404] N82-16395

DIODES
Computational study of magnetic dam effects in a high impedance diode [AD-A106154] N82-16818

DIPOLE ANTENNAS
Antenna considerations and signal processing techniques for the identification of buried non-metallic objects [AD-A107752] N82-16332

DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Advanced methods for preparation and characterization of infrared detector materials --- mercury cadmium telluride alloys [NASA-CR-161949] N82-16848

DISILICIDES
Silicon production process evaluations [NASA-CR-163470] N82-16436

DISKS
Non-stationary viscous gaseous disks in nuclei of dense stellar systems N82-16994

DISPERSION
Oil slick dispersal mechanics [PB82-105560] N82-16610

DISPERSIONS
Impact of topographic circulations on the transport and dispersion of air pollutants [PB82-102435] N82-16584

DISPLACEMENT
Use of back azimuth measurements in seismic event location with regional data [AD-A106429] N82-16639

DISPLAY DEVICES
Simulator evaluation of electronic radio aids to navigation displays. The RA-2 experiment [AD-A106672] N82-16062
System for providing an integrated display of instantaneous information relative to aircraft attitude, heading, altitude, and horizontal situation [NASA-CASE-FRC-11005-1] N82-16075
Threat perception while viewing single intruder conflicts on a cockpit display of traffic information [NASA-TM-81341] N82-16076
Aircraft alerting systems standardization study. Volume 2: Aircraft alerting system design guidelines [AD-A106732] N82-16077

DISSOLVED GASES
MESA (Marine Ecosystem Analysis) New York Bight project: Winkler oxygen data, expanded water column characterization cruises (XWCC-2 to SWCC-24), NOAA ships Researcher and George B. Kelez, 1975 - 1979 [PB82-100975] N82-16575

DISSOLVING
Aqueous dissolution of calcium metaphosphate glasses [DE81-030130] N82-16246
Oil slick dispersal mechanics [PB82-105560] N82-16610

DISTANCE MEASURING EQUIPMENT
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 3: A comparison of waypoint guidance algorithms for RNAV/MLS transition [NASA-CR-3512] N82-16060

DISTRIBUTION FUNCTIONS
A Fokker-Planck model for the stellar initial mass function N82-16968

DIURNAL VARIATIONS
Hourly diurnal flow variations in publicly-owned wastewater treatment facilities [PB82-107954] N82-16601

DIVERGENCE
Neutral-beam systems for magnetic-fusion reactors [DE81-027940] N82-16876

DIVERTERS
Expanded boundary divertor experiments in doublet 3 [DE81-030399] N82-16868

DOMAINS
Anaphora for limited domain systems [AD-A106559] N82-16762

DOMESTIC ENERGY
New York State plan to encourage commercialization of more efficient gas technologies [PB81-249997] N82-16549

DOMESTIC SATELLITE COMMUNICATIONS SYSTEMS
Satellite options for rural telecommunications in developing countries [PB81-244766] N82-16339

DOMINANCE
Domination problem for vector measures and applications to nonstationary processes [AD-A106375] N82-16778

DOPED CRYSTALS
Deep impurity states in gallium arsenide [AD-A106695] N82-16908

DOPPLER RADAR
The zero-Doppler positioning system [AD-A107806] N82-16064
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports [NASA-CR-161855] N82-17043
A study of the geographic coverage properties of a satellite borne Doppler lidar wind velocity measuring system N82-17058

DRAFT (GAS FLOW)
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam [PB82-106998] N82-16614

DRAINAGE
Nocturnal drainage flow over complex terrain using a generalized shallow-fluid approximation [DE81-028693] N82-16460
Implication of spatial averaging in complex terrain wind studies [DE81-024451] N82-16672

DRAINAGE PATTERNS
Analysis of stream-aquifer system interrelationships in the Big Blue and Little Blue River Basins in Gage and Jefferson Counties, Nebraska [PB81-245870] N82-16466

DROP SIZE
Documentation for program SIMICE [AD-A106777] N82-16761

DROP TESTS
Skid-test evaluation of protective coverings for explosive billets [DE82-000072] N82-16258

DROPS (LIQUIDS)
A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

DROUGHT
Predominant periods in the time series of drought area index for the Western High Plains AD 1700 to 1962 N82-17039

DRUGS
Chemicals Identified in Human Biological Media [DE81-030613] N82-16735

DRYING
Simple predictive model for performance of desiccant beds for solar dehumidification [DE81-023606] N82-16500

DUCTED FLOW
A modified Dodge algorithm for the parabolized Navier-Stokes equation and compressible duct flows [NASA-CR-165060] N82-16363

DUCTILITY
An experimental evaluation of tearing instability using the compact specimen [AD-A107633] N82-16218

DUCTS
A model to calculate EM fields in tropospheric duct environments at frequencies through SHF [AD-A107710] N82-16335
Calculated neutron and gamma-ray energy spectra from 14-MeV neutrons streaming through an iron duct. Comparison with experiment --- blanket-shield assemblies of fusion reactors [DE81-030626] N82-16824

DUST
Acoustical concept for measuring particle size distributions [PB81-235301] N82-16387

DWARF STARS
Monitoring solar-type stars N82-17035

DYE LASERS
The two-photon absorptivity of rotational transitions in the A2 Sigma hyperon + (v prime = 0) - X-2 pion (v prime prime = 0) gamma band of nitric oxide [NASA-TM-81335] N82-16815

DYNAMIC CHARACTERISTICS
Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems [DE82-000666] N82-16522

DYNAMIC MODELS
Dynamic behavior of moving-bed coal-gasification reactors [DE82-000595] N82-16285

DYNAMIC PROGRAMMING
System reliability analysis with dynamic programming N82-16129
A model for solving multiperiod multireservoir water resources problems with stochastic inflows [AD-A106769] N82-16456

DYNAMIC RESPONSE
Numerical and flight simulator test of the flight deterioration concept [NASA-CR-3500] N82-16655

DYNAMIC STABILITY
Equilibrium and stability of rotating stellar cores with finite entropy N82-16995

DYNAMIC STRUCTURAL ANALYSIS
Study of ground handling characteristics of a maritime patrol airship [NASA-CR-166253] N82-16090
ACOSS nine (Active Control Of Space Structures) [AD-A106686] N82-16168

E

E GLASS
Tribological characteristics of a composite total-surface hip replacement [NASA-TP-1853] N82-16239

EAR
A hydrodynamic model of an outer hair cell [NASA-TM-82773] N82-16743

EARLY STARS
Mass loss from early type stars N82-16980

EARTH OBSERVATIONS (FROM SPACE)
Proper frequencies of a down-looking water-vapor radiometer over sea surface N82-16103
NASA/MSFC FY-81 Atmospheric Processes Research Review [NASA-CP-2204] N82-16660
Severe storms and local weather research N82-16663

EARTH ORBITS
Mission definition for a large-aperture microwave radiometer spacecraft N82-16155

EARTH RESOURCES PROGRAM
Earth Resources: A continuing bibliography, with indexes, issue 31 [NASA-SP-7041(31)] N82-16436

EARTH ROTATION
Prediction of Earth rotation and polar motion [NASA-CR-163468] N82-16637
Tidal friction in the Earth-Moon system N82-16978

EARTH SATELLITES
Radio frequency interference by Earth orbiting satellites. Deep Space Interference Prediction Program N82-16125

EARTH TIDES
Tidal friction in the Earth-Moon system N82-16978

EARTHQUAKE DAMAGE
Earthquake engineering of large underground structures [PB81-247918] N82-16291

Evaluation of the feasibility of establishing a national testing capability for the simulation of earthquake loads on large-scale structures
[PB81-243875] N82-16295

Investigation of reinforced brick masonry buildings undamaged by the San Fernando earthquake
[PB82-104217] N82-16432

Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977
[PB81-241663] N82-16630

EARTHQUAKE RESISTANCE

Investigation of reinforced brick masonry buildings undamaged by the San Fernando earthquake
[PB82-104217] N82-16432

Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977
[PB81-241663] N82-16630

EARTHQUAKE RESISTANT STRUCTURES

Evaluation of the feasibility of establishing a national testing capability for the simulation of earthquake loads on large-scale structures
[PB81-243875] N82-16295

Investigation of reinforced brick masonry buildings undamaged by the San Fernando earthquake
[PB82-104217] N82-16432

EARTHQUAKES

Earthquake hazards reduction program and fire prevention and control program
[GPO-78-756] N82-16631

EATING

Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

ECHO SOUNDING

Approximate fluid-structure interaction theories for acoustic echo signal predictions
[AD-A106349] N82-16812

ECOLOGY

Pennsylvania baseline
[PB82-101742] N82-16617

ECONOMIC ANALYSIS

Modeling solar-energy systems for economic optimization
[DE81-030030] N82-16518

Proceedings of the Conference on Innovation in the Environmental Technology Industry
[PB82-109588] N82-16606

ECONOMIC DEVELOPMENT

Some employment and earnings implications of regional biomass energy utilization: New England and the Cornbelt States
[DE81-030689] N82-16520

ECONOMIC FACTORS

Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] N82-16646

Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] N82-16959

ECONOMIC IMPACT

Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] N82-16259

ECOSYSTEMS

MESA (Marine Ecosystem Analysis) New York Bight project: Winkler oxygen data, expanded water column characterization cruises (XWCC-2 to SWCC-24), NOAA ships Researcher and George B. Kelez, 1975 - 1979
[PB82-100975] N82-16575

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-17), NOAA ship George B. Kelez, April 1978
[PB82-100983] N82-16576

MESA (Marine Ecosystem Analysis) New York Bight project. Expanded water column characterization cruise (XWCC-18). NOAA ship George B. Kelez, Jun. 1978
[PB82-100991] N82-16577

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-19). NOAA ship George B. Kelez, July 1978
[PB82-101007] N82-16578

MESA (Marine Ecosystem Analysis) New York Bight project. Expanded water column characterization cruise (XWCC-20). NOAA ship George B. Kelez, July-August 1978
[PB82-101015] N82-16579

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-21). NOAA ship George B. Kelez, April 1979
[PB82-101023] N82-16580

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-22). NOAA ship George B. Kelez, May-June 1979
[PB82-101031] N82-16581

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-23). NOAA ship George B. Kelez, July 1979
[PB82-101049] N82-16582

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-24). NOAA ship George B. Kelez, August 1979
[PB82-101056] N82-16583

Pollution Problems of the Great Lakes Region. Report of the Great Lakes Region Conference
[PB81-246951] N82-16625

EDUCATION

Weather satellite interpretation: Introduction to weather satellite imagery
[PB82-107657] N82-16677

EFFICIENCY

New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] N82-16549

EFFLUENTS

Time- and space-dependence of particulate effluent in the exhaust plume of a pulsed liquid bipropellant engine
[AD-A106525] N82-16173

Performance of trickling filter plants: Reliability, stability, variability
[PB82-106143] N82-16603

Geothermal Effluent Sampling Workshop
[PB82-105628] N82-16611

Reeds computer code
[NASA-CR-161956] N82-16760

EIGENVALUES

A study of eigenvalue behavior in adaptive arrays
[AD-A106544] N82-16322

EINSTEIN EQUATIONS

Kinetic theory in astrophysics and cosmology
N82-17062

EJECTION SEATS

A generalized escape system simulation computer program: A user's manual
[AD-A106152] N82-16055

ELASTIC PROPERTIES

Studies of the effect of orientation on the elastic constants of stretched and hydrostatically extruded poly(chlorotriflouroethylene): A model of affine orientation in semi-crystalline polymers
[AD-A107909] N82-16245

Large deformations near the tips of an interface-crack between two neo-hookean sheets
[AD-A106147] N82-16425

ELASTIC SCATTERING

Calculations of elastic wave scattering from voids and crack-like defects by the method of optimal truncation
[DE81-030770] N82-16428

ELASTIC WAVES

Calculations of elastic wave scattering from voids and crack-like defects by the method of optimal truncation
[DE81-030770] N82-16428

ELASTOHYDRODYNAMICS

Effects of artificially produced defects on film thickness distribution in sliding EHD point contacts
[NASA-TM-82732] N82-16412

Basic lubrication equations
[NASA-TM-81693] N82-16413

ELASTOMERS

Heat sealable, flame and abrasion resistant coated fabric — clothing and containers for space exploration
[NASA-CASE-MSC-18382-1] N82-16238

ELASTOPLASTICITY

Crack branching in brittle materials. Part 1: Analytical aspects
[PB81-243735] N82-16255

ELECTRIC AUTOMOBILES

Electric car: Is it still the vehicle of the future
[DE81-030437] N82-16943

Future trends in advanced batteries for automobile propulsion
[DE81-030543] N82-16944

ELECTRIC BATTERIES

Study of the secondary Li electrode in organic electrolyte
[DE82-001506] N82-16209

Calcium inorganic electrolyte battery development
[AD-A106199] N82-16497

Future trends in advanced batteries for automobile propulsion
[DE81-030543] N82-16944

ELECTRIC CONNECTORS

The design and evaluation of superconducting connectors N82-17059

ELECTRIC DISCHARGES

Partial discharge characteristics of liquid-impregnated laminate dielectric structures
[DE81-028745] N82-16356

ELECTRIC ENERGY STORAGE

Compressed air energy storage preliminary design and site development program in an aquifer. Turbomachinery design
[DE82-000672] N82-16524

ELECTRIC EQUIPMENT TESTS

High-voltage testing current measurement techniques
[PB81-240038] N82-16383

ELECTRIC FIELDS

Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail
[NASA-CR-168508] N82-16634

Double layers on auroral field lines
[NASA-CR-165113] N82-16635

Vector electric fields
[AD-A106784] N82-16642

Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature
[PB82-102567] N82-16737

Thunderstorm electric field modelling N82-17065

ELECTRIC GENERATORS

The NASA Lewis large wind turbine program
[NASA-TM-82761] N82-16495

Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] N82-16522

Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] N82-16525

ELECTRIC HYBRID VEHICLES

Hybrid and electric advanced vehicle systems (heavy) simulation
[NASA-CR-165536] N82-16938

Electric car: Is it still the vehicle of the future
[DE81-030437] N82-16943

ELECTRIC MOTOR VEHICLES

Temperature and concentration transients in the aluminum-air battery — application to electric vehicles
[DE81-030338] N82-16512

Hybrid and electric advanced vehicle systems (heavy) simulation
[NASA-CR-165536] N82-16938

ELECTRIC MOTORS

A survey of electric propulsion motors for automated guideway transit vehicles
[PB82-109307] N82-16360

ELECTRIC POWER

Energy consumption for the echo station (DSS 12)
N82-16139

ELECTRIC POWER PLANTS

Carbon dioxide power plant for total emission control and enhanced oil recovery
[DE81-030734] N82-16458

Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] N82-16481

Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165455] N82-16483

ELECTRIC POWER SUPPLIES
International market assessment of stand-alone photovoltaic power systems for cottage industry applications
[NASA-CR-165267] N82-16494

ELECTRIC POWER TRANSMISSION
Kafjord, Norway transmission line VLF antenna tests, 1979 - 1980
[AD-A106430] N82-16325

ELECTRICAL FAULTS
Theory of electron-avalanche breakdown in solids
[AD-A106751] N82-16903

ELECTRICAL IMPEDANCE
Characterization of power MESFETs at 21 GHz
[AD-A106673] N82-16349

ELECTRICAL INSULATION
A test and instrumentation system for the investigation of degradation of electrical insulating materials
[NASA-CR-165109] N82-16341
High-voltage testing current measurement techniques
[PB81-240036] N82-16383
Design considerations of a thermally stabilized continuous flow electrophoresis chamber 2
N82-17074

ELECTRICAL MEASUREMENT
High-voltage testing current measurement techniques
[PB81-240036] N82-16383
Technical activities 1980 center for absolute physical quantities
[PB81-248478] N82-16393

ELECTRICAL PROPERTIES
Evaluation tests of Abacus 6 kVA utility-interactive inverter
[DE82-001352] N82-16358
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] N82-16543
Advanced methods for preparation and characterization of infrared detector materials --- mercury cadmium telluride alloys
[NASA-CR-161949] N82-16848

ELECTRICAL RESISTANCE
Research on development of low-resistance p-n junctions in ZnSe
[AD-A106008] N82-16909

ELECTRICAL RESISTIVITY
Preparation and characterization of conducting iron tungstates
[AD-A106541] N82-16193
Compatibility and accelerated aging study for Li(Si)/FeS2 thermally activated batteries
[DE81-030210] N82-16503
Handbook of geophysical cavity-locating techniques with emphasis on electrical resistivity
[PB81-242711] N82-16653

ELECTRO-OPTICS
A preliminary evaluation of the system for Inventorying Road Surface Topography (SIRST)
[PB81-249336] N82-16294
Models of weather environments adverse to electro-optical systems
[AD-A107637] N82-16859
Deep impurity states in gallium arsenide
[AD-A106695] N82-16908

ELECTROCHEMISTRY
Vibrational spectroscopy of the electrode-electrolyte interface. Use of Fourier transform infrared Spectroscopy
[AD-A106231] N82-16192
Study of the secondary Li electrode in organic electrolyte
[DE82-001508] N82-16209

ELECTRODES
Vibrational spectroscopy of the electrode-electrolyte interface. Use of Fourier transform infrared Spectroscopy
[AD-A106231] N82-16192
Study of the secondary Li electrode in organic electrolyte
[DE82-001508] N82-16209
Technology development for phosphoric acid fuel cell powerplant, phase 2
[NASA-CR-165426] N82-16482
Electrode unit for testing human H reflex
N82-16728

ELECTROLYSIS
Study of the secondary Li electrode in organic electrolyte
[DE82-001508] N82-16209
Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236

ELECTROLYTES
Vibrational spectroscopy of the electrode-electrolyte interface. Use of Fourier transform infrared Spectroscopy
[AD-A106231] N82-16192
Temperature and concentration transients in the aluminum-air battery --- application to electric vehicles
[DE81-030336] N82-16512
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] N82-16521
Deliberate modification of the behavior of n-type cadium telluride/electrolyte interfaces by surface etching: Removal of fermi level pinning
[AD-A106382] N82-16907

ELECTROLYTIC CELLS
Calcium inorganic electrolyte battery development
[AD-A106199] N82-16497

ELECTROMAGNETIC ABSORPTION
High altitude atmospheric investigations. Part 2: Development of in-situ experiments for measurements in the D-region of the ionosphere and their results
[AD-A106770] N82-16318
The two-photon absorptivity of rotational transitions in the A2 Sigma hyperon + (v prime = O) - X-2 pion (v prime prime = O) gamma band of nitric oxide
[NASA-TM-81335] N82-16815
Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

ELECTROMAGNETIC COMPATIBILITY
Goldstone STDN 9-meter radiation test
N82-16137
Electromagnetic design of a microwave radiometer antenna system N82-16162

ELECTROMAGNETIC FIELDS
Multipole expansion for transient electric and magnetic fields in an internally excited spherical cavity contaning dampers of finite thickness with distributed electrical properties
[AD-A106384] N82-16329
Full wave analysis for scattering cross sections
[AD-A107704] N82-16333
A model to calculate EM fields in tropospheric duct environments at frequencies through SHF
[AD-A107710] N82-16335

ELECTROMAGNETIC INTERACTIONS
Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail
[NASA-CR-168508] N82-16634

ELECTROMAGNETIC INTERFERENCE
Performance of telecommunications systems in the spectral-use environment. 6: Analytical results for land-mobile scenarios in class B interference, with fading and multipath
[PB81-249344] N82-16337
The role of hiss in magnetospheric chorus emissions
[AD-A106479] N82-16643

ELECTROMAGNETIC MEASUREMENT
Analysis of results of mini round robin reflectance test
[PB81-244873] N82-16394

ELECTROMAGNETIC NOISE
Synthesizer stability evaluation N82-16134

ELECTROMAGNETIC PULSES
Propagation of transient signals through nonlinear, ionized media
[AD-A106754] N82-16320

ELECTROMAGNETIC SCATTERING
UTD analysis of electromagnetic scattering by flat structures
[NASA-CR-165099] N82-16313
Multiple electromagnetic scattering from a cluster of spheres. Volume 2: Symmetrization
[AD-A106658] N82-16797

ELECTROMAGNETIC SPECTRA
IUE observations of a new BL lac object from the S5 radio catalogue N82-16990

ELECTROMAGNETIC SURFACE WAVES
High frequency scattering by a sphere with complex surface impedance N82-16799

ELECTROMAGNETIC WAVE FILTERS
Nanosecond and picosecond spectroscopy and kinetics of dynamic absorbing materials
[AD-A107733] N82-16403

ELECTROMAGNETIC WAVE TRANSMISSION
Propagation of transient signals through nonlinear, ionized media
[AD-A106754] N82-16320

ELECTRON ACCELERATORS
Non-linear analysis of the free electron lasers utilizing a linear wiggler field
[AD-A106229] N82-16309

ELECTRON AVALANCHE
Theory of electron-avalanche breakdown in solids
[AD-A106751] N82-16903

ELECTRON BEAM WELDING
A determination of the current density in electron beams N82-17045

ELECTRON BEAMS
Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] N82-16490
Diagnostic device for bunched electron beams
[DE82-000639] N82-16844
A determination of the current density in electron beams N82-17045

ELECTRON CAPTURE
Collisions of fast multicharged ions in gas targets. Charge transfer and ionization
[DE81-030541] N82-16823

ELECTRON CYCLOTRON HEATING
Design of first walls and beam dumps for tandem mirror experiment upgrade
[DE81-030686] N82-16875
Formation and control of plasma potentials in TMX upgrade N82-16896
Ambipolar potential control by fast wave heating in Bumpy Tori N82-16897
Effect on ambipolar potential of ion cyclotron heating N82-16898

ELECTRON DENSITY (CONCENTRATION)
Laser heated gas-jet: A soft X-ray source
[DE81-029627] N82-16407

ELECTRON ENERGY
Energetics and collision dynamics of electronic transition lasers
[AD-A107591] N82-16404
Magnetic shell tracing: A simplified approach
[AD-A106714] N82-16647
The effect of transiting electrons on the ambipolar potential in a tandem mirror plasma N82-16892

ELECTRON IMPACT
Electron-impact excitation of ions
[DE81-030606] N82-16825

ELECTRON SPIN
Low-temperature electron spin resonance in (TMTSF) 2PF6 in the high pressure metallic phase
[DE81-030233] N82-16827

ELECTRON TRANSFER
Nanosecond and picosecond spectroscopy and kinetics of dynamic absorbing materials
[AD-A107733] N82-16403

ELECTRONIC COUNTERMEASURES
Advanced adaptive antenna techniques
[AD-A106545] N82-16323

ELECTRONIC EQUIPMENT
WR 10 millimeter wave microcalorimeter
[PB81-246639] N82-16392

ELECTRONIC EQUIPMENT TESTS
The zero-Doppler positioning system
[AD-A107806] N82-16064
Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953] N82-16170
Manufacturing Methods and Technology (MM&T) specification for miniature cathode ray tube
[AD-A106433] N82-16345
Microcomputer based test system for charge coupled devices
[DE81-029860] N82-16357
Infrared equipment, general
[AD-A106711] N82-16854

ELECTRONIC PACKAGING
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043
The design and evaluation of superconducting connectors N82-17059

ELECTROPHORESIS
Design considerations of a thermally stabilized continuous flow electrophoresis chamber 2
N82-17074

ELECTROPLATING
Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants
[AD-A107552] N82-16562

ELECTROREFINING
Electrorefining of aluminum
[PB81-243693] N82-16230
Electrorefining of sodium using solid state rapid ion conductors
[PB81-243667] N82-16234

ELECTROSTATICS
Physics of electrostatic lens
[AD-A105262] N82-16817

ELEMENTARY PARTICLE INTERACTIONS
Kaon-induced nuclear reactions
[DE81-030552] N82-16839

ELLIPTIC DIFFERENTIAL EQUATIONS
Regional Monte Carlo solution of elliptic partial differential equations
[DE81-028772] N82-16793

ELLIPTICAL PLASMAS
High-beta studies with beam-heated, non-circular plasmas in ISX-B
[DE81-032003] N82-16874

EMERGENCIES
Emergency telemetry performance N82-16136

EMERGENCY LOCATOR TRANSMITTERS
Special investigation report. Search and rescue procedures and arming of emergency locator transmitter: Aircraft accident near Michigan City, Indiana, 7 December, 1980
[PB81-249427] N82-16058

EMISSION
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] N82-16595
Unregulated exhaust emissions from noncatalyst baseline cars under malfunction conditions
[PB82-101130] N82-16596
Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

EMISSION SPECTRA
The role of hiss in magnetospheric chorus emissions
[AD-A106479] N82-16643
Magnetic activity in cool stars N82-16983
High resoluton IUE observations of the MG II resonance lines in the T Tauri Star S CrA
N82-16987

EMPLOYMENT
Some employment and earnings implications of regional biomass energy utilization: New England and the Cornbelt States
[DE81-030689] N82-16520

ENCAPSULATED MICROCIRCUITS
Analysis of field usage failure rate data for plastic encapsulated solid state devices
[NASA-CR-161946] N82-16343
Development of design, qualification, screening, and application requirements for plastic encapsulated solid-state devices for space applications
[NASA-CR-161947] N82-16344

ENERGETIC PARTICLES
Energetics and collision dynamics of electronic transition lasers
[AD-A107591] N82-16404

ENERGY CONSERVATION
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] N82-16057
Seminar: Energy conservation. Role of power capacitors: Concepts and Policy Issues
[PB81-247967] N82-16359
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] N82-16417
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] N82-16485
Risk of producing energy, and conserving it
[DE81 030807] N82-16507
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516
Code workbook for active and passive solar design: Single-family residential construction
[DE82-000637] N82-16531
Energy conservation by multiple glazing on heavy masonry buildings
[PB81-246977] N82-16548
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] N82-16549
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] N82-16550
Transport and energy
[DE81-030287] N82-16946

ENERGY CONSUMPTION
Energy consumption for the echo station (DSS 12)
N82-16139
Indoor climate, outdoor climate and energy consumption: A new approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings based on methods of statistical analysis N82-16476
Choice and Utilization of Energy-using Durables
[DE81-904223] N82-16513
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] N82-16514
Energy conservation by multiple glazing on heavy masonry buildings
[PB81-246977] N82-16548
Analysis of federal incentives used to stimulate energy consumption
[DE81-031928] N82-16935
Transport and energy
[DE81-030287] N82-16946

ENERGY CONVERSION
Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] N82-16205
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165328] N82-16480
Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] N82-16522
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000668] N82-16543
Energy and environmental quality: Case histories of impact management
[DE81-028435] N82-16565

ENERGY CONVERSION EFFICIENCY
Modeling solar-energy systems for economic optimization
[DE81-030030] N82-16518

ENERGY DISSIPATION
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] N82-16511

ENERGY LEVELS
Energetics and collision dynamics of electronic transition lasers
[AD-A107591] N82-16404

ENERGY POLICY
Seminar: Energy conservation. Role of power capacitors: Concepts and Policy Issues
[PB81-247967] N82-16359
Oil Shale 1982: A technology and policy primer
N82-16449
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] N82-16462
Enhanced oil recovery by CO2 foam flooding
[DE82-000949] N82-16464
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] N82-16467
Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] N82-16475
Energy in the 1980s: A call for leadership. The Public Awareness Symposium
[DE81-027613] N82-16504
Energy industries abroad
[DE82-001896] N82-16510
Analysis of state-energy-program capabilities
[DE82-001963] N82-16523
Design, construction, and initial operation of the ANL research
[DE82-001961] N82-16528
Development of hydroconversion of biomass to synthetic fuels. Project 61042 technical report
[DE82-000874] N82-16529
Case studies of retrofit applications of solar energy in the MASEC region
[DE82-001712] N82-16532
Cogeneration potential: Enhanced oil recovery
[DE81-904202] N82-16539
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2
[PB82-103573] N82-16618

ENERGY REQUIREMENTS
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] N82-16514
Modeling solar-energy systems for economic optimization
[DE81-030030] N82-16518
A comparison of energy technologies and their use in urban planning
[PB81-239592] N82-16546

ENERGY STORAGE
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] N82-16427
Modeling solar-energy systems for economic optimization
[DE81-030030] N82-16518
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] N82-16521
Comparison of energy-storage devices for use in future automobiles
[DE81-026530] N82-16945

ENERGY TECHNOLOGY
Oil Shale 1982: A technology and policy primer
N82-16449
Assessment of emerging energy sources
[DE82-900318] N82-16519
A comparison of energy technologies and their use in urban planning
[PB81-239592] N82-16546

ENERGY TRANSFER
Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions
[AD-A107718] N82-16198
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] N82-16525
The effect of transiting electrons on the ambipolar potential in a tandem mirror plasma N82-16892

ENGINE DESIGN
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] N82-16485
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] N82-16937
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] N82-16947

ENGINE FAILURE
Reusable rocket engine maintenance study
[NASA-CR-165569] N82-16172

ENGINE INLETS
Prediction of sound radiation from different practical jet engine inlets
[NASA-CR-165120] N82-16810

ENGINE NOISE
Acoustic and emission characteristics of small, high-speed internal combustion engines
[PB82-104225] N82-16416
Multiple pure tone elimination strut assembly --- air breathing engines
[NASA-CASE-FRC-11062-1] N82-16800
Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801
Analytical study of twin-jet shielding
[NASA-CR-165103] N82-16802
Analytical study of twin-jet shielding
[NASA-CR-165104] N82-16803
Analytical study of twin-jet shielding
[NASA-CR-165105] N82-16804
Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805

Analytical study of twin-jet shielding two-dimensional model
[NASA-CR-165107] N82-16806

ENGINE PARTS
Elevated temperature fatigue testing of metals
[NASA-TM-82745] N82-16419

ENGINE TESTS
Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] N82-16417

ENGINEERING MANAGEMENT
Technology transfer of computer-aided engineering to the university community
[UCRL-85694] N82-16939
Technology transfer and development of computer-aided engineering with the university community
[DE81-022408] N82-16940

ENTHALPY
Construction of large reaction mechanisms
[AD-A106139] N82-16197

ENTROPY
Construction of large reaction mechanisms
[AD-A106139] N82-16197

ENVIRONMENT EFFECTS
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] N82-16259
Discrimation of unique biological communities in the Mississippi lignite belt N82-16453
Environmental impacts associated with using peat for energy
[DE81-032000] N82-16463
Acid rain and forest productivity
[DE81-030916] N82-16555
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] N82-16563
Guidelines for the use of chemicals in removing hazardous substance discharges
[PB82-107483] N82-16615
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2
[PB82-103573] N82-16618
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] N82-16846

ENVIRONMENT MANAGEMENT
Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 2: Alternatives evaluation technical reference document
[PB82-107921] N82-16600

ENVIRONMENT MODELS
Adequacy and economics of water supply in northeastern Illinois, 1985 - 2010
[PB82-105495] N82-16469
Demonstration of a long-range atmospheric tracer system using perfluorocarbons
[PB82-106246] N82-16613
Models of weather environments adverse to electro-optical systems
[AD-A107637] N82-16859

ENVIRONMENT PROTECTION
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] N82-16467
Hazardous waste preliminary planning requirements for SRC-1 demonstration plant in Newman, Kentucky
[DE82-001346] N82-16561
Advanced Environmental Control Technology Program
[DE82-000898] N82-16562
Energy and environmental quality: Case histories of impact management
[DE81-028435] N82-16565
Air pollutants in selected Salt Lake Basin communities, 1971 - 1975
[PB82-103664] N82-16588
A summary of the EPA national source performance audit program - 1980
[PB82-108127] N82-16602
Pennsylvania baseline
[PB82-101742] N82-16617
Systems studies of waste transportation
[DE81-030840] N82-16941

ENVIRONMENTAL CHEMISTRY
The source and transport of arsenic in northeastern Ohio groundwaters
[PB81-240525] N82-16471

ENVIRONMENTAL CONTROL
Advanced Environmental Control Technology Program
[DE82-000898] N82-16562

ENVIRONMENTAL ENGINEERING
On-site wastewater treatment problems and alternatives for western North Carolina
[PB81-240541] N82-16572

ENVIRONMENTAL MONITORING
Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] N82-16439
Development of a through-the-earth monitor system
[PB81-237646] N82-16470
NEIC manual for groundwater/subsurface investigations at hazardous waste sites
[PB82-103755] N82-16590
A summary of the EPA national source performance audit program - 1980
[PB82-108127] N82-16602
Northern Gulf of Mexico topographic features study, executive summary
[PB81-248643] N82-16691
Northern Gulf of Mexico topographic features study, volume 3
[PB81-248676] N82-16694
Reeds computer code
[NASA-CR-161956] N82-16760

ENVIRONMENTAL QUALITY
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447
Federal initiative for clean air: Inspection and maintenance
[PB82-102500] N82-16585

ENVIRONMENTAL SURVEYS
Proceedings of the Conference on Innovation in the Environmental Technology Industry
[PB82-109588] N82-16606
Wastewater management plan for the Lake Washington/Green River Basins
[PB82-105982] N82-16612
Community noise attitudinal survey guidelines
[PB81-244295] N82-16626

ENVIRONMENTAL TESTS
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-3502] N82-16178
Behavior of construction adhesives under long-term load
[AD-A106565] N82-16240
A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

ENZYME ACTIVITY
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716

ENZYMES
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723

EPOXY MATRIX COMPOSITES
Prediction of composite hygral behavior made simple
[NASA-TM-82780] N82-16181
Interferometric study of epoxy resin gelation
[DE81-030128] N82-16252
Development of toughened epoxy polymers for high performance composite and ablative applications
N82-17044

EPOXY RESINS
Tribological characteristics of a composite total-surface hip replacement
[NASA-TP-1853] N82-16239
Interferometric study of epoxy resin gelation
[DE81-030128] N82-16252
Development of toughened epoxy polymers for high performance composite and ablative applications
N82-17044

EQUATIONS OF MOTION
Basic lubrication equations
[NASA-TM-81693] N82-16413

EQUATIONS OF STATE
Surface contour of a biaxially strained, doubly curved antenna reflective mesh N82-17063
Surface control temperatures for the Bridgman-Stockbarger and float zone techniques
N82-17073

EQUATORIAL ATMOSPHERE
Ionospheric disturbances propagating eastward in a low latitude detected by VHF polarimeters
[INPE-2202-PRE/011] N82-16632
Numerical simulation of Rayleigh-Taylor instability in the equatorial ionospheric plasma
[INPE-2172-RPE/388] N82-16633

EQUIPMENT
Optimum equipment maintenance/replacement policy. Part 1: Dynamic programming approach
N82-16128

EQUIPMENT SPECIFICATIONS
Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953] N82-16170
Advanced recorder design and development
[PB81-244105] N82-16385
Automatic gas-levitation system for vacuum deposition of laser-fusion targets
[DE82-000296] N82-16406

EQUIVALENT CIRCUITS
EHF test-bed subharmonic mixer
[AD-A106156] N82-16351

EREP
Earth Resources: A continuing bibliography, with indexes, issue 31
[NASA-SP-7041(31)] N82-16436

ERROR ANALYSIS
Gain uncertainty of arrayed antennas N82-16122
Investigation of digitally controlled oscillator operability problems N82-16135
Development of a surface panel measurement system
[NASA-CR-163469] N82-16315
WR 10 millimeter wave microcalorimeter
[PB81-246539] N82-16392
Transient error reliability models based on data analysis
[AD-A106554] N82-16751

ERROR DETECTION CODES
Microprocessor digital fault
[AD-A106707] N82-16752

ERROR FUNCTIONS
Tolerance analysis of optical telescopes using coherent addition of wavefront errors N82-17048

ERRORS
Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842
Reduction of anisoplanatic errors
[AD-A106689] N82-16855

ERYTHROCYTES
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715

ESTERS
Ester liquid crystal mixtures for dynamic scattering at elevated temperatures
[AD-A106790] N82-16906

ESTIMATES
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements
[AD-A106143] N82-16739
Density estimation and projection pursuit methods
[AD-A107816] N82-16779

ESTIMATING
ARMA spectral estimation: An efficient closed form procedure
[AD-A106753] N82-16788
Quantile estimation in dependent sequences
[AD-A106132] N82-16790

Research in multirate estimation and control optimal sample rate selection — application to aircraft control
[AD-A108043] N82-16792
Reduction of anisoplanatic errors
[AD-A108669] N82-16855

ETCHING
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] N82-16491
Deliberate modification of the behavior of n-type cadium telluride/electrolyte interfaces by surface etching: Removal of fermi level pinning
[AD-A108382] N82-16907

ETHYL ALCOHOL
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 1: Project conceptual design
[DE82-000474] N82-16260
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 2: Project marketing/economic/financial and organization
[DE82-000472] N82-16261
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 3: Project environmental/health/safety and socioeconomics
[DE82-000473] N82-16262
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 1: Executive summary
[DE82-000294] N82-16265
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 2: Technical analysis
[DE82-000479] N82-16266
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 3: Procurement analysis, marketing analysis, and environmental and regulatory analysis
[DE82-000478] N82-16267
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 4: Economic and financial analysis, management analysis
[DE82-000477] N82-16268
Proceedings of the 4th International Sympcsium on Alcohol Fuels Technology, volume 1
[DE81-903753] N82-16273
Proceedings of the 4th International Symposium on Alcohol fuels Technology, volume 2
[DE81-903754] N82-16274
Small-scale fuel-alcohol plant. Volume 2: Detailed equipment information
[DE82-001037] N82-16278
Small-scale-fuel-alcohol plant. Volume 3: Construction information
[DE82-001036] N82-16279

ETHYLENE COMPOUNDS
Solidification phenomena of binary organic mixtures N82-17047

EULER-CAUCHY EQUATIONS
The 3-D on the 7600-Star-Cray
[DE81-030889] N82-17004

EVALUATION
A preliminary evaluation of the system for Inventorying Road Surface Topography (SIRST)
[PB81-249336] N82-16294
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] N82-16550
Emission and fuel economy of FUEL-MAX, a retrofit device
[PB81-244162] N82-16961

EVAPORATORS
Effects of ammonia contamination by water on OTEC power system performance
[DE82-001832] N82-16535
OTEC performance tests of the Trane plate-fin heat exchanger
[DE82-001233] N82-16541
Study to perform preliminary experiments to evaluate particle generation and characterization techniques for zero-gravity cloud physics experiments
[NASA-CR-3486] N82-16657

EXCIMER LASERS
Stability of optical coatings in hostile excimer laser environments
[AD-A106756] N82-16397

EXERCISE PHYSIOLOGY
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man
N82-16729

EXHAUST EMISSION
Federal initiative for clean air: Inspection and maintenance
[PB82-102500] N82-16585
Emission characteristics of 1979 and 1980 California passenger cars equipped with three-way catalysts
[PB82-105073] N82-16594
Estimating mobile source pollutants in microscale exposure situations
[PB82-101114] N82-16597
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] N82-16959
The effects of the Moleculetor Fuel Energizer on emissions and fuel economy
[PB81-244998] N82-16960
Emission and fuel economy of FUEL-MAX, a retrofit device
[PB81-244162] N82-16961
Carbon monoxide and non-FTP (Federal Test Procedures) ambient temperature
[PB81-243180] N82-16962
A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

EXHAUST GASES
The APRAC-3/MOBILE 1 emissions and diffusion modeling package: User's manual
[PB82-103783] N82-16488
Flue-gas desulfurization: Review of selected commercial and advanced technologies
[DE82-001960] N82-16559
Exhaust emissions from high-mileage catalyst-equipped passenger cars
[PB82-103326] N82-16586

EXHAUST SYSTEMS
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] N82-16595
Unregulated exhaust emissions from noncatalyst baseline cars under malfunction conditions
[PB82-101130] N82-16596

EXOBIOLOGY
USSR report: Space biology and aerospace medicine, volume 15, no. 6, November - December 1981
[JPRS-79849] N82-16704
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714
Aerospace Medicine and Biology: A continuing bibliography (Supplement 226)
[NASA-SP-7011(226)] N82-16731

EXPLOSIONS
Far field overpressure from TNT explosions: A survey of available models
[AD-A107952] N82-16370

EXPLOSIVE DEVICES
Improvements in explosive charges
[DE81-028977] N82-16276

EXPLOSIVES
Skid-test evaluation of protective coverings for explosive billets
[DE82-000072] N82-16258
Improvements in explosive charges
[DE81-028977] N82-16276
Critical parameters for detonation propagation and initiation of solid explosives
[AD-A106485] N82-16365

EXPOSURE
Carbon monoxide commuter exposure data base: A 5-day study in Los Angeles
[PB82-103607] N82-16589

EXTENSOMETERS
Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842

EXTERNAL STORES
Nonlinear analysis of interfering bodies in supersonic flow
[AD-A108071] N82-16053

EXTRAGALACTIC RADIO SOURCES
Arcsecond positions for millisecond VLBI nuclei of extragalactic radio souces. Part 1: 546 sources
N82-16109

EXTREMELY HIGH FREQUENCIES
EHF test-bed subharmonic mixer
[AD-A106156] N82-16351

EXTRUDING
A finite element model of a White-Metzner viscoelastic polymer extrudate
[AD-A106740] N82-16242
Process for the formation of biaxially oriented films of poly(p-phenylene terephthalamide) (PPD-T) from liquid crystalline solutions
[AD-A108058] N82-16244

EYE DISEASES
The prevalence of visual deficiencies among 1979 general aviation accident airmen
[AD-A106489] N82-16054
Detection of amblyopia utilizing generated retinal reflexes
[NASA-CR-161944] N82-16732

EYE MOVEMENTS
Method of recording rotatory eye reflexes
N82-16727

F

FABRICATION
Fabrication of boron/aluminum fan blades for SCR engines
[NASA-CR-165294] N82-16176
Technology development for phosphoric acid fuel cell powerplant, phase 2
[NASA-CR-165426] N82-16482
Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] N82-16491
Fabrication of heterojunction LEDs for operation at 1.3 micrometers
[AD-A107730] N82-16857
Fabrication of metal mirrors for far-infrared wavelengths
[AD-A107898] N82-16858
Development of toughened epoxy polymers for high performance composite and ablative applications
N82-17044

FABRICS
Heat sealable, flame and abrasion resistant coated fabric — clothing and containers for space exploration
[NASA-CASE-MSC-18382-1] N82-16238

FACTORIZATION
Multiple electromagnetic scattering from a cluster of spheres. Volume 2: Symmetrization
[AD-A106658] N82-16797

FAILURE
NDI of composite materials
[AD-A106278] N82-16186

FAILURE ANALYSIS
Development of an engineering analysis of progressive damage in composites during low velocity impact
[NASA-CR-165778] N82-16177
Analysis of field usage failure rate data for plastic encapsulated solid state devices
[NASA-CR-161946] N82-16343
Dimensions, volume 65, number 4, May/June 1981
[PB82-106006] N82-16956

FAILURE MODES
Reusable rocket engine maintenance study
[NASA-CR-165569] N82-16172
Failure loads for model adhesive joints subjected to tension, compression or torsion
[AD-A106724] N82-16424
Incipient failure detection (IFD) of SSME ball bearings N82-17080

FAN BLADES
Fabrication of boron/aluminum fan blades for SCR engines
[NASA-CR-165294] N82-16176

FAR FIELDS
Far field overpressure from TNT explosions: A survey of available models
[AD-A107952] N82-16370

FAR INFRARED RADIATION
Fabrication of metal mirrors for far-infrared wavelengths
[AD-A107896] N82-16856
Far infrared balloon-borne observations
N82-16972

FAR ULTRAVIOLET RADIATION
Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850

FARM CROPS
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] N82-16467

FATIGUE (BIOLOGY)
Operator's manual for variable weight, variable CG helmet simulator
[AD-A108093] N82-16078
Fatigue in Flight Inspection Field Office (FIFO) flight crews
[AD-A106791] N82-16733

FATIGUE (MATERIALS)
Thermal degradation of graphite/epoxy composite
[AD-A106425] N82-16185

FATIGUE LIFE
Elevated temperature fatigue testing of metals
[NASA-TM-82745] N82-16419

FATIGUE TESTS
Rotor testing in FY 1981
[DE81-028340] N82-16536

FEASIBILITY ANALYSIS
Evaluation of the feasibility of establishing a national testing capability for the simulation of earthquake loads on large-scale structures
[PB81-243875] N82-16295
Development of a pipe location system
[PB81-246530] N82-16386
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] N82-16514

FEDERAL BUDGETS
Appropriation reimbursements
[PB81-245409] N82-16925
Long-term planning for national science policy
[GPO-66-603] N82-16936

FEEDBACK CONTROL
A program to evaluate a control system based on feedback of aerodynamic pressure differentials
[NASA-CR-163466] N82-16089
Research in multirate estimation and control optimal sample rate selection --- application to aircraft control
[AD-A108043] N82-16792
Digital compensation techniques for the effects of time lag in closed-loop simulation using the 6 DOF motion system N82-17069

FEEDERS
QOT and E of the F-16 20mm ammunition loading system's ability to upload/download A-7D aircraft
[AD-A108007] N82-16099

FEEDING (SUPPLYING)
Materials and design experience in a slurry-fed electric glass melter
[DE82-000957] N82-16250

FERMI SURFACES
Deliberate modification of the behavior of n-type cadium telluride/electrolyte interfaces by surface etching: Removal of fermi level pinning
[AD-A106382] N82-16907

FERRITIC STAINLESS STEELS
Fracture toughness testing on ferritic alloys using the electropotential technique
[DE81-029776] N82-16224

FERROELECTRICITY
Study of the photovoltaic effect in thin film barium titanate
[NASA-CR-165061] N82-16479

FERROMAGNETISM
Random anisotropy effects in Ising spin glass
[INPE-2194-TDL/061] N82-16919

FIBER COMPOSITES
Fabrication of boron/aluminum fan blades for SCR engines
[NASA-CR-165294] N82-16176
Prediction of composite hygral behavior made simple
[NASA-TM-82780] N82-16181
Characterization of microstructures
[AD-A106351] N82-16217

FIBER OPTICS
Report of significant accomplishments
[AD-A107607] N82-16353
Dual polarization fiber optic gyro
[AD-A106731] N82-16377
Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850

FIBER REINFORCED COMPOSITES
Composite structural materials --- fiber reinforced composites for aircraft structures
[NASA-CR-165121] N82-16182
NDI of composite materials
[AD-A106278] N82-16186

FIELD COILS
A study pertaining to inertial energy storage machine designs for space applications
[NASA-CR-163465] N82-16489

FIELD EFFECT TRANSISTORS
Characterization of power MESFETs at 21 GHz
[AD-A106673] N82-16349
High resistivity molecular beam epitaxial AlGaAs for device applications
[AD-A107597] N82-16819

FILM THICKNESS
Effects of artificially produced defects on film thickness distribution in sliding EHD point contacts
[NASA-TM-82732] N82-16412

FILTRATION
Denitrification of nitrate-containing heavy-metal-filtrate solutions
[DE82-000701] N82-16558
Performance of trickling filter plants: Reliability, stability, variability
[PB82-108143] N82-16603

FINANCIAL MANAGEMENT
A computerized life-cycle cost methodology for engineering analysis N82-16130
Appropriation reimbursements
[PB81-245409] N82-16925
Long-term planning for national science policy
[GPO-66-603] N82-16936

FINITE ELEMENT METHOD
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533] N82-16060
Use of weight functions to determine the stress intensity for a cracked thick-walled cylinder
[AD-A106270] N82-16423
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] N82-16918

FINS
Ground calibration of a strain-gauged CT-4A aircraft (1979)
[AD-A107847] N82-16073

FIRE DAMAGE
Water repellent soils: A state-of-the-art
[PB81-248270] N82-16305

FIRE PREVENTION
Earthquake hazards reduction program and fire prevention and control program
[GPO-78-756] N82-16631

FIREPROOFING
Method of preventing oxidation of graphite fireproof material
[NASA-TM-76786] N82-16160

FIRES
Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850

FISHERIES
Brazilian remote sensing activities, current and prospective needs
[E82-10026] N82-16444
Sea Grant program, University of Minnesota
[PB81-243958] N82-16687

FISSILE FUELS
Deposition and characterization of pyrocarbon coatings produced by use of CO2 dilution
[PB82-000900] N82-16190

FLAME RETARDANTS
Flame inhibition by methyl bromide
[DE81-030995] N82-16204
Heat sealable, flame and abrasion resistant coated fabric --- clothing and containers for space exploration
[NASA-CASE-MSC-18382-1] N82-16238

FLASH LAMPS
A study pertaining to inertial energy storage machine designs for space applications
[NASA-CR-163465] N82-16489

FLASH POINT
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] N82-16210

FLAT PLATES
UTD analysis of electromagnetic scattering by flat structures
[NASA-CR-165099] N82-16313

FLEXIBILITY
Instructions for TI-59 combined card/module calculations for in-plane and flexural properties of symmetric laminates --- programmable calculator operations
[AD-A107984] N82-16169
Evaluation of flexible pavement crack sealing methods used in Utah
[PB81-239469] N82-16290

FLEXIBLE SPACECRAFT
Natural modes and real modal variables for flexible spacecraft
[CRC-1348] N82-16146

FLIGHT ALTITUDE
System for providing an integrated display of instantaneous information relative to aircraft attitude, heading, altitude, and horizontal situation
[NASA-CASE-FRC-11005-1] N82-16075

FLIGHT CLOTHING
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706

FLIGHT CONTROL
Research in multirate estimation and control optimal sample rate selection --- application to aircraft control
[AD-A108043] N82-16792
Flight dynamics technology development: Structures and dynamics, vehicle equipment/subsystems, flight control and aeromechanics
[AD-A096636] N82-17082

FLIGHT CREWS
Causes of fatigue among crews of civil aviation helicopters N82-16708
Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709
Fatigue in Flight Inspection Field Office (FIFO) flight crews
[AD-A106791] N82-16733

FLIGHT FATIGUE
Causes of fatigue among crews of civil aviation helicopters N82-16708
Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

FLIGHT INSTRUMENTS
Aircraft alerting systems standardization study. Volume 2: Aircraft alerting system design guidelines
[AD-A106732] N82-16077

FLIGHT MECHANICS
Flight dynamics technology development: Structures and dynamics, vehicle equipment/subsystems, flight control and aeromechanics
[AD-A096636] N82-17082

FLIGHT PATHS
Automation of on-board flightpath management
[NASA-TM-84212] N82-16088

FLIGHT RECORDERS
Advanced recorder design and development
[PB81-244105] N82-16385

FLIGHT SIMULATION
Advanced Space Shuttle simulation model
[NASA-CR-161958] N82-16143

FLIGHT SIMULATORS
Implementation of the recommendations made on the technical report titled analysis of advanced simulator for pilot training
[AD-A106779] N82-16094
Numerical and flight simulator test of the flight deterioration concept
[NASA-CR-3500] N82-16655

FLIGHT STRESS (BIOLOGY)
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711

FLIGHT TIME
Fuel optimal maneuvers for spacecraft with fixed thrusters N82-17046

FLORIDA

Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 1: Wastewater facilities existing environment technical reference document
[PB82-107913] N82-16599

Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 2: Alternatives evaluation technical reference document
[PB82-107921] N82-16600

FLOTATION

Investigation of by-product molybdenum recovery
[PB81-246514] N82-16232

FLOW CHAMBERS

Design considerations of a thermally stabilized continuous flow electrophoresis chamber 2
N82-17074

FLOW DISTRIBUTION

The analysis and design of two-element airfoil configuration in transonic flow
[AD-A107547] N82-16052

Nonlinear analysis of interfering bodies in supersonic flow
[AD-A108071] N82-16053

Hourly diurnal flow variations in publicly-owned wastewater treatment facilities
[PB82-107954] N82-16601

Precipitation field and intrastorm flow of supercell convective storms
[AD-A106752] N82-16667

FLOW GEOMETRY

Calculation of three-dimensional, inviscid, supersonic, steady flows
[NASA-CR-166110] N82-16047

A computer program for variable-geometry single-stage axial compressor test data analysis (UD0400)
[AD-A106676] N82-16086

Effects of gas-flow pattern on cavity shape
[DE82-000347] N82-16375

FLOW MEASUREMENT

Use of the pitot tube in very low density flows
[AD-A106374] N82-16366

FLOW VELOCITY

Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652

Near-bottom velocities in waves with a current
[PB81-238665] N82-16689

FLOW VISUALIZATION

Application of image processing techniques to fluid flow data analysis
[NASA-TM-82760] N82-16049

FLOWMETERS

Venturi design for metering solids flow in gas-solids suspensions
[DE81-031944] N82-16380

FLUES

Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106996] N82-16614

FLUID DYNAMICS

Matter in general relativity N82-17061

FLUID FILMS

Air desorption from a water film
[DE81-031961] N82-16203

FLUID FLOW

Application of image processing techniques to fluid flow data analysis
[NASA-TM-82760] N82-16049

Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652

A hydrodynamic model of an outer hair cell
[NASA-TM-82773] N82-16743

FLUID MECHANICS

Fluid mechanics and heat transfer spirally fluted tubing
[AD-A107983] N82-16369

FLUIDIZED BED PROCESSORS

Development of potential uses for the residue from fluidized-bed-combustion processes
[DE81-030157] N82-16211

Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] N82-16475

Development of hydroconversion of biomass to synthetic fuels. Project 61042 technical report
[DE82-000874] N82-16529

FLUORESCENCE

Determination of yttrium in high density silicon nitride by emission and X-ray fluorescence spectroscopy
[AD-A107596] N82-16199

X-ray astronomy instrumentation studies --- design of a proportional counter and measurements of fluorescent radiation
[NASA-CR-161948] N82-17001

FLUOROCARBONS

Demonstration of a long-range atmospheric tracer system using perfluorocarbons
[PB82-106246] N82-16613

FLUX (RATE)

Ambipolar potential control by fast wave heating in Bumpy Tori N82-16897

FLUX DENSITY

Quark-gluon plasma and the little bang
[DE81-030320] N82-16840

FLYWHEELS

Rotor testing in FY 1981
[DE81-028340] N82-16536

FOAMS

Preparation of multishell ICF target plastic-foam cushion materials by thermally induced phase-inversion processes
[DE82-000574] N82-16249

Enhanced oil recovery by CO2 foam flooding
[DE82-000949] N82-16464

FOCUSING

Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953] N82-16170

A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] N82-16492

FOG DISPERSAL

Design of prototype charged particle fog dispersal unit
[NASA-CR-3481] N82-16659

FOOD PROCESSING

Storage stability and improvement of intermediate moisture foods, phase 5
[NASA-CR-167503] N82-16742

FORCED VIBRATION

An experimental study of forced asymmetric oscillations in a rotating liquid-filled cylinder
[AD-A107948] N82-16372

FORESTS

Brazilian remote sensing activities, current and prospective needs
[E82-10026] N82-16444

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

Acid rain and forest productivity
[DE81-030916] N82-16555

FORGING

Design for manufacturability: Design for forging, part 2
[PB82-101692] N82-16297

FORM FACTORS

Cook inlet circulatory survey: 1973-75
[PB81-245235] N82-16688

FORMALDEHYDE

Synthesis of polyformals
[NASA-CASE-ARC-11244-1] N82-16174

Substitutes for paraformaldehyde hardener and zinc acetate as an accelerator in Wattle-Tannin based adhesives for exterior grade particle board
[PB81-245755] N82-16253

FORMALISM

Toward a unified logical basis for programming languages
[AD-A106772] N82-16765

FORTRAN

A generalized escape system simulation computer program. A user's manual
[AD-A106152] N82-16055

Random network generation
[AD-A106360] N82-16796

Tolerance analysis of optical telescopes using coherent addition of wavefront errors N82-17048

FOSSILS

Northern Gulf of Mexico topographic features study. Volume 2: Methods, fossil coccoliths, chemical analyses
[PB81-248668] N82-16693

FOURIER ANALYSIS

Evaluation tests of Abacus 6 kVA utility-interactive inverter
[DE82-001352] N82-16358

FOURIER SERIES

Products of multiple Fourier series with application to the multiblade transformation
[NASA-TM-81340] N82-16746

FOURIER TRANSFORMATION

Some applications of Fourier transform infrared spectroscopy in the examination of painting materials
[PB81-249575] N82-16256

Testing for Gaussianity and linearity of stationary time series
[AD-A017548] N82-16781

FRACTURE MECHANICS

LLNL gas-stimulation program
[DE82-000802] N82-16269

FRACTURE STRENGTH

Fracture toughness testing on ferritic alloys using the electropotential technique
[DE81-029776] N82-16224

Crack branching in brittle materials. Part 1: Analytical aspects
[PB81-243735] N82-16255

Evaluation of the fracture behavior of concrete with the J-integral
[PB81-235855] N82-16433

Development of toughened epoxy polymers for high performance composite and ablative applications
N82-17044

FRAMES

Laser measuring system for incremental assemblies --- measuring wire-wrapped frame assemblies in spark chambers
[NASA-CASE-GSC-12321-1] N82-16396

FRAUNHOFER LINES

Observed variability in the Fraunhofer line spectrum of solar flux, 1975 - 1980 N82-17023

FREE CONVECTION

Study of non-Darcy natural convection from a vertical heated surface in a saturated porous medium
[DE81-030081] N82-16374

FREE ELECTRON LASERS

Diagnostic device for bunched electron beams
[DE82-000639] N82-16844

FREE ELECTRONS

Non-linear analysis of the free electron lasers utilizing a linear wiggler field
[AD-A106229] N82-16398

FREE FALL

Heat loss and drag of spherical drop tube samples
N82-17079

FREE FLOW

Documentation for program SIMICE
[AD-A106777] N82-16761

FREE JETS

Spray charging and trapping scrubber for fugitive particle emission control
[PB82-115304] N82-16596

FREEZING

Closed-system freezing of soils in linings and earth embankment dams
[PB81-240491] N82-16289

High-pressure gradient-freeze growth of single crystals of indium phosphide
[AD-A107731] N82-16913

FREQUENCY MODULATION

Sine wave ranging revisited N82-16124

FREQUENCY SHIFT

Propagation of transient signals through nonlinear, ionized media
[AD-A106754] N82-16320

FREQUENCY STABILITY

The 403 MHz SAW oscillator
[AD-A107588] N82-16378

FREQUENCY SYNTHESIZERS

Synthesizer stability evaluation N82-16134

FRICTION

Laboratory pavement polishing device (wear machine) versus field friction test units and accumulative traffic (ADT). Phase 2: Correlation study
[PB81-233256] N82-16293

Thin, applied surfacing for improving skid resistance of concrete pavements
[PB81-247744] N82-16307

FROST
Synoptic scenario of the invasion of cold air during the freeze of May 1979 and frost mapping to forecast areas of major risk
[INPE-2166-RPE/383] N82-16654

FROZEN FOODS
Overall effective thermal resistance of corrugated fiberboard containers
[AD-A106569] N82-16183

FUEL CELLS
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165455] N82-16463

FUEL COMBUSTION
A comprehensive model to determine the effects of temperature and species fluctuations on reaction rates in turbulent reacting flows
[NASA-CR-165108] N82-16364
Demonstration of catalytic combustion with residual fuel
[NASA-CR-165369] N82-16484
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] N82-16595
Fuel NOx control by catalytic combustion
[PB82-102351] N82-16623
Evaluation of the Moleculetor Fuel Energizer under section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-247942] N82-16958
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] N82-16959
The effects of the Moleculetor Fuel Energizer on emissions and fuel economy
[PB81-244998] N82-16960
Emission and fuel economy of FUEL-MAX, a retrofit device
[PB81-244162] N82-16961

FUEL CONSUMPTION
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] N82-16057
Turboprop cargo aircraft systems study
[NASA-CR-165813] N82-16070
NASA research activities in aeropropulsion
[NASA-TM-82788] N82-16084
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] N82-16485
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] N82-16514
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516
Exhaust emissions from high-mileage catalyst-equipped passenger cars
[PB82-103326] N82-16586
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] N82-16595
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] N82-16947
Consumer behavior towards fuel efficient vehicles, volume 2
[PB81-246654] N82-16948
Development of adjustment factors for on road fuel economy
[PB81-241986] N82-16950
An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100538] N82-16953
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] N82-16966
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043
Fuel optimal maneuvers for spacecraft with fixed thrusters N82-17046

FUEL OILS
Demonstration of catalytic combustion with residual fuel
[NASA-CR-165369] N82-16484

FUEL PRODUCTION
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 1
[DE81-903753] N82-16273
Proceedings of the 4th International Symposium on Alcohol fuels Technology, volume 2
[DE81-903754] N82-16274
Energy industries abroad
[DE82-001896] N82-16510
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] N82-16514

FUEL SYSTEMS
Demonstration of catalytic combustion with residual fuel
[NASA-CR-165369] N82-16484
Comparison of energy-storage devices for use in future automobiles
[DE81-026530] N82-16945

FUEL TESTS
Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] N82-16417
Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] N82-16595

FUELS
Small-scale fuel-alcohol plant. Volume 2: Detailed equipment information
[DE82-001037] N82-16278

FURNACES
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] N82-16427
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] N82-16560
Combustion enhancement and pollutant-control research with acoustically induced mixing
[DE82-001100] N82-16567

FUSION REACTORS
Effect of microstructure on the mechanical properties of a commercial 12Cr-1Mo steel (HT-9)
[DE82-000082] N82-16225
Compact Commercial Tokamak Reactor (CCTR): A concept for a 500-MWe commercial-Tokamak fusion system
[DE81-030406] N82-16871
Neutral-beam systems for magnetic-fusion reactors
[DE81-027940] N82-16876

FUSION WELDING
Heat source: Materials interactions during fusion welding
[AD-A107717] N82-16414

G

GALACTIC EVOLUTION
Astronomical Society Information no. 50: Reports of the Scientific Meetings
[REPT-50] N82-16967
The evolution of density perturbation in an open universe
[REPT-670] N82-17005

GALACTIC NUCLEI
The Galactic centre and Aquila regions in the near infrared N82-16969
The dynamics of molecular gas in the Galactic center N82-16970

GALACTIC RADIATION
The Galactic centre and Aquila regions in the near infrared N82-16969

GALACTIC STRUCTURE
Galaxies in the light of the 21 cm line N82-16984
Structure and dynamics of the Large Magellanic Cloud N82-16985

GALAXIES
Astronomical society information no. 52: Report of the meeting --- conferences
[ISSN-0374-1958] N82-16986
Star populations in the galactic halo N82-16988

GALLIUM ARSENIDES
Research on InGaAs FETs
[AD-A108016] N82-16355
Heterojunctions in semiconductors
[AD-A106546] N82-16905
Deep impurity states in gallium arsenide
[AD-A106696] N82-16908
The effect of solute-vacancy pairs on the physical properties of Si doped GaAs and other compound semiconductor systems
[AD-A107596] N82-16910

GAMMA RAY BURSTS
Thermonuclear model for gamma-ray bursts
[DE81-030835] N82-17003

GAMMA RAY SPECTRA
Feasibility of interfacing a microcomputer with a multichannel analyzer to perform gamma ray spectroscopy
[AD-A106176] N82-16194
Calculated neutron and gamma-ray energy spectra from 14-MeV neutrons streaming through an iron duct: Comparison with experiment --- blanke-shield assemblies of fusion reactors
[DE81-030626] N82-16824
Neutron capture gamma-ray spectroscopic measurements in the actinide region
[DE81-030316] N82-16832

GANYMEDE
The morphology and evolution of Ganymede and Callisto N82-17013

GAPS
Double layers on auroral field lines
[NASA-CR-165113] N82-16635

GAS CHROMATOGRAPHY
Identification of synthetic fluids utilizing pyrolysis gas liquid chromatographic techniques
[AD-A108117] N82-16200
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] N82-16275
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900659] N82-16568

GAS DENSITY
CAS22 - FORTRAN program for fast design and analysis of shock-free airfoil cascades using fictitious-gas concept
[NASA-CR-3507] N82-16044

GAS DISSOCIATION
Experiments on the interaction of highpower microwaves with air
[AD-A106390] N82-16862

GAS DYNAMICS
Calculation of three-dimensional, inviscid, supersonic, steady flows
[NASA-CR-165110] N82-16047
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] N82-16525

GAS EXCHANGE
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720

GAS FLOW
ARC control experiments using a high performance arc heater
[AD-A106140] N82-[illegible]
Effects of gas-flow pattern on cavity shape
[DE82-000347] N82-16375
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] N82-16525
Geothermal Effluent Sampling Workshop
[PB82-105626] N82-16611

GAS GENERATORS
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] N82-16614

GAS IONIZATION
Experiments on the interaction of highpower microwaves with air
[AD-A106390] N82-16862

GAS JETS
Laser heated gas-jet: A soft X-ray source
[DE81-029627] N82-16407
Noise generation by gas jets in a turbulent wake
[AD-A106223] N82-16811

GAS LASERS
Catalytic coal conversion support. Use of laser flash-pyrolysis for structural analysis
[DE82-004221] N82-16275
Recyclability issues in XeF lasers
[AD-A107759] N82-16405
GAS METERS
Automatic gas-levitation system for vacuum deposition of laser-fusion targets
[DE82-000296] N82-16406
GAS PRESSURE
Neutral density measurements in Doublet 3
[DE82-000497] N82-16829
GAS RECOVERY
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] N82-16563
GAS STREAMS
Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001069] N82-16525
GAS TEMPERATURE
A unified thermal and vertical trajectory model for the prediction of high altitude balloon performance
[NASA-CR-156884] N82-16048
GAS TURBINE ENGINES
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533] N82-16080
Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093
Demonstration of catalytic combustion with residual fuel
[NASA-CR-165369] N82-16484
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] N82-16485
Gas-heat-pump development
[DE81-031991] N82-16508
GAS TURBINES
Brittle materials design, high temperature gas turbine
[AD-A106670] N82-16085
Thermionic-combustor combined-cycle system. Volume 3: A thermionic converter design for gas-turbine combined-cycle systems
[DE82-000729] N82-16509
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] N82-16937
GAS-ION INTERACTIONS
Collisions of fast multicharged ions in gas targets: Charge transfer and ionization
[DE81-030541] N82-16823
GAS-METAL INTERACTIONS
Proceedings of the Interdisciplinary Meeting on Hydrogen in Metals
[DE81-904020] N82-16226
GASIFICATION
Verification of the foreign synfuels industrialization experience
[DE82-000230] N82-16272
Industrial steam supply system characteristics program. Phase 2: Low- and medium-Btu gas-fired boilers with associated gasification plants
[DE82-000535] N82-16517
Development of hydroconversion of biomass to synethetic fuels. Project 61042 technical report
[DE82-000874] N82-16529
GASOHOL (FUEL)
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] N82-16259
Proceedings of the 4th International Symposium on Alcohol Fuels Technology, volume 1
[DE81-903753] N82-16273
Proceedings of the 4th International Symposium on Alcohol fuels Technology, volume 2
[DE81-903754] N82-16274
GASOLINE
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] N82-16264
GAUSS EQUATION
Testing for Gaussianity and linearity of stationary time series
[AD-A017548] N82-16781
GELATINS
Storage stability and improvement of intermediate moisture foods, phase 5
[NASA-CR-167503] N82-16742
GELATION
Interferometric study of epoxy resin gelation
[DE81-030128] N82-16252
GENERAL AVIATION AIRCRAFT
Summary of theoretical considerations and wind tunnel tests of an aerodynamic spoiler for stall proofing a general aviation airplane
[NASA-CR-165100] N82-16046
Spin tests of a single-engine, high-wing light airplane
[NASA-TP-1927] N82-16068
GENETICS
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700
GEODESY
Analytical positioning of aids to navigation
[AD-A107811] N82-16065
Time correction of data from the NAVSTAR Geodetic Receiver System
[AD-A107643] N82-16066
GEOLOGICAL FAULTS
Handbook of geophysical cavity-locating techniques with emphasis on electrical resistivity
[PB81-242711] N82-16653
GEOLOGICAL SURVEYS
Handbook of geophysical cavity-locating techniques with emphasis on electrical resistivity
[PB81-242711] N82-16653
GEOLOGY
LLNL gas-stimulation program
[DE82-000802] N82-16269
Pennsylvania baseline
[PB82-101742] N82-16617
GEOMAGNETIC TAIL
Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail
[NASA-CR-168508] N82-16634
GEOMAGNETISM
Magnetic shell tracing: A simplified approach
[AD-A106714] N82-16647
GEOMETRICAL THEORY OF DIFFRACTION
High frequency scattering by a sphere with complex surface impedance N82-16799
GEOMORPHOLOGY
Northern Gulf of Mexico topographic features study. Volume 4: Other banks
[PB81-248684] N82-16695
GEOPHYSICAL FLUID FLOW CELLS
Global weather research N82-16662
GEOPHYSICAL FLUIDS
Nothern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography
[PB81-248650] N82-16692
Northern Gulf of Mexico topographic features study. Volume 5: Florida Middle Ground
[PB81-248692] N82-16696
GEOSTROPHIC WIND
Effects of diabatic heating on the ageostrophic circulation of an upper tropospheric jet streak
[NASA-CR-3497] N82-16658
GEOSYNCHRONOUS ORBITS
Efficient structures for geosynchronous spacecraft solar arrays. Phase 1, 2 and 3
[NASA-CR-163471] N82-16493
GEOTHERMAL ENERGY UTILIZATION
Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030968] N82-16942
GEOTHERMAL RESOURCES
Case studies of low-to-moderate temperature hydrothermal energy development
[DE82-000883] N82-16501
GEOTHERMAL TECHNOLOGY
Geothermal Effluent Sampling Workshop
[PB82-105628] N82-16611
An overview, current status, and future plans for the DOE atmospheric studies in complex terrain (ASCOT) program
[DE91-024417] N82-16651
GERMANIUM
Heterojunctions in semiconductors
[AD-A106546] N82-16905
GEYSERS
An overview, current status, and future plans for the DOE atmospheric studies in complex terrain (ASCOT) program
[DE91-024417] N82-16651
GLASS
Aqueous dissolution of calcium metaphosphate glasses
[DE81-030130] N82-16248
Materials and design experience in a slurry-fed electric glass melter
[DE82-000957] N82-16250
Copper-coated laser-fusion targets using molecular-beam levitation
[DE82-000644] N82-16841
GLASS FIBERS
Precision measurements on fibrous glass insulation
[PB81-239634] N82-16308
GLAZES
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] N82-16511
Energy conservation by multiple glazing on heavy masonry buildings
[PB81-246977] N82-16548
GLOBAL POSITIONING SYSTEM
Time correction of data from the NAVSTAR Geodetic Receiver System
[AD-A107643] N82-16066
GLOBULAR CLUSTERS
The mass (star number)-radius relations for the clusters of the large Magellanic Cloud N82-16993
Evolution and nucelosynthesis of massive Pop 111 stars N82-16997
GLUCOSE
Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] N82-16205
GLUONS
Quark-gluon plasma and the little bang
[DE81-030320] N82-16840
GOES SATELLITES
Weather satellite interpretation: Introduction to weather satellite imagery
[PB82-107557] N82-16677
GOLD
Search for promethium-like gold lines and other transitions of interest to fusion research
[DE81-029917] N82-16872
GONDOLAS
Far infrared balloon-borne observations N82-16972
GOVERNMENT/INDUSTRY RELATIONS
Energy industries abroad
[DE82-001896] N82-16510
GOVERNMENTS
Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977
[PB81-241663] N82-16630
GRAIN BOUNDARIES
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] N82-16543
GRAINS
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 1: Executive summary
[DE82-000294] N82-16265
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 2: Technical analysis
[DE82-000479] N82-16266
Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 3: Procurement analysis, marketing analysis, and environmental and regulatory analysis
[DE82-000478] N82-16267

Assessment of the economic, technical, and environmental feasibility of developing, constructing, and operating a 25-million-gallon-per-year grain-ethanol-production facility. Volume 4: Economic and financial analysis, management analysis
[DE82-000477] N82-16268

GRAINS (FOOD)
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 1: Project conceptual design
[DE82-000474] N82-16260
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 2: Project marketing/economic/financial and organization
[DE82-000472] N82-16261
AGRI Grain Power ethanol-for-fuel project feasibility study report. Volume 3: Project environmental/health/safety and socioeconomics
[DE82-000473] N82-16262
Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] N82-16448

GRAMMARS
Anaphora for limited domain systems
[AD-A106559] N82-16762

GRANITE
Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842

GRAPHITE
Method of preventing oxidation of graphite fireproof material
[NASA-TM-76766] N82-16180
Thermal expansion of alkali-graphite intercalation compounds
[DE82-000060] N82-16429
Lattice dynamics of graphite intercalation compounds: Modelled by the phonon dispersion of linear chains
[PB82-000061] N82-16914
Phonons in alkali graphite intercalation compounds
[DE82-000059] N82-16916

GRAPHITE-EPOXY COMPOSITES
Development of an engineering analysis of progressive damage in composites during low velocity impact
[NASA-CR-165778] N82-16177
Thermal degradation of graphite/epoxy composite
[AD-A106425] N82-16185
Rotor testing in FY 1981
[DE81-028340] N82-16536

GRASSHOPPERS
Remote sensing applications to resource problems in South Dakota
[E82-10027] N82-16445

GRASSLANDS
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

GRAVITATION THEORY
The generation of spiral waves in galaxies
N82-16974

GRAVITATIONAL COLLAPSE
Astronomical society information number 51. Review articles 2 --- with emphasis on solar system evolutionary processes
[REPT-51] N82-16975
Formation of the planetary system N82-16977
Early phases of stellar formation N82-16979

GRAVITATIONAL EFFECTS
Gravitational agglomeration of post-HCDA LMFBR nonspherical aerosols
[AD-A106756] N82-16641
Study to perform preliminary experiments to evaluate particle generation and characterization techniques for zero-gravity cloud physics experiments
[NASA-CR-3486] N82-16657
Simulation of some of man's movements in different gravity fields N82-16712

GRAVITATIONAL FIELDS
Simulation of some of man's movements in different gravity fields N82-16712

GRAZING INCIDENCE
Critical angles and grazing incidence: The breakdown of regular shock reflection in solids
[AD-A107665] N82-16426

GREAT LAKES (NORTH AMERICA)
Pollution Problems of the Great Lakes Region. Report of the Great Lakes Region Conference
[PB81-246951] N82-16625

GREENHOUSE EFFECT
Evolutionary variations of solar luminosity
N82-17032

GREENLAND
Tide tables 1982 high and low water predictions. East Coast of North and South America including Greenland
[PB81-241622] N82-16698

GROOVES
Fluid mechanics and heat transfer spirally fluted tubing
[AD-A107963] N82-16369
Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] N82-16511

GROUND HANDLING
Study of ground handling characteristics of a maritime patrol airship
[NASA-CR-166253] N82-16090

GROUND STATIONS
Energy consumption for the echo station (DSS 12)
N82-16139

GROUND SUPPORT SYSTEMS
Report by the Aerospace Safety Advisory Panel
[NASA-TM-84094] N82-16142

GROUND TRUTH
A summary of results from solar monitoring rocket flights N82-17019

GROUND WATER
Analysis of stream-aquifer system interrelationships in the Big Blue and Little Blue River Basins in Gage and Jefferson Counties, Nebraska
[PB81-245870] N82-16466
Adequacy and economics of water supply in northeastern Illinois, 1985 - 2010
[PB82-105495] N82-16469
The source and transport of arsenic in northeastern Ohio groundwaters
[PB81-240525] N82-16471
Hydrogeologic setting of the Glacial Lake Agassiz Peatlands, Northern Minnesota
[PB81-249328] N82-16473
Evaluation of pollution abatement alternatives: Picillo property, Coventry, Rhode Island
[PB82-103888] N82-16592
Pennsylvania baseline
[PB82-101742] N82-16617

GROUND WIND
The wind characteristics program element
[DE82-004876] N82-16673
Why windspeeds increase on high mountain slopes at night
[PB81-243909] N82-16680

GROUP DYNAMICS
Formal techniques for analysis and design of purposive organizations
[AD-A106775] N82-16922

GROUP THEORY
Multiple electromagnetic scattering from a cluster of spheres. Volume 2: Symmetrization
[AD-A106658] N82-16797

GUIDE VANES
A method of estimating upwash angle at noseboom-mounted vanes
[AD-A106160] N82-16051

GULF OF MEXICO
Proceedings of the Gulf Circulation Studies Workshop
[PB81-248254] N82-16690
Northern Gulf of Mexico topographic features study, executive summary
[PB81-248643] N82-16691
Nothern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography
[PB81-248650] N82-16692
Northern Gulf of Mexico topographic features study. Volume 2: Methods, fossil coccoliths, chemical analyses
[PB81-248668] N82-16693
Northern Gulf of Mexico topographic features study, volume 3
[PB81-248676] N82-16694
Northern Gulf of Mexico topographic features study. Volume 4: Other banks
[PB81-248684] N82-16695
Northern Gulf of Mexico topographic features study. Volume 5: Florida Middle Ground
[PB81-248692] N82-16696
Measurements and analysis of acoustic bottom interaction in the Northwestern Mexican Basin
[AD-A107551] N82-16813

GULF STREAM
Proceedings of the Gulf Circulation Studies Workshop
[PB81-248254] N82-16690

GUNN DIODES
Gunn diodes and devices (bibliography for 1978-1980)
[NASA-TM-76750] N82-16342

GYROSCOPES
Dual polarization fiber optic gyro
[AD-A106731] N82-16377

GYROSCOPIC STABILITY
Natural modes and real modal variables for flexible spacecraft
[CRC-1348] N82-16146

H

H ALPHA LINE
Experimental comprehensive solar flare indices for major and certain lesser flares, 1975-1979
[PB82-109497] N82-17042

H LINES
Variation of the solar He I 1830 A line: 1977 - 1980 N82-17040

HABITATS
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

HAIR
A hydrodynamic model of an outer hair cell
[NASA-TM-82773] N82-16743

HALLEY'S COMET
The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma
[REPT-626] N82-17007

HALOS
Star populations in the galactic halo N82-16988

HANDICAPS
Paratransit, Inc., Special transportation service in Sacramento
[PB82-106204] N82-16955

HARDENING (MATERIALS)
Substitutes for paraformaldehyde hardener and zinc acetate as an accelerator in Wattle-Tannin based adhesives for exterior grade particle board
[PB81-245755] N82-16253

HARMONIC ANALYSIS
EHF test-bed subharmonic mixer
[AD-A106156] N82-16351
Cook inlet circulatory survey: 1973-75
[PB81-245235] N82-16688

HARMONIC FUNCTIONS
Products of multiple Fourier series with application to the multiblade transformation
[NASA-TM-81340] N82-16746

HAWAII
Current measurements off Keahole Point, Hawaii: Application to OTEC-1
[DE81-030539] N82-16686

HAZARDS
Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103870] N82-16591

HEAD (ANATOMY)
Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710

HEALTH PHYSICS
Mechanisms of cadmium absorption in rats
[PB82-108184] N82-16703
Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation N82-16726

HEART RATE
Fatigue in Flight Inspection Field Office (FIFO) flight crews
[AD-A106791] N82-16733

HEAT BALANCE
Bi-Gas pilot plant operation
[DE82-000223] N82-16271

HEAT EXCHANGERS
Development of a high-efficiency gas-fired water heater
[DE81-032028] N82-16506
OTEC performance tests of the Trane plate-fin heat exchanger
[DE82-001833] N82-16541

HEAT FLUX
An alternate approach to the measurement of soil surface heat flux
[AD-A106741] N82-16649

HEAT MEASUREMENT
An alternate approach to the measurement of soil surface heat flux
[AD-A106741] N82-16649

HEAT PUMPS
Gas-heat-pump development
[DE81-031991] N82-16508

HEAT SHIELDING
Development of a polysilicon process based on chemical vapor deposition (phase 1)
[NASA-CR-163475] N82-16488
Design study of imaging techniques for the Starprobe mission
[NASA-CR-168392] N82-16849

HEAT SINKS
Thermionic-combustor combined-cycle system. Volume 3: A thermionic converter design for gas-turbine combined-cycle systems
[DE82-000729] N82-16509

HEAT SOURCES
Thermionic-combustor combined-cycle system. Volume 3: A thermionic converter design for gas-turbine combined-cycle systems
[DE82-000729] N82-16509

HEAT STORAGE
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] N82-16427
Alternate thermochemical cycles
[DE81-030248] N82-16502
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle
[DE82-901186] N82-16526

HEAT TRANSFER
Heat transfer from impinging jets. A literature review
[AD-A106723] N82-16367
Fluid mechanics and heat transfer spirally fluted tubing
[AD-A107983] N82-16369
Heat source: Materials interactions during fusion welding
[AD-A107717] N82-16414
Effects of ammonia contamination by water on OTEC power system performance
[DE82-001832] N82-16535
OTEC performance tests of the Trane plate-fin heat exchanger
[DE82-001833] N82-16541
MHD Heat and Seed Recovery Technology Project
[DE82-001608] N82-16900

HEAT TRANSFER COEFFICIENTS
Overall effective thermal resistance of corrugated fiberboard containers
[AD-A106569] N82-16183
Documentation for program SIMICE
[AD-A106777] N82-16761

HEAT TRANSMISSION
Study of non-Darcy natural convection from a vertical heated surface in a saturated porous medium
[DE81-030061] N82-16374

HEATING EQUIPMENT
Development of a high-efficiency gas-fired water heater
[DE81-032028] N82-16506
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516
The Class C Passive Performance Evaluation Program
[DE82-000454] N82-16533

HEAVY ELEMENTS
Denitrification of nitrate-containing heavy-metal-filtrate solutions
[DE82-000701] N82-16558

HEAVY IONS
Relativistic heavy-ion experiments
[DE81-030544] N82-16822

HELICOPTER DESIGN
Predesign study for a modern 4-bladed rotor for the NASA rotor systems research aircraft
[NASA-CR-166153] N82-16042

HELICOPTERS
Test and evaluation of improved aircrew restraint systems
[AD-A107576] N82-16056
Causes of fatigue among crews of civil aviation helicopters N82-16708
Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

HELIOSTATS
Solar energy systems simulation and analysis
[DE81-026975] N82-16542

HELIUM
A study of the vent pipe for the gravity probe-B N82-17053

HELIUM IONS
Optically pumped polarized ion sources
[DE81-026306] N82-16798

HELMETS
Operator's manual for variable weight, variable CG helmet simulator
[AD-A108093] N82-16078
Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710

HEMODYNAMIC RESPONSES
Question of redistribution of blood in orthostatic position N82-16705
Systemic and cerebral hemodynamics in flight personnel exposed to moderate hypoxia N82-16707
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight N82-16722

HEREDITY
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

HETERODYNING
Fabrication of metal mirrors for far-infrared wavelengths
[AD-A107898] N82-16858

HETEROJUNCTIONS
Fabrication of heterojunction LEDs for operation at 1.3 micrometers
[AD-A107730] N82-16857
Heterojunctions in semiconductors
[AD-A106546] N82-16905

HEURISTIC METHODS
The heuristic of George Polya and its relation to artificial intelligence
[AD-A106557] N82-16771

HIERARCHIES
Medical Subject Headings: Tree structures, 1982
[PB81-227472] N82-16931

HIGH ALTITUDE BALLOONS
A unified thermal and vertical trajectory model for the prediction of high altitude balloon performance
[NASA-CR-156884] N82-16048

HIGH ENERGY INTERACTIONS
Heat source: Materials interactions during fusion welding
[AD-A107717] N82-16414
Relativistic heavy-ion experiments
[DE81-030544] N82-16822

HIGH FLUX ISOTOPE REACTORS
Swelling and microstructure of HFIR irradiated austenitic stainless steels
[DE82-000158] N82-16219

HIGH FREQUENCIES
A VLBI survey of the northern polar cap region N82-16108
Propagation of transient signals through nonlinear, ionized media
[AD-A106754] N82-16320
High frequency scattering by a sphere with complex surface impedance N82-16799

HIGH LEVEL LANGUAGES
A translator for the high level language sequel 2/query statement
[INPE-2184-RPE/395] N82-16757
A high level language for data acquisition and process control
[INPE-2173-RPE/389] N82-16758

HIGH PRESSURE
Surface conforming thermal/pressure seal --- tail assemblies of space shuttle orbiters
[NASA-CASE-MSC-18422-1] N82-16408
Low-temperature electron spin resonance in (TMTSF) 2PF6 in the high pressure metallic phase
[DE81-030233] N82-16827

HIGH RESOLUTION
Compression of meteorological satellite images
[INPE-2182-RPE/393] N82-16856
Angular interferometry-resolution enhancement using half-wave plates
[AD-A107974] N82-16860

HIGH TEMPERATURE GAS COOLED REACTORS
Deposition and characterization of pyrocarbon coatings produced by use of CO2 dilution
[PB82-000900] N82-16190

HIGH TEMPERATURE TESTS
Elevated temperature fatigue testing of metals
[NASA-TM-82745] N82-16419

HIGHWAYS
A preliminary evaluation of the system for Inventorying Road Surface Topography (SIRST)
[PB81-249336] N82-16294
Evaluation of maintenance/rehabilitation alternatives for continuously reinforced concrete pavement
[PB82-105792] N82-16298
Evaluation of super-water reducers for highway applications
[PB82-101106] N82-16302
Bridge and pavement maintenance
[PB81-247504] N82-16309
Evaluation of retro-reflective measurement devices
[PB81-243594] N82-16951
Evaluation of retro-reflective measurement devices
[PB81-243602] N82-16952

HILBERT SPACE
Domination problem for vector measures and applications to nonstationary processes
[AD-A106375] N82-16778

HINGES
Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers
[PB81-238461] N82-16963

HISS
The role of hiss in magnetospheric chorus emissions
[AD-A106479] N82-16643

HISTOGRAMS
Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171

HOLOGRAPHY
Development of a pipe location system
[PB81-246530] N82-16386

HOMEOSTASIS
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706

HOMOPOLAR GENERATORS
A study pertaining to inertial energy storage machine designs for space applications
[NASA-CR-163465] N82-16489

HORIZONTAL ORIENTATION
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)
[PB81-239568] N82-16547

HORIZONTAL TAIL SURFACES
Ground calibration of a strain-gauged CT-4A aircraft (1979)
[AD-A107847] N82-16073

HOT PRESSING
Fabrication of boron/aluminum fan blades for SCR engines
[NASA-CR-165294] N82-16176

HUDSON RIVER (NY-NJ)
Polychlorinated biphenyl transport in the Hudson River, New York
[PB81-249757] N82-16573
Relationship of water quality of Hudson River, New York during peak discharges to geologic characteristics of contributing subbasins
[PB81-249740] N82-16627

HUMAN BODY
Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation N82-16726

Chemicals Identified in Human Biological Media [DE81-030813] N82-16735

HUMAN FACTORS ENGINEERING

Spectrally balanced chromatic landing approach lighting system [NASA-CASE-ARC-10990-1] N82-16059

Aircraft alerting systems standardization study. Volume 2: Aircraft alerting system design guidelines [AD-A106732] N82-16077

The defense mapping agency's pilot digital operations [AD-A108092] N82-16457

Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710

Pilot workload: A survey of operational problems [AD-A107758] N82-16745

HUMAN PERFORMANCE

Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man N82-16729

An analysis of cognitive mapping skill [AD-A106145] N82-16740

Ability differences and cognitive mapping skill [AD-A106389] N82-16741

Pilot workload: A survey of operational problems [AD-A107758] N82-16745

HUMAN REACTIONS

Community noise attitudinal survey guidelines [PB81-244295] N82-16626

Phenomena of fluctuation of human reaction to antiorthostatic position N82-16721

Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature [PB82-102567] N82-16737

Community sensitivity to changes in aircraft noise exposure [NASA-CR-3490] N82-16807

HUMAN TOLERANCES

Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710

HUMAN WASTES

Possible use of house fly larvae for utilization of organic waste in biological life-support systems N82-16719

HYDROCARBONS

Investigation of sulfur-tolerant catalysts for selective synthesis of hydrocarbon liquids from coal-derived gases [DE82-000274] N82-16284

HYDRODYNAMIC COEFFICIENTS

Current measurements off Keahole Point, Hawaii: Application to OTEC-1 [DE81-030539] N82-16686

HYDRODYNAMICS

Gravitational agglomeration of post-HCDA LMFBR nonspherical aerosols [AD-A106766] N82-16641

A hydrodynamic model of an outer hair cell [NASA-TM-82773] N82-16743

HYDROELECTRIC POWER STATIONS

Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah [DE82-000416] N82-16461

HYDROGEN

Design of first walls and beam dumps for tandem mirror experiment upgrade [DE81-030888] N82-16875

HYDROGEN EMBRITTLEMENT

Proceedings of the Interdisciplinary Meeting on Hydrogen in Metals [DE81-904020] N82-16226

HYDROGEN IONS

Optically pumped polarized ion sources [DE81-026306] N82-16798

Effects of fluctuating electric fields on hydrogen and impurity ions in EBT N82-16890

HYDROGEN PLASMA

Expanded boundary divertor experiments in doublet 3 [DE81-030399] N82-16868

Initial ICRH experiments on EBT-S N82-16899

HYDROGEN PRODUCTION

Systems analysis of H2/natural gas supplementation and separation [DE81-030031] N82-16270

Materials testing for solar-thermal chemical process heat [DE82-002003] N82-16530

HYDROGEN SULFIDE

Hydrogen sulfide generation by reaction of natural gas, sulfur and steam [PB82-106998] N82-16614

HYDROGEN-BASED ENERGY

Systems analysis of H2/natural gas supplementation and separation [DE81-030031] N82-16270

HYDROGENATION

Systems analysis of H2/natural gas supplementation and separation [DE81-030031] N82-16270

HYDROGEOLOGY

Hydrogeologic setting of the Glacial Lake Agassiz Peatlands, Northern Minnesota [PB81-249328] N82-16473

Hazardous waste preliminary planning requirements for SRC-1 demonstration plant in Newman, Kentucky [DE82-001346] N82-16561

NEIC manual for groundwater/subsurface investigations at hazardous waste sites [PB82-103755] N82-16590

Relationship of water quality of Hudson River, New York during peak discharges to geologic characteristics of contributing subbasins [PB81-249740] N82-16627

Northern Gulf of Mexico topographic features study, executive summary [PB81-248643] N82-16691

Nothern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography [PB81-248650] N82-16692

Northern Gulf of Mexico topographic features study. Volume 4: Other banks [PB81-248684] N82-16695

Northern Gulf of Mexico topographic features study. Volume 5: Florida Middle Ground [PB81-248692] N82-16696

HYDROGRAPHY

Northern Gulf of Mexico topographic features study, volume 3 [PB81-248676] N82-16694

HYDROLOGY

Pennsylvania baseline [PB82-101742] N82-16617

HYDROLYSIS

Conversion of ORNL waste paper to sugar using acid hydrolysis [DE82-000462] N82-16205

HYDROMETEOROLOGY

Development of a large scale cloud system, 23-27 March 1978 [AD-A106417] N82-16665

HYDROPYROLYSIS

Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst [DE81-029631] N82-16210

HYDROSTATICS

Studies of the effect of orientation on the elastic constants of stretched and hydrostatically extruded poly(chlorotriflouroethylene): A model of affine orientation in semi-crystalline polymers [AD-A107909] N82-16245

HYDROTHERMAL SYSTEMS

Case studies of low-to-moderate temperature hydrothermal energy development [DE82-000883] N82-16501

HYDROXYL COMPOUNDS

Synthesis of polyformals [NASA-CASE-ARC-11244-1] N82-16174

HYGIENE

Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709

Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710

Hygienic principles of ongoing monitoring of quality of recycled water during space flights N82-16717

Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine N82-16718

HYGRAL PROPERTIES

Prediction of composite hygral behavior made simple [NASA-TM-82780] N82-16181

HYPERBOLIC FUNCTIONS

Applications of random differential equations to engineering science. Wave propagation in turbulent media and random linear hyperbolic systems [AD-A106020] N82-16782

HYPERGEOMETRIC FUNCTIONS

Calculation of the temperature of a permanent incompressible laminar flow in a tube with known wall temperature distribution [INPE-2153-TDL/057] N82-16362

HYPERNUCLEI

Kaon-induced nuclear reactions [DE81-030552] N82-16839

HYPERONS

The two-photon absorptivity of rotational transitions in the A2 Sigma hyperon + (v prime = O) - X-2 pion (v prime prime = O) gamma band of nitric oxide [NASA-TM-81335] N82-16815

HYPOKINESIA

Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723

HYPOTHALAMUS

Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite N82-16716

HYPOXIA

Systemic and cerebral hemodynamics in flight personnel exposed to moderate hypoxia N82-16707

Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724

Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man N82-16729

I

ICE

The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data [AD-A106419] N82-16644

ICE FORMATION

The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data [AD-A106419] N82-16644

Documentation for program SIMICE [AD-A106777] N82-16761

ICE PREVENTION

Ice phobics blade tracking and comparison of vibration analysis techniques [AD-A108121] N82-16074

IDAHO

Boise Cascade: INEL solar home [DE82-003778] N82-16534

IGNITION LIMITS

Smoldering combustion hazards of thermal insulation materials [PB82-107046] N82-16215

ILLUMINATING

Daylighting [DE82-000930] N82-16515

IMAGE PROCESSING

Application of image processing techniques to fluid flow data analysis [NASA-TM-82760] N82-16049

Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications [E82-10020] N82-16438

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin [E82-10021] N82-16439

CNPq/INPE: LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories [E82-10023] N82-16441

The defense mapping agency's pilot digital operations [AD-A108092] N82-16457

Three-dimensional digital line segments [AD-A106813] N82-16766

Lie groups and lie algebras in video tracking [AD-A107858] N82-16780

Systolic algorithms for running order statistics in signal and image processing [AD-A106555] N82-16787

Texture classification with change point statistics [AD-A106614] N82-16789

IMAGE RESOLUTION

Compression of meteorological satellite images [INPE-2182-RPE/393] N82-16656

IMAGERY

Near surface flaw detection by ultrasonic angle imaging [PB81-235939] N82-16418

Viking orbiter stereo imaging catalog [NASA-CR-3501] N82-17009

IMAGING TECHNIQUES

Application of image processing techniques to fluid flow data analysis [NASA-TM-82760] N82-16049

Development of a pipe location system [PB81-246530] N82-16386

Simplified algorithm for calculating radiative transfer in satellite images [INPE-2169-RPE/385] N82-16450

Discrimation of unique biological communities in the Mississippi lignite belt N82-16453

Design study of imaging techniques for the Starprobe mission [NASA-CR-168392] N82-16649

IMMOBILIZATION

Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723

IMPACT DAMAGE

Development of an engineering analysis of progressive damage in composites during low velocity impact [NASA-CR-165778] N82-16177

Review of literature and regulation relating to thoracic impact toleance and injury criteria [PB82-108697] N82-16736

IMPEDANCE

High frequency scattering by a sphere with complex surface impedance N82-16799

IMPEDANCE MEASUREMENT

Computational study of magnetic dam effects in a high impedance diode [AD-A106154] N82-16818

IMPLOSIONS

Parametric considerations for inductively driven plasma implosions [AD-A106679] N82-16863

IMPREGNATING

Technology for improving the wear resistance of aggregates by materials impregnation [PB81-246191] N82-16306

IMPURITIES

Effects of fluctuating electric fields on hydrogen and impurity ions in EBT N82-16890

Deep impurity states in gallium arsenide [AD-A106695] N82-16908

INCENTIVES

New York State plan to encourage commercialization of more efficient gas technologies [PB81-249997] N82-16549

Analysis of federal incentives used to stimulate energy consumption [DE81-031928] N82-16935

INCOMPRESSIBLE FLOW

Calculation of the temperature of a permanent incompressible laminar flow in a tube with known wall temperature distribution [INPE-2153-TDL/057] N82-16362

INCONEL (TRADEMARK)

On relationship between microfissuring and microstructure in the HAZ of Inconel 718 N82-17078

INDEXES (DOCUMENTATION)

Permuted Medical Subject Headings, 1982 [PB81-227464] N82-16930

Medical Subject Headings: Tree structures, 1982 [PB81-227472] N82-16931

Medical subject headings: Annotated alphabetic list, 1982 [PB81-227480] N82-16932

Experimental comprehensive solar flare indices for major and certain lesser flares, 1975-1979 [PB82-109497] N82-17042

INDICATING INSTRUMENTS

System for providing an integrated display of instantaneous information relative to aircraft attitude, heading, altitude, and horizontal situation [NASA-CASE-FRC-11005-1] N82-16075

INDIUM COMPOUNDS

Research on InGaAs FETs [AD-A108016] N82-16355

INDIUM PHOSPHIDES

High-pressure gradient-freeze growth of single crystals of indium phosphide [AD-A107731] N82-16913

INDUSTRIAL ENERGY

Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant [DE81-030968] N82-16942

INDUSTRIAL PLANTS

Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants [AD-A107552] N82-16552

Public health hazards of Lurgi/Fischer Tropsch coal liquefaction [DE82-001617] N82-16566

INDUSTRIAL WASTES

Conversion of ORNL waste paper to sugar using acid hydrolysis [DE82-000462] N82-16205

Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants [AD-A107552] N82-16552

Public health hazards of Lurgi/Fischer Tropsch coal liquefaction [DE82-001617] N82-16566

Conservation of cooling water by silica removal with activated alumina [PB81-247959] N82-16570

Hourly diurnal flow variations in publicly-owned wastewater treatment facilities [PB82-107954] N82-16601

Heavy metal sources and flows in a municipal sewage system: Literature survey and field investigation of the Kokomo, Indiana sewage system [PB82-108366] N82-16604

Environmental assessment, source test and evaluation report: Coal preparation plant no. 2 [PB82-103573] N82-16618

Spent fuel and radioactive waste inventories and projections as of December 31, 1980 [DE82-000307] N82-16836

INELASTIC STRESS

Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships [NASA-CR-165533] N82-16080

INERTIAL CONFINEMENT FUSION

Light ion beams as the driver for inertial-confinement fusion [DE81-030116] N82-16870

INFESTATION

Remote sensing applications to resource problems in South Dakota [E82-10027] N82-16445

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation [E82-10029] N82-16447

INFORMATION DISSEMINATION

Verification of the foreign synfuels industrialization experience [DE82-000230] N82-16272

Residential energy conservation outreach activities: A new federal approach [PB81-242349] N82-16550

Assessment of the Region V water monitoring activities [PB82-103334] N82-16587

Regional needs regarding technical information [DE82-001772] N82-16929

INFORMATION RETRIEVAL

The K-D-B-tree: A search structure for large multidimensional dynamic indexes [AD-A106550] N82-16773

User considerations in computer-based information system [AD-A106194] N82-16928

Medical subject headings: Annotated alphabetic list, 1982 [PB81-227480] N82-16932

Enhancing technology transfer to state and local government utilizing on-line information retrieval services and on-line communications systems [PB81-246241] N82-16949

INFORMATION SYSTEMS

Digital Avionics Information System (DAIS): Development and demonstration [AD-A107906] N82-16079

The design, development, demonstration, and transfer of advanced command and control (C2) computer-based systems [AD-A106787] N82-16319

Electronic information systems and user contexts: Emerging social science issues [RAND/P-6690] N82-16926

INFORMATION THEORY

Nature abhors an empty vacuum --- the possibility of satisfying classical mechanics in a quantized world [AD-A106362] N82-16920

INFRARED DETECTORS

A preliminary evaluation of the system for Inventorying Road Surface Topography (SIRST) [PB81-249336] N82-16294

Advanced methods for preparation and characterization of infrared detector materials --- mercury cadmium telluride alloys [NASA-CR-161949] N82-16848

INFRARED IMAGERY

Research on long wavelength bias-assisted photoemitters [AD-A107815] N82-16912

INFRARED INSTRUMENTS

Infrared equipment, general [AD-A106711] N82-16854

Far infrared balloon-borne observations N82-16972

INFRARED LASERS

Laser Induced Damage in Optical Materials [AD-A106548] N82-16399

INFRARED PHOTOGRAPHY

Satellite cloud analysis over the GATE area on 4 August 1974 [PB82-107582] N82-16678

INFRARED RADIATION

Infrared-excess of peculiar B- and A-stars N82-16996

INFRARED SPECTRA

Thermal vegetation canopy model studies [AD-A106422] N82-16455

A climate index derived from satellite measured spectral infrared radiation [AD-A106733] N82-16648

INFRARED SPECTROSCOPY

Some applications of Fourier transform infrared spectroscopy in the examination of painting materials [PB81-249575] N82-16256

Coal-gasification instrumentation program (PR 11734) [DE82-001153] N82-16381

INFRARED TELESCOPES

The Galactic centre and Aquila regions in the near infrared N82-16969

INFRARED WINDOWS

Laser Induced Damage in Optical Materials [AD-A106548] N82-16399

INHIBITORS

Mechanical properties of adhesively bonded aluminum structures protected with hydrated inhibitors [AD-A106222] N82-16241

INJECTION LASERS

Power efficiency of semiconductor injection lasers N82-16115

Phase-locking of semiconductor injection lasers N82-16116

INLET FLOW

Effects of gas-flow pattern on cavity shape [DE82-000347] N82-16375

INORGANIC COATINGS

A process for the production of a scale-proof and corrosion-resistant coating on graphite and carbon bodies [NASA-TM-76785] N82-16179

INPUT

Construction of large reaction mechanisms [AD-A106139] N82-16197

INSOLATION

Analysis of results of mini round robin reflectance test [PB81-244873] N82-16394

INSULATION

Overall effective thermal resistance of corrugated fiberboard containers [AD-A106569] N82-16183

INSULATORS

Ion-beam-enhanced adhesion in the electronic stopping region [NASA-CR-163467] N82-16814

Metal-semiconductor reaction phenomena and microstructural investigations of laser-induced regrowth of silicon on insulators [AD-A106357] N82-16904

INTAKE SYSTEMS

Venturi design for metering solids flow in gas-solids suspensions [DE81-031944] N82-16380

INTEGRATED CIRCUITS

The complexity of manipulating hierarchically defined sets of rectangles [AD-A106552] N82-16350

LSI/VLSI ion implanted GaAs IC processing [AD-A107623] N82-16352

Microcomputer based test system for charge coupled devices [DE81-029860] N82-16357

INTEGRATED ENERGY SYSTEMS

Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development [NASA-CR-165328] N82-16480

Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development [NASA-CR-165455] N82-16483

INTERACTIONS

High frequency scattering by a sphere with complex surface impedance N82-16799

INTERACTIVE CONTROL

The optimal planning computerized manufacturing systems [PB81-245284] N82-16312

INTERCALATION

Lattice dynamics of graphite intercalation compounds: Modelled by the phonon dispersion of linear chains [PB82-000061] N82-16914

Phonons in alkali graphite intercalation compounds [DE82-000059] N82-16916

INTERFACES

Investigation of digitally controlled oscillator operability problems N82-16135

INTERFERENCE GRATING

A new SPS antenna design to reduce grating lobes --- solar power satellites N82-17070

INTERFEROMETERS

Angular interferometry-resolution enhancement using half-wave plates [AD-A107974] N82-16860

INTERGRANULAR CORROSION

On relationship between microfissuring and microstructure in the HAZ of Inconel 718 N82-17078

INTERMEDIATE FREQUENCY AMPLIFIERS

Method to treat picture and sound carriers to obtain a constant and adjustable level spacing between the picture carrier and the second carrier of a TV signal when there are variations of field intensity between the carriers [BMFT-FB-T-81-041] N82-16336

INTERNAL COMBUSTION ENGINES

Acoustic and emission characteristics of small, high-speed internal combustion engines [PB82-104225] N82-16416

Electric car: Is it still the vehicle of the future [DE81-030437] N82-16943

INTERNAL CONVERSION

Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel [PB81-245714] N82-16959

INTERNATIONAL RELATIONS

Energy industries abroad [DE82-001896] N82-16510

INTERNATIONAL TRADE

International market assessment of stand-alone photovoltaic power systems for cottage industry applications [NASA-CR-165287] N82-16494

INTERPOLATION

Nonpolynomial and inverse interpolation for line search: Synthesis and convergence rates [AD-A106680] N82-16776

INTERPROCESSOR COMMUNICATION

Merging on parallel models of computation [AD-A106189] N82-16750

INTERSTELLAR GAS

The hydrostatic equilibrium of interstellar gas and magnetic fields in the 6kpc region of the galaxy N82-16973

Early phases of stellar formation N82-16979

Non-stationary viscous gaseous disks in nuclei of dense stellar systems N82-16994

INVENTORIES

Spent fuel and radioactive waste inventories and projections as of December 31, 1980 [DE82-000307] N82-16836

INVERSIONS

Iterative abel inversion of optically thick, cylindrically symmetric radiation sources [AD-A106239] N82-16865

INVERTERS

Evaluation tests of Abacus 6 kVA utility-interactive inverter [DE82-001352] N82-16358

INVISCID FLOW

Calculation of three-dimensional, inviscid, supersonic, steady flows [NASA-CR-165110] N82-16047

ION ACCELERATORS

Physics of electrostatic lens [AD-A105262] N82-16817

Light ion beams as the driver for inertial-confinement fusion [DE81-030116] N82-16870

ION ATOM INTERACTIONS

The study of atom-atom electron-molecule and photon-molecule processes [AD-A107991] N82-16820

ION BEAMS

Ion-beam-enhanced adhesion in the electronic stopping region [NASA-CR-163467] N82-16814

Computational study of magnetic dam effects in a high impedance diode [AD-A106154] N82-16818

Light ion beams as the driver for inertial-confinement fusion [DE81-030116] N82-16870

Search for promethium-like gold lines and other transitions of interest to fusion research [DE81-029917] N82-16872

Experimental measurement of plasma space potential N82-16879

ION CURRENTS

Computational study of magnetic dam effects in a high impedance diode [AD-A106154] N82-16818

ION CYCLOTRON RADIATION

Effect on ambipolar potential of ion cyclotron heating N82-16898

Initial ICRH experiments on EBT-S N82-16899

ION DENSITY (CONCENTRATION)

Relativistic heavy-ion experiments [DE81-030544] N82-16822

Multi-species ambipolar phenomena in the ELMO Bumpy Torus N82-16878

Ambipolar potential and its effects on the confinement parameters of the EBT plasma N82-16888

ION DISTRIBUTION

Double layers on auroral field lines [NASA-CR-165113] N82-16635

Low-energy ion pitch-angle distribution in the outer magnetosphere: Ion zipper distributions [AD-A106153] N82-16646

Power requirements for ion tail formation in EBT N82-16889

ION IMPLANTATION

LSI/VLSI ion implanted GaAs IC processing [AD-A107623] N82-16352

Development and fabrication of a solar cell junction processing system [NASA-CR-163474] N82-16490

Deep impurity states in gallium arsenide [AD-A106695] N82-16908

ION IRRADIATION

Ion-beam-enhanced adhesion in the electronic stopping region [NASA-CR-163467] N82-16814

ION MOTION

Molecular dynamics calculations for sodium using pseudopotential theory [AD-A108014] N82-16821

ION PLATING

Aluminum and chromium ion particle studies for enhancement of surface properties N82-17071

ION SCATTERING

Surface studies of plastic-bonded PETN and RDX by X-ray Photoelectron Spectroscopy (XPS) and Ion-Scattering Spectroscopy (ISS) [DE81-030402] N82-16207

Electron-impact excitation of ions [DE81-030806] N82-16825

ION SELECTIVE ELECTRODES

Electrorefining of sodium using solid state rapid ion conductors [PB81-243667] N82-16234

ION SOURCES

Optically pumped polarized ion sources [DE81-026306] N82-16798

Neutral-beam systems for magnetic-fusion reactors [DE81-027940] N82-16876

IONIC COLLISIONS

Investigations of nonreactive vibrational and rotational excitation in small, potentially reactive ion molecule systems at energies below 6eV [MPIS-4/1981] N82-16816

Collisions of fast multicharged ions in gas targets: Charge transfer and ionization [DE81-030541] N82-16823

IONIC DIFFUSION

Power requirements for ion tail formation in EBT N82-16889

IONIC MOBILITY

Surface chemical technology for improved wetting of coal dust [PB82-104654] N82-16608

IONIZATION

Collisions of fast multicharged ions in gas targets: Charge transfer and ionization [DE81-030541] N82-16823

Reactions of metal ions and their clusters in the gas phase using laser ionization: Ion cyclotron resonance spectroscopy [DE81-029015] N82-16915

The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma [REPT-626] N82-17007

IONIZATION CROSS SECTIONS

Collisions of fast multicharged ions in gas targets: Charge transfer and ionization [DE81-030541] N82-16823

IONIZING RADIATION

Experimental comprehensive solar flare indices for major and certain lesser flares, 1975-1979 [PB82-109497] N82-17042

IONOSPHERE

Propagation of transient signals through nonlinear, ionized media [AD-A106754] N82-16320

Dynamics of magnetosphere-ionosphere coupling including turbulent transport [NASA-CR-165098] N82-16636

IONOSPHERIC DISTURBANCES

Ionospheric disturbances propagating eastward in a low latitude detected by VHF polarimeters [INPE-2202-PRE/011] N82-16632

Numerical simulation of Rayleigh-Taylor instability in the equatorial ionospheric plasma [INPE-2172-RPE/388] N82-16633

IONOSPHERIC PROPAGATION

High altitude atmospheric investigations. Part 2: Development of in-situ experiments for measurements in the D-region of the ionosphere and their results [AD-A106770] N82-16318

VLF/LF/MF Whispering gallery propagation studies [AD-A106517] N82-16324

Skywave communication techniques. Decision feedback equilization for serially modulated spread-spectrum signals in the HF band yields improved reliability [AD-A106380] N82-16326

Ionospheric disturbances propagating eastward in a low latitude detected by VHF polarimeters
[INPE-2202-PRE/011] N82-16632

IRON ALLOYS
Resistance of (Fe,Ni)sub3V long-range-ordered alloys to radiation damage
[DE81-032006] N82-16221

IRON COMPOUNDS
Preparation and characterization of conducting iron tungstates
[AD-A106541] N82-16193

IRRIGATION
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

ISCHEMIA
Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724

ISOTHERMAL PROCESSES
A computer code for swirling turbulent axisymmetric recirculating flows in practical isothermal combustor geometries
[NASA-CR-3442] N82-16082

ISOTOPIC ENRICHMENT
Isotopic anomalies and the early history of the solar system N82-16976

ITERATION
Research on algorithms for adaptive antenna arrays
[AD-A106684] N82-16321

ITERATIVE SOLUTION
Incomplete block cyclic reduction
[UCRL-85837] N82-16784
Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

J

J INTEGRAL
Evaluation of the fracture behavior of concrete with the J-integral
[PB81-235855] N82-16433

JAMMING
Advanced adaptive antenna techniques
[AD-A106545] N82-16323

JET AIRCRAFT
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] N82-16057
Multiple pure tone elimination strut assembly --- air breathing engines
[NASA-CASE-FRC-11062-1] N82-16800

JET AIRCRAFT NOISE
Comparison of acoustic data from a 102 mm conic nozzle as measured in the RAE 24-foot wind tunnel and the NASA Ames 40- by 80-foot wind tunnel
[NASA-TM-81343] N82-16083
Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801
Analytical study of twin-jet shielding
[NASA-CR-165103] N82-16802
Analytical study of twin-jet shielding
[NASA-CR-165104] N82-16803
Analytical study of twin-jet shielding
[NASA-CR-165105] N82-16804
Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805
Analytical study of twin-jet shielding two-dimensional model
[NASA-CR-165107] N82-16806

JET ENGINES
Prediction of sound radiation from different practical jet engine inlets
[NASA-CR-165120] N82-16810

JET FLOW
Heat transfer from impinging jets. A literature review
[AD-A106723] N82-16367
Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801
Analytical study of twin-jet shielding
[NASA-CR-165103] N82-16802
Analytical study of twin-jet shielding
[NASA-CR-165104] N82-16803
Analytical study of twin-jet shielding
[NASA-CR-165105] N82-16804
Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805
Analytical study of twin-jet shielding two-dimensional model
[NASA-CR-165107] N82-16806

JET IMPINGEMENT
Heat transfer from impinging jets. A literature review
[AD-A106723] N82-16367

JET STREAMS (METEOROLOGY)
Effects of diabatic heating on the ageostrophic circulation of an upper tropospheric jet streak
[NASA-CR-3497] N82-16658

JFET
Research on InGaAs FETs
[AD-A108016] N82-16355

JOINTS (JUNCTIONS)
Analysis of bonded joints in composite materials structures involving hygrothermal effects
[AD-A106720] N82-16188
Failure loads for model adhesive joints subjected to tension, compression or torsion
[AD-A106724] N82-16424
Bolted connections in composite structures
[PB81-247124] N82-16435

JOSEPHSON JUNCTIONS
Report of significant accomplishments
[AD-A107607] N82-16353

JUDGMENTS
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements
[AD-A106143] N82-16739

JUPITER (PLANET)
The morphology and evolution of Ganymede and Calisto N82-17013
Ray tracing studies of Jupiter's magnetosphere N82-17064

K

KANSAS
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

KAONS
Kaon-induced nuclear reactions
[DE81-030552] N82-16839

KENTUCKY
Flash hydropyrolysis of Western Kentucky no. 9 bituminous coal with catalyst
[DE81-029631] N82-16210

KEROSENE
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] N82-16264

KEVLAR (TRADEMARK)
Stressed Kevlar strand test
[DE81-030769] N82-16430

KINETIC ENERGY
Power requirements for ion tail formation in EBT N82-16889

KINETIC THEORY
Matter in general relativity N82-17061

KINETICS
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715

KNOWLEDGE
The knowledge level
[AD-A106556] N82-16772

KOHOUTEK COMET
The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma
[REPT-626] N82-17007

L

LAGRANGE MULTIPLIERS
Conflict among testing procedures in a linear regression model
[RAND/P-6691] N82-16794

LAKE SUPERIOR
Sea Grant program, University of Minnesota
[PB81-243958] N82-16687

LAKES
Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] N82-16439
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] N82-16846

LAMINAR FLOW
Calculation of the temperature of a permanent incompressible laminar flow in a tube with known wall temperature distribution
[INPE-2153-TDL/057] N82-16362

LAMINATES
Fabrication of boron/aluminum fan blades for SCR engines
[NASA-CR-165294] N82-16176
Instructions for TI-59 combined card/module calculations for in-plane and flexural properties of symmetric laminates --- programmable calculator operations
[AD-A107984] N82-16189
Strength and stiffness of small glued-laminated beams with different qualities of tension laminations
[AD-A106562] N82-16421
A summary of modulus of elasticity and knot size surveys for laminating grades of lumber
[AD-A106561] N82-16422

LAND MANAGEMENT
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] N82-16467

LAND MOBILE SATELLITE SERVICE
Computer simulator for a mobile telephone system
[NASA-CR-164808] N82-16314

LAND USE
Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil
[E82-10025] N82-16443
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447
Implications of land, water and energy resource policies on agricultural production
[PB81-244063] N82-16467

LANDFILLS
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] N82-16537
NEIC manual for groundwater/subsurface investigations at hazardous waste sites
[PB82-103755] N82-16590
Use of remote sensing techniques in a systematic investigation of an uncontrolled hazardous waste site
[PB82-103896] N82-16593

LANDSAT SATELLITES
CNPq/INPE: LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] N82-16441

LANDSAT 2
LANDSAT-2 and LANDSAT-3 flight evaluation report, 23 January to 23 July 1980
[E82-10022] N82-16440

LANDSAT 3
LANDSAT-2 and LANDSAT-3 flight evaluation report, 23 January to 23 July 1980
[E82-10022] N82-16440

LANGUAGE PROGRAMMING
OPS5 user's manual
[AD-A106558] N82-16763

LARGE SCALE INTEGRATION
The complexity of manipulating hierarchically defined sets of rectangles
[AD-A106552] N82-16350
LSI/VLSI ion implanted GaAs IC processing
[AD-A107623] N82-16352

LARGE SPACE STRUCTURES
The microwave radiometer spacecraft: A design study
[NASA-RP-1079] N82-16153
The microwave radiometer spacecraft. A design study: Executive summary N82-16154

High-resolution passive microwave imaging of the surface of the Earth N82-16156

Radiometer design concepts for large aperture microwave radiometer spacecraft N82-16157

Systems design and analysis of the microwave radiometer spacecraft N82-16159

Preliminary design of tetrahedral truss reflector structure N82-16160

Weight estimates and packaging techniques for the microwave radiometer spacecraft --- shuttle compatible design N82-16161

Adaptive control system for large annular momentum control device N82-16165

ACOSS nine (Active Control Of Space Structures) [AD-A106686] N82-16168

ACOSS seven (Active Control Of Space Structures) [AD-A106687] N82-16169

Fiscal year 1981 scientific and technical reports, articles, papers, and presentations [NASA-TM-82445] N82-16927

Attitude control of the space construction base: A modular approach N82-17057

LARVAE

Possible use of house fly larvae for utilization of organic waste in biological life-support systems N82-16719

LASER ANNEALING

Metal-semiconductor reaction phenomena and microstructural investigations of laser-induced regrowth of silicon on insulators [AD-A106357] N82-16904

LASER APPLICATIONS

Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions [AD-A107716] N82-16198

Laser velocimeter measurements in turbulent and mixing flows, Part 3 [AD-A106130] N82-16368

Laser kinetic spectroscopic studies (a) the unimolecular reactions of nitroalkanes and, (b) elementary reactions important in combustion [AD-A107820] N82-16402

Measurement of surface shape of imploding hollow plasma liners [DE81-030996] N82-16866

LASER DAMAGE

Laser Induced Damage in Optical Materials [AD-A106548] N82-16399

LASER FUSION

Automatic gas-levitation system for vacuum deposition of laser-fusion targets [DE82-000296] N82-16406

Copper-coated laser-fusion targets using molecular-beam levitation [DE82-000644] N82-16841

LASER HEATING

Laser heated gas-jet: A soft X-ray source [DE81-029627] N82-16407

LASER INTERFEROMETRY

Angular interferometry-resolution enhancement using half-wave plates [AD-A107974] N82-16860

LASER RANGE FINDERS

Laser measuring system for incremental assemblies --- measuring wire-wrapped frame assemblies in spark chambers [NASA-CASE-GSC-12321-1] N82-16396

LASER RANGER/TRACKER

Aircraft position measurement using laser beacon optics [AD-A107973] N82-16067

LASER SPECTROSCOPY

Laser kinetic spectroscopic studies (a) the unimolecular reactions of nitroalkanes and, (b) elementary reactions important in combustion [AD-A107820] N82-16402

LASER TARGETS

Preparation of multishell ICF target plastic-foam cushion materials by thermally induced phase-inversion processes [DE82-000574] N82-16249

Metal-containing plasma-polymerized coatings for laser-fusion targets [DE82-000346] N82-16251

Automatic gas-levitation system for vacuum deposition of laser-fusion targets [DE82-000296] N82-16406

Copper-coated laser-fusion targets using molecular-beam levitation [DE82-000644] N82-16841

LASER WINDOWS

Photoacoustic spectroscopy of dielectric and semiconducting solids [AD-A107613] N82-16911

LASERS

Energetics and collision dynamics of electronic transition lasers [AD-A107591] N82-16404

Effects of strong turbulence on short wavelength laser: Experimental determination of mean square wander angle [AD-A106776] N82-16852

LATTICE PARAMETERS

Lattice dynamics of graphite intercalation compounds: Modelled by the phonon dispersion of linear chains [PB82-000061] N82-16914

Study of shock-induced signals and coherent effects in solids by molecular dynamics [DE81-030412] N82-16917

LAW (JURISPRUDENCE)

Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977 [PB81-241663] N82-16630

LEACHING

Leaching of nuclear-waste forms [DE81-030490] N82-16843

LEAD (METAL)

Metal production by electrolysis of molten salt-metal sulfide slurries [PB81-235434] N82-16236

Atmospheric deposition of heavy metals and their interaction with acid precipitation in a North American deciduous forest [DE81-032004] N82-16556

Restoring hazardous spill-damaged areas: Technique identification/assessment [PB82-103870] N82-16591

LEADING EDGES

Large deformations near the tips of an interface-crack between two neo-hookean sheets [AD-A106147] N82-16425

LEAST SQUARES METHOD

A model for solving multiperiod multireservoir water resources problems with stochastic inflows [AD-A106769] N82-16456

LEVITATION

Automatic gas-levitation system for vacuum deposition of laser-fusion targets [DE82-000296] N82-16406

Copper-coated laser-fusion targets using molecular-beam levitation [DE82-000644] N82-16841

LICENSING

Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah [DE82-000416] N82-16461

LIE GROUPS

Lie groups and lie algebras in video tracking [AD-A107858] N82-16780

LIFE (DURABILITY)

Statistical data analysis for reliability tests [AD-A105188] N82-16786

LIFE CYCLE COSTS

Life-cycle cost analysis of projects using a polynomial cash flow model for nonuniform maintenance and operations costs N82-16123

LIFE SUPPORT SYSTEMS

USSR report: Space biology and aerospace medicine, volume 15, no. 6, November - December 1981 [JPRS-79849] N82-16704

Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine N82-16718

Possible use of house fly larvae for utilization of organic waste in biological life-support systems N82-16719

Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720

LIFT

A unified thermal and vertical trajectory model for the prediction of high altitude balloon performance [NASA-CR-156884] N82-16048

LIGHT (VISIBLE RADIATION)

Evaluation of retro-reflective measurement devices [PB81-243594] N82-16951

LIGHT EMITTING DIODES

Fabrication of heterojunction LEDs for operation at 1.3 micrometers [AD-A107730] N82-16857

LIGHT IONS

Light ion beams as the driver for inertial-confinement fusion [DE81-030116] N82-16870

LIGHT SCATTERING

Assignment of an anomalous peak in the Brillouin spectrum of oriented polymer films [AD-A107897] N82-16246

Winter and summer measurements of European very low altitude volume scattering coefficients [AD-A106363] N82-16666

Ester liquid crystal mixtures for dynamic scattering at elevated temperatures [AD-A106790] N82-16906

LIGHT SOURCES

Progress and prospects at the National Synchrotron Light Source (NSLS) [DE81-030738] N82-16861

LIGHTNING

Severe storms and local weather research N82-16663

Detection and analysis of radio frequency lightning emissions N82-17052

Thunderstorm electric field modelling N82-17065

LIKELIHOOD RATIO

Conflict among testing procedures in a linear regression model [RAND/P-6691] N82-16794

LIMB DARKENING

Sclera solar diameter observations N82-17026

LINE SPECTRA

Laser heated gas-jet: A soft X-ray source [DE81-029627] N82-16407

Galaxies in the light of the 21 cm line N82-16984

LINEAR SYSTEMS

Conflict among testing procedures in a linear regression model [RAND/P-6691] N82-16794

LINEARITY

A calibration service for analog-to-digital and digital-to-analog converters [PB81-243404] N82-16395

Testing for Gaussianity and linearity of stationary time series [AD-A017548] N82-16781

LINES (GEOMETRY)

Three-dimensional digital line segments [AD-A106813] N82-16766

LININGS

Measurement of surface shape of imploding hollow plasma liners [DE81-030996] N82-16866

LIPID METABOLISM

Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724

LIPIDS

Small unilamellar vesicles as reagents: A chemically defined quantitative assay for lectins [DE81-030365] N82-16208

Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724

LIQUID CRYSTALS

Real-time implementation of nonlinear processing functions --- liquid crystal light values [AD-A106773] N82-16856

Ester liquid crystal mixtures for dynamic scattering at elevated temperatures [AD-A106790] N82-16906

LIQUID FILLED SHELLS

An experimental study of forced asymmetric oscillations in a rotating liquid-filled cylinder [AD-A107948] N82-16372

LIQUID HELIUM

Feasibility study for long lifetime helium dewar [NASA-CR-166254] N82-16145

LIQUID METAL FAST BREEDER REACTORS

Gravitational agglomeration of post-HCDA LMFBR nonspherical aerosols [AD-A106766] N82-16641

LIQUID PHASE EPITAXY
Metal-semiconductor reaction phenomena and microstructural investigations of laser-induced regrowth of silicon on insulators
[AD-A106357] N82-16904

LIQUID PHASES
The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data
[AD-A106419] N82-16644

LIQUID PROPELLANT ROCKET ENGINES
Reusable rocket engine maintenance study
[NASA-CR-165569] N82-16172
Time- and space-dependence of particulate effluent in the exhaust plume of a pulsed liquid bipropellant engine
[AD-A106525] N82-16173

LIQUID WASTES
Use of a phenolic-carboxylic acid cation resin in the treatment of low-level liquid waste at Oak Ridge National Laboratory
[DE82-000500] N82-16554

LIQUID-SOLID INTERFACES
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle
[DE82-901186] N82-16526
Deliberate modification of the behavior of n-type cadium telluride/electrolyte interfaces by surface etching: Removal of fermi level pinning
[AD-A106382] N82-16907

LIQUIDS
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] N82-16527

LITHIUM
Study of the secondary Li electrode in organic electrolyte
[DE82-001508] N82-16209

LITHIUM SULFUR BATTERIES
Compatibility and accelerated aging study for Li(Si)/FeS2 thermally activated batteries
[DE81-030210] N82-16503

LITHOLOGY
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000896] N82-16465

LIVESTOCK
Analysis to develop a program for energy-integrated farm systems
[DE82-000318] N82-16514

LOAD TESTS
Evaluation of the fracture behavior of concrete with the J-integral
[PB81-235855] N82-16433

LOADING OPERATIONS
QOT and E of the F-16 20mm ammunition loading system's ability to upload/download A-7D aircraft
[AD-A106007] N82-16099

LOADS (FORCES)
Effect of seals on rotor systems
[NASA-TM-82786] N82-16411
A study of component design loads due to dynamic environment N82-17056

LOGISTICS
Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants
[AD-A107552] N82-16552

LONG DURATION SPACE FLIGHT
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight N82-16722

LONG TERM EFFECTS
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-3502] N82-16178

LONG WAVE RADIATION
Research on long wavelength bias-assisted photoemitters
[AD-A107815] N82-16912

LONGITUDINAL STABILITY
Summary of theoretical considerations and wind tunnel tests of an aerodynamic spoiler for stall proofing a general aviation airplane
[NASA-CR-165100] N82-16046

LOW ALTITUDE
Winter and summer measurements of European very low altitude volume scattering coefficients
[AD-A106363] N82-16666

LOW COST
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] N82-16527

LOW DENSITY FLOW
Use of the pitot tube in very low density flows
[AD-A106374] N82-16366

LOW GRAVITY MANUFACTURING
Heat loss and drag of spherical drop tube samples N82-17079

LOW SPEED
A versatile data acquisition system for a low speed wind tunnel
[AD-A106269] N82-16097

LOW TEMPERATURE
Case studies of low-to-moderate temperature hydrothermal energy development
[DE82-000883] N82-16501

LOW TEMPERATURE PHYSICS
Low-temperature electron spin resonance in (TMTSF) 2PF6 in the high pressure metallic phase
[DE81-030233] N82-16827

LOWER ATMOSPHERE
Winter and summer measurements of European very low altitude volume scattering coefficients
[AD-A106363] N82-16666

LOWER BODY NEGATIVE PRESSURE
Results of study of hemodynamics and phase structure of the cardiac cycle during functional test with lower body negative pressure during 140-day Salyut-6 station flight N82-16722

LUBRICANT TESTS
Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093

LUBRICANTS
Identification of synthetic fluids utilizing pyrolysis gas liquid chromatographic techniques
[AD-A108117] N82-16200
Traction contact performance evaluation at high speeds
[NASA-CR-165226] N82-16409

LUBRICATING OILS
Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093
Identification of synthetic fluids utilizing pyrolysis gas liquid chromatographic techniques
[AD-A108117] N82-16200

LUBRICATION
Basic lubrication equations
[NASA-TM-81693] N82-16413

LUMINOSITY
Estimating short-term solar variations by a simple envelope matching technique N82-17028
Thermal perturbation of the Sun N82-17029
Effects of changes in convective efficiency on the solar radius and luminosity N82-17030
Evolutionary variations of solar luminosity N82-17032
On the seat of the solar cycle N82-17033
Short and long term variations in the solar constant N82-17034
Solar pulsations and long-term solar variability N82-17036
Observations of large-scale motions of the Sun N82-17037
A prospectus for a theory of variable variability N82-17041

LUNAR ORBITS
Tidal friction in the Earth-Moon system N82-16978

LUNAR TIDES
Tidal friction in the Earth-Moon system N82-16978

M

MAGELLANIC CLOUDS
Structure and dynamics of the Large Magellanic Cloud N82-16985
The mass (star number)-radius relations for the clusters of the large Magellanic Cloud N82-16993

MAGNESIUM OXIDES
Factors affecting the soundness of blended cements
[PB82-104746] N82-16299

MAGNETIC ANOMALIES
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system — the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446

MAGNETIC CHARGE DENSITY
Magnetic shell tracing: A simplified approach
[AD-A106714] N82-16647

MAGNETIC DIFFUSION
Transient magnetic-field calculations with TRIDIF
[DE81-030843] N82-16785

MAGNETIC DIPOLES
Transient magnetic-field calculations with TRIDIF
[DE81-030843] N82-16785

MAGNETIC EFFECTS
Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems N82-16725
Computational study of magnetic dam effects in a high impedance diode
[AD-A106154] N82-16818

MAGNETIC EQUATOR
Numerical simulation of Rayleigh-Taylor instability in the equatorial ionospheric plasma
[INPE-2172-RPE/388] N82-16633

MAGNETIC FIELD CONFIGURATIONS
Tilt and shift mode stability with line tying
[AD-A106228] N82-16864
Numerical simulation of the Beta 2 experiment
[DE81-030884] N82-16867

MAGNETIC FIELDS
Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems N82-16725
Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature
[PB82-102567] N82-16737
Transient magnetic-field calculations with TRIDIF
[DE81-030843] N82-16785
Observing solitons in one dimensional magnetic systems
[DE81-029919] N82-16828

MAGNETIC FLUX
Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail
[NASA-CR-168508] N82-16634
Field errors in EBT and their effects on the ambipolar potential N82-16887

MAGNETIC INDUCTION
Parametric considerations for inductively driven plasma implosions
[AD-A106679] N82-16863

MAGNETIC LENSES
Physics of electrostatic lens
[AD-A105262] N82-16817

MAGNETIC MIRRORS
Design of first walls and beam dumps for tandem mirror experiment upgrade
[DE81-030888] N82-16875
The effect of transiting electrons on the ambipolar potential in a tandem mirror plasma N82-16892
Central cell confinement in MFTF-B N82-16893
Instabilities in a small axisymmetric mirror N82-16894
Effcts due to the large ambipolar potential in TMX N82-16895
Formation and control of plasma potentials in TMX upgrade N82-16896

MAGNETIC PROPERTIES
Low-temperature electron spin resonance in (TMTSF) 2PF6 in the high pressure metallic phase
[DE81-030233] N82-16827

MAGNETIC PUMPING
Non-linear analysis of the free electron lasers utilizing a linear wiggler field
[AD-A106229] N82-16398

MAGNETIC STORAGE
Tape recording and triggering systems
[PB81-243248] N82-16382
Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications
[E82-10020] N82-16438

MAGNETIC STORMS
Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail
[NASA-CR-168508] N82-16634

MAGNETIC SURVEYS
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system — the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446

MAGNETIC SUSPENSION
Adaptive control system for large annular momentum control device N82-16165

MAGNETIC TAPES
Tape recording and triggering systems
[PB81-243248] N82-16382

MAGNETOHYDRODYNAMIC GENERATORS
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] N82-16481
MHD Heat and Seed Recovery Technology Project
[DE82-001608] N82-16900
Technical support for open-cycle MHD program — combined cycle mhd/steam power system analysis
[DE82-001955] N82-16901

MAGNETOHYDRODYNAMIC STABILITY
Tilt and shift mode stability with line tying
[AD-A106228] N82-16864
Fusion plasma control using TRAIL: A nondamageable limiter
[DE81-030825] N82-16873
Instabilities in a small axisymmetric mirror
N82-16894
Effcts due to the large ambipolar potential in TMX
N82-16895

MAGNETOHYDRODYNAMICS
A study pertaining to inertial energy storage machine designs for space applications
[NASA-CR-163465] N82-16489
Dynamics of magnetosphere-ionosphere coupling including turbulent transport
[NASA-CR-165098] N82-16636

MAGNETOHYDROSTATICS
The hydrostatic equilibrium of interstellar gas and magnetic fields in the 6kpc region of the galaxy
N82-16973

MAGNETOSPHERE
Dynamics of magnetosphere-ionosphere coupling including turbulent transport
[NASA-CR-165098] N82-16636
Vector electric fields
[AD-A106784] N82-16642
The role of hiss in magnetospheric chorus emissions
[AD-A106479] N82-16643
Low-energy ion pitch-angle distribution in the outer magnetosphere: Ion zipper distributions
[AD-A106153] N82-16646
Ray tracing studies of Jupiter's magnetosphere
N82-17064

MAIN SEQUENCE STARS
Simultaneous IUE and optical observations of the short period spot active binary XY Ursae Majoris
N82-16992

MAINTENANCE
Optimum equipment maintenance/replacement policy. Part 1: Dynamic programming approach
N82-16128
Evaluation of maintenance/rehabilitation alternatives for continuously reinforced concrete pavement
[PB82-105792] N82-16298
Bridge and pavement maintenance
[PB81-247504] N82-16309
Operation and maintenance costs for municipal wastewater facilities
[PB81-249971] N82-16628
Use of embedded microcomputers in system debugging and maintenance
[DE81-029859] N82-16755

MALES
Phenomena of fluctuation of human reaction to antiorthostatic position N82-16721

MAN ENVIRONMENT INTERACTIONS
Pollution Problems of the Great Lakes Region. Report of the Great Lakes Region Conference
[PB81-246951] N82-16625

MAN MACHINE SYSTEMS
Investigation of digitally controlled oscillator operability problems N82-16135
Anaphora for limited domain systems
[AD-A106559] N82-16762
A technical briefing on the Initial Graphics Exchange Specification (IGES)
[PB81-238719] N82-16768
User considerations in computer-based information system
[AD-A106194] N82-16928

MANAGEMENT
Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE82-000967] N82-16833

MANAGEMENT METHODS
On-site wastewater treatment problems and alternatives for western North Carolina
[PB81-240541] N82-16572
Principles of project management
[NASA-TM-84089] N82-16921

MANAGEMENT PLANNING
The optimal planning of computerized manufacturing systems — process planning automation, a recursive approach
[PB81-245276] N82-16311
Formal techniques for analysis and design of purposive organizations
[AD-A106775] N82-16922

MANUALS
Operator's manual for variable weight, variable CG helmet simulator
[AD-A108093] N82-16078
NEIC manual for groundwater/subsurface investigations at hazardous waste sites
[PB82-103755] N82-16590
Weather satellite interpretation: Introduction to weather satellite imagery
[PB82-107657] N82-16677

MANUFACTURING
Design for manufacturability: Design for forging, part 2
[PB82-101692] N82-16297
Exploratory study of constraints on design by functional requirements and manufacturing
[PB82-101856] N82-16304
The optimal planning of computerized manufacturing systems — data flow CMS control system architecture
[PB81-241564] N82-16310
The optimal planning of computerized manufacturing systems — process planning automation, a recursive approach
[PB81-245276] N82-16311

MAPPING
Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171
Discrimation of unique biological communities in the Mississippi lignite belt N82-16453
The defense mapping agency's pilot digital operations
[AD-A108092] N82-16457
Northern Gulf of Mexico topographic features study. Volume 5: Florida Middle Ground
[PB81-248692] N82-16696
An analysis of cognitive mapping skill
[AD-A106145] N82-16740
Ability differences and cognitive mapping skill
[AD-A106389] N82-16741
Ridge systems of Mars N82-17012

MARINE BIOLOGY
Studies on toxicity of OTEC plant components on marine animals from the Gulf of Mexico
[DE81-030167] N82-16564
Northern Gulf of Mexico topographic features study, executive summary
[PB81-248643] N82-16691
Northern Gulf of Mexico topographic features study, volume 3
[PB81-248676] N82-16694
Northern Gulf of Mexico topographic features study. Volume 4: Other banks
[PB81-248684] N82-16695
Northern Gulf of Mexico topographic features study. Volume 5: Florida Middle Ground
[PB81-248692] N82-16696

MARINE CHEMISTRY
Northern Gulf of Mexico topographic features study, executive summary
[PB81-248643] N82-16691
Northern Gulf of Mexico topographic features study. Volume 2: Methods, fossil coccoliths, chemical analyses
[PB81-248668] N82-16693
Northern Gulf of Mexico topographic features study, volume 3
[PB81-248676] N82-16694
Northern Gulf of Mexico topographic features study. Volume 4: Other banks
[PB81-248684] N82-16695

MARINE ENVIRONMENTS
Studies on toxicity of OTEC plant components on marine animals from the Gulf of Mexico
[DE81-030167] N82-16564
MESA (Marine Ecosystem Analysis) New York Bight project: Winkler oxygen data, expanded water column characterization cruises (XWCC-2 to SWCC-24), NOAA ships Researcher and George B. Kelez, 1975 - 1979
[PB82-100975] N82-16575
Pollution Problems of the Great Lakes Region. Report of the Great Lakes Region Conference
[PB81-246951] N82 16625

MARINE METEOROLOGY
An introduction to sea state forecasting
[PB81-242687] N82-16699

MARINE RESOURCES
Brazilian remote sensing activities, current and prospective needs
[E82-10026] N82-16444

MARKET RESEARCH
International market assessment of stand-alone photovoltaic power systems for cottage industry applications
[NASA-CR-165287] N82-16494
Consumer behavior towards fuel efficient vehicles, volume 2
[PB81-246654] N82-16948

MARKETING
QUSER user's guide
[DE81-030681] N82-16767

MARKING
Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] N82-16448

MARS SURFACE
Viking orbiter stereo imaging catalog
[NASA-CR-3501] N82-17009
Ridge systems of Mars N82-17012

MASONRY
Energy conservation by multiple glazing on heavy masonry buildings
[PB81-246977] N82-16548

MASS
The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data
[AD-A106419] N82-16644

MASS TRANSFER
Mass loss from early type stars N82-16980
The formation of compact objects in binary systems N82-16981

MATCHED FILTERS
Analysis of maximin matched-filter design for communication through a nonlinearly distorting channel
[AD-A106789] N82-16327

MATCHING
Estimating short-term solar variations by a simple envelope matching technique N82-17028

MATERIAL ABSORPTION
Mechanisms of cadmium absorption in rats
[PB82-108184] N82-16703

MATERIAL BALANCE
Bi-Gas pilot plant operation
[DE82-000223] N82-16271

MATERIALS HANDLING
Skid-test evaluation of protective coverings for explosive billets
[DE82-000072] N82-16258
Systems studies of waste transportation
[DE81-030840] N82-16941

MATERIALS RECOVERY
Investigation of by-product molybdenum recovery
[PB81-246514] N82-16232
Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236
Civil agencies should save millions by recovering silver from photographic wastes
[PB81-243479] N82-16237

Potential economic benefits from process control of coal preparation plants
[DE82-000661] N82-16263
Conservation of cooling water by silica removal with activated alumina
[PB81-247959] N82-16570

MATERIALS SCIENCE
Technical activities 1980: Center for Materials Science
[PB81-245316] N82-16391

MATHEMATICAL LOGIC
Toward a unified logical basis for programming languages
[AD-A106772] N82-16765
The heuristic of George Polya and its relation to artificial intelligence
[AD-A106657] N82-16771

MATHEMATICAL MODELS
A model to calculate EM fields in tropospheric duct environments at frequencies through SHF
[AD-A107710] N82-16335
Far field overpressure from TNT explosions: A survey of available models
[AD-A107952] N82-16370
Nocturnal drainage flow over complex terrain using a generalized shallow-fluid approximation
[DE81-028693] N82-16460
Enhanced oil recovery by CO2 foam flooding
[DE82-000949] N82-16464
The APRAC-3/MOBILE 1 emissions and diffusion modeling package: User's manual
[PB82-103763] N82-16488
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] N82-16560
Dynamics of magnetosphere-ionosphere coupling including turbulent transport
[NASA-CR-166098] N82-16836
Models in the policy process: Past, present, and future
[RAND/P-6654] N82-16795
Random anisotropy effects in Ising spin glass
[INPE-2194-TDL/061] N82-16919
Thermal perturbation of the Sun N82-17029
Effects of changes in convective efficiency on the solar radius and luminosity N82-17030
Short and long term variations in the solar constant N82-17034
A prospectus for a theory of variable variability N82-17041
Fuel optimal maneuvers for spacecraft with fixed thrusters N82-17046

MATHEMATICAL PROGRAMMING
Nonpolynomial and inverse interpolation for line search: Synthesis and convergence rates
[AD-A106680] N82-16776

MATRICES (MATHEMATICS)
Sparse matrices
[AD-A106187] N82-16775
Incomplete block cyclic reduction
[UCRL-85837] N82-16784

MATTER (PHYSICS)
The evolution of density perturbation in an open universe
[REPT-670] N82-17005

MEAN
Statistical Analysis of daily mean temperatures N82-17072

MEASURING INSTRUMENTS
Precision measurements on fibrous glass insulation
[PB81-239834] N82-16308

MECHANICAL DEVICES
International market assessment of stand-alone photovoltaic power systems for cottage industry applications
[NASA-CR-165287] N82-16494

MECHANICAL DRIVES
Traction contact performance evaluation at high speeds
[NASA-CR-165226] N82-16409

MECHANICAL ENGINEERING
Exploratory study of constraints on design by functional requirements and manufacturing
[PB82-101858] N82-16304

MECHANICAL MEASUREMENT
Development of a surface panel measurement system
[NASA-CR-163469] N82-16315

MECHANICAL PROPERTIES
Composite structural materials — fiber reinforced composites for aircraft structures
[NASA-CR-165121] N82-16182
Effect of microstructure on the mechanical properties of a commercial 12Cr-1Mo steel (HT-9)
[DE82-000082] N82-16225
Development of strength in cements
[PB82-103979] N82-16300
Technical activities 1980: Center for Materials Science
[PB81-245316] N82-16391
Analysis of strain distribution for fiber reinforced composites by Moire method
[NAL-TR-681] N82-16420
Technology development for phosphoric acid fuel cell powerplant, phase 2
[NASA-CR-165426] N82-16482
Evaluation of three partially volatile neutron shields for high-performance shipping casks
[DE82-000245] N82-16831

MEDICAL SCIENCE
Permuted Medical Subject Headings, 1982
[PB81-227464] N82-16930
Medical Subject Headings: Tree structures, 1982
[PB81-227472] N82-16931
Medical subject headings: Annotated alphabetic list, 1982
[PB81-227480] N82-16932

MELTING
Carbon vapor pressure in the range 3450 to 4500 K and evidence for melting at approximately 3800 K
[AD-A106134] N82-16196
Materials and design experience in a slurry-fed electric glass melter
[DE82-000957] N82-16250
Development of in-can melting process and equipment, 1979 and 1980
[DE82-001050] N82-16834

MELTING POINTS
Calcium inorganic electrolyte battery development
[AD-A106199] N82-16497

MEMBRANE STRUCTURES
Biaxial and electrostatic tensioning effects on thin membrane materials N82-16166
Bootlace catenary concept for antenna shape control N82-16167
Surface contour of a biaxially strained, doubly curved antenna reflective mesh N82-17063

MEMBRANES
Condition of meningeal nervous system during repeated exposure to transverse accelerations N82-16730

MERCURY CADMIUM TELLURIDES
Advanced methods for preparation and characterization of infrared detector materials — mercury cadmium telluride alloys
[NASA-CR-161949] N82-16848

MERCURY COMPOUNDS
Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions
[AD-A107716] N82-16198

MESH
Surface contour of a biaxially strained, doubly curved antenna reflective mesh N82-17063

MESOMETEOROLOGY
Mesoscale Aspects of Convective Storms
[PB81-247249] N82-16679

MESOSCALE PHENOMENA
Effects of diabatic heating on the ageostrophic circulation of an upper tropospheric jet streak
[NASA-CR-3497] N82-16658
Severe storms and local weather research N82-16663
Mesoscale Aspects of Convective Storms
[PB81-247249] N82-16679

METABOLIC WASTES
An application of decision analysis to technology assessment: An assessment of decentralized waste treatment methods
[PB82-109018] N82-16605

METAL AIR BATTERIES
Temperature and concentration transients in the aluminum-air battery — application to electric vehicles
[DE81-030338] N82-16512

METAL BONDING
Ion-beam-enhanced adhesion in the electronic stopping region
[NASA-CR-163467] N82-16814

METAL COATINGS
Copper-coated laser-fusion targets using molecular-beam levitation
[DE82-000644] N82-16841

METAL FINISHING
Assessment of emerging technologies for metal finishing pollution control: Three case studies
[PB81-244485] N82-16571

METAL IONS
Optically pumped polarized ion sources
[DE81-026306] N82-16796
Molecular dynamics calculations for sodium using pseudopotential theory
[AD-A106014] N82-16821
Reactions of metal ions and their clusters in the gas phase using laser ionization: Ion cyclotron resonance spectroscopy
[DE81-029015] N82-16915

METAL MATRIX COMPOSITES
Characterization of microstructures
[AD-A106351] N82-16217

METAL OXIDE SEMICONDUCTORS
Characterization of power MESFETs at 21 GHz
[AD-A106673] N82-16349

METAL VAPOR LASERS
Stability of optical coatings in hostile excimer laser environments
[AD-A106756] N82-16397

METALLOGRAPHY
Characterization of microstructures
[AD-A106351] N82-16217

METALS
Heavy metal sources and flows in a municipal sewage system: Literature survey and field investigation of the Kokomo, Indiana sewage system
[PB82-108366] N82-16604
Transient magnetic-field calculations with TRIDIF
[DE81-030843] N82-16785

METEORITES
The stochastic evolution of asteroidal regoliths and the origin of brecciated and gas-rich meteorites N82-17011

METEORITIC COMPOSITION
Isotopic anomalies and the early history of the solar system N82-16976

METEOROLOGICAL CHARTS
Frequency and motion of Atlantic tropical cyclones
[PB81-247256] N82-16682

METEOROLOGICAL PARAMETERS
NASA/MSFC FY-81 Atmospheric Processes Research Review
[NASA-CP-2204] N82-16660
Global weather research N82-16662
Climatic conditions at Air Force bases in Australia
[AD-A106275] N82-16664
Development of a large scale cloud system, 23-27 March 1978
[AD-A106417] N82-16665

METEOROLOGICAL SATELLITES
A climate index derived from satellite measured spectral infrared radiation
[AD-A106733] N82-16648
Satellite cloud analysis over the GATE area on 4 August 1974
[PB82-107582] N82-16678

METEOROLOGY
Study of the nocturnal drainage flow over a sloping plateau in North-Central New Mexico
[DE81-028744] N82-16459

METHANE
Concepts of fundamental processes related to gasification of coal
[DE82-000763] N82-16282
Cryogenic fluids density reference system: Provisional accuracy statement (1980)
[PB81-244865] N82-16388
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] N82-16462

METHODOLOGY
Cryogenic fluids density reference system: Provisional accuracy statement (1980)
[PB81-244865] N82-16388

METHYL ALCOHOLS
Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol
[PB81-242562] N82-16286

Fuel economy and exhaust emissions of a methanol-fuel Chevette
[PB82-101783] N82-16595

METHYL COMPOUNDS
Flame inhibition by methyl bromide
[DE81-030995] N82-16204

METHYLENE
Mechanical properties of adhesively bonded aluminum structures protected with hydrated inhibitors
[AD-A106222] N82-16241

METROLOGY
Technical activities 1980 center for absolute physical quantities
[PB81-248478] N82-16393

MICE
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

MICROBIOLOGY
Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103870] N82-16591
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711

MICROCOMPUTERS
Feasibility of interfacing a microcomputer with a multichannel analyzer to perform gamma ray spectroscopy
[AD-A106176] N82-16194
The design, development, demonstration, and transfer of advanced command and control (C2) computer-based systems
[AD-A106767] N82-16319
NBS phase angle calibration standard
[PB81-244899] N82-16390
Multiple microcomputer control algorithm feasibility breadboard
[AD-A107940] N82-16753
Use of embedded microcomputers in system debugging and maintenance
[DE81-029859] N82-16755
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043
Development of photomultiplier electronics and computer interfacing software for a high speed photoelectric photometer-Stoke's meter N82-17049

MICROCRACKS
On relationship between microfissuring and microstructure in the HAZ of Inconel 718
N82-17078

MICROELECTRONICS
Research in electronics: JSEP
[AD-A107624] N82-16354

MICROMETEOROLOGY
Nocturnal drainage flow over complex terrain using a generalized shallow-fluid approximation
[DE81-028693] N82-16460
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672

MICROORGANISMS
Density levels of pathogenic organisms in municipal wastewater sludge, a literature review
[PB82-102286] N82-16619
Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702

MICROPHONES
The effects of microphones and facemasks on LPC vocoder performance
[AD-A107906] N82-16744

MICROPROCESSORS
Advanced recorder design and development
[PB81-244105] N82-16385
Microprocessor digital fault
[AD-A106707] N82-16752
Use of a microprocessor to implement an ADCCP protocol with reject and selective reject (Federal standard 1003)
[AD-A107769] N82-16754

MICROPROGRAMMING
Implementation of the recommendations made on the technical report titled analysis of advanced simulator for pilot training
[AD-A106779] N82-16094

MICROSEISMS
Tape recording and triggering systems
[PB81-243248] N82-16382

MICROSTRUCTURE
Characterization of microstructures
[AD-A106351] N82-16217
Swelling and microstructure of HFIR irradiated austenitic stainless steels
[DE82-000158] N82-16219
Tensile properties and mirostructure of helium-injected and reactor-irradiated V-20 Ti
[DE81-032005] N82-16220
Void swelling in the molybdenum alloy TZM irradiated to high fluences
[DE81-029802] N82-16223
Effect of microstructure on the mechanical properties of a commercial 12Cr-1Mo steel (HT-9)
[DE82-000082] N82-16225
Metal-semiconductor reaction phenomena and microstructural investigations of laser-induced regrowth of silicon on insulators
[AD-A106357] N82-16904
The effect of solute-vacancy pairs on the physical properties of Si doped GaAs and other compound semiconductor systems
[AD-A107598] N82-16910
On relationship between microfissuring and microstructure in the HAZ of Inconel 718
N82-17078

MICROWAVE COUPLING
Experiments on the interaction of highpower microwaves with air
[AD-A106390] N82-16862

MICROWAVE IMAGERY
Mission definition for a large-aperture microwave radiometer spacecraft N82-16155

MICROWAVE LANDING SYSTEMS
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 3: A comparison of waypoint guidance algorithms for RNAV/MLS transition
[NASA-CR-3512] N82-16060

MICROWAVE OSCILLATORS
Investigation of digitally controlled oscillator operability problems N82-16135

MICROWAVE RADIOMETERS
The telecommunications and data acquisition report
[NASA-CR-165111] N82-16101
Proper frequencies of a down-looking water-vapor radiometer over sea surface N82-16103
The microwave radiometer spacecraft: A design study
[NASA-RP-1079] N82-16153
The microwave radiometer spacecraft. A design study: Executive summary N82-16154
High-resolution passive microwave imaging of the surface of the Earth N82-16156
Radiometer design concepts for large aperture microwave radiometer spacecraft N82-16157
Evolution and design characteristics of the microwave radiometer spacecraft N82-16158
Systems design and analysis of the microwave radiometer spacecraft N82-16159
Electromagnetic design of a microwave radiometer antenna system N82-16162
Effects of random distortions on the surface accuracy of a large antenna N82-16163

MICROWAVE SCATTERING
Coherent scatter of microwaves from moderately rough surfaces
[AD-A106133] N82-16331

MICROWAVE SWITCHING
Microwave switching power divider --- antenna feeds
[NASA-CASE-GSC-12420-1] N82-16340

MICROWAVE TRANSMISSION
An FM/CW method for the measurements of time delays of large Cassegrain antennas N82-16110
Experiments on the interaction of highpower microwaves with air
[AD-A106390] N82-16862

MILITARY AIR FACILITIES
Climatic conditions at Air Force bases in Australia
[AD-A106275] N82-16664

MILITARY AIRCRAFT
Test and evaluation of improved aircrew restraint systems
[AD-A107576] N82-16056

MILKY WAY GALAXY
The hydrostatic equilibrium of interstellar gas and magnetic fields in the 6kpc region of the galaxy
N82-16973

MILLIMETER WAVES
EHF test-bed subharmonic mixer
[AD-A106156] N82-16351
WR 10 millimeter wave microcalorimeter
[PB81-246639] N82-16392

MINE DETECTORS
Antenna considerations and signal processing techniques for the identification of buried non-metallic objects
[AD-A107752] N82-16332

MINERAL DEPOSITS
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] N82-16462

MINERAL EXPLORATION
Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024] N82-16442
Brazilian remote sensing activities, current and prospective needs
[E82-10026] N82-16444
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] N82-16462
The 1977 census of mineral industries. South Atlantic division
[PB81-243099] N82-16934

MINERALS
The 1977 census of mineral industries. West North Central division
[PB81-243081] N82-16933

MINES (EXCAVATIONS)
Tape recording and triggering systems
[PB81-243248] N82-16382
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447
Development of a through-the-earth monitor system
[PB81-237646] N82-16470

MINIATURE ELECTRONIC EQUIPMENT
Manufacturing Methods and Technology (MM&T) specification for miniature cathode ray tube
[AD-A106433] N82-16345
Manufacturing Methods and Technology (MM&T) specifications for miniature cathode ray tube
[AD-A106432] N82-16346

MINICOMPUTERS
Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096
A versatile data acquisition system for a low speed wind tunnel
[AD-A106269] N82-16097
A high level language for data acquisition and process control
[INPE-2173-RPE/389] N82-16758

MINING
Discrimation of unique biological communities in the Mississippi lignite belt N82-16453
Underground coal mining section data
[NASA-CR-168393] N82-16454
The 1977 census of mineral industries. West North Central division
[PB81-243081] N82-16933
The 1977 census of mineral industries. South Atlantic division
[PB81-243099] N82-16934

MINNESOTA
Hydrogeologic setting of the Glacial Lake Agassiz Peatlands, Northern Minnesota
[PB81-249326] N82-16473

Sea Grant program, University of Minnesota
[PB81-243966] N82-16687

MINUTEMAN ICBM
Propellant surveillance report LGM-30 A, B, F and G stage I TP-H1043 aft closure propellant --- for Minuteman motors
[AD-A107877] N82-16257

MIOSIS
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

MIRROR FUSION
Neutral-beam systems for magnetic-fusion reactors
[DE81-027940] N82-16876
Ambipolar potential formation and control in bumpy tori and mirrors: Proceedings of workshop
[CONF-810511] N82-16877
Experimental measurement of plasma space potential N82-16879
Ambipolar potential formation in TMX N82-16880
Space potential measurements in the central cell of TMX N82-16881
Potential measurements in Phaedrus - Wisconsin's Tandem Mirror N82-16882
Central cell confinement in MFTF-B N82-16893
Instabilities in a small axisymmetric mirror N82-16894
Effcts due to the large ambipolar potential in TMX N82-16895
Formation and control of plasma potentials in TMX upgrade N82-16896
Progress in the tandem mirror program
[DE81-030303] N82-16902

MIRRORS
Fabrication of metal mirrors for far-infrared wavelengths
[AD-A107898] N82-16858
Fabrication of X-ray telescopes for sounding rocket flights
[NASA-CR-165112] N82-17002

MISSISSIPPI
Discrimation of unique biological communities in the Mississippi lignite belt N82-16453

MIXTURES
Ester liquid crystal mixtures for dynamic scattering at elevated temperatures
[AD-A106790] N82-16906

MODAL RESPONSE
Natural modes and real modal variables for flexible spacecraft
[CRC-1348] N82-16146

MODEMS
Simulation of a digital modem for communicating at 4,800 BITS/S
[INPE-2178-RPE/391] N82-16749

MODULUS OF ELASTICITY
A summary of modulus of elasticity and knot size surveys for laminating grades of lumber
[AD-A106561] N82-16422
Experiments on continuous composite beams
[PB81-247116] N82-16434

MOIRE EFFECTS
Analysis of strain distribution for fiber reinforced composites by Moire method
[NAL-TR-681] N82-16420

MOISTURE CONTENT
Evaluation of super-water reducers for highway applications
[PB82-101106] N82-16302
Relationships , between soil moisture-holding properties and soil texture, organic matter content, and bulk density
[NASA-TM-76674] N82-16451
Effects of ammonia contamination by water on OTEC power system performance
[DE82-001832] N82-16535
The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data
[AD-A106419] N82-16644
Storage stability and improvement of intermediate moisture foods, phase 5
[NASA-CR-167503] N82-16742
Documentation for program SIMICE
[AD-A106777] N82-16761

MOLECULAR BEAM EPITAXY
High resistivity molecular beam epitaxial AlGaAs for device applications
[AD-A107597] N82-16819

MOLECULAR BEAMS
Copper-coated laser-fusion targets using molecular-beam levitation
[DE82-000644] N82-16841

MOLECULAR CHAINS
Lattice dynamics of graphite intercalation compounds: Modelled by the phonon dispersion of linear chains
[PB82-000061] N82-16914

MOLECULAR CLOUDS
The dynamics of molecular gas in the Galactic center N82-16970

MOLECULAR COLLISIONS
Collisions of fast multicharged ions in gas targets: Charge transfer and ionization
[DE81-030541] N82-16823

MOLECULAR ELECTRONICS
Research in electronics: JSEP
[AD-A107624] N82-16354

MOLECULAR EXCITATION
Rate enhancement resulting from reagent vibrational excitation as estimated by the BEBO method
[AD-A106431] N82-16400

MOLECULAR GASES
The dynamics of molecular gas in the Galactic center N82-16970

MOLECULAR INTERACTIONS
Study of shock-induced signals and coherent effects in solids by molecular dynamics
[DE81-030412] N82-16917

MOLECULAR OSCILLATIONS
Vibrational relaxation of DF (v=1 and 3) in H2, D2, N2, and HF at 200 K
[AD-A106142] N82-16401

MOLECULAR STRUCTURE
Molecular dynamics calculations for sodium using pseudopotential theory
[AD-A108014] N82-16821
Macromolecular structural changes in bituminous coals during extraction and solubilization
[DE82-000687] N82-16830

MOLECULAR WEIGHT
Macromolecular structural changes in bituminous coals during extraction and solubilization
[DE82-000687] N82-16830

MOLTEN SALT ELECTROLYTES
Electrorefining of aluminum
[PB81-243693] N82-16230

MOLTEN SALTS
Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236

MOLYBDENUM ALLOYS
Void swelling in the molybdenum alloy TZM irradiated to high fluences
[DE81-029802] N82-16223
Fracture toughness testing on ferritic alloys using the electropotential technique
[DE81-029776] N82-16224
Investigation of by-product molybdenum recovery
[PB81-246514] N82-16232

MOLYBDENUM OXIDES
Catalytic hydrogenation of coal-derived liquids
[DE82-003250] N82-16212

MOMENT DISTRIBUTION
Experiments on continuous composite beams
[PB81-247116] N82-16434

MOMENTUM TRANSFER
Digital compensation techniques for the effects of time lag in closed-loop simulation using the 6 DOF motion system N82-17069

MONOCHROMATORS
Theory of a modified Wadsworth monochromator matched to a low energy storage ring source
[DE81-030034] N82-16379
Progress and prospects at the National Synchrotron Light Source (NSLS)
[DE81-030738] N82-16861

MONOMERS
Technology for improving the wear resistance of aggregates by materials impregnation
[PB81-246191] N82-16306

MONTE CARLO METHOD
Regional Monte Carlo solution of elliptic partial differential equations
[DE81-028772] N82-16793

MOORING
Study of ground handling characteristics of a maritime patrol airship
[NASA-CR-166253] N82-16090

MORPHOLOGY
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715
Condition of meningeal nervous system during repeated exposure to transverse accelerations N82-16730

MORTARS (MATERIAL)
Thin, applied surfacing for improving skid resistance of concrete pavements
[PB81-247744] N82-16307

MOTION SICKNESS
Acceleration measures and motion sickness incidence
[AD-A107996] N82-16734

MOTOR VEHICLES
Estimating mobile source pollutants in microscale exposure situations
[PB82-101114] N82-16597
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] N82-16959
The effects of the Moleculetor Fuel Energizer on emissions and fuel economy
[PB81-244998] N82-16960
Emission and fuel economy of FUEL-MAX, a retrofit device
[PB81-244162] N82-16961
Carbon monoxide and non-FTP (Federal Test Procedures) ambient temperature
[PB81-243180] N82-16962
Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers
[PB81-238461] N82-16963
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] N82-16966

MOUNTAINS
Study of the nocturnal drainage flow over a sloping plateau in North-Central New Mexico
[DE81-028744] N82-16459
On-site wastewater treatment problems and alternatives for western North Carolina
[PB81-240541] N82-16572
Why windspeeds increase on high mountain slopes at night
[PB81-243909] N82-16680

MULTIPATH TRANSMISSION
Skywave communication techniques. Decision feedback equilization for serially modulated spread-spectrum signals in the HF band yields improved reliability
[AD-A106380] N82-16328
Performance of telecommunications systems in the spectral-use environment. 6: Analytical results for land-mobile scenarios in class B interference, with fading and multipath
[PB81-249344] N82-16337

MULTIPLEXING
Multi-channel temperature measurement amplification system --- solar heating systems
[NASA-CASE-MFS-23775-1] N82-16474

MULTIPLICATION
Products of multiple Fourier series with application to the multiblade transformation
[NASA-TM-81340] N82-16746

MULTIPROCESSING (COMPUTERS)
New S-band transmitter automation software N82-16126

MULTIVARIATE STATISTICAL ANALYSIS
Density estimation and projection pursuit methods
[AD-A107816] N82-16779
The design of multiactivity multifacility systems
[AD-A107670] N82-16791

MUSCLES
Operator's manual for variable weight, variable CG helmet simulator
[AD-A108093] N82-16078
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714

MUTAGENS
Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702

MUTATIONS
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700
Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702
MYOCARDIUM
Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724

N

N-TYPE SEMICONDUCTORS
Deliberate modification of the behavior of n-type cadium telluride/electrolyte interfaces by surface etching: Removal of fermi level pinning
[AD-A106382] N82-16907
NACELLES
Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850
NASA PROGRAMS
Principles of project management
[NASA-TM-84089] N82-16921
Research and technology annual report, 1981
[NASA-TM-81333] N82-17031
NATIONAL OCEANIC SATELLITE SYSTEM
NOSS altimeter algorithm specifications
[NASA-RP-1083] N82-16683
NATURAL GAS
LLNL gas-stimulation program
[DE82-000802] N82-16269
Systems analysis of H2/natural gas supplementation and separation
[DE81-030031] N82-16270
Preliminary resource assessment of coalbed methane in the United States
[DE82-001356] N82-16462
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] N82-16549
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] N82-16614
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] N82-16959
NATURAL LANGUAGE (COMPUTERS)
Anaphora for limited domain systems
[AD-A106559] N82-16762
NAVIER-STOKES EQUATION
A modified Dodge algorithm for the parabolized Navier-Stokes equation and compressible duct flows
[NASA-CR-165080] N82-16363
Basic lubrication equations
[NASA-TM-81693] N82-16413
NAVIGATION AIDS
Simulator evaluation of electronic radio aids to navigation displays. The RA-2 experiment
[AD-A106672] N82-16062
Analytical positioning of aids to navigation
[AD-A107811] N82-16065
System for providing an integrated display of instantaneous information relative to aircraft attitude, heading, altitude, and horizontal situation
[NASA-CASE-FRC-11005-1] N82-16075
NAVSTAR SATELLITES
Time correction of data from the NAVSTAR Geodetic Receiver System
[AD-A107643] N82-16066
NEBRASKA
Analysis of stream-aquifer system interrelationships in the Big Blue and Little Blue River Basins in Gage and Jefferson Counties, Nebraska
[PB81-245870] N82-16466
NETHERLANDS
Wind energy planning considerations
[PM-80-4] N82-16496
NETWORK ANALYSIS
Long-range prediction of network traffic --- in computer systems
[DE81-030241] N82-16770
NETWORK SYNTHESIS
Random network generation
[AD-A106360] N82-16796
NEURONS
Electrode unit for testing human H reflex
N82-16728
NEUTRAL BEAMS
High-beta studies with beam-heated, non-circular plasmas in ISX-B
[DE81-032003] N82-16874
Design of first walls and beam dumps for tandem mirror experiment upgrade
[DE81-030888] N82-16875
Neutral-beam systems for magnetic-fusion reactors
[DE81-027940] N82-16876
Progress in the tandem mirror program
[DE81-030303] N82-16902
NEUTRAL PARTICLES
Neutral density measurements in Doublet 3
[DE82-000497] N82-16829
NEUTRON IRRADIATION
Void swelling in the molybdenum alloy TZM irradiated to high fluences
[DE81-029802] N82-16223
NEUTRON SCATTERING
Observing solitons in one dimensional magnetic systems
[DE81-029919] N82-16828
NEUTRON SPECTRA
Calculated neutron and gamma-ray energy spectra from 14-MeV neutrons streaming through an iron duct: Comparison with experiment --- blanke-shield assemblies of fusion reactors
[DE81-030626] N82-16824
NEUTRON STARS
Thermonuclear model for gamma-ray bursts
[DE81-030835] N82-17003
NEUTRONS
Improvements in explosive charges
[DE81-028977] N82-16276
NEW ENGLAND (US)
Solar consumer assurance: An assessment of mechanisms in the northeast
[DE81-030052] N82-16538
NEWTONIAN FLUIDS
Basic lubrication equations
[NASA-TM-81693] N82-16413
NICKEL ALLOYS
Resistance of (Fe,Ni)sub3V long-range-ordered alloys to radiation damage
[DE81-032006] N82-16221
Control of fractionation-area corrosion at SRC pilot plants
[DE82-001949] N82-16280
The determination of the stacking fault energy in copper-nickel alloys N82-17054
NICKEL OXIDES
Catalytic hydrogenation of coal-derived liquids
[DE82-003250] N82-16212
NIGHT
Nocturnal drainage flow over complex terrain using a generalized shallow-fluid approximation
[DE81-028693] N82-16460
Impact of topographic circulations on the transport and dispersion of air pollutants
[PB82-102435] N82-16584
NITRIC ACID
Laser kinetic spectroscopic studies (a) the unimolecular reactions of nitroalkanes and, (b) elementary reactions important in combustion
[AD-A107820] N82-16402
NITRIC OXIDE
The two-photon absorptivity of rotational transitions in the A2 Sigma hyperon + (v prime = O) - X-2 pion (v prime prime = O) gamma band of nitric oxide
[NASA-TM-81335] N82-16815
NITRILES
Vibrational spectroscopy of the electrode-electrolyte interface. Use of Fourier transform infrared Spectroscopy
[AD-A106231] N82-16192
Reductions in aprotic media. 1: Cathodic reduction limits in acetonitrile at a platinum electrode
[AD-A106815] N82-16195
NOISE
High frequency scattering by a sphere with complex surface impedance N82-16799
NOISE (SOUND)
Noise generation by gas jets in a turbulent wake
[AD-A106223] N82-16811
NOISE MEASUREMENT
Synthesizer stability evaluation N82-16134
Noise of the SR-3 propeller model at 2 deg and 4 deg angle of attack
[NASA-TM-82738] N82-16808
NOISE POLLUTION
Simplified noise strategy manual
[PB81-243016] N82-16624
Community noise attitudinal survey guidelines
[PB81-244295] N82-16626
Foreign noise research in surface transportation, 1978-1981
[PB82-100306] N82-16954
NOISE PREDICTION (AIRCRAFT)
Turboprop cargo aircraft systems study
[NASA-CR-165813] N82-16070
A shock wave approach to the noise of supersonic propellers
[NASA-TM-82752] N82-16809
NOISE REDUCTION
NASA research activities in aeropropulsion
[NASA-TM-82788] N82-16084
Simplified noise strategy manual
[PB81-243016] N82-16624
Community noise attitudinal survey guidelines
[PB81-244295] N82-16626
The effects of microphones and facemasks on LPC vocoder performance
[AD-A107908] N82-16744
Multiple pure tone elimination strut assembly --- air breathing engines
[NASA-CASE-FRC-11062-1] N82-16800
NOISE SPECTRA
Comparison of acoustic data from a 102 mm conic nozzle as measured in the RAE 24-foot wind tunnel and the NASA Ames 40- by 80-foot wind tunnel
[NASA-TM-81343] N82-16083
Community noise attitudinal survey guidelines
[PB81-244295] N82-16626
Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801
NOISE TEMPERATURE
X-band narrow-beam radiometer for DSS 13
N82-15113
NONDESTRUCTIVE TESTS
NDI of composite materials
[AD-A106278] N82-16186
Mechanistic interpretation of nondestructive pavement testing deflections
[PB82-107095] N82-16303
NONLINEAR PROGRAMMING
Non-linear regression models: A study of the principal estimation methods
[INPE-2183-RPE/394] N82-16774
NONLINEAR SYSTEMS
A model for solving multiperiod multireservoir water resources problems with stochastic inflows
[AD-A106769] N82-16456
Real-time implementation of nonlinear processing functions --- liquid crystal light values
[AD-A106773] N82-16856
NONPARAMETRIC STATISTICS
Texture classification with change point statistics
[AD-A106814] N82-16789
Quantile estimation in dependent sequences
[AD-A106132] N82-16790
NONSTABILIZED OSCILLATION
An experimental study of forced asymmetric oscillations in a rotating liquid-filled cylinder
[AD-A107948] N82-16372
NORADRENALINE
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
NOREPINEPHRINE
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems N82-16725
NORTH AMERICA
Tide tables 1982 high and low water predictions. East Coast of North and South America including Greenland
[PB81-241622] N82-16698

NORTH CAROLINA

On-site wastewater treatment problems and alternatives for western North Carolina
[PB81-240541] N82-16572

NOSES (FOREBODIES)

A method of estimating upwash angle at noseboom-mounted vanes
[AD-A106160] N82-16051

NOTCH SENSITIVITY

Evaluation of the fracture behavior of concrete with the J-integral
[PB81-235855] N82-16433

NUCLEAR CHEMISTRY

Research in nuclear chemistry
[DE81-030542] N82-16847

NUCLEAR ELECTRIC POWER GENERATION

Risk of producing energy, and conserving it
[DE81-030807] N82-16507

NUCLEAR EXPLOSIONS

Improvements in explosive charges
[DE81-028977] N82-16276

Multipole expansion for transient electric and magnetic fields in an internally excited spherical cavity contaning dampers of finite thickness with distributed electrical properties
[AD-A106384] N82-16329

NUCLEAR FISSION

Improvements in explosive charges
[DE81-028977] N82-16276

NUCLEAR FUSION

Search for promethium-like gold lines and other transitions of interest to fusion research
[DE81-029917] N82-16672

Evolution and nucelosynthesis of massive Pop 111 stars N82-16997

Nuclear activity in SO, SBO - galaxy nuclei N82-16999

NUCLEAR INTERACTIONS

Oasis in the desert: Weakly broken parity in grand unified theories
[DE81-031963] N82-16826

NUCLEAR POWER PLANTS

Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] N82-16846

NUCLEAR REACTIONS

Kaon-induced nuclear reactions
[DE81-030552] N82-16839

NUCLEAR REACTORS

Spent fuel and radioactive waste inventories and projections as of December 31, 1980
[DE82-000307] N82-16836

NUCLEAR SCATTERING

Oasis in the desert: Weakly broken parity in grand unified theories
[DE81-031963] N82-16826

NUCLEI

Non-stationary viscous gaseous disks in nuclei of dense stellar systems N82-16994

NUCLEI (NUCLEAR PHYSICS)

Neutron capture gamma-ray spectroscopic measurements in the actinide region
[DE81-030316] N82-16832

NUMERICAL ANALYSIS

Energetics and collision dynamics of electronic transition lasers
[AD-A107591] N82-16404

A determination of the current density in electron beams N82-17045

NUMERICAL CONTROL

Multiple microcomputer control algorithm feasibility breadboard
[AD-A107940] N82-16753

A technical briefing on the Initial Graphics Exchange Specification (IGES)
[PB81-238719] N82-16768

Research in multirate estimation and control optimal sample rate selection --- application to aircraft control
[AD-A108043] N82-16792

NUMERICAL FLOW VISUALIZATION

The analysis and design of two-element airfoil configuration in transonic flow
[AD-A107547] N82-16052

O

O RING SEALS

Effect of seals on rotor systems
[NASA-TM-82786] N82-16411

OCEAN BOTTOM

Near-bottom velocities in waves with a current
[PB81-236685] N82-16689

Measurements and analysis of acoustic bottom interaction in the Northwestern Mexican Basin
[AD-A107551] N82-16813

OCEAN CURRENTS

Current measurements off Keahole Point, Hawaii: Application to OTEC-1
[DE81-030539] N82-16686

Cook inlet circulatory survey: 1973-75
[PB81-245235] N82-16688

Proceedings of the Gulf Circulation Studies Workshop
[PB81-248254] N82-16690

An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] N82-16697

OCEAN SURFACE

Water turbidity measurements in Gulf Saint Vincent
[AD-A106274] N82-16684

An introduction to sea state forecasting
[PB81-242687] N82-16699

OCEAN THERMAL ENERGY CONVERSION

Effects of ammonia contamination by water on OTEC power system performance
[DE82-001832] N82-16535

Current measurements off Keahole Point, Hawaii: Application to OTEC-1
[DE81-030539] N82-16686

OCEANOGRAPHIC PARAMETERS

Mission definition for a large-aperture microwave radiometer spacecraft N82-16155

OCEANOGRAPHY

Nothern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography
[PB81-248650] N82-16692

Northern Gulf of Mexico topographic features study. Volume 5: Florida Middle Ground
[PB81-248692] N82-16696

OHIO

The source and transport of arsenic in northeastern Ohio groundwaters
[PB81-240525] N82-16471

OIL EXPLORATION

Enhanced oil recovery by CO2 foam flooding
[DE82-000949] N82-16464

Energy industries abroad
[DE82-001896] N82-16510

OIL FIELDS

Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000896] N82-16465

OIL RECOVERY

Carbon dioxide power plant for total emission control and enhanced oil recovery
[DE81-030734] N82-16458

Enhanced oil recovery by CO2 foam flooding
[DE82-000949] N82-16464

Small business innovation research: Oil recovery enhancement by acoustic means
[PB81-243842] N82-16472

Cogeneration potential: Enhanced oil recovery
[DE81-904202] N82-16539

OIL SLICKS

Oil slick dispersal mechanics
[PB82-105560] N82-16610

OILS

Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] N82-16264

Reversibility of coal liquefaction
[DE81-027804] N82-16277

ON-LINE SYSTEMS

Technology transfer and development of computer-aided engineering with the university community
[DE81-022408] N82-16940

Enhancing technology transfer to state and local government utilizing on-line information retrieval services and on-line communications systems
[PB81-246241] N82-16949

ONBOARD DATA PROCESSING

Automation of on-board flightpath management
[NASA-TM-84212] N82-16088

ONBOARD EQUIPMENT

Proper frequencies of a down-looking water-vapor radiometer over sea surface N82-16103

OPERATING COSTS

Life-cycle cost analysis of projects using a polynomial cash flow model for nonuniform maintenance and operations costs N82-16123

Operation and maintenance costs for municipal wastewater facilities
[PB81-249971] N82-16628

OPERATING SYSTEMS (COMPUTERS)

Research through simulation --- simulators and research applications at Langley
[NASA-FACTS-125] N82-16092

GCF-NOCC reconfiguration N82-16131

OPERATING TEMPERATURE

Temperature and concentration transients in the aluminum-air battery --- application to electric vehicles
[DE81-030338] N82-16512

OPERATIONAL PROBLEMS

LANDSAT-2 and LANDSAT-3 flight evaluation report, 23 January to 23 July 1980
[E82-10022] N82-16440

OPERATIONS RESEARCH

CNPq/INPE: LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] N82-16441

Formal techniques for analysis and design of purposive organizations
[AD-A106775] N82-16922

OPERATORS (PERSONNEL)

Operator's manual for variable weight, variable CG helmet simulator
[AD-A108093] N82-16078

OPHTHALMOLOGY

Method of recording rotatory eye reflexes N82-16727

OPTICAL COMMUNICATION

An M-ary coherent optical receiver for the free-space channel N82-16111

Phase-locking of semiconductor injection lasers N82-16116

The 2.5-bit/detected photon demonstration program: Description, analysis and phase 1 results N82-16117

Fiber Optic Translator Unit (FOTU), volume 1
[AD-A106131] N82-16853

Reduction of anisoplanatic errors
[AD-A106689] N82-16855

OPTICAL DATA PROCESSING

Time integrating optical signal processing
[AD-A106778] N82-16851

Fiber Optic Translator Unit (FOTU), volume 1
[AD-A106131] N82-16853

Real-time implementation of nonlinear processing functions --- liquid crystal light values
[AD-A106773] N82-16856

OPTICAL MEASUREMENT

Development of a surface panel measurement system
[NASA-CR-163469] N82-16315

Evaluation of retro-reflective measurement devices
[PB81-243594] N82-16951

OPTICAL MEASURING INSTRUMENTS

Evaluation of retro-reflective measurement devices
[PB81-243602] N82-16952

The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043

Tolerance analysis of optical telescopes using coherent addition of wavefront errors N82-17048

OPTICAL POLARIZATION

Dual polarization fiber optic gyro
[AD-A106731] N82-16377

OPTICAL PROPERTIES

Laser Induced Damage in Optical Materials
[AD-A106548] N82-16399

OPTICAL PUMPING

Stability of optical coatings in hostile excimer laser environments
[AD-A106756] N82-16397

Optically pumped polarized ion sources
[DE81-026306] N82-16798

OPTICAL RADAR

A study of the geographic coverage properties of a satellite borne Doppler lidar wind velocity measuring system N82-17058

OPTICAL THICKNESS

Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

OPTICAL TRACKING

Passive trilateration positioning procedure error analysis
[AD-A106690] N82-16061

OPTICAL TRANSFER FUNCTION

Real-time implementation of nonlinear processing functions --- liquid crystal light values
[AD-A106773] N82-16856

OPTICAL WAVEGUIDES

Test and evaluation of UV fiber optics for application for aircraft fire detector systems
[AD-A106129] N82-16850

OPTICS

A study of optically contacted quartz at cryogenic temperatures N82-17060

OPTIMIZATION

ARC control experiments using a high performance arc heater
[AD-A106140] N82-16098

Optimum equipment maintenance/replacement policy. Part 1: Dynamic programming approach N82-16128

Modeling solar-energy systems for economic optimization
[DE81-030030] N82-16518

Nonpolynomial and inverse interpolation for line search: Synthesis and convergence rates
[AD-A106680] N82-16776

ORBITAL ASSEMBLY

The microwave radiometer spacecraft. A design study: Executive summary N82-16154

Preliminary design of tetrahedral truss reflector structure N82-16160

Attitude control of the space construction base: A moduler approach N82-17057

ORBITAL MECHANICS

Subroutines for celestial mechanics and orbit generation
[INPE-2180-RPE/392] N82-17006

ORGANIC COMPOUNDS

Relationships between soil moisture-holding properties and soil texture, organic matter content, and bulk density
[NASA-TM-76674] N82-16451

ORGANIC LIQUIDS

Solidification phenomena of binary organic mixtures N82-17047

ORGANIC MATERIALS

Water repellent soils: A state-of-the-art
[PB81-248270] N82-16305

ORGANIC PHOSPHORUS COMPOUNDS

Applications of DHDECMP extraction chromatography to nuclear analytical chemistry
[DE81-030134] N82-16202

ORGANIZATIONS

Formal techniques for analysis and design of purposive organizations
[AD-A106775] N82-16922

ORGANOMETALLIC POLYMERS

Metal-containing plasma-polymerized coatings for laser-fusion targets
[DE82-000346] N82-16251

ORTHOGONALITY

Generation of orthogonal boundary fitted coordinate systems
[AD-A107851] N82-16783

ORTHOSTATIC TOLERANCE

Question of redistribution of blood in orthostatic position N82-16705

OSCILLATING CYLINDERS

An experimental study of forced asymmetric oscillations in a rotating liquid-filled cylinder
[AD-A107946] N82-16372

OSCILLATIONS

Observations of large-scale motions of the Sun N82-17037

A prospectus for a theory of variable variability N82-17041

OSCILLATORS

The 403 MHz SAW oscillator
[AD-A107588] N82-16378

OVERPRESSURE

Far field overpressure from TNT explosions: A survey of available models
[AD-A107952] N82-16370

OXIDASE

Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723

OXIDATION

Oxidation of polycrystalline boron: The interpretation of AES and ELS results
[DE82-000087] N82-16201

OXIDATION RESISTANCE

Method of preventing oxidation of graphite fireproof material
[NASA-TM-76786] N82-16180

OXYGEN

MESA (Marine Ecosystem Analysis) New York Bight project: Winkler oxygen data, expanded water column characterization cruises (XWCC-2 to SWCC-24), NOAA ships Researcher and George B. Kelez, 1975 - 1979
[PB82-100975] N82-16575

Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720

A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

OXYGEN MASKS

The effects of microphones and facemasks on LPC vocoder performance
[AD-A107908] N82-16744

OZONE

Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A106386] N82-16640

A climatology of a newly defined tropopause using simultaneous ozone temperature profiles
[AD-A106399] N82-16671

Variation in plant response to ozone: A conceptual model of physiological events
[DE81-029692] N82-16701

P

P-N JUNCTIONS

Research on development of low-resistance p-n junctions in ZnSe
[AD-A108008] N82-16909

P-TYPE SEMICONDUCTORS

Research on development of low-resistance p-n junctions in ZnSe
[AD-A108008] N82-16909

PACIFIC OCEAN

An observational study of blocking
[AD-A106739] N82-16670

Quantitative data on the abundances and distribution of seamounts in the Pacific Ocean
[AD-A107853] N82-16685

PACKET SWITCHING

Voice flow control in integrated packet networks
[AD-A106722] N82-16330

PAINTS

Some applications of Fourier transform infrared spectroscopy in the examination of painting materials
[PB81-249575] N82-16256

Experimental pavement delineation treatments
[PB81-249161] N82-16292

Evaluation of retro-reflective measurement devices
[PB81-243594] N82-16951

Evaluation of retro-reflective measurement devices
[PB81-243602] N82-16952

PANELS

Nonlinear finite element analysis of sandwich composites
[AD-A106378] N82-16187

PAPER (MATERIAL)

Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] N82-16205

PARABOLIC DIFFERENTIAL EQUATIONS

A modified Dodge algorithm for the parabolized Navier-Stokes equation and compressible duct flows
[NASA-CR-165080] N82-16363

PARABOLIC REFLECTORS

Potential for using parabolic trough collectors to supplement power cycle boilers
[SAND-81-0572C] N82-16505

PARABOLOID MIRRORS

Fabrication of metal mirrors for far-infrared wavelengths
[AD-A107896] N82-16858

PARALLEL PROCESSING (COMPUTERS)

Merging on parallel models of computation
[AD-A106189] N82-16750

A classic example of PRODUCER/CONSUMER implemented in LANAC language
[INPE-2185-RPE/396] N82-16756

PARAMETER IDENTIFICATION

Turboprop cargo aircraft systems study
[NASA-CR-165813] N82-16070

Design of a 1.5-m, 32-GHz, clear aperture antenna N82-16114

Auxiliary subprograms for calculating the navigational parameters of artificial Earth satellites. FORTRAN IV
[NASA-TM-75684] N82-16140

Critical parameters for detonation propagation and initiation of solid explosives
[AD-A106485] N82-16365

Non-linear regression models: A study of the principal estimation methods
[INPE-2183-RPE/394] N82-16774

Parametric considerations for inductively driven plasma implosions
[AD-A106679] N82-16863

PARAMETERIZATION

Operational VLBI clock synchronization and platform parameter determination N82-16133

The design of multiactivity multifacility systems
[AD-A107670] N82-16791

PARASITES

Parasites in southern sludges and disinfection by standard sludge treatment
[PB82-102344] N82-16622

PARTICLE EMISSION

Performance characteristics of automotive engines in the United States, third series, 1978 Buick 196 CID (3.2L), 2V
[PB81-236630] N82-16417

Spray charging and trapping scrubber for fugitive particle emission control
[PB82-115304] N82-16596

Study to perform preliminary experiments to evaluate particle generation and characterization techniques for zero-gravity cloud physics experiments
[NASA-CR-3486] N82-16657

PARTICLE PRECIPITATION

Development of a particle collector for absolute measurements of particle form, particle size and particle concentration --- by precipitation on whiskers
[BMFT-FB-T-81-029] N82-16214

PARTICLE SIZE DISTRIBUTION

Acoustical concept for measuring particle size distributions
[PB81-235301] N82-16387

Models of weather environments adverse to electro-optical systems
[AD-A107637] N82-16859

A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

PARTICULATE SAMPLING

Development of a particle collector for absolute measurements of particle form, particle size and particle concentration --- by precipitation on whiskers
[BMFT-FB-T-81-029] N82-16214

Air pollutants in selected Salt Lake Basin communities, 1971 - 1975
[PB82-103664] N82-16588

Geothermal Effluent Sampling Workshop
[PB82-105628] N82-16611

A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

PASSENGERS

Los Angeles Downtown People Mover (DPM) operational analysis
[PB81-241416] N82-16964

PATHOGENESIS

Density levels of pathogenic organisms in municipal wastewater sludge, a literature review
[PB82-102286] N82-16619

PATTERN RECOGNITION

Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE [E82-10024] N82-16442

Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil [E82-10025] N82-16443

PAVEMENTS

Evaluation of flexible pavement crack sealing methods used in Utah [PB81-238469] N82-16290

Experimental pavement delineation treatments [PB81-249161] N82-16292

Laboratory pavement polishing device (wear machine) versus field friction test units and accumulative traffic (ADT). Phase 2. Correlation study [PB81-233256] N82-16293

Evaluation of maintenance/rehabilitation alternatives for continuously reinforced concrete pavement [PB82-105792] N82-16298

Investigation of the use of coal refuse-fly ash compositions as highway base course material [PB82-101940] N82-16301

Mechanistic interpretation of nondestructive pavement testing deflections [PB82-107095] N82-16303

Thin, applied surfacing for improving skid resistance of concrete pavements [PB81-247744] N82-16307

Bridge and pavement maintenance [PB81-247504] N82-16309

Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers [PB81-238461] N82-16963

PEAKS (LANDFORMS)

Why windspeeds increase on high mountain slopes at night [PB81-243909] N82-16680

PEAT

Environmental impacts associated with using peat for energy [DE81-032000] N82-16463

PELLETS

Fusion plasma control using TRAIL: A nondamageable limiter [DE81-030825] N82-16873

PENNSYLVANIA

Pennsylvania baseline [PB82-101742] N82-16617

PERCEPTION

An analysis of cognitive mapping skill [AD-A106145] N82-16740

Ability differences and cognitive mapping skill [AD-A106389] N82-16741

PERFORMANCE PREDICTION

A unified thermal and vertical trajectory model for the prediction of high altitude balloon performance [NASA-CR-156884] N82-16048

Comparison of energy-storage devices for use in future automobiles [DE81-026530] N82-16945

PERFORMANCE TESTS

Antenna azimuth bearing model experiment N82-16132

Evaluation tests of Abacus 6 kVA utility-interactive inverter [DE82-001352] N82-16358

Infrared equipment, general [AD-A106711] N82-16854

Emission and fuel economy of FUEL-MAX, a retrofit device [PB81-244162] N82-16961

PERIODIC VARIATIONS

Variations of the Solar Constant --- conference [NASA-CP-2191] N82-17014

The variability of the solar output N82-17018

Solar variability indications from Nimbus 7 satellite data N82-17020

Indirect methods for measuring variations of the solar constant N82-17021

PERIPHERAL NERVOUS SYSTEM

Condition of meningeal nervous system during repeated exposure to transverse accelerations N82-16730

PERMEABILITY

Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores [DE81-030336] N82-16852

Transient magnetic-field calculations with TRIDIF [DE81-030843] N82-16785

PERSONNEL DEVELOPMENT

Assessment of MSFC's supervisory training programs and courses --- marshall space flight center N82-17068

PERSONNEL MANAGEMENT

Underground coal mining section data [NASA-CR-168393] N82-16454

Formal techniques for analysis and design of purposive organizations [AD-A106775] N82-16922

PERTURBATION

The evolution of density perturbation in an open universe [REPT-670] N82-17005

Estimating short-term solar variations by a simple envelope matching technique N82-17028

Thermal perturbation of the Sun N82-17029

PESTICIDES

Chemicals Identified in Human Biological Media [DE81-030813] N82-16735

PHARMACOLOGY

Small unilamellar vesicles as reagents: A chemically defined quantitative assay for lectins [DE81-030365] N82-16208

PHASE CHANGE MATERIALS

Development of advanced building materials for the passive solar application [DE81-032009] N82-16288

Solidification phenomena of binary organic mixtures N82-17047

PHASE COHERENCE

Simulation of a digital modem for communicating at 4,800 BITS/S [INPE-2178-RPE/391] N82-16749

PHASE DEMODULATORS

Simulation of a digital modem for communicating at 4,800 BITS/S [INPE-2178-RPE/391] N82-16749

PHASE DIAGRAMS

Advanced methods for preparation and characterization of infrared detector materials --- mercury cadmium telluride alloys [NASA-CR-161949] N82-16848

PHASE LOCKED SYSTEMS

Phase-locking of semiconductor injection lasers N82-16116

A digital filter implementation of the deep space transponder phase lock loop integrator N82-16119

Improved carrier tracking performance with coupled phase-locked loops N82-16120

PHASE MODULATION

Sine wave ranging revisited N82-16124

Simulation of a digital modem for communicating at 4,800 BITS/S [INPE-2178-RPE/391] N82-16749

PHASE SHIFT

NBS phase angle calibration standard [PB81-244899] N82-16390

PHENOLIC RESINS

Fast-setting phenolic and tannin-based honeymoon adhesive systems for exterior grade finger joints [PB81-245748] N82-16254

Use of a phenolic-carboxylic acid cation resin in the treatment of low-level liquid waste at Oak Ridge National Laboratory [DE82-000500] N82-16554

PHENOLOGY

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation [E82-10029] N82-16447

PHONONS

Lattice dynamics of graphite intercalation compounds: Modelled by the phonon dispersion of linear chains [PB82-000061] N82-16914

Phonons in alkali graphite intercalation compounds [DE82-000059] N82-16916

PHOSPHATES

Aqueous dissolution of calcium metaphosphate glasses [DE81-030130] N82-16248

PHOSPHORIC ACID

Mechanical properties of adhesively bonded aluminum structures protected with hydrated inhibitors [AD-A106222] N82-16241

Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development [NASA-CR-165455] N82-16483

PHOSPHORIC ACID FUEL CELLS

Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development [NASA-CR-165328] N82-16480

Technology development for phosphoric acid fuel cell powerplant, phase 2 [NASA-CR-165426] N82-16482

PHOTOCHEMICAL REACTIONS

Study to perform preliminary experiments to evaluate particle generation and characterization techniques for zero-gravity cloud physics experiments [NASA-CR-3486] N82-16657

PHOTOCONDUCTIVITY

Deep impurity states in gallium arsenide [AD-A106695] N82-16908

PHOTODISSOCIATION

Laser kinetic spectroscopic studies (a) the unimolecular reactions of nitroalkanes and, (b) elementary reactions important in combustion [AD-A107820] N82-16402

PHOTOELECTRIC EFFECT

Preparation and characterization of conducting iron tungstates [AD-A106541] N82-16193

PHOTOELECTRIC EMISSION

Research on long wavelength bias-assisted photoemitters [AD-A107815] N82-16912

PHOTOELECTRIC MATERIALS

Research on long wavelength bias-assisted photoemitters [AD-A107815] N82-16912

Development of photomultiplier electronics and computer interfacing software for a high speed photoelectric photometer-Stoke's meter N82-17049

PHOTOELECTRON SPECTROSCOPY

Preparation and characterization of conducting iron tungstates [AD-A106541] N82-16193

PHOTOELECTRONS

Surface studies of plastic-bonded PETN and RDX by X-ray Photoelectron Spectroscopy (XPS) and Ion-Scattering Spectroscopy (ISS) [DE81-030402] N82-16207

PHOTOGEOLOGY

Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE [E82-10024] N82-16442

Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming [E82-10028] N82-16446

Weather satellite interpretation: Introduction to weather satellite imagery [PB82-107657] N82-16677

PHOTOGRAPHIC PROCESSING

Civil agencies should save millions by recovering silver from photographic wastes [PB81-243479] N82-16237

CNPq/INPE: LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories [E82-10023] N82-16441

Oil slick dispersal mechanics [PB82-105560] N82-16610

Reconnaissance and recovery of the brighter asteroids. Brief summary of the entire project [NASA-CR-165101] N82-17008

PHOTOGRAPHY

Platinum: The price of photographic printing materials [PB81-249542] N82-16389

PHOTOINTERPRETATION
Wetland mapping from digitized aerial photography — Sheboygan Marsh, Wisconsin [E82-10019] N82-16437
Weather satellite interpretation: Introduction to weather satellite imagery [PB82-107657] N82-16677
PHOTOLITHOGRAPHY
Platinum: The price of photographic printing materials [PB81-249542] N82-16389
PHOTOMAPPING
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system — the Bearlodge area of northeastern Wyoming [E82-10028] N82-16446
PHOTOMETERS
Upper atmospheric section N82-16661
The new optical (300 nm less than lambda lambda less than 1000 nm) ESO photometer N82-16998
Development of photomultiplier electronics and computer interfacing software for a high speed photoelectric photometer-Stoke's meter N82-17049
PHOTOMETRY
Monitoring solar-type stars N82-17035
PHOTONS
The two-photon absorptivity of rotational transitions in the A2 Sigma hyperon + (v prime = O) - X-2 pion (v prime prime = O) gamma band of nitric oxide [NASA-TM-81335] N82-16815
PHOTOSPHERE
Observed variability in the Fraunhofer line spectrum of solar flux, 1975 - 1980 N82-17023
PHOTOSYNTHESIS
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720
PHOTOVOLTAIC CELLS
International market assessment of stand-alone photovoltaic power systems for cottage industry applications [NASA-CR-165287] N82-16494
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells [DE82-000868] N82-16543
PHOTOVOLTAIC EFFECT
Study of the photovoltaic effect in thin film barium titanate [NASA-CR-165081] N82-16479
PHYSICAL CHEMISTRY
Storage stability and improvement of intermediate moisture foods, phase 5 [NASA-CR-167503] N82-16742
PHYSICAL FACTORS
Fatigue in Flight Inspection Field Office (FIFO) flight crews [AD-A106791] N82-16733
PHYSICAL FITNESS
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man N82-16729
PHYSICAL WORK
Fatigue in Flight Inspection Field Office (FIFO) flight crews [AD-A106791] N82-16733
PHYSIOLOGICAL EFFECTS
Operator's manual for variable weight, variable CG helmet simulator [AD-A106093] N82-16078
Variation in plant response to ozone: A conceptual model of physiological events [DE81-029692] N82-16701
Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709
Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature [PB82-102567] N82-16737
PIEZOELECTRIC TRANSDUCERS
Piezoelectric PVF2 polymer films and devices [AD-A107642] N82-16243
PIGMENTS
Some applications of Fourier transform infrared spectroscopy in the examination of painting materials [PB81-249575] N82-16256
PILOT PERFORMANCE
Threat perception while viewing single intruder conflicts on a cockpit display of traffic information [NASA-TM-81341] N82-16076
Numerical and flight simulator test of the flight deterioration concept [NASA-CR-3500] N82-16655
Causes of fatigue among crews of civil aviation helicopters N82-16708
PILOT PLANTS
Bi-Gas pilot plant operation [DE82-000223] N82-16271
PILOT TRAINING
Implementation of the recommendations made on the technical report titled analysis of advanced simulator for pilot training [AD-A106779] N82-16094
PINNING
Deliberate modification of the behavior of n-type cadium telluride/electrolyte interfaces by surface etching: Removal of fermi level pinning [AD-A106382] N82-16907
PIPE FLOW
Calculation of the temperature of a permanent incompressible laminar flow in a tube with known wall temperature distribution [INPE-2153-TDL/057] N82-16362
A study of the vent pipe for the gravity probe-B N82-17053
PIPELINES
Development of a pipe location system [PB81-246530] N82-16386
PIPER AIRCRAFT
Resonance tests on a Piper PA-32R tailplane before and after damage [AD-A106273] N82-16071
PIPES (TUBES)
Fluid mechanics and heat transfer spirally fluted tubing [AD-A107983] N82-16369
Development of a pipe location system [PB81-246530] N82-16386
Static stress-intensity factors and dynamic crack propagation in pipes [DE82-900365] N82-16431
Current measurements off Keahole Point, Hawaii: Application to OTEC-1 [DE81-030539] N82-16686
PITCH (INCLINATION)
Variable gain for a wind turbine pitch control [NASA-TM-82751] N82-16478
PITOT TUBES
Use of the pitot tube in very low density flows [AD-A106374] N82-16366
PLANE WAVES
High frequency scattering by a sphere with complex surface impedance N82-16799
PLANETARY EVOLUTION
Astronomical society information number 51. Review articles 2 --- with emphasis on solar system evolutionary processes [REPT-51] N82-16975
Isotopic anomalies and the early history of the solar system N82-16976
Formation of the planetary system N82-16977
The morphology and evolution of Ganymede and Calisto N82-17013
PLANETARY GEOLOGY
Advances in planetary geology [NASA-TM-84412] N82-17010
PLANETARY WAVES
Synoptic scenario of the invasion of cold air during the freeze of May 1979 and frost mapping to forecast areas of major risk [INPE-2166-RPE/383] N82-16654
PLANETOLOGY
Advances in planetary geology [NASA-TM-84412] N82-17010
PLANT DESIGN
Small-scale fuel-alcohol plant. Volume 2: Detailed equipment information [DE82-001037] N82-16278
Small-scale-fuel-alcohol plant. Volume 3: Construction information [DE82-001036] N82-16279
Carbon dioxide power plant for total emission control and enhanced oil recovery [DE81-030734] N82-16458
Industrial steam supply system characteristics program. Phase 2: Low- and medium-Btu gas-fired boilers with associated gasification plants [DE82-000535] N82-16517
Hazardous waste preliminary planning requirements for SRC-1 demonstration plant in Newman, Kentucky [DE82-001346] N82-16561
Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico [PB82-104670] N82-16607
PLANT STRESS
Variation in plant response to ozone: A conceptual model of physiological events [DE81-029692] N82-16701
PLASMA CHEMISTRY
Plasma chemistry and organic synthesis [NASA-TM-75843] N82-16175
PLASMA CONTROL
Fusion plasma control using TRAIL: A nondamageable limiter [DE81-030825] N82-16873
Design of first walls and beam dumps for tandem mirror experiment upgrade [DE81-030888] N82-16875
Ambipolar potential formation and control in bumpy tori and mirrors: Proceedings of workshop [CONF-810511] N82-16877
Ambipolar potential formation in TMX N82-16880
Field errors in EBT and their effects on the ambipolar potential N82-16887
Ambipolar potential and its effects on the confinement parameters of the EBT plasma N82-16888
Central cell confinement in MFTF-B N82-16893
Effcts due to the large ambipolar potential in TMX N82-16895
Formation and control of plasma potentials in TMX upgrade N82-16896
Ambipolar potential control by fast wave heating in Bumpy Tori N82-16897
Progress in the tandem mirror program [DE81-030303] N82-16902
PLASMA DECAY
Numerical simulation of the Beta 2 experiment [DE81-030884] N82-16867
PLASMA DENSITY
Expanded boundary divertor experiments in doublet 3 [DE81-030399] N82-16868
PLASMA DIAGNOSTICS
Neutral density measurements in Doublet 3 [DE82-000497] N82-16829
Measurement of surface shape of imploding hollow plasma liners [DE81-030996] N82-16866
Experimental measurement of plasma space potential N82-16879
Space potential measurements in the central cell of TMX N82-16881
Potential measurements in Phaedrus - Wisconsin's Tandem Mirror N82-16882
Instabilities in a small axisymmetric mirror N82-16894
Effect on ambipolar potential of ion cyclotron heating N82-16898
PLASMA DRIFT
Space potential measurements on EBT N82-16883
Effects of fluctuating electric fields on hydrogen and impurity ions in EBT N82-16890
Anomalous transport and the ambipolar field in EBT N82-16891
PLASMA DYNAMICS
A study pertaining to inertial energy storage machine designs for space applications [NASA-CR-163465] N82-16489
PLASMA ELECTRODES
Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail [NASA-CR-168508] N82-16634
PLASMA EQUILIBRIUM
Tilt and shift mode stability with line tying [AD-A106228] N82-16864
PLASMA GUNS
Fusion plasma control using TRAIL: A nondamageable limiter [DE81-030825] N82-16873
PLASMA HEATING
High-beta studies with beam-heated, non-circular plasmas in ISX-B [DE81-032003] N82-16874
PLASMA LOSS
Progress in the tandem mirror program [DE81-030303] N82-16902

PLASMA PHYSICS
The study of atom-atom electron-molecule and photon-molecule processes
[AD-A107991] N82-16820
Neutral density measurements in Doublet 3
[DE82-000497] N82-16829

PLASMA POTENTIALS
Ambipolar potential formation and control in bumpy tori and mirrors: Proceedings of workshop
[CONF-810511] N82-16877
Multi-species ambipolar phenomena in the ELMO Bumpy Torus N82-16878
Experimental measurement of plasma space potential N82-16879
Ambipolar potential formation in TMX N82-16880
Space potential measurements in the central cell of TMX N82-16881
Potential measurements in Phaedrus - Wisconsin's Tandem Mirror N82-16882
Space potential measurements on EBT N82-16883
Potential formation in Nagoya Bumpy Torus N82-16884
Aluminum impurity ions and the ambipolar potential in EBT N82-16885
EBT transport and ambipolar potential formation with rapid loss of high energy impurity ions N82-16886
Field errors in EBT and their effects on the ambipolar potential N82-16887
Ambipolar potential and its effects on the confinement parameters of the EBT plasma N82-16888
The effect of transiting electrons on the ambipolar potential in a tandem mirror plasma N82-16892
Formation and control of plasma potentials in TMX upgrade N82-16896
Ambipolar potential control by fast wave heating in Bumpy Tori N82-16897

PLASMA PROBES
Potential formation in Nagoya Bumpy Torus N82-16884

PLASMA TEMPERATURE
Expanded boundery divertor experiments in doublet 3
[DE81-030399] N82-16868
Fusion plasma control using TRAIL: A nondamageable limiter
[DE81-030625] N82-16873

PLASMA-ELECTROMAGNETIC INTERACTION
Experiments on the interaction of highpower microwaves with air
[AD-A106390] N82-16862

PLASMA-PARTICLE INTERACTIONS
The effect of transiting electrons on the ambipolar potential in a tandem mirror plasma N82-16892

PLASMAS (PHYSICS)
Parametric considerations for inductively driven plasma implosions
[AD-A106679] N82-16863
Design of first walls and beam dumps for tandem mirror experiment upgrade
[DE81-030888] N82-16875
The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma
[REPT-626] N82-17007

PLASTIC COATINGS
Surface studies of plastic-bonded PETN and RDX by X-ray Photoelectron Spectroscopy (XPS) and Ion-Scattering Spectroscopy (ISS)
[DE81-030402] N82-16207

PLASTIC PROPERTIES
Bolted connections in composite structures
[PB81-247124] N82-16435

PLASTIC TAPES
Experimental pavement delineation treatments
[PB81-249161] N82-16292

PLASTICS
Preparation of multishell ICF target plastic-foam cushion materials by thermally induced phase-inversion processes
[DE82-000574] N82-16249
Analysis of field usage failure rate data for plastic encapsulated solid state devices
[NASA-CR-161946] N82-16343
Development of design, qualification, screening, and application requirements for plastic encapsulated solid-state devices for space applications
[NASA-CR-161947] N82-16344

PLATING
Plating on aluminum
[PB81-239501] N82-16235

PLATINUM
Platinum: The price of photographic printing materials
[PB81-249542] N82-16389

PLYWOOD
A summary of modulus of elasticity and knot size surveys for laminating grades of lumber
[AD-A106561] N82-16422

POISSON EQUATION
Double layers on auroral field lines
[NASA-CR-165113] N82-16635
Transient magnetic-field calculations with TRIDIF
[DE81-030843] N82-16785

POLAR WANDERING (GEOLOGY)
Prediction of Earth rotation and polar motion
[NASA-CR-163468] N82-16637

POLARIZATION (SPIN ALIGNMENT)
Optically pumped polarized ion sources
[DE81-026306] N82-16798

POLARIZATION (WAVES)
Assignment of an anomalous peak in the Brillouin spectrum of oriented polymer films
[AD-A107897] N82-16246
UTD analysis of electromagnetic scattering by flat structures
[NASA-CR-165099] N82-16313

POLICIES
Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977
[PB81-241663] N82-16630
Models in the policy process: Past, present, and future
[RAND/P-6654] N82-16795

POLISHING
Laboratory pavement polishing device (wear machine) versus field friction test units and accumulative traffic (ADT). Phase 2. Correlation study
[PB81-233256] N82-16293

POLLUTION
Impact of topographic circulations on the transport and dispersion of air pollutants
[PB82-102435] N82-16584

POLLUTION CONTROL
Carbon dioxide power plant for total emission control and enhanced oil recovery
[DE81-030734] N82-16458
Flue-gas desulfurization: Review of selected commercial and advanced technologies
[DE82-001960] N82-16559
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] N82-16560
Advanced Environmental Control Technology Program
[DE82-000698] N82-16562
Energy and environmental quality: Case histories of impact management
[DE81-028435] N82-16565
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] N82-16568
Assessment of emerging technologies for metal finishing pollution control: Three case studies
[PB81-244485] N82-16571
Evaluation of pollution abatement alternatives: Picillo property, Coventry, Rhode Island
[PB82-103888] N82-16592
Emission characteristics of 1979 and 1980 California passenger cars equipped with three-way catalysts
[PB82-105073] N82-16594
Spray charging and trapping scrubber for fugitive particle emission control
[PB82-115304] N82-16598
Proceedings of the Conference on Innovation in the Environmental Technology Industry
[PB82-109588] N82-16606
Techniques for handling landborne spills of volatile hazardous substances
[PB82-105230] N82-16609
Wastewater management plan for the Lake Washington/Green River Basins
[PB82-105982] N82-16612
Fuel NOx control by catalytic combustion
[PB82-102351] N82-16623
Community noise attitudinal survey guidelines
[PB81-244295] N82-16826
Technical support for open-cycle MHD program — combined cycle mhd/steam power system analysis
[DE82-001955] N82-16901
Foreign noise research in surface transportation, 1976-1981
[PB82-100306] N82-16954

POLLUTION MONITORING
Acoustical concept for measuring particle size distributions
[PB81-235301] N82-16387
Air pollution and related phenomena in South Africa
[SR-APRG-12] N82-16551
Vocational education training in environmental health sciences: Collecting stream samples for water quality, module 16
[PB81-249690] N82-16574
Assessment of the Region V water monitoring activities
[PB82-103334] N82-16587
Use of remote sensing techniques in a systematic investigation of an uncontrolled hazardous waste site
[PB82-103896] N82-16593
Carbon monoxide and non-FTP (Federal Test Procedures) ambient temperature
[PB81-243160] N82-16962

POLLUTION TRANSPORT
Air pollution and related phenomena in South Africa
[SR-APRG-12] N82-16551
Modifications of trajectory models needed for pollutant source-receptor analysis
[DE81-029915] N82-16553
Polychlorinated biphenyl transport in the Hudson River, New York
[PB81-249757] N82-16573
Estimating mobile source pollutants in microscale exposure situations
[PB82-101114] N82-16597
An overview, current status, and future plans for the DOE atmospheric studies in complex terrain (ASCOT) program
[DE91-024417] N82-16651
Spent fuel and radioactive waste inventories and projections as of December 31, 1980
[DE82-000307] N82-16836

POLOIDAL FLUX
Ambipolar potential formation in TMX N82-16880
Potential measurements in Phaedrus - Wisconsin's Tandem Mirror N82-16882
Space potential measurements on EBT N82-16883
Effects of fluctuating electric fields on hydrogen and impurity ions in EBT N82-16890

POLYAMIDE RESINS
Process for the formation of biaxially oriented films of poly(p-phenylene terephthalamide) (PPD-T) from liquid crystalline solutions
[AD-A106058] N82-16244

POLYATOMIC MOLECULES
Upper atmospheric section N82-16661

POLYCHLORINATED BIPHENYLS
Polychlorinated biphenyl transport in the Hudson River, New York
[PB81-249757] N82-16573

POLYCRYSTALS
Studies of the effect of orientation on the elastic constants of stretched and hydrostatically extruded poly(chlorotriflouroethylene): A model of affine orientation in semi-crystalline polymers
[AD-A107909] N82-16245
Development of a polysilicon process based on chemical vapor deposition (phase 1)
[NASA-CR-163475] N82-16488

POLYMER MATRIX COMPOSITES
Development of toughened epoxy polymers for high performance composite and ablative applications N82-17044

POLYMERIC FILMS
Piezoelectric PVF2 polymer films and devices
[AD-A107642] N82-16243
Process for the formation of biaxially oriented films of poly(p-phenylene terephthalamide) (PPD-T) from liquid crystalline solutions
[AD-A106058] N82-16244
Assignment of an anomalous peak in the Brillouin spectrum of oriented polymer films
[AD-A107897] N82-16246

POLYMERIZATION
Reversibility of coal liquefaction
[DE81-027804] N82-16277

POLYMERS
A finite element model of a White-Metzner viscoelastic polymer extrudate
[AD-A106740] N82-16242
Synthesis of articulated all-para polymers
[AD-A107554] N82-16247

POLYVINYL FLUORIDE
Piezoelectric PVF2 polymer films and devices
[AD-A107642] N82-16243

POROSITY
Relationships between soil moisture-holding properties and soil texture, organic matter content, and bulk density
[NASA-TM-76674] N82-16451
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000896] N82-16465
Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652

POROUS BOUNDARY LAYER CONTROL
Study of non-Darcy natural convection from a vertical heated surface in a saturated porous medium
[DE81-030081] N82-16374

POSITION (LOCATION)
The zero-Doppler positioning system
[AD-A107806] N82-16064
Analytical positioning of aids to navigation
[AD-A107811] N82-16065
Use of back azimuth measurements in seismic event location with regional data
[AD-A106429] N82-16639
Frequency and motion of Atlantic tropical cyclones
[PB81-247256] N82-16682

POSITION ERRORS
Passive trilateration positioning procedure error analysis
[AD-A106690] N82-16061

POSITION INDICATORS
Passive trilateration positioning procedure error analysis
[AD-A106690] N82-16061
Aircraft position measurement using laser beacon optics
[AD-A107973] N82-16067
Development of a pipe location system
[PB81-246530] N82-16386

POSTFLIGHT ANALYSIS
Mission Operation Report: Space Shuttle program STS-2
[NASA-TM-84088] N82-16141

POSTMISSION ANALYSIS (SPACECRAFT)
Mission Operation Report: Space Shuttle program STS-2
[NASA-TM-84088] N82-16141
ATS-6 engineering performance report. Volume:Program and systems summaries: Mechanical and thermal details
[NASA-RP-1080-VOL-1] N82-16147
ATS-6 engineering performance report. Volume 2: Orbit and attitude controls
[NASA-RP-1080-VOL-2] N82-16148
ATS-6 engineering performance report. Volume 3: Telecommunications and power
[NASA-RP-1080-VOL-3] N82-16149
ATS-6 engineering performance report. Volume 4: Television experiments
[NASA-RP-1080-VOL-4] N82-16150
ATS-6 engineering performance report. Volume 5: Propagation experiments
[NASA-RP-1080-VOL-5] N82-16151
ATS-6 engineering performance report. Volume 6: Scientific experiments
[NASA-RP-1080-VOL-6] N82-16152

POSTURE
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713

POTABLE WATER
Hygienic principles of ongoing monitoring of quality of recycled water during space flights N82-16717

POTASSIUM COMPOUNDS
Thermal expansion of alkali-graphite intercalation compounds
[DE82-000060] N82-16429

POTENTIAL ENERGY
Cogeneration potential: Enhanced oil recovery
[DE81-904202] N82-16539

POTENTIAL GRADIENTS
Efficts due to the large ambipolar potential in TMX N82-16895

POTENTIAL THEORY
Molecular dynamics calculations for sodium using pseudopotential theory
[AD-A108014] N82-16821

POTENTIOMETRIC ANALYSIS
Research in nuclear chemistry
[DE81-030542] N82-16847

POWER AMPLIFIERS
Characterization of power MESFETs at 21 GHz
[AD-A106673] N82-16349

POWER CONDITIONING
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 2: Appendices
[NASA-CR-165539] N82-16748

POWER EFFICIENCY
Power efficiency of semiconductor injection lasers N82-16115
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] N82-16481

POWER GAIN
A calibration service for analog-to-digital and digital-to-analog converters
[PB81-243404] N82-16395
Laser Induced Damage in Optical Materials
[AD-A106548] N82-16399
Variable gain for a wind turbine pitch control
[NASA-TM-82751] N82-16478

POWER SPECTRA
Effects of strong turbulence on short wavelength laser: Experimental determination of mean square wander angle
[AD-A106776] N82-16852

PRECIPITATION (CHEMISTRY)
MHD Heat and Seed Recovery Technology Project
[DE82-001608] N82-16900

PRECIPITATION (METEOROLOGY)
Modifications of trajectory models needed for pollutant source-receptor analysis
[DE81-029915] N82-16553
Atmospheric deposition of heavy metals and their interaction with acid precipitation in a North American deciduous forest
[DE81-032004] N82-16556

PRECIPITATION PARTICLE MEASUREMENT
Development of a particle collector for absolute measurements of particle form, particle size and particle concentration --- by precipitation on whiskers
[BMFT-FB-T-81-029] N82-16214

PRECISION
Precision measurements on fibrous glass insulation
[PB81-239634] N82-16308

PRECONDITIONING
Incomplete block cyclic reduction
[UCRL-85837] N82-16784

PREDICTION ANALYSIS TECHNIQUES
Prediction of composite hygral behavior made simple
[NASA-TM-82780] N82-16181
A prediction method for turbulent boundary layers in adverse pressure gradients
[AD-A107849] N82-16371
Long-range prediction of network traffic --- in computer systems
[DE81-030241] N82-16770
Prediction of sound radiation from different practical jet engine inlets
[NASA-CR-165120] N82-16810
The study of atom-atom electron-molecule and photon-molecule processes
[AD-A107991] N82-16820
Estimating short-term solar variations by a simple envelope matching technique N82-17028
Evolutionary variations of solar luminosity N82-17032
The combined solar and tidal influence in climate N82-17038
Predominant periods in the time series of drought area index for the Western High Plains AD 1700 to 1962 N82-17039

PREDICTIONS
Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977
[PB81-241663] N82-16630

PRESERVING
Storage stability and improvement of intermediate moisture foods, phase 5
[NASA-CR-167503] N82-16742

PRESSURE
Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A106386] N82-16640

PRESSURE CHAMBERS
Comparative antihypoxic efficacy of pressure chamber conditioning and fasting of man N82-16729

PRESSURE DISTRIBUTION
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] N82-16697
Evaluation of man's endurance of local pressure to the head and objective assessment of hygienic specifications for protective helmets N82-16710

PRESSURE GRADIENTS
A prediction method for turbulent boundary layers in adverse pressure gradients
[AD-A107849] N82-16371
Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652

PRESSURE ICE
An observational study of blocking
[AD-A106739] N82-16670

PRESSURE MEASUREMENT
Programs for the transonic wind tunnel data processing installation. Part 9: Pressure measurements updated
[AD-A106271] N82-16095
Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096

PROBABILITY DENSITY FUNCTIONS
A comprehensive model to determine the effects of temperature and species fluctuations on reaction rates in turbulent reacting flows
[NASA-CR-165108] N82-16364
The H-function and probability density functions of certain algebraic combinations of independent random variables with H-function probability distribution
[AD-A106768] N82-16777
Density estimation and projection pursuit methods
[AD-A107816] N82-16779

PROBABILITY DISTRIBUTION FUNCTIONS
The H-function and probability density functions of certain algebraic combinations of independent random variables with H-function probability distribution
[AD-A106768] N82-16777

PROBABILITY THEORY
Implications of the Putnam software equation on confidence levels for project success N82-16121
Choosing among alternatives with uncertain outcomes: Effect of prior curing and estimation requirements
[AD-A106143] N82-16739
Statistical data analysis for reliability tests
[AD-A105188] N82-16786

PROBLEM SOLVING
An application of decision analysis to technology assessment: An assessment of decentralized waste treatment methods
[PB82-109018] N82-16605
Pilot workload: A survey of operational problems
[AD-A107758] N82-16745
The heuristic of George Polya and its relation to artificial intelligence
[AD-A106557] N82-16771
The knowledge level
[AD-A106558] N82-16772
Sparse matrices
[AD-A105187] N82-16775
Regional Monte Carlo solution of elliptic partial differential equations
[DE81-028772] N82-16793

PROCESS CONTROL (INDUSTRY)
The optimal planning of computerized manufacturing systems --- process planning automation, a recursive approach
[PB81-245276] N82-16311
Semiconductor measurement technology: The design, testing, and analysis of a comprehensive test pattern for measuring CMOS/SOS process performance and control
[PB81-245342] N82-16361
PROCESS HEAT
Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030968] N82-16942
PROCUREMENT POLICY
Appropriation reimbursements
[PB81-245409] N82-16925
PRODUCT DEVELOPMENT
The 403 MHz SAW oscillator
[AD-A107588] N82-16378
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] N82-16527
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] N82-16549
Consumer behavior towards fuel efficient vehicles, volume 2
[PB81-246654] N82-16948
PRODUCTION ENGINEERING
Reversibility of coal liquefaction
[DE81-027804] N82-16277
Oil Shale 1982: A technology and policy primer
N82-16449
Technology development for phosphoric acid fuel cell powerplant, phase 2
[NASA-CR-165426] N82-16482
PRODUCTIVITY
Technology transfer and development of computer-aided engineering with the university community
[DE81-022406] N82-16940
Research into technology output measures
[PB81-245300] N82-16957
PROGRAM VERIFICATION (COMPUTERS)
Simple computer program to model 3-dimensional underground heat flow with realistic boundary conditions
[DE81-030213] N82-16373
PROGRAMMED INSTRUCTION
Vocational education training in environmental health sciences: Collecting stream samples for water quality, module 16
[PB81-249690] N82-16574
PROGRAMMING
The 3-D on the 7600-Star-Cray
[DE81-030669] N82-17004
PROGRAMMING LANGUAGES
A classic example of PRODUCER/CONSUMER implemented in LANAC language
[INPE-2185-RPE/396] N82-16756
OPS5 user's manual
[AD-A106556] N82-16763
Toward a unified logical basis for programming languages
[AD-A106772] N82-16765
Three papers of network programs
[AD-A106799] N82-16769
PROGRAMS
NASA/MSFC FY-81 Atmospheric Processes Research Review
[NASA-CP-2204] N82-16660
PROJECT MANAGEMENT
Life-cycle cost analysis of projects using a polynomial cash flow model for nonuniform maintenance and operations costs N82-16123
Evaluation of the feasibility of establishing a national testing capability for the simulation of earthquake loads on large-scale structures
[PB81-243675] N82-16295
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] N82-16550
Weather satellite interpretation: Introduction to weather satellite imagery
[PB82-107657] N82-16677
Nothern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography
[PB81-248650] N82-16692
Principles of project management
[NASA-TM-84069] N82-16921
Flight dynamics technology development: Structures and dynamics, vehicle equipment/subsystems, flight control and aeromechanics
[AD-A096836] N82-17082
PROJECT PLANNING
Long-term planning for national science policy
[GPO-68-603] N82-16936
PROMETHIUM
Search for promethium-like gold lines and other transitions of interest to fusion research
[DE81-029917] N82-16872
PROPAGATION
Approximate fluid-structure interaction theories for acoustic echo signal predictions
[AD-A106349] N82-16812
PROPAGATION MODES
ATS-6 engineering performance report. Volume 5: Propagation experiments
[NASA-RP-1080-VOL-5] N82-16151
PROPELLANT STORABILITY
Propellant surveillance report LGM-30 A, B, F and G stage I TP-H1043 aft closure propellant --- for Minuteman motors
[AD-A107877] N82-16257
PROPELLER EFFICIENCY
Turboprop cargo aircraft systems study
[NASA-CR-165813] N82-16070
PROPELLERS
Noise of the SR-3 propeller model at 2 deg and 4 deg angle of attack
[NASA-TM-82738] N82-16808
A shock wave apprcach to the noise of supersonic propellers
[NASA-TM-82752] N82-16809
PROPORTIONAL COUNTERS
X-ray astronomy instrumentation studies --- design of a proportional counter and measurements of fluorescent radiation
[NASA-CR-161948] N82-17001
Fabrication of X-ray telescopes for sounding rocket flights
[NASA-CR-165112] N82-17002
Determination of the efficiency of a proportional counter for detecting X-rays N82-17066
PROPULSION
NASA research activities in aeropropulsion
[NASA-TM-82788] N82-16084
PROPULSION SYSTEM PERFORMANCE
Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] N82-16937
Electric car: Is it still the vehicle of the future
[DE81-030437] N82-16943
Future trends in advanced batteries for automobile propulsion
[DE81-030543] N82-16944
PROPULSIVE EFFICIENCY
Small passenger car transmission test: Chevrolet Malibu 200C transmission with lockup
[NASA-CR-165182] N82-16410
PROTECTIVE COATINGS
A process for the production of a scale-proof and corrosion-resistant coating on graphite and carbon bodies
[NASA-TM-76785] N82-16179
Heat sealable, flame and abrasion resistant coated fabric --- clothing and containers for space exploration
[NASA-CASE-MSC-18382-1] N82-16238
Skid-test evaluation of protective coverings for explosive billets
[DE82-000072] N82-16258
PROTEIN METABOLISM
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714
PSEUDORANDOM SEQUENCES
An investigation of the uniform random number generator N82-17077
PSYCHOMOTOR PERFORMANCE
Causes of fatigue among crews of civil aviation helicopters N82-16706
PUBLIC HEALTH
Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] N82-16259
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] N82-16563
PUBLIC RELATIONS
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] N82-16550
PULSARS
The formation of compact objects in binary systems N82-16981
PULSE COMMUNICATION
COMSTAR satellite 19/29 GHz propagation experiment
[AD-A106001] N82-16334
Memory-based frame synchronizer --- for digital communication systems
[NASA-CASE-GSC-12430-1] N82-16747
PULSED LASERS
Nanosecond and picosecond spectroscopy and kinetics of dynamic absorbing materials
[AD-A107733] N82-16403
The two-photon absorptivity of rotational transitions in the A2 Sigma hyperon + (v prime = O) - X-2 pion (v prime prime = O) gamma band of nitric oxide
[NASA-TM-81335] N82-16815
Reactions of metal ions and their clusters in the gas phase using laser ionization: Ion cyclotron resonance spectroscopy
[DE81-029015] N82-16915
PUNCHED TAPES
Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842
PURIFICATION
Performance of trickling filter plants: Reliability, stability, variability
[PB82-108143] N82-16603
Evaluation of on-site wastewater treatment and disposal options
[PB82-101635] N82-16616
Parasites in southern sludges and disinfection by standard sludge treatment
[PB82-102344] N82-16622
PYRIDINES
Vibrational overtone spectroscopy of benzene and pyridine on Ag(111)
[AD-A106396] N82-16191
PYROLYSIS
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] N82-16275
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] N82-16560

Q

QUALITY CONTROL
Propellant surveillance report LGM-30 A, B, F and G stage I TP-H1043 aft closure propellant --- for Minuteman motors
[AD-A107877] N82-16257
Analysis of field usage failure rate data for plastic encapsulated solid state devices
[NASA-CR-161946] N82-16343
Development of design, qualification, screening, and application requirements for plastic encapsulated solid-state devices for space applications
[NASA-CR-161947] N82-16344
A calibration service for analog-to-digital and digital-to-analog converters
[PB81-243404] N82-16395
A summary of the EPA national source performance audit program - 1980
[PB82-106127] N82-16602
Carbon monoxide and non-FTP (Federal Test Procedures) ambient temperature
[PB81-243180] N82-16962
QUANTILES
Quantile estimation in dependent sequences
[AD-A106132] N82-16790
QUANTITATIVE ANALYSIS
Small unilamellar vesicles as reagents: A chemically defined quantitative assay for lectins
[DE81-030365] N82-16208
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] N82-16226

QUANTUM THEORY

Technical activities 1980 center for absolute physical quantities
[PB81-248478] N82-16393

Nature abhors an empty vacuum — the possibility of satisfying classical mechanics in a quantized world
[AD-A106362] N82-16920

QUARKS

Quark-gluon plasma and the little bang
[DE81-030320] N82-16840

QUARTZ

A study of optically contacted quartz at cryogenic temperatures N82-17060

QUASARS

Astronomical society information no. 52. Report of the meeting — conferences
[ISSN-0374-1958] N82-16986

The 1 mm observations of optically selected quasars N82-17000

QUEUEING THEORY

The optimal planning computerized manufacturing systems
[PB81-245284] N82-16312

Quantile estimation in dependent sequences
[AD-A106132] N82-16790

R

RABBITS

Stationary magnetic fields and reticular influences on adrenergic and cholinergic systems N82-16725

RADAR ANTENNAS

Antenna considerations and signal processing techniques for the identification of buried non-metallic objects
[AD-A107752] N82-16332

RADAR BEACONS

ATCRBS uplink environment measurement near Jacksonville, Florida
[AD-A108053] N82-16063

RADAR CROSS SECTIONS

UTD analysis of electromagnetic scattering by flat structures
[NASA-CR-165099] N82-16313

RADAR IMAGERY

Digital correlation of DDRS data
[NASA-CR-167494] N82-16452

RADAR MEASUREMENT

An FM/CW method for the measurements of time delays of large Cassegrain antennas N82-16110

RADAR TRACKING

Adaptive processing for low RCS targets
[AD-A106685] N82-16317

RADAR TRANSMISSION

Adaptive processing for low RCS targets
[AD-A106685] N82-16317

RADIANT FLUX DENSITY

Electron-impact excitation of ions
[DE81-030606] N82-16825

RADIATION ABSORPTION

Photoacoustic spectroscopy of dielectric and semiconducting solids
[AD-A107613] N82-16911

RADIATION BELTS

Magnetic shell tracing: A simplified approach
[AD-A106714] N82-16647

RADIATION DAMAGE

Resistance of (Fe,Ni)sub3V long-range-ordered alloys to radiation damage
[DE81-032006] N82-16221

Influence of irradiation on the tensile properties of austenitic stainless steel weldments
[DE81-032002] N82-16222

RADIATION DOSAGE

Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation N82-16726

RADIATION EFFECTS

Multipole expansion for transient electric and magnetic fields in an internally excited spherical cavity contaning dampers of finite thickness with distributed electrical properties
[AD-A106384] N82-16329

RADIATION INJURIES

Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation N82-16726

RADIATION PROTECTION

Nanosecond and picosecond spectroscopy and kinetics of dynamic absorbing materials
[AD-A107733] N82-16403

RADIATION SHIELDING

Evaluation of three partially volatile neutron shields for high-performance shipping casks
[DE82-000245] N82-16831

RADIATION SICKNESS

Clinical distinctions of radiation sickness with exposure of different parts of the human body to radiation N82-16726

RADIATION SOURCES

Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

RADIATION TRANSPORT

Calculated neutron and gamma-ray energy spectra from 14-MeV neutrons streaming through an iron duct: Comparison with experiment — blanke-shield assemblies of fusion reactors
[DE81-030626] N82-16824

RADIATIVE TRANSFER

Simplified algorithm for calculating radiative transfer in satellite images
[INPE-2169-RPE/385] N82-16450

A climate index derived from satellite measured spectral infrared radiation
[AD-A106733] N82-16648

Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

RADII

The mass (star number)-radius relations for the clusters of the large Magellanic Cloud N82-16993

RADIO ALTIMETERS

NOSS altimeter algorithm specifications
[NASA-RP-1083] N82-16683

RADIO ANTENNAS

Radio astronomy N82-16102

Development of a surface panel measurement system
[NASA-CR-163469] N82-16315

RADIO ASTRONOMY

The telecommunications and data acquisition report
[NASA-CR-165111] N82-16101

Radio astronomy N82-16102

RADIO ATTENUATION

COMSTAR satellite 19/29 GHz propagation experiment
[AD-A108001] N82-16334

RADIO EMISSION

The 1 mm observations of optically selected quasars N82-17000

Detection and analysis of radio frequency lightning emissions N82-17052

RADIO FREQUENCIES

The effect of partial coherence in receiving system noise temperature on array gain for telemetry and radio frequency carrier reception for similar receiving systems N82-16127

Synthesizer stability evaluation N82-16134

RADIO FREQUENCY DISCHARGE

Detection and analysis of radio frequency lightning emissions N82-17052

RADIO FREQUENCY HEATING

Initial ICRH experiments on EBT-S N82-16899

RADIO FREQUENCY INTERFERENCE

Radio frequency interference by Earth orbiting satellites: Deep Space Interference Prediction Program N82-16125

RADIO NAVIGATION

Simulator evaluation of electronic radio aids to navigation displays. The RA-2 experiment
[AD-A106672] N82-16062

ATS-6 engineering performance report. Volume 5: Propagation experiments
[NASA-RP-1080-VOL-5] N82-16151

RADIO SOURCES (ASTRONOMY)

A VLBI survey of the northern polar cap region N82-16108

RADIO SPECTROSCOPY

Simultaneous IUE and optical observations of the short period spot active binary XY Ursae Majoris N82-16992

RADIO TRANSMISSION

Analysis of maximin matched-filter design for communication through a nonlinearly distorting channel
[AD-A106789] N82-16327

COMSTAR satellite 19/29 GHz propagation experiment
[AD-A108001] N82-16334

RADIO TRANSMITTERS

New S-band transmitter automation software N82-16126

RADIO WAVES

High altitude atmospheric investigations. Part 2: Development of in-situ experiments for measurements in the D-region of the ionosphere and their results
[AD-A106770] N82-16318

VLF/LF/MF Whispering gallery propagation studies
[AD-A108517] N82-16324

Experimental comprehensive solar flare indices for major and certain lesser flares, 1975-1979
[PB82-109497] N82-17042

RADIOACTIVE WASTES

Use of a phenolic-carboxylic acid cation resin in the treatment of low-level liquid waste at Oak Ridge National Laboratory
[DE82-000500] N82-16554

Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE82-000967] N82-16833

Development of in-can melting process and equipment, 1979 and 1980
[DE82-001050] N82-16834

Immobilization of high-level waste
[DE81-025595] N82-16835

Spent fuel and radioactive waste inventories and projections as of December 31, 1980
[DE82-000307] N82-16836

Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE81-025399] N82-16837

STAFF-5, a two-dimensional computer model for simulation of the performance of spent fuel in storage/disposal
[DE82-000043] N82-16838

Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842

Leaching of nuclear-waste forms
[DE81-030490] N82-16843

Nuclear waste management
[DE82-001605] N82-16845

Systems studies of waste transportation
[DE81-030840] N82-16941

RADIOMETERS

X-band narrow-beam radiometer for DSS 13 N82-16113

RADIOTELEPHONES

Computer simulator for a mobile telephone system
[NASA-CR-164808] N82-16314

RADIUM ISOTOPES

Neutron capture gamma-ray spectroscopic measurements in the actinide region
[DE81-030316] N82-16832

RAIL TRANSPORTATION

An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100538] N82-16953

Foreign noise research in surface transportation, 1978-1981
[PB82-100306] N82-16954

Los Angeles Downtown People Mover (DPM) operational analysis
[PB81-241416] N82-16964

RAIN

COMSTAR satellite 19/29 GHz propagation experiment
[AD-A108001] N82-16334

Precipitation field and intrastorm flow of supercell convective storms
[AD-A106752] N82-16667

RAMAN SPECTROSCOPY

Coal-gasification instrumentation program (PR 11734)
[DE82-001153] N82-16381

RANDOM ACCESS MEMORY
Memory-based frame synchronizer --- for digital communication systems
[NASA-CASE-GSC-12430-1] N82-16747
RANDOM NUMBERS
An investigation of the uniform random number generator N82-17077
RANDOM PROCESSES
Random network generation
[AD-A106380] N82-16796
RANDOM VARIABLES
The H-function and probability density functions of certain algebraic combinations of independent random variables with H-function probability distribution
[AD-A106766] N82-16777
RANDOM WALK
Regional Monte Carlo solution of elliptic partial differential equations
[DE81-026772] N82-16793
RANGEFINDING
Sine wave ranging revisited N82-16124
RANGELANDS
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447
RANKING
Systolic algorithms for running order statistics in signal and image processing
[AD-A106666] N82-16787
Quantile estimation in dependent sequences
[AD-A106132] N82-16790
RAPID TRANSIT SYSTEMS
Los Angeles Downtown People Mover (DPM) operational analysis
[PB81-241416] N82-16964
RARE EARTH COMPOUNDS
Applications of DHDECMP extraction chromatography to nuclear analytical chemistry
[DE81-030134] N82-16202
RARE EARTH ELEMENTS
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446
RATES (PER TIME)
Research in multirate estimation and control optimal sample rate selection --- application to aircraft control
[AD-A106043] N82-16792
Mass loss from early type stars N82-16980
RATS
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite N82-16716
Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723
Lipid spectrum of the myocardium of white rats exposed to hypoxic hypoxia N82-16724
RAWINSONDES
Demonstration of a long-range atmospheric tracer system using perfluorocarbons
[PB82-106246] N82-16613
RAY TRACING
Ray tracing studies of Jupiter's magnetosphere N82-17064
RAYLEIGH WAVES
Near surface flaw detection by ultrasonic angle imaging
[PB81-235939] N82-16418
REACTION KINETICS
Synthesis of polyformals
[NASA-CASE-ARC-11244-1] N82-16174
Reductions in aprotic media. 1: Cathodic reduction limits in acetonitrile at a platinum electrode
[AD-A106815] N82-16195
Construction of large reaction mechanisms
[AD-A106139] N82-16197
Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions
[AD-A107718] N82-16198
Aqueous dissolution of calcium metaphosphate glasses
[DE81-030130] N82-16248
A comprehensive model to determine the effects of temperature and species fluctuations on reaction rates in turbulent reacting flows
[NASA-CR-165108] N82-16364
Laser kinetic spectroscopic studies (a) the unimolecular reactions of nitroalkanes and, (b) elementary reactions important in combustion
[AD-A107820] N82-16402
Oil slick dispersal mechanics
[PB82-105560] N82-16610
Reactions of metal ions and their clusters in the gas phase using laser ionization: Ion cyclotron resonance spectroscopy
[DE81-029015] N82-16915
Development of toughened epoxy polymers for high performance composite and ablative applications N82-17044
REACTION PRODUCTS
Experimental work related to two bismuth sulfate cycles and their possible improvement. Outline of a possible antimonyl sulfate cycle with separate evolution of sulfur dioxide and oxygen
[DE81-030236] N82-16206
REACTOR DESIGN
Fusion-reactor blanket and coolant material compatibility
[PB81-030018] N82-16869
Compact Commercial Tokamak Reactor (CCTR): A concept for a 500-MWe commercial-Tokamak fusion system
[DE81-030406] N82-16871
REACTOR MATERIALS
Resistance of (Fe,Ni)sub3V long-range-ordered alloys to radiation damage
[DE81-032006] N82-16221
Void swelling in the molybdenum alloy TZM irradiated to high fluences
[DE81-029802] N82-16223
Fusion-reactor blanket and coolant material compatibility
[PB81-030018] N82-16869
READ-ONLY MEMORY DEVICES
Use of embedded microcomputers in system debugging and maintenance
[DE81-029859] N82-16755
REAL TIME OPERATION
Research through simulation --- simulators and research applications at Langley
[NASA-FACTS-125] N82-16092
A high level language for data acquisition and process control
[INPE-2173-RPE/389] N82-16758
Real-time implementation of nonlinear processing functions --- liquid crystal light values
[AD-A106773] N82-16856
RECEIVERS
An M-ary coherent optical receiver for the free-space channel N82-16111
RECHARGING
Study of the secondary Li electrode in organic electrolyte
[DE82-001506] N82-16209
RECIRCULATIVE FLUID FLOW
A computer code for swirling turbulent axisymmetric recirculating flows in practical isothermal combustor geometries
[NASA-CR-3442] N82-16062
RECLAMATION
Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103870] N82-16591
RECONNAISSANCE AIRCRAFT
Study of ground handling characteristics of a maritime patrol airship
[NASA-CR-166253] N82-16090
RECREATION
Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] N82-16846
RECTANGLES
The complexity of manipulating hierarchically defined sets of rectangles
[AD-A106552] N82-16350
RECYCLING
Recyclability issues in XeF lasers
[AD-A107759] N82-16405
Conservation of cooling water by silica removal with activated alumina
[PB81-247959] N82-16570
REDUCTION (CHEMISTRY)
Reductions in aprotic media. 1: Cathodic reduction limits in acetonitrile at a platinum electrode
[AD-A106815] N82-16195
REEFS
Northern Gulf of Mexico topographic features study, volume 3
[PB81-248676] N82-15694
REFINING
Silicon production process evaluations
[NASA-CR-163470] N82-16486
REFLECTANCE
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] N82-16492
Evaluation of retro-reflective measurement devices
[PB81-243594] N82-16951
REFLECTOMETERS
Analysis of results of mini round robin reflectance test
[PB81-244873] N82-16394
Evaluation of retro-reflective measurement devices
[PB81-243594] N82-16951
REFLECTORS
Preliminary design of tetrahedral truss reflector structure N82-16160
Effects of random distortions on the surface accuracy of a large antenna N82-16163
Development of a surface panel measurement system
[NASA-CR-163469] N82-16315
REFLEXES
Electrode unit for testing human H reflex N82-16728
REFRACTORY MATERIALS
Materials testing for solar-thermal chemical process heat
[DE82-002003] N82-16530
Development of high strength, high temperature ceramics N82-17050
REGENERATION (ENGINEERING)
New features and applications of PRESTO, a computer code for the performance of regenerative, superheated steam turbine cycles
[NASA-TP-1954] N82-16477
REGENERATION (PHYSIOLOGY)
Distinctions of regeneration of confined atmosphere by means of photosynthesis of unicellular algae N82-16720
REGIONAL PLANNING
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447
Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE81-025399] N82-16837
REGOLITH
The stochastic evolution of asteroidal regoliths and the origin of brecciated and gas-rich meteorites N82-17011
REGRESSION ANALYSIS
Non-linear regression models: A study of the principal estimation methods
[INPE-2183-RPE/394] N82-16774
Testing for Gaussianity and linearity of stationary time series
[AD-A017548] N82-16781
ARMA spectral estimation: An efficient closed form procedure
[AD-A106753] N82-16788
Conflict among testing procedures in a linear regression model
[RAND/P-6691] N82-16794
REGULATIONS
Federal initiative for clean air: Inspection and maintenance
[PB82-102500] N82-16585
Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977
[PB81-241663] N82-16630
Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE82-000967] N82-16833

REINFORCING FIBERS
Analysis of strain distribution for fiber reinforced composites by Moire method
[NAL-TR-681] N82-16420
RELATIVISTIC PARTICLES
Relativistic heavy-ion experiments
[DE81-030544] N82-16822
RELATIVITY
Nature abhors an empty vacuum --- the possibility of satisfying classical mechanics in a quantized world
[AD-A106362] N82-16920
Matter in general relativity N82-17061
RELIABILITY
System reliability analysis with dynamic programming N82-16129
Analysis of field usage failure rate data for plastic encapsulated solid state devices
[NASA-CR-161946] N82-16343
Solar consumer assurance: An assessment of mechanisms in the northeast
[DE81-030052] N82-16538
RELIABILITY ANALYSIS
Transient error reliability models based on data analysis
[AD-A106554] N82-16751
Statistical data analysis for reliability tests
[AD-A105188] N82-16786
Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842
REMOTE SENSING
Mission definition for a large-aperture microwave radiometer spacecraft N82-16155
Earth Resources: A continuing bibliography, with indexes, issue 31
[NASA-SP-7041(31)] N82-16436
Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024] N82-16442
Development of a through-the-earth monitor system
[PB81-237646] N82-16470
Use of remote sensing techniques in a systematic investigation of an uncontrolled hazardous waste site
[PB82-103896] N82-16593
REMOTE SENSORS
Earth Resources: A continuing bibliography, with indexes, issue 31
[NASA-SP-7041(31)] N82-16436
REMOVAL
Wastewater dechlorination state-of-the-art field survey and pilot studies
[PB82-102336] N82-16621
REPLACING
Optimum equipment maintenance/replacement policy. Part 1: Dynamic programming approach N82-16128
RESCUE OPERATIONS
Special investigation report. Search and rescue procedures and arming of emergency locator transmitter: Aircraft accident near Michigan City, Indiana, 7 December, 1980
[PB81-249427] N82-16058
RESEARCH
Building technology project summaries, 1980 - 1981
[PB82-106105] N82-16296
Research and technology annual report, 1981
[NASA-TM-81333] N82-17081
RESEARCH AND DEVELOPMENT
Analysis of state-energy-program capabilities
[DE82-001963] N82-16523
A manual for designing and implementing a process to monitor complex system developments
[PB82-104308] N82-16923
Research into technology output measures
[PB81-245300] N82-16957
RESEARCH MANAGEMENT
Long-term planning for national science policy
[GPO-88-603] N82-16936
RESERVOIRS
A model for solving multiperiod multireservoir water resources problems with stochastic inflows
[AD-A106769] N82-16456
Effects of porosity type, pore geometry, and diagenetic history on tertiary recovery of petroleum from carbonate reservoirs
[DE82-000696] N82-16465
RESIDENTIAL ENERGY
Passive-solar retrofit concepts
[DE82-000453] N82-16496
Passive-solar multi-family concepts
[DE82-000456] N82-16499
Choice and Utilization of Energy-using Durables
[DE81-904228] N82-16513
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516
New York State plan to encourage commercialization of more efficient gas technologies
[PB81-249997] N82-16549
Residential energy conservation outreach activities: A new federal approach
[PB81-242349] N82-16550
RESIDUAL STRESS
Residual stress measurements in structural steels
[PB81-241499] N82-16229
RESIDUES
Development of potential uses for the residue from fluidized-bed-combustion processes
[DE81-030157] N82-16211
RESINS
Some applications of Fourier transform infrared spectroscopy in the examination of painting materials
[PB81-249575] N82-16258
Technology for improving the wear resistance of aggregates by materials impregnation
[PB81-246191] N82-16306
RESONANCE
Low-temperature electron spin resonance in (TMTSF) 2PF6 in the high pressure metallic phase
[DE81-030233] N82-16827
RESONANCE LINES
Search for promethium-like gold lines and other transitions of interest to fusion research
[DE81-029917] N82-16672
High resoluton IUE observations of the MG II resonance lines in the T Tauri Star S CrA N82-16987
RESONANCE TESTING
Resonance tests on a Piper PA-32R tailplane before and after damage
[AD-A106273] N82-16071
RESONANT FREQUENCIES
Resonance tests on a Piper PA-32R tailplane before and after damage
[AD-A106273] N82-16071
RESOURCES MANAGEMENT
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447
Oil Shale 1982: A technology and policy primer N82-16449
Adequacy and economics of water supply in northeastern Illinois, 1985 - 2010
[PB82-105495] N82-16469
Energy and environmental quality: Case histories of impact management
[DE81-026435] N82-16585
Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 1: Wastewater facilities existing environment technical reference document
[PB82-107913] N82-16599
RETENTION (PSYCHOLOGY)
Ability differences and cognitive mapping skill
[AD-A106389] N82-16741
RETINAL IMAGES
Detection of amblyopia utilizing generated retinal reflexes
[NASA-CR-161944] N82-16732
RETROFITTING
Passive-solar retrofit concepts
[DE82-000453] N82-16496
Case studies of retrofit applications of solar energy in the MASEC region
[DE82-001712] N82-16532
RETROREFLECTION
Evaluation of retro-reflective measurement devices
[PB81-243602] N82-16952
RETROREFLECTORS
Angular interferometry-resolution enhancement using half-wave plates
[AD-A107974] N82-16860
REVERSING
Reversibility of coal liquefaction
[DE81-027804] N82-16277
REVISIONS
Evaluation of the impact on emissions and fuel economy of converting two vehicles to compressed natural gas fuel
[PB81-245714] N82-16959
REYNOLDS EQUATION
Basic lubrication equations
[NASA-TM-81693] N82-16413
RHEOLOGY
Traction contact performance evaluation at high speeds
[NASA-CR-165226] N82-16409
RHYTHM (BIOLOGY)
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711
Phenomena of fluctuation of human reaction to antiorthostatic position N82-16721
RIBS (SUPPORTS)
Thermal measurement technique of rib elements on DSN antenna structure N82-16112
RIDGES
Ridge systems of Mars N82-17012
RISK
Risk of producing energy, and conserving it
[DE81-030607] N82-16507
RIVER BASINS
Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah
[DE82-000416] N82-16461
Analysis of stream-aquifer system interrelationships in the Big Blue and Little Blue River Basins in Gage and Jefferson Counties, Nebraska
[PB81-245870] N82-16466
Relationship of water quality of Hudson River, New York during peak discharges to geologic characteristics of contributing subbasins
[PB81-249740] N82-16627
ROADS
Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers
[PB81-238461] N82-16963
ROBOTS
The optimal planning of computerized manufacturing systems --- data flow CMS control system architecture
[PB81-241564] N82-16310
ROCK MECHANICS
Small business innovation research: Oil recovery enhancement by acoustic means
[PB81-243842] N82-16472
ROCKET EXHAUST
Time- and space-dependence of particulate effluent in the exhaust plume of a pulsed liquid bipropellant engine
[AD-A106525] N82-16173
Reeds computer code
[NASA-CR-161956] N82-16760
ROCKET FLIGHT
Fiscal year 1981 scientific and technical reports, articles, papers, and presentations
[NASA-TM-82445] N82-16927
A summary of results from solar monitoring rocket flights N82-17019
ROOT-MEAN-SQUARE ERRORS
Prediction of Earth rotation and polar motion
[NASA-CR-163468] N82-16637
Effects of strong turbulence on short wavelength laser: Experimental determination of mean square wander angle
[AD-A106776] N82-16852
ROTARY WINGS
Predesign study for a modern 4-bladed rotor for the NASA rotor systems research aircraft
[NASA-CR-166153] N82-16042
Pre-design study for a modern four-bladed rotor for the Rotor System Research Aircraft (RSRA) --- integrating the YAH-64 main rotor
[NASA-CR-166154] N82-16043
Ice phobics blade tracking and comparison of vibration analysis techniques
[AD-A108121] N82-16074
ROTATING CYLINDERS
An experimental study of forced asymmetric oscillations in a rotating liquid-filled cylinder
[AD-A107948] N82-16372

ROTATING MATTER
Investigations of nonreactive vibrational and rotational excitation in small, potentially reactive ion molecule systems at energies below 6eV
[MPIS-4/1981] N82-16816

ROTATION
Method of recording rotatory eye reflexes
N82-16727

ROTOR AERODYNAMICS
Study of controlled diffusion stator blading. 1. Aerodynamic and mechanical design report
[NASA-CR-165500] N82-16061

ROTOR BLADES (TURBOMACHINERY)
Study of controlled diffusion stator blading. 1. Aerodynamic and mechanical design report
[NASA-CR-165500] N82-16061
Products of multiple Fourier series with application to the multiblade transformation
[NASA-TM-81340] N82-16746

ROTOR SYSTEMS RESEARCH AIRCRAFT
Pre-design study for a modern four-bladed rotor for the Rotor System Research Aircraft (RSRA) --- integrating the YAH-64 main rotor
[NASA-CR-166154] N82-16043

ROTORS
Effect of seals on rotor systems
[NASA-TM-82786] N82-16411
Rotor testing in FY 1981
[DE81-028340] N82-16536

RUBIDIUM COMPOUNDS
Thermal expansion of alkali-graphite intercalation compounds
[DE82-000080] N82-16429

RUNWAY CONDITIONS
Community sensitivity to changes in aircraft noise exposure
[NASA-CR-3490] N82-16807

RUNWAY LIGHTS
Spectrally balanced chromatic landing approach lighting system
[NASA-CASE-ARC-10990-1] N82-16059

RURAL LAND USE
Coal development in rural America: The resources at risk
[PB81-243313] N82-16545

S

SADDLE POINTS (GAME THEORY)
Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805

SAFETY
Report by the Aerospace Safety Advisory Panel
[NASA-TM-84094] N82-16142

SAFETY DEVICES
Test and evaluation of improved aircrew restraint systems
[AD-A107576] N82-16056

SAFETY FACTORS
Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] N82-16563
Review of literature and regulation relating to thoracic impact toleance and injury criteria
[PB82-108697] N82-16736

SAFETY MANAGEMENT
Report by the Aerospace Safety Advisory Panel
[NASA-TM-84094] N82-16142

SAMPLES
Vocational education training in environmental health sciences. Collecting stream samples for water quality, module 16
[PB81-249690] N82-16574

SAMPLING
Vocational education training in environmental health sciences: Collecting stream samples for water quality, module 16
[PB81-249690] N82-16574

SANDS
Near-bottom velocities in waves with a current
[PB81-238665] N82-16689

SANDSTONES
Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652

SANDWICH STRUCTURES
Nonlinear finite element analysis of sandwich composites
[AD-A106378] N82-16187

SATELLITE ANTENNAS
Microwave switching power divider --- antenna feeds
[NASA-CASE-GSC-12420-1] N82-16340

SATELLITE ATTITUDE CONTROL
ATS-6 engineering performance report. Volume 2: Orbit and attitude controls
[NASA-RP-1080-VOL-2] N82-16148
Adaptive control system for large annular momentum control device N82-16165
Attitude control of the space construction base: A modular approach N82-17057

SATELLITE CONFIGURATIONS
ATS-6 engineering performance report. Volume:Program and systems summaries: Mechanical and thermal details
[NASA-RP-1080-VOL-1] N82-16147
The microwave radiometer spacecraft: A design study
[NASA-RP-1079] N82-16153
The microwave radiometer spacecraft. A design study: Executive summary N82-16154
Evolution and design characteristics of the microwave radiometer spacecraft N82-16158
Systems design and analysis of the microwave radiometer spacecraft N82-16159
Weight estimates and packaging techniques for the microwave radiometer spacecraft --- shuttle compatible design N82-16161

SATELLITE CONTROL
ATS-6 engineering performance report. Volume 3: Telecommunications and power
[NASA-RP-1080-VOL-3] N82-16149

SATELLITE DESIGN
ATS-6 engineering performance report. Volume:Program and systems summaries: Mechanical and thermal details
[NASA-RP-1080-VOL-1] N82-16147

SATELLITE NAVIGATION SYSTEMS
Auxiliary subprograms for calculating the navigational parameters of artificial Earth satellites. FORTRAN IV
[NASA-TM-75684] N82-16140

SATELLITE OBSERVATION
Satellite cloud analysis over the GATE area on 4 August 1974
[PB82-107582] N82-16676

SATELLITE ORBITS
ATS-6 engineering performance report. Volume 2: Orbit and attitude controls
[NASA-RP-1080-VOL-2] N82-16148

SATELLITE SOLAR ENERGY CONVERSION
Efficient structures for geosynchronous spacecraft solar arrays. Phase 1, 2 and 3
[NASA-CR-163471] N82-16493

SATELLITE TELEVISION
ATS-6 engineering performance report. Volume 4: Television experiments
[NASA-RP-1080-VOL-4] N82-16150

SATELLITE TRANSMISSION
ATS-6 engineering performance report. Volume 5: Propagation experiments
[NASA-RP-1080-VOL-5] N82-16151

SATELLITE-BORNE INSTRUMENTS
A summary of results from solar monitoring rocket flights N82-17019
A study of the geographic coverage properties of a satellite borne Doppler lidar wind velocity measuring system N82-17058

SATELLITE-BORNE PHOTOGRAPHY
Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications
[E82-10020] N82-16438
Compression of meteorological satellite images
[INPE-2182-RPE/393] N82-16656

SATURN
Voyager mission support, 2 N82-16107

SATURN (PLANET)
Voyager mission support, 1 N82-16106

SCANNERS
Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096

SCATTERING COEFFICIENTS
Winter and summer measurements of European very low altitude volume scattering coefficients
[AD-A106363] N82-16666
Multiple electromagnetic scattering from a cluster of spheres. Volume 2: Symmetrization
[AD-A106658] N82-16797

SCATTERING CROSS SECTIONS
Full wave analysis for scattering cross sections
[AD-A107704] N82-16333
Electron-impact excitation of ions
[DE81-030806] N82-16825

SCHEDULES
Implications of the Putnam software equation on confidence levels for project success N82-16121

SCHEDULING
Underground coal mining section data
[NASA-CR-168393] N82-16454
Mathematical programming techniques for scheduling Spacelab crew activities and experiment operations N82-17075
A study of the relativistic rise in ionization as measured by ion chambers of different design
N82-17076

SCHOTTKY DIODES
EHF test-bed subharmonic mixer
[AD-A106156] N82-16351

SCIENTISTS
Long-term planning for national science policy
[GPO-68-603] N82-16936

SCRAP
Electrorefining of aluminum
[PB81-243693] N82-16230

SEA STATES
An introduction to sea state forecasting
[PB81-242687] N82-16699

SEA WATER
Brazilian remote sensing activities, current and prospective needs
[E82-10026] N82-16444
MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-23), NOAA ship George B. Kelez, July 1979
[PB82-101049] N82-16582
Water turbidity measurements in Gulf Saint Vincent
[AD-A106274] N82-16684

SEALERS
Evaluation of flexible pavement crack sealing methods used in Utah
[PB81-239469] N82-16290

SEALING
Evaluation of flexible pavement crack sealing methods used in Utah
[PB81-239469] N82-16290

SEALS (STOPPERS)
Surface conforming thermal/pressure seal --- tail assemblies of space shuttle orbiters
[NASA-CASE-MSC-18422-1] N82-16408

SEAMOUNTS
Quantitative data on the abundances and distribution of seamounts in the Pacific Ocean
[AD-A107853] N82-16685

SEARCH PROFILES
The K-D-B-tree: A search structure for large multidimensional dynamic indexes
[AD-A106550] N82-16773

SEARCHING
Special investigation report. Search and rescue procedures and arming of emergency locator transmitter: Aircraft accident near Michigan City, Indiana, 7 December, 1980
[PB81-249427] N82-16058
Nonpolynomial and inverse interpolation for line search: Synthesis and convergence rates
[AD-A106680] N82-16776

SEAS
Proper frequencies of a down-looking water-vapor radiometer over sea surface N82-16103

SECULAR VARIATIONS
Solar radius measurements N82-17027

SEDIMENT TRANSPORT
Relationship of water quality of Hudson River, New York during peak discharges to geologic characteristics of contributing subbasins
[PB81-249740] N82-16827

Northern Gulf of Mexico topographic features study. Volume 2: Methods, fossil coccoliths, chemical analyses
[PB81-248668] N82-16693

SEDIMENTS

Northern Gulf of Mexico topographic features study, executive summary
[PB81-248643] N82-16691

Nothern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography
[PB81-248650] N82-16692

Northern Gulf of Mexico topographic features study, volume 3
[PB81-248676] N82-16694

Northern Gulf of Mexico topographic features study. Volume 4: Other banks
[PB81-248684] N82-16695

SEISMIC WAVES

Earthquake engineering of large underground structures
[PB81-247918] N82-16291

SEISMOLOGY

Use of back azimuth measurements in seismic event location with regional data
[AD-A106429] N82-16639

Solar pulsations and long-term solar variability
N82-17036

SELF ABSORPTION

Mechanisms of cadmium absorption in rats
[PB82-108184] N82-16703

SEMICONDUCTOR DEVICES

Gunn diodes and devices (bibliography for 1978-1980)
[NASA-TM-76750] N82-16342

Heterojunctions in semiconductors
[AD-A106546] N82-16905

SEMICONDUCTOR JUNCTIONS

Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] N82-16490

SEMICONDUCTOR LASERS

Power efficiency of semiconductor injection lasers
N82-16115

Phase-locking of semiconductor injection lasers
N82-16116

SEMICONDUCTORS (MATERIALS)

Gunn diodes and devices (bibliography for 1978-1980)
[NASA-TM-76750] N82-16342

Semiconductor measurement technology: The design, testing, and analysis of a comprehensive test pattern for measuring CMOS/SOS process performance and control
[PB81-245342] N82-16361

Silicon production process evaluations
[NASA-CR-163470] N82-16486

Heterojunctions in semiconductors
[AD-A106546] N82-16905

The effect of solute-vacancy pairs on the physical properties of Si doped GaAs and other compound semiconductor systems
[AD-A107598] N82-16910

Photoacoustic spectroscopy of dielectric and semiconducting solids
[AD-A107613] N82-16911

SEPARATED FLOW

Nonlinear analysis of interfering bodies in supersonic flow
[AD-A108071] N82-16053

SERVICE LIFE

A computerized life-cycle cost methodology for engineering analysis N82-16130

Feasibility study for long lifetime helium dewar
[NASA-CR-166254] N82-16145

SETTLING

Surface chemical technology for improved wetting of coal dust
[PB82-104654] N82-16608

SEWAGE TREATMENT

Performance of trickling filter plants: Reliability, stability, variability
[PB82-108143] N82-16603

Evaluation of on-site wastewater treatment and disposal options
[PB82-101635] N82-16616

Density levels of pathogenic organisms in municipal wastewater sludge, a literature review
[PB82-102286] N82-16619

Composting processes to stabilize and disinfect municipal sewage sludge
[PB81-240509] N82-16629

SEYFERT GALAXIES

Optical and ultraviolet spectra of Seyfert galaxies
N82-16991

Nuclear activity in SO, SBO - galaxy nuclei
N82-16999

SHAFTS (MACHINE ELEMENTS)

A system for measuring steady-state torque on a rotating shaft
[PB81-240632] N82-16384

SHALE OIL

Oil Shale 1982: A technology and policy primer
N82-16449

SHALES

Assessment of environmental health and safety issues associated with the commercialization of unconventional gas recovery: Devonian shale
[DE82-001047] N82-16563

SHAPE CONTROL

Bootlace catenary concept for antenna shape control N82-16167

SHAPES

Neutral density measurements in Doublet 3
[DE82-000497] N82-16829

Measurement of surface shape of imploding hollow plasma liners
[DE81-030996] N82-16866

High-beta studies with beam-heated, non-circular plasmas in ISX-B
[DE81-032003] N82-16874

SHEAR STRESS

Experiments on continuous composite beams
[PB81-247116] N82-16434

SHELLS (STRUCTURAL FORMS)

Wave propagation through axially symmetric dielectric shells
[AD-A106762] N82-16326

SHIELDING

Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801

Analytical study of twin-jet shielding
[NASA-CR-165103] N82-16802

Analytical study of twin-jet shielding
[NASA-CR-165104] N82-16803

Analytical study of twin-jet shielding
[NASA-CR-165105] N82-16804

Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805

Analytical study of twin-jet shielding two-dimensional model
[NASA-CR-165107] N82-16806

SHIVA LASER SYSTEM

Copper-coated laser-fusion targets using molecular-beam levitation
[DE82-000644] N82-16841

SHOCK LOADS

Study of shock-induced signals and coherent effects in solids by molecular dynamics
[DE81-030412] N82-16917

SHOCK TESTS

Study of shock-induced signals and coherent effects in solids by molecular dynamics
[DE81-030412] N82-16917

SHOCK WAVE ATTENUATION

CAS22 - FORTRAN program for fast design and analysis of shock-free airfoil cascades using fictitious-gas concept
[NASA-CR-3507] N82-16044

SHOCK WAVE PROPAGATION

Critical parameters for detonation propagation and initiation of solid explosives
[AD-A106485] N82-16365

SHOCK WAVES

Critical angles and grazing incidence: The breakdown of regular shock reflection in solids
[AD-A107665] N82-16426

A shock wave approach to the noise of supersonic propellers
[NASA-TM-82752] N82-16609

SIDELOBES

A new SPS antenna design to reduce grating lobes --- solar power satellites N82-17070

SIGNAL ANALYSIS

NBS phase angle calibration standard
[PB81-244899] N82-16390

SIGNAL DETECTION

Novel digital signal processing and detection techniques
[AD-A106774] N82-16347

Incipient failure detection (IFD) of SSME ball bearings N82-17080

SIGNAL DETECTORS

Aircraft position measurement using laser beacon optics
[AD-A107973] N82-16067

SIGNAL DISTORTION

Analysis of maximin matched-filter design for communication through a nonlinearly distorting channel
[AD-A106789] N82-16327

SIGNAL FADING

Performance of telecommunications systems in the spectral-use environment. 6: Analytical results for land-mobile scenarios in class B interference, with fading and multipath
[PB81-249344] N82-16337

SIGNAL MIXING

EHF test-bed subharmonic mixer
[AD-A106156] N82-16351

SIGNAL PROCESSING

Aircraft position measurement using laser beacon optics
[AD-A107973] N82-16067

Adaptive processing for low RCS targets
[AD-A106885] N82-16317

Antenna considerations and signal processing techniques for the identification of buried non-metalic objects
[AD-A107752] N82-16332

Method to treat picture and sound carriers to obtain a constant and adjustable level spacing between the picture carrier and the second carrier of a TV signal when there are variations of field intensity between the carriers
[BMFT-FB-T-81-041] N82-16336

Some canonical approaches to the evaluation of telecommunication system performance
[PB81-249310] N82-16338

Novel digital signal processing and detection techniques
[AD-A106774] N82-16347

Report of significant accomplishments
[AD-A107607] N82-16353

Development of a pipe location system
[PB81-246530] N82-16386

NBS phase angle calibration standard
[PB81-244899] N82-16390

The effects of microphones and facemasks on LPC vocoder performance
[AD-A107908] N82-16744

Systolic algorithms for running order statistics in signal and image processing
[AD-A106555] N82-16787

Time integrating optical signal processing
[AD-A106778] N82-16851

Fiber Optic Translator Unit (FOTU), volume 1
[AD-A106131] N82-16853

SIGNAL RECEPTION

Performance of telecommunications systems in the spectral-use environment. 6: Analytical results for land-mobile scenarios in class B interference, with fading and multipath
[PB81-249344] N82-16337

Some canonical approaches to the evaluation of telecommunication system performance
[PB81-249310] N82-16338

SIGNAL TO NOISE RATIOS

Improved carrier tracking performance with coupled phase-locked loops N82-16120

The effect of partial coherence in receiving system noise temperature on array gain for telemetry and radio frequency carrier reception for similar receiving systems N82-16127

SIGNALS

Approximate fluid-structure interaction theories for acoustic echo signal predictions
[AD-A106349] N82-16812

SIGNATURE ANALYSIS

Incipient failure detection (IFD) of SSME ball bearings N82-17080

SILANES

Synthesis of aminosilane and aromatic diamine intermediates for polymarization N82-17055

SILICIDES

A process for the production of a scale-proof and corrosion-resistant coating on graphite and carbon bodies
[NASA-TM-76786] N82-16179

SILICON

Silicon production process evaluations
[NASA-CR-163470] N82-16486

Development of a polysilicon process based on chemical vapor deposition (phase 1)
[NASA-CR-163475] N82-16488

Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] N82-16543

Metal-semiconductor reaction phenomena and microstructural investigations of laser-induced regrowth of silicon on insulators
[AD-A108867] N82-16904

SILICON CARBIDES

Brittle materials design, high temperature gas turbine
[AD-A108670] N82-16085

Materials testing for solar-thermal chemical process heat
[DE82-002003] N82-16530

SILICON FILMS

Study of the photovoltaic effect in thin film barium titanate
[NASA-CR-165061] N82-16479

Silicon-on ceramic process: Silicon sheet growth and device development for the large-area silicon sheet task of the low-cost solar array project
[NASA-CR-163476] N82-16487

The effect of solute-vacancy pairs on the physical properties of Si doped GaAs and other compound semiconductor systems
[AD-A107598] N82-16910

SILICON NITRIDES

Brittle materials design, high temperature gas turbine
[AD-A108670] N82-16085

Determination of yttrium in high density silicon nitride by emission and X-ray fluorescence spectroscopy
[AD-A107596] N82-16199

Development of high strength, high temperature ceramics N82-17050

SILICON OXIDES

Conservation of cooling water by silica removal with activated alumina
[PB81-247959] N82-16570

SILICONE RUBBER

Evaluation of three partially volatile neutron shields for high-performance shipping casks
[DE82-000245] N82-16831

SILVER

Electrorefining of sodium using solid state rapid ion conductors
[PB81-243867] N82-16234

Civil agencies should save millions by recovering silver from photographic wastes
[PB81-243479] N82-16237

SIMULATION

The zero-Doppler positioning system
[AD-A107806] N82-16064

Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953] N82-16170

SIMULATORS

Simulator evaluption of electronic radio aids to navigation displays. The RA-2 experiment
[AD-A106672] N82-16062

Operator's manual for variable weight, variable CG helmet simulator
[AD-A108093] N82-16078

Research through simulation --- simulators and research applications at Langley
[NASA-FACTS-125] N82-16092

Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093

SINE WAVES

Sine wave ranging revisited N82-16124

NBS phase angle calibration standard
[PB81-244880] N82-16390

Acceleration measures and motion sickness incidence
[AD-A107996] N82-16734

SINGLE CRYSTALS

The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data
[AD-A106419] N82-16644

High-pressure gradient-freeze growth of single crystals of indium phosphide
[AD-A107731] N82-16913

SINGLE SIDEBAND TRANSMISSION

Digital single sideband modulators for analog signals
[IND-FB-105] N82-16316

SITE SELECTION

The Class C Passive Performance Evaluation Program
[DE82-000454] N82-16533

Hazardous waste preliminary planning requirements for SRC-1 demonstration plant in Newman, Kentucky
[DE82-001346] N82-16561

The wind characteristics program element
[DE82-004876] N82-16673

SKIDDING

Skid-test evaluation of protective coverings for explosive billets
[DE82-000072] N82-16258

SKYLAB PROGRAM

Earth Resources: A continuing bibliography, with indexes, issue 31
[NASA-SP-7041(31)] N82-16436

SLAGS

Factors affecting the soundness of blended cements
[PB82-104746] N82-16299

SLIDING FRICTION

Effects of artificially produced defects on film thickness distribution in sliding EHD point contacts
[NASA-TM-82732] N82-16412

SLUDGE

Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants
[AD-A107552] N82-16552

Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] N82-16568

Density levels of pathogenic organisms in municipal wastewater sludge, a literature review
[PB82-102286] N82-16619

Parasites in southern sludges and disinfection by standard sludge treatment
[PB82-102344] N82-16622

Composting processes to stabilize and disinfect municipal sewage sludge
[PB81-240509] N82-16629

SLURRIES

Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] N82-16213

Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236

Materials and design experience in a slurry-fed electric glass melter
[DE82-000957] N82-16250

SNOWSTORMS

Ice crystal processes in Colorado, upslope snowstorms. Article 1: Case study of an upslope snowstorm
[PB82-109547] N82-16676

SOCIAL FACTORS

Nuclear energy center conceptual study. Phase 3: Site specific evaluation - environmental. Recreation use and physical characteristics of Lake Hartwell
[DE81-027337] N82-16846

Electronic information systems and user contexts: Emerging social science issues
[RAND/P-6690] N82-16926

SODIUM

Electrorefining of aluminum
[PB81-243693] N82-16230

Electrorefining of sodium using solid state rapid ion conductors
[PB81-243867] N82-16234

Molecular dynamics calculations for sodium using pseudopotential theory
[AD-A106014] N82-16821

SODIUM HYDROXIDES

Temperature and concentration transients in the aluminum-air battery --- application to electric vehicles
[DE81-030338] N82-16512

SOIL EROSION

Water repellent soils: A state-of-the-art
[PB81-248270] N82-16305

SOIL MOISTURE

Mission definition for a large-aperture microwave radiometer spacecraft N82-16155

SOIL SCIENCE

Water repellent soils: A state-of-the-art
[PB81-248270] N82-16305

Acid rain and forest productivity
[DE81-030916] N82-16555

SOILS

Closed-system freezing of soils in linings and earth embankment dams
[PB81-240491] N82-16289

The application of remote sensing to resource management and environmental quality programs in Kansas -- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

Relationships between soil moisture-holding properties and soil texture, organic matter content, and bulk density
[NASA-TM-76674] N82-16451

Pennsylvania baseline
[PB82-101742] N82-16617

An alternate approach to the measurement of soil surface heat flux
[AD-A106741] N82-16649

SOLAR ACTIVITY

Variation of the solar He I 1830 A line: 1977 - 1980 N82-17040

SOLAR ACTIVITY EFFECTS

Solar rotation and activity in the past and their possible influence upon the evolution of life
N82-16971

SOLAR ARRAYS

Silicon-on ceramic process: Silicon sheet growth and device development for the large-area silicon sheet task of the low-cost solar array project
[NASA-CR-163476] N82-16487

Efficient structures for geosynchronous spacecraft solar arrays. Phase 1, 2 and 3
[NASA-CR-163471] N82-16493

SOLAR ATMOSPHERE

Solar pulsations and long-term solar variability
N82-17036

SOLAR BLANKETS

Efficient structures for geosynchronous spacecraft solar arrays. Phase 1, 2 and 3
[NASA-CR-163471] N82-16493

SOLAR CELLS

Silicon-on ceramic process: Silicon sheet growth and device development for the large-area silicon sheet task of the low-cost solar array project
[NASA-CR-163476] N82-16487

Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] N82-16490

Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] N82-16491

Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000868] N82-16543

SOLAR COLLECTORS

A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] N82-16492

Potential for using parabolic trough collectors to supplement power cycle boilers
[SAND-81-0572C] N82-16505

Reducing convective losses from cover glazings of solar-thermal collectors
[DE81-025726] N82-16511

Modeling solar-energy systems for economic optimization
[DE81-030030] N82-16518

Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] N82-16527

Solar energy systems simulation and analysis
[DE81-026975] N82-16542

SOLAR CONSTANT

Variations of the Solar Constant --- conference
[NASA-CP-2191] N82-17014

Sensitivity of the Earth's climate to changes
N82-17015

Review of ground-based measurements
N82-17016

Change in the solar constant between 1968 and 1978 N82-17017
The variability of the solar output N82-17018
A summary of results from solar monitoring rocket flights N82-17019
Solar variability indications from Nimbus 7 satellite data N82-17020
Indirect methods for measuring variations of the solar constant N82-17021
Estimating short-term solar variations by a simple envelope matching technique N82-17028
Thermal perturbation of the Sun N82-17029
Effects of changes in convective efficiency on the solar radius and luminosity N82-17030
An instrument to measure the solar spectrum from 170 to 3200 nm on board Spacelab N82-17031
Evolutionary variations of solar luminosity N82-17032
On the seat of the solar cycle N82-17033
Short and long term variations in the solar constant N82-17034
Solar pulsations and long-term solar variability N82-17036
Observations of large-scale motions of the Sun N82-17037
Variation of the solar He I 1830 A line: 1977 - 1980 N82-17040
A prospectus for a theory of variable variability N82-17041

SOLAR COOLING
Simple predictive model for performance of desiccant beds for solar dehumidification [DE81-023606] N82-16500
The Class C Passive Performance Evaluation Program [DE82-000454] N82-16533
Boise Cascade: INEL solar home [DE82-003778] N82-16534
Passive solar products catalog, 1981 [DE82-000292] N82-16540
Developments in solar-powered air conditioning: State-of-the-art and prospects for South Africa [PB81-246076] N82-16544

SOLAR CYCLES
On the seat of the solar cycle N82-17033
The combined solar and tidal influence in climate N82-17038
A prospectus for a theory of variable variability N82-17041

SOLAR DIAMETER
The horizontal and vertical semi-diameters of the Sun observed at the Cape of Good Hope (1834 - 1887) and Paris (1837 - 1906): A report on work in progress N82-17024
Eclipse radius measurements N82-17025
Sclera solar diameter observations N82-17026
Solar radius measurements N82-17027
Thermal perturbation of the Sun N82-17029
Effects of changes in convective efficiency on the solar radius and luminosity N82-17030
On the seat of the solar cycle N82-17033
Short and long term variations in the solar constant N82-17034

SOLAR ECLIPSES
Eclipse radius measurements N82-17025

SOLAR ENERGY
A solar powered water purification system at Goldstone (DSS 13) N82-16138
Passive-solar multi-family concepts [DE82-000456] N82-16499
Simple predictive model for performance of desiccant beds for solar dehumidification [DE81-023606] N82-16500
Modeling solar-energy systems for economic optimization [DE81-030030] N82-16518
Design, construction, and initial operation of the ANL research [DE82-001961] N82-16528
Materials testing for solar-thermal chemical process heat [DE82-002003] N82-16530
Solar consumer assurance: An assessment of mechanisms in the northeast [DE81-030052] N82-16538
Solar energy systems simulation and analysis [DE81-026975] N82-16542

SOLAR ENERGY CONVERSION
Code workbook for active and passive solar design: Single-family residential construction [DE82-000637] N82-16531
Passive solar products catalog, 1981 [DE82-000292] N82-16540
Regional needs regarding technical information [DE82-001772] N82-16929

SOLAR FLARES
Experimental comprehensive solar flare indices for major and certain lesser flares, 1975-1979 [PB82-109497] N82-17042

SOLAR FLUX
Analysis of results of mini round robin reflectance test [PB81-244873] N82-16394
Monitoring solar-type stars N82-17035

SOLAR FLUX DENSITY
Estimating short-term solar variations by a simple envelope matching technique N82-17028

SOLAR HEATING
Summer-heat-gain control in passive-solar-heated buildings: Fixed horizontal overhangs [DE81-026700] N82-16287
Development of advanced building materials for the passive solar application [DE81-032009] N82-16288
Multi-channel temperature measurement amplification system --- solar heating systems [NASA-CASE-MFS-23775-1] N82-16474
Solar heated fluidized bed gasification system [NASA-CASE-NPO-15071-1] N82-16475
Passive-solar multi-family concepts [DE82-000456] N82-16499
Potential for using parabolic trough collectors to supplement power cycle boilers [SAND-81-0572C] N82-16505
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle [DE82-901186] N82-16526
Case studies of retrofit applications of solar energy in the MASEC region [DE82-001712] N82-16532
The Class C Passive Performance Evaluation Program [DE82-000454] N82-16533
Boise Cascade: INEL solar home [DE82-003778] N82-16534
Passive solar products catalog, 1981 [DE82-000292] N82-16540

SOLAR HOUSES
Passive-solar retrofit concepts [DE82-000453] N82-16496
Code workbook for active and passive solar design: Single-family residential construction [DE82-000637] N82-16531
Boise Cascade: INEL solar home [DE82-003778] N82-16534

SOLAR MAGNETIC FIELD
Short and long term variations in the solar constant N82-17034
The combined solar and tidal influence in climate N82-17038
Predominant periods in the time series of drought area index for the Western High Plains AD 1700 to 1962 N82-17039

SOLAR NEUTRINOS
Solar nutrinos N82-17022

SOLAR PONDS (HEAT STORAGE)
Design, construction, and initial operation of the ANL research [DE82-001961] N82-16528

SOLAR POWER SATELLITES
A new SPS antenna design to reduce grating lobes --- solar power satellites N82-17070

SOLAR PROBES
Design study of imaging techniques for the Starprobe mission [NASA-CR-168392] N82-16849

SOLAR RADIATION
Analysis of results of mini round robin reflectance test [PB81-244873] N82-16394

SOLAR ROTATION
Solar rotation and activity in the past and their possible influence upon the evolution of life N82-16971
Observations of large-scale motions of the Sun N82-17037
Variation of the solar He I 1830 A line: 1977 - 1980 N82-17040

SOLAR SPECTRA
The variability of the solar output N82-17018
Observed variability in the Fraunhofer line spectrum of solar flux, 1975 - 1980 N82-17023
An instrument to measure the solar spectrum from 170 to 3200 nm on board Spacelab N82-17031
Variation of the solar He I 1830 A line: 1977 - 1980 N82-17040

SOLAR SPECTROMETERS
An instrument to measure the solar spectrum from 170 to 3200 nm on board Spacelab N82-17031

SOLAR SYSTEM
Astronomical Society Information no. 50. Reports of the Scientific Meetings [REPT-50] N82-16967
Astronomical society information number 51. Review articles 2 --- with emphasis on solar system evolutionary processes [REPT-51] N82-16975
Isotopic anomalies and the early history of the solar system N82-16976
Formation of the planetary system N82-16977

SOLAR WIND
The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma [REPT-626] N82-17007

SOLENOIDS
Progress in the tandem mirror program [DE81-030303] N82-16902

SOLID ELECTROLYTES
Electrorefining of sodium using solid state rapid ion conductors [PB81-243867] N82-16234

SOLID ROCKET PROPELLANTS
Propellant surveillance report LGM-30 A, B, F and G stage I TP-H1043 aft closure propellant --- for Minuteman motors [AD-A107877] N82-16257

SOLID STATE
Theory of electron-avalanche breakdown in solids [AD-A106751] N82-16903

SOLID STATE DEVICES
Analysis of field usage failure rate data for plastic encapsulated solid state devices [NASA-CR-161946] N82-16343
Development of design, qualification, screening, and application requirements for plastic encapsulated solid-state devices for space applications [NASA-CR-161947] N82-16344
Research in electronics: JSEP [AD-A107624] N82-16354

SOLID WASTES
Development of potential uses for the residue from fluidized-bed-combustion processes [DE81-030157] N82-16211

SOLIDIFICATION
Development of in-can melting process and equipment, 1979 and 1980 [DE82-001050] N82-16834
Immobilization of high-level waste [DE81-025595] N82-16835
Solidification phenomena of binary organic mixtures N82-17047
Solidification of a binary mixture N82-17067
Heat loss and drag of spherical drop tube samples N82-17079

SOLIDS
Critical angles and grazing incidence: The breakdown of regular shock reflection in solids [AD-A107665] N82-16426
Study of shock-induced signals and coherent effects in solids by molecular dynamics [DE81-030412] N82-16917

SOLIDS FLOW
Performance of trickling filter plants: Reliability, stability, variability [PB82-108143] N82-16603

SOLITARY WAVES
Observing solitons in one dimensional magnetic systems [DE81-029919] N82-16828

SOLVENT EXTRACTION
Macromolecular structural changes in bituminous coals during extraction and solubilization [DE82-000687] N82-16830
Research in nuclear chemistry [DE81-030542] N82-16847

SOS (SEMICONDUCTORS)
Metal-semiconductor reaction phenomena and microstructural investigations of laser-induced regrowth of silicon on insulators
[AD-A106357] N82-16904
SOUND PROPAGATION
Simplified noise strategy manual
[PB81-243016] N82-16624
SOUND WAVES
Combustion enhancement and pollutant-control research with acoustically induced mixing
[DE82-001100] N82-16567
SOUNDING ROCKETS
Fabrication of X-ray telescopes for sounding rocket flights
[NASA-CR-165112] N82-17002
SOUTH AMERICA
Tide tables 1982 high and low water predictions. East Coast of North and South America including Greenland
[PB81-241622] N82-16698
SOUTH DAKOTA
Remote sensing applications to resource problems in South Dakota
[E82-10027] N82-16445
SOUTHERN CALIFORNIA
Carbon monoxide commuter exposure data base: A 5-day study in Los Angeles
[PB82-103607] N82-16589
SPACE
Norepinephrine and enzymes of synthesis and degradation thereof in the rat hypothalamus following flight aboard the Cosmos-936 biosatellite
N82-16716
SPACE COMMUNICATION
A digital filter implementation of the deep space transponder phase lock loop integrator N82-16119
SPACE COOLING (BUILDINGS)
Summer-heat-gain control in passive-solar-heated buildings: Fixed horizontal overhangs
[DE81-028700] N82-16287
Indoor climate, outdoor climate and energy consumption: A new approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings based on methods of statistical analysis N82-16476
SPACE ENVIRONMENT SIMULATION
Heat loss and drag of spherical drop tube samples
N82-17079
SPACE ERECTABLE STRUCTURES
Preliminary design of tetrahedral truss reflector structure N82-16160
SPACE EXPLORATION
Fiscal year 1981 scientific and technical reports, articles, papers, and presentations
[NASA-TM-82445] N82-16927
Advances in planetary geology
[NASA-TM-84412] N82-17010
SPACE FLIGHT
Hygienic principles of ongoing monitoring of quality of recycled water during space flights N82-16717
SPACE HEATING (BUILDINGS)
Summer-heat-gain control in passive-solar-heated buildings: Fixed horizontal overhangs
[DE81-028700] N82-16287
Indoor climate, outdoor climate and energy consumption: A new approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings based on methods of statistical analysis N82-16476
Passive-solar retrofit concepts
[DE82-000453] N82-16498
Passive-solar multi-family concepts
[DE82-000456] N82-16499
Choice and Utilization of Energy-using Durables
[DE81-904228] N82-16513
Assessment of seasonal-efficiency models for natural-gas-fired residential furnaces
[DE82-000499] N82-16516
Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle
[DE82-901186] N82-16526
Case studies of retrofit applications of solar energy in the MASEC region
[DE82-001712] N82-16532
SPACE LABORATORIES
An instrument to measure the solar spectrum from 170 to 3200 nm on board Spacelab N82-17031

SPACE PLATFORMS
Operational VLBI clock synchronization and platform parameter determination N82-16133
SPACE SHUTTLE MAIN ENGINE
Development of high strength, high temperature ceramics N82-17050
SPACE SHUTTLE ORBITERS
Advanced Space Shuttle simulation model
[NASA-CR-161958] N82-16143
Surface conforming thermal/pressure seal --- tail assemblies of space shuttle orbiters
[NASA-CASE-MSC-18422-1] N82-16408
SPACE SHUTTLE PAYLOADS
Weight estimates and packaging techniques for the microwave radiometer spacecraft --- shuttle compatible design N82-16161
SPACE SHUTTLES
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043
A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051
A study of component design loads due to dynamic environment N82-17056
Research and technology annual report, 1981
[NASA-TM-81333] N82-17081
SPACE SUITS
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706
SPACE TRANSPORTATION SYSTEM
Fiscal year 1981 scientific and technical reports, articles, papers, and presentations
[NASA-TM-82445] N82-16927
SPACE TRANSPORTATION SYSTEM FLIGHTS
Report by the Aerospace Safety Advisory Panel
[NASA-TM-84094] N82-16142
SPACE TRANSPORTATION SYSTEM 2 FLIGHT
Mission Operation Report: Space Shuttle program STS-2
[NASA-TM-84088] N82-16141
SPACEBORNE EXPERIMENTS
ATS-6 engineering performance report. Volume 6: Scientific experiments
[NASA-RP-1080-VOL-6] N82-16152
Positions, movements and equilibrium of rats after flights aboard biosatellites N82-16713
SPACEBORNE TELESCOPES
Design study of imaging techniques for the Starprobe mission
[NASA-CR-168392] N82-16849
SPACECRAFT COMMUNICATION
Emergency telemetry performance N82-16136
ATS-6 engineering performance report. Volume 3: Telecommunications and power
[NASA-RP-1080-VOL-3] N82-16149
Kafjord, Norway transmission line VLF antenna tests, 1979 - 1980
[AD-A106430] N82-16325
SPACECRAFT COMPONENTS
A test and instrumentation system for the investigation of degradation of electrical insulating materials
[NASA-CR-165109] N82-16341
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043
A study of component design loads due to dynamic environment N82-17056
SPACECRAFT CONTROL
ACOSS seven (Active Control Of Space Structures)
[AD-A106687] N82-16169
SPACECRAFT ELECTRONIC EQUIPMENT
Development of design, qualification, screening, and application requirements for plastic encapsulated solid-state devices for space applications
[NASA-CR-161947] N82-16344
SPACECRAFT PERFORMANCE
Mission Operation Report: Space Shuttle program STS-2
[NASA-TM-84088] N82-16141
LANDSAT-2 and LANDSAT-3 flight evaluation report, 23 January to 23 July 1980
[E82-10022] N82-16440
SPACECRAFT POWER SUPPLIES
Fuel optimal maneuvers for spacecraft with fixed thrusters N82-17046

SPACECRAFT STABILITY
Natural modes and real modal variables for flexible spacecraft
[CRC-1348] N82-16146
ACOSS nine (Active Control Of Space Structures)
[AD-A106686] N82-16168
ACOSS seven (Active Control Of Space Structures)
[AD-A106687] N82-16169
SPACECRAFT TRACKING
DSS 13 unattended operations station controller
N82-16118
Radio frequency interference by Earth orbiting satellites: Deep Space Interference Prediction Program N82-16125
SPACELAB
Mathematical programming techniques for scheduling Spacelab crew activities and experiment operations N82-17075
A study of the relativistic rise in ionization as measured by ion chambers of different design
N82-17076
SPARK CHAMBERS
Laser measuring system for incremental assemblies --- measuring wire-wrapped frame assemblies in spark chambers
[NASA-CASE-GSC-12321-1] N82-16396
SPATIAL DISTRIBUTION
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672
SPATIAL RESOLUTION
Radiometer design concepts for large aperture microwave radiometer spacecraft N82-16157
SPECTRAL BANDS
Assignment of an anomalous peak in the Brillouin spectrum of oriented polymer films
[AD-A107697] N82-16246
SPECTRAL EMISSION
Laser heated gas-jet: A soft X-ray source
[DE81-029627] N82-16407
SPECTRAL ENERGY DISTRIBUTION
The variability of the solar output N82-17018
SPECTRAL REFLECTANCE
Analysis of results of mini round robin reflectance test
[PB81-244873] N82-16394
SPECTRAL SIGNATURES
Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil
[E82-10025] N82-16443
Thermal vegetation canopy model studies
[AD-A106422] N82-16455
SPECTROGRAMS
High resoluton IUE observations of the MG II resonance lines in the T Tauri Star S CrA
N82-16987
SPECTROMETERS
Nanosecond and picosecond spectroscopy and kinetics of dynamic absorbing materials
[AD-A107733] N82-16403
SPECTROSCOPIC ANALYSIS
Vibrational spectroscopy of the electrode-electrolyte interface. Use of Fourier transform infrared Spectroscopy
[AD-A106231] N82-16192
Oxidation of polycrystalline boron: The interpretation of AES and ELS results
[DE82-000087] N82-16201
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] N82-16228
Coal-gasification instrumentation program (PR 11734)
[DE82-001153] N82-16381
SPECTROSCOPY
Feasibility of interfacing a microcomputer with a multichannel analyzer to perform gamma ray spectroscopy
[AD-A106176] N82-16194
SPECTRUM ANALYSIS
ARMA spectral estimation: An efficient closed form procedure
[AD-A106753] N82-16788
SPEECH RECOGNITION
The effects of microphones and facemasks on LPC vocoder performance
[AD-A107908] N82-16744

SPEED INDICATORS
Rotor testing in FY 1981
[DE81-028340] N82-16536

SPENT FUELS
Spent fuel and radioactive waste inventories and projections as of December 31, 1980
[DE82-000307] N82-16836
STAFF-5, a two-dimensional computer model for simulation of the performance of spent fuel in storage/disposal
[DE82-000043] N82-16838
Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842
Nuclear waste management
[DE82-001605] N82-16845

SPERMATOZOA
Possible mechanism for chemical induction of chromosome aberrations in male meiotic and postmeiotic germ cells of mice
[DE81-031999] N82-16700

SPHERES
Multiple electromagnetic scattering from a cluster of spheres. Volume 2: Symmetrization
[AD-A106658] N82-16797
High frequency scattering by a sphere with complex surface impedance N82-16799

SPHERICAL ANTENNAS
Electromagnetic design of a microwave radiometer antenna system N82-16162

SPHERICAL COORDINATES
Multipole expension for transient electric and magnetic fields in an internally excited spherical cavity contaning dampers of finite thickness with distributed electrical properties
[AD-A106384] N82-16329

SPHEROMAKS
Tilt and shift mode stability with line tying
[AD-A106228] N82-16884

SPILLING
Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103870] N82-16591
Techniques for handling landborne spills of volatile hazardous substances
[PB82-105230] N82-16609

SPIN GLASS
Random anisotropy effects in Ising spin glass
[INPE-2194-TDL/061] N82-16919

SPIN TESTS
Spin tests of a single-engine, high-wing light airplane
[NASA-TP-1927] N82-16068

SPINAL CORD
Electrode unit for testing human H reflex
N82-16728

SPIRAL GALAXIES
The generation of spiral waves in galaxies
N82-16974

SPOILERS
Summary of theoretical considerations and wind tunnel tests of an aerodynamic spoiler for stall proofing a general aviation airplane
[NASA-CR-165100] N82-16046

SPRAYING
Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] N82-16213

SPREAD F
Ionospheric disturbances propagating eastward in a low latitude detected by VHF polarimeters
[INPE-2202-PRE/011] N82-16632

SPREAD SPECTRUM TRANSMISSION
Advanced underwater telemetry and voice links for inland and coastal waters research
[PB81-241408] N82-16144
Skywave communication techniques. Decision feedback equilization for serially modulated spread-spectrum signals in the HF band yields improved reliability
[AD-A106380] N82-16328

STABILIZATION
Effect of seals on rotor systems
[NASA-TM-82786] N82-16411

STACKING FAULT ENERGY
The determination of the stacking fault energy in copper-nickel alloys N82-17054

STAINLESS STEELS
Crevice corrosion and metal-ion concentration cell-corrosion resistance of candidate materials for OTEC heat exchangers, parts 1 and 2
[DE82-000909] N82-16227

STANDARDIZATION
A summary of the EPA national source performance audit program - 1980
[PB82-108127] N82-16602

STANDARDS
Precision measurements on fibrous glass insulation
[PB81-239634] N82 16308
Cryogenic fluids density reference system: Provisional accuracy statement (1980)
[PB81-244865] N82-16388
NBS phase angle calibration standard
[PB81-244899] N82-16390
Technical activities 1980: Center for Materials Science
[PB81-245318] N82-16391

STAR CLUSTERS
Astronomical society information no. 52. Report of the meeting --- conferences
[ISSN-0374-1958] N82-16986
The mass (star number)-radius relations for the clusters of the large Magellanic Cloud N82-16993
Non-stationary viscous gaseous disks in nuclei of dense stellar systems N82-16994

STAR DISTRIBUTION
Star populations in the galactic halo N82-16988

STAR TRACKERS
Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953] N82-16170
Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171

STARS
Astronomical society information no. 52. Report of the meeting --- conferences
[ISSN-0374-1958] N82-16986

STATIC TESTS
A summary of the EPA national source performance audit program - 1980
[PB82-108127] N82-16602

STATISTICAL ANALYSIS
Frequency and motion of Atlantic tropical cyclones
[PB81-247256] N82-16682

STATISTICAL DISTRIBUTIONS
A Fokker-Planck model for the stellar initial mass function N82-16968

STATISTICAL TESTS
Texture classification with change point statistics
[AD-A106814] N82-16789
Conflict among testing procedures in a linear regression model
[RAND/P-6691] N82-16794

STATISTICAL WEATHER FORECASTING
Statistical Analysis of daily mean temperatures
N82-17072

STEADY STATE
Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] N82-16283

STEAM
Industrial steam supply system characteristics program. Phase 2: Low- and medium-Btu gas-fired boilers with associated gasification plants
[DE82-000535] N82-16517
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] N82-16614

STEAM TURBINES
New features and applications of PRESTO, a computer code for the performance of regenerative, superheated steam turbine cycles
[NASA-TP-1954] N82-16477

STEEL STRUCTURES
Residual stress measurements in structural steels
[PB81-241499] N82-16229
Experiments on continuous composite beams
[PB81-247116] N82-16434
Aluminum and chromium ion particle studies for enhancement of surface properties N82-17071

STEELS
Control of fractionation-area corrosion at SRC pilot plants
[DE82-001949] N82-16280

STELLAR EVOLUTION
A Fokker-Planck model for the stellar initial mass function N82-16968
Astronomical society information number 51. Review articles 2 --- with emphasis on solar system evolutionary processes
[REPT-51] N82-16975
Formation of the planetary system N82-16977
Early phases of stellar formation N82-16979
Mass loss from early type stars N82-16980
The formation of compact objects in binary systems N82-16981
Wolf-Rayet stars with compact companions
N82-16982
Astronomical society information no. 52. Report of the meeting --- conferences
[ISSN-0374-1958] N82-16986
Non-stationary viscous gaseous disks in nuclei of dense stellar systems N82-16994
Evolution and nucelosynthesis of massive Pop 111 stars N82-16997
Solar nutrinos N82-17022

STELLAR LUMINOSITY
The 1 mm observations of optically selected quasars N82-17000
Indirect methods for measuring variations of the solar constant N82-17021
Sclera solar diameter observations N82-17026
Monitoring solar-type stars N82-17035

STELLAR MAGNETIC FIELDS
Magnetic activity in cool stars N82-16983
A prospectus for a theory of variable variability
N82-17041

STELLAR MASS
Mass loss from early type stars N82-16980
The formation of compact objects in binary systems N82-16981
Structure and dynamics of the Large Magellanic Cloud N82-16985
The mass (star number)-radius relations for the clusters of the large Magellanic Cloud N82-16993
Non-stationary viscous gaseous disks in nuclei of dense stellar systems N82-16994

STELLAR MASS ACCRETION
A Fokker-Planck model for the stellar initial mass function N82-16968

STELLAR MODELS
Thermonuclear model for gamma-ray bursts
[DE81-030835] N82-17003

STELLAR RADIATION
Thermonuclear model for gamma-ray bursts
[DE81-030835] N82-17003

STELLAR ROTATION
Magnetic activity in cool stars N82-16983
Equilibrium and stability of rotating stellar cores with finite entropy N82-16995

STELLAR SPECTRA
Astronomical society information no. 52. Report of the meeting --- conferences
[ISSN-0374-1958] N82-16986
IUE observations of a new BL lac object from the S5 radio catalogue N82-16990
Optical and ultraviolet spectra of Seyfert galaxies
N82-16991
Simultaneous IUE and optical observations of the short period spot active binary XY Ursae Majoris
N82-16992

STELLAR SPECTROPHOTOMETRY
Astronomical society information no. 52. Report of the meeting --- conferences
[ISSN-0374-1958] N82-16986
Simultaneous IUE and optical observations of the short period spot active binary XY Ursae Majoris
N82-16992

STELLAR STRUCTURE
Equilibrium and stability of rotating stellar cores with finite entropy N82-16995
Variations of the Solar Constant --- conference
[NASA-CP-2191] N82-17014

STEREOPHOTOGRAPHY
Viking orbiter stereo imaging catalog
[NASA-CR-3501] N82-17009

STERILIZATION
Parasites in southern sludges and disinfection by standard sludge treatment
[PB82-102344] N82-16622

STILLS
A solar powered water purification system at Goldstone (DSS 13) N82-16138

STIMULATED EMISSION DEVICES
Vibrational relaxation of DF (v=1 and 3) in H2, D2, N2, and HF at 200 K
[AD-A106142] N82-16401

STOCHASTIC PROCESSES
A model for solving multiperiod multireservoir water resources problems with stochastic inflows
[AD-A106769] N82-16456
Domination problem for vector measures and applications to nonstationary processes
[AD-A106375] N82-16778
The stochastic evolution of asteroidal regoliths and the origin of brecciated and gas-rich meteorites
N82-17011

STOICHIOMETRY
Heat source: Materials interactions during fusion welding
[AD-A107717] N82-16414

STORAGE RINGS (PARTICLE ACCELERATORS)
Theory of a modified Wadsworth monochromator matched to a low energy storage ring source
[DE81-030034] N82-16379

STORAGE STABILITY
Hazardous waste preliminary planning requirements for SRC-1 demonstration plant in Newman, Kentucky
[DE82-001346] N82-16561
Storage stability and improvement of intermediate moisture foods, phase 5
[NASA-CR-167503] N82-16742
STAFF-5, a two-dimensional computer model for simulation of the performance of spent fuel in storage/disposal
[DE82-000043] N82-16836

STORMS
Development of a large scale cloud system, 23-27 March 1978
[AD-A106417] N82-16665
Mesoscale Aspects of Convective Storms
[PB81-247249] N82-16679

STORMS (METEOROLOGY)
NASA/MSFC FY-81 Atmospheric Processes Research Review
[NASA-CP-2204] N82-16660
Severe storms and local weather research
N82-16663

STRAIN GAGES
Ground calibration of a strain-gauged CT-4A aircraft (1979)
[AD-A107847] N82-16073

STRAIN RATE
Analysis of strain distribution for fiber reinforced composites by Moire method
[NAL-TR-681] N82-16420

STRANGENESS
Kaon-induced nuclear reactions
[DE81-030552] N82-16839

STRATIGRAPHY
Hydrogeologic setting of the Glacial Lake Agassiz Peatlands, Northern Minnesota
[PB81-249328] N82-16473

STRATOSPHERE
Comparison of the dynamic processes during major and minor stratospheric warmings in a numerical model
[AD-A106371] N82-16645

STRATOSPHERE RADIATION
Upper atmospheric section N82-16661

STREAMS
Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] N82-16537
Vocational education training in environmental health sciences: Collecting stream samples for water quality, module 16
[PB81-249690] N82-16574

STREPTOMYCETES
Effect of transmeridional flights on biorhythm of zone formation by Streptomyces levoris N82-16711

STRESS (PHYSIOLOGY)
Fatigue in Flight Inspection Field Office (FIFO) flight crews
[AD-A106791] N82-16733

STRESS ANALYSIS
Development of an engineering analysis of progressive damage in composites during low velocity impact
[NASA-CR-165778] N82-16177
Strength and stiffness of small glued-laminated beams with different qualities of tension laminations
[AD-A106562] N82-16421

STRESS CONCENTRATION
Ground calibration of a strain-gauged CT-4A aircraft (1979)
[AD-A107847] N82-16073
Behavior of construction adhesives under long-term load
[AD-A106565] N82-16240
Use of weight functions to determine the stress intensity for a cracked thick-walled cylinder
[AD-A106270] N82-16423

STRESS CORROSION CRACKING
Effects of environmental variables on the crack initiation stages of corrosion fatigue of high strength aluminum alloys
[NASA-CR-165115] N82-16216
Proceedings of the Interdisciplinary Meeting on Hydrogen in Metals
[DE81-904020] N82-16226

STRESS INTENSITY FACTORS
Static stress-intensity factors and dynamic crack propagation in pipes
[DE82-900365] N82-16431

STRESS MEASUREMENT
Residual stress measurements in structural steels
[PB81-241499] N82-16229
LLNL gas-stimulation program
[DE82-000802] N82-16269

STRESS-STRAIN RELATIONSHIPS
Effect of paperboard stress-strain characteristics on strength of singlewall corrugated fiberboard: A theoretical approach
[AD-A106566] N82-16184
Analysis of bonded joints in composite materials structures involving hygrothermal effects
[AD-A106720] N82-16188
Earthquake engineering of large underground structures
[PB81-247918] N82-16291

STRETCHING
Biaxial and electrostatic tensioning effects on thin membrane materials N82-16166

STRIP MINING
Coal development in rural America: The resources at risk
[PB81-243313] N82-16545

STRIP TRANSMISSION LINES
Microwave switching power divider --- antenna feeds
[NASA-CASE-GSC-12420-1] N82-16340
EHF test-bed subharmonic mixer
[AD-A106156] N82-16351

STRUCTURAL ANALYSIS
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533] N82-16080

STRUCTURAL DESIGN
Building technology project summaries, 1980 - 1981
[PB82-106105] N82-16296

STRUCTURAL DESIGN CRITERIA
Predesign study for a modern 4-bladed rotor for the NASA rotor systems research aircraft
[NASA-CR-166153] N82-16042
Evolution and design characteristics of the microwave radiometer spacecraft N82-16158
Small-scale fuel-alcohol plant. Volume 3: Construction information
[DE82-001036] N82-16279
A study pertaining to inertial energy storage machine designs for space applications
[NASA-CR-163465] N82-16489
Design of first walls and beam dumps for tandem mirror experiment upgrade
[DE81-030888] N82-16875
Development of photomultiplier electronics and computer interfacing software for a high speed photoelectric photometer-Stoke's meter N82-17049
Development of high strength, high temperature ceramics N82-17050

STRUCTURAL ENGINEERING
Pre-design study for a modern four-bladed rotor for the Rotor System Research Aircraft (RSRA) --- integrating the YAH-64 main rotor
[NASA-CR-166154] N82-16043
Earthquake engineering of large underground structures
[PB81-247918] N82-16291
Evaluation of the feasibility of establishing a national testing capability for the simulation of earthquake loads on large-scale structures
[PB81-243875] N82-16295
Building technology project summaries, 1980 - 1981
[PB82-106105] N82-16296

STRUCTURAL MEMBERS
Residual stress measurements in structural steels
[PB81-241499] N82-16229
Mechanical properties of adhesively bonded aluminum structures protected with hydrated inhibitors
[AD-A106222] N82-16241

STRUCTURAL PROPERTIES (GEOLOGY)
Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024] N82-16442
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446

STRUCTURAL STABILITY
Investigation of reinforced brick masonry buildings undamaged by the San Fernando earthquake
[PB82-104217] N82-16432

STRUCTURAL STRAIN
Strength and stiffness of small glued-laminated beams with different qualities of tension laminations
[AD-A106562] N82-16421
Experiments on continuous composite beams
[PB81-247116] N82-16434

STRUCTURAL VIBRATION
Ice phobics blade tracking and comparison of vibration analysis techniques
[AD-A108121] N82-16074
A study of component design loads due to dynamic environment N82-17056

STRUCTURAL WEIGHT
Integration of a code for aeroelastic design of conventional and composite wings into ACSYNT, an aircraft synthesis program --- wing aeroelastic design (WADES)
[NASA-CR-137805] N82-16069

STRUTS
Multiple pure tone elimination strut assembly --- air breathing engines
[NASA-CASE-FRC-11062-1] N82-16800

SUBMERGED BODIES
Approximate fluid-structure interaction theories for acoustic echo signal predictions
[AD-A106349] N82-16812

SUBROUTINES
Subroutines for celestial mechanics and orbit generation
[INPE-2180-RPE/392] N82-17006

SUBSONIC FLOW
Laser velocimeter measurements in turbulent and mixing flows, Part 3
[AD-A106130] N82-16368

SULFATES
Experimental work related to two bismuth sulfate cycles and their possible improvement. Outline of a possible antimonyl sulfate cycle with separate evolution of sulfur dioxide and oxygen
[DE81-030236] N82-16206

SULFUR
Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236
Formation of NO sub x and other products from chemically bound nitrogen in coal combustion
[DE81-028536] N82-16560
Hydrogen sulfide generation by reaction of natural gas, sulfur and steam
[PB82-106998] N82-16614

SULFUR COMPOUNDS
Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] N82-16568

SULFUR DIOXIDES
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] N82-16557

SULFURIC ACID
Materials testing for solar-thermal chemical process heat
[DE82-002003] N82-16530

SUMMER
Summer-heat-gain control in passive-solar-heated buildings: Fixed horizontal overhangs
[DE81-028700] N82-16287

SUN
Solar nutrinos N82-17022
Observed variability in the Fraunhofer line spectrum of solar flux, 1975 - 1980 N82-17023
The horizontal and vertical semi-diameters of the Sun observed at the Cape of Good Hope (1834 - 1887) and Paris (1837 - 1906): A report on work in progress N82-17024

SUNFLOWERS
Sunflower seed oil as an extender for diesel fuel in agricultural tractors
[DE81-903440] N82-16264

SUNLIGHT
Daylighting
[DE82-000930] N82-16515

SUNSPOT CYCLE
Predominant periods in the time series of drought area index for the Western High Plains AD 1700 to 1962 N82-17039

SUNSPOTS
On the seat of the solar cycle N82-17033
Short and long term variations in the solar constant N82-17034
Observations of large-scale motions of the Sun N82-17037

SUPERCONDUCTIVITY
The design and evaluation of superconducting connectors N82-17059

SUPERCONDUCTORS
Low-temperature electron spin resonance in (TMTSF) 2PF6 in the high pressure metallic phase
[DE81-030233] N82-16827

SUPERHEATING
Carbon vapor pressure in the range 3450 to 4500 K and evidence for melting at approximately 3800 K
[AD-A106134] N82-16196

SUPERHIGH FREQUENCIES
Goldstone STDN 9-meter radiation test N82-16137
A model to calculate EM fields in tropospheric duct environments at frequencies through SHF
[AD-A107710] N82-16335

SUPERSONIC FLOW
Calculation of three-dimensional, inviscid, supersonic, steady flows
[NASA-CR-165110] N82-16047
Nonlinear analysis of interfering bodies in supersonic flow
[AD-A108071] N82-16053
A shock wave approach to the noise of supersonic propellers
[NASA-TM-82752] N82-16809

SUPERSONIC NOZZLES
Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801

SUPERSONIC SPEEDS
Noise of the SR-3 propeller model at 2 deg and 4 deg angle of attack
[NASA-TM-82738] N82-16808

SUPPORT INTERFERENCE
Effects of antenna blockage on radio frequency performance of the microwave radiometer spacecraft N82-16164

SURFACE DEFECTS
Effects of artificially produced defects on film thickness distribution in sliding EHD point contacts
[NASA-TM-82732] N82-16412

SURFACE DISTORTION
Measurement of surface shape of imploding hollow plasma liners
[DE81-030996] N82-16866

SURFACE FINISHING
Thin, applied surfacing for improving skid resistance of concrete pavements
[PB81-247744] N82-16307
Stability of optical coatings in hostile excimer laser environments
[AD-A106756] N82-16397
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] N82-16492
Energy conservation by multiple glazing on heavy masonry buildings
[PB81-246977] N82-16548

SURFACE NAVIGATION
Simulator evaluation of electronic radio aids to navigation displays. The RA-2 experiment
[AD-A106672] N82-16062
Analytical positioning of aids to navigation
[AD-A107811] N82-16065

SURFACE PROPERTIES
Near surface flaw detection by ultrasonic angle imaging
[PB81-235939] N82-16418
Surface chemical technology for improved wetting of coal dust
[PB82-104654] N82-16608

SURFACE ROUGHNESS
Biaxial and electrostatic tensioning effects on thin membrane materials N82-16166
A preliminary evaluation of the system for Inventorying Road Surface Topography (SIRST)
[PB81-249336] N82-16294
Coherent scatter of microwaves from moderately rough surfaces
[AD-A106133] N82-16331
Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers
[PB81-238461] N82-16963

SURFACE ROUGHNESS EFFECTS
Effects of random distortions on the surface accuracy of a large antenna N82-16163
Full wave analysis for scattering cross sections
[AD-A107704] N82-16333

SURFACE WATER
Evaluation of pollution abatement alternatives: Picillo property, Coventry, Rhode Island
[PB82-103888] N82-16592

SURFACE WAVES
Report of significant accomplishments
[AD-A107607] N82-16353

SURFACES
An alternate approach to the measurement of soil surface heat flux
[AD-A106741] N82-16649
High frequency scattering by a sphere with complex surface impedance N82-16799

SURFACTANTS
Surface chemical technology for improved wetting of coal dust
[PB82-104654] N82-16608

SURVEILLANCE
Infrared equipment, general
[AD-A106711] N82-16854

SURVEYS
A VLBI survey of the northern polar cap region N82-16108
Consumer orientations toward fuel efficient vehicles: Executive summary
[PB81-245359] N82-16965
Consumer orientations toward fuel efficient vehicles
[PB81-245367] N82-16966
Assessment of MSFC's supervisory training programs and courses --- marshall space flight center N82-17068

SWELLING
Prediction of composite hygral behavior made simple
[NASA-TM-82780] N82-16181
Swelling and microstructure of HFIR irradiated austenitic stainless steels
[DE82-000158] N82-16219
Void swelling in the molybdenum alloy TZM irradiated to high fluences
[DE81-029802] N82-16223

SWEPTBACK WINGS
Some experimental investigations on transonic flutter characteristics of thin plate wing models with sweptback and tapered tips
[NAL-TR-682] N82-16050

SWITCHING CIRCUITS
Microwave switching power divider --- antenna feeds
[NASA-CASE-GSC-12420-1] N82-16340

SYMMETRY
Multiple electromagnetic scattering from a cluster of spheres. Volume 2: Symmetrization
[AD-A106658] N82-16797

SYNCHRONISM
Operational VLBI clock synchronization and platform parameter determination N82-16133

SYNCHRONIZERS
Memory-based frame synchronizer --- for digital communication systems
[NASA-CASE-GSC-12430-1] N82-16747

SYNCHROTRONS
Progress and prospects at the National Synchrotron Light Source (NSLS)
[DE81-030738] N82-16861

SYNOPTIC METEOROLOGY
Synoptic scenario of the invasion of cold air during the freeze of May 1979 and frost mapping to forecast areas of major risk
[INPE-2166-RPE/383] N82-16654
Synoptic climatology of bell-shaped thunderstorms
[AD-A106158] N82-16668
On the analysis of Seasat winds
[PB81-245649] N82-16675

SYNTHESIS (CHEMISTRY)
Synthesis of polyformals
[NASA-CASE-ARC-11244-1] N82-16174
Synthesis of articulated all-para polymers
[AD-A107554] N82-16247

SYNTHETIC FUELS
Verification of the foreign synfuels industrialization experience
[DE82-000230] N82-16272
Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] N82-16281
Oil Shale 1982: A technology and policy primer N82-16449
Solar heated fluidized bed gasification system
[NASA-CASE-NPO-15071-1] N82-16475
Energy in the 1980s: A call for leadership. The Public Awareness Symposium
[DE81-027613] N82-16504
Development of hydroconversion of biomass to synethetic fuels. Project 61042 technical report
[DE82-000674] N82-16529

SYSTEM EFFECTIVENESS
Emission and fuel economy of FUEL-MAX, a retrofit device
[PB81-244162] N82-16961

SYSTEM FAILURES
Unregulated exhaust emissions from noncatalyst baseline cars under malfunction conditions
[PB82-101130] N82-16596

SYSTEMS ANALYSIS
System reliability analysis with dynamic programming N82-16129
Systems analysis of H2/natural gas supplementation and separation
[DE81-030031] N82-16270
CNPq/INPE: LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] N82-16441
Technical support for open-cycle MHD program --- combined cycle mhd/steam power system analysis
[DE82-001955] N82-16901

SYSTEMS ENGINEERING
Small-scale-fuel-alcohol plant. Volume 3: Construction information
[DE82-001036] N82-16279
Design, construction, and initial operation of the ANL research
[DE82-001961] N82-16528
The design of multiactivity multifacility systems
[AD-A107670] N82-16791
A manual for designing and implementing a process to monitor complex system developments
[PB82-104308] N82-16923
X-ray astronomy instrumentation studies --- design of a proportional counter and measurements of fluorescent radiation
[NASA-CR-161948] N82-17001
Research and technology annual report, 1981
[NASA-TM-81333] N82-17081

SYSTEMS INTEGRATION
Block 1 phase 2 very long baseline interferometry implementation N82-16104

SYSTEMS SIMULATION
Computer simulator for a mobile telephone system
[NASA-CR-164808] N82-16314

T

T TAURI STARS
High resoluton IUE observations of the MG II resonance lines in the T Tauri Star S CrA
N82-16987

TABLES (DATA)
Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171
Tide tables 1982 high and low water predictions. East Coast of North and South America including Greenland
[PB81-241622] N82-16696

TACAN
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 3: A comparison of waypoint guidance algorithms for RNAV/MLS transition
[NASA-CR-3512] N82-16060

TAIL ASSEMBLIES
Resonance tests on a Piper PA-32R tailplane before and after damage
[AD-A106273] N82-16071
Surface conforming thermal/pressure seal --- tail assemblies of space shuttle orbiters
[NASA-CASE-MSC-18422-1] N82-16408

TANKER SHIPS
Simulator evaluation of electronic radio aids to navigation displays. The RA-2 experiment
[AD-A106672] N82-16062

TAPE RECORDERS
Tape recording and triggering systems
[PB81-243248] N82-16382

TASKS
Pilot workload: A survey of operational problems
[AD-A107758] N82-16745

TECHNOLOGICAL FORECASTING
Air service, airport access and future technology
[PB82-105958] N82-16100
Long-term planning for national science policy
[GPO-68-603] N82-16936
Flight dynamics technology development: Structures and dynamics, vehicle equipment/subsystems, flight control and aeromechanics
[AD-A096636] N82-17082

TECHNOLOGY ASSESSMENT
Foreign coal-liquefaction-technology survey and assessment
[DE82-0009555] N82-16281
Concepts of fundamental processes related to gasification of coal
[DE82-000763] N82-16282
Earthquake engineering of large underground structures
[PB81-247918] N82-16291
Oil Shale 1982: A technology and policy primer
N82-16449
Assessment of emerging energy sources
[DE82-900318] N82-16519
Case studies of retrofit applications of solar energy in the MASEC region
[DE82-001712] N82-16532
Assessment of emerging technologies for metal finishing pollution control: Three case studies
[PB81-244485] N82-16571
Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103670] N32-16591
An application of decision analysis to technology assessment: An assessment of decentralized waste treatment methods
[PB82-109018] N82-16605
Wastewater dechlorination state-of-the-art field survey and pilot studies
[PB82-102336] N82-16621
Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] N82-16947
Research into technology output measures
[PB81-245300] N82-16957
Carbon monoxide and non-FTP (Federal Test Procedures) ambient temperature
[PB81-243180] N82-16962

TECHNOLOGY TRANSFER
Technology transfer of computer-aided engineering to the university community
[UCRL-85694] N82-16939

TECHNOLOGY UTILIZATION
Proceedings of the Conference on Innovation in the Environmental Technology Industry
[PB82-109586] N82-16606

TELECOMMUNICATION
Performance of telecommunications systems in the spectral-use environment. 6: Analytical results for land-mobile scenarios in class B interference, with fading and multipath
[PB81-249344] N82-16337
Some canonical approaches to the evaluation of telecommunication system performance
[PB81-249310] N82-16338

TELEMETRY
Voyager mission support, 1 N82-16106
Radio frequency interference by Earth orbiting satellites: Deep Space Interference Prediction Program N82-16125
Emergency telemetry performance N82-16136

TELESCOPES
The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043
Tolerance analysis of optical telescopes using coherent addition of wavefront errors N82-17048

TELEVISION TRANSMISSION
Method to treat picture and sound carriers to obtain a constant and adjustable level spacing between the picture carrier and the second carrier of a TV signal when there are variations of field intensity between the carriers
[BMFT-FB-T-81-041] N82-16336
Enhancing technology transfer to state and local government utilizing on-line information retrieval services and on-line communications systems
[PB81-246241] N82-16949

TEMPERATURE CONTROL
Surface control temperatures for the Bridgman-Stockbarger and float zone techniques
N82-17073

TEMPERATURE DISTRIBUTION
Case studies of low-to-moderate temperature hydrothermal energy development
[DE82-000883] N82-16501
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] N82-16557

TEMPERATURE EFFECTS
A comprehensive model to determine the effects of temperature and species fluctuations on reaction rates in turbulent reacting flows
[NASA-CR-165108] N82-16364
Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652
Ester liquid crystal mixtures for dynamic scattering at elevated temperatures
[AD-A106790] N82-16906

TEMPERATURE GRADIENTS
Comparison of the dynamic processes during major and minor stratospheric warmings in a numerical model
[AD-A106371] N82-16645
Statistical Analysis of daily mean temperatures
N82-17072

TEMPERATURE MEASUREMENT
Thermal measurement technique of rib elements on DSN antenna structure N82-16112
X-band narrow-beam radiometer for DSS 13
N82-16113
Calculation of the temperature of a permanent incompressible laminar flow in a tube with known wall temperature distribution
[INPE-2153-TDL/057] N82-16362
Multi-channel temperature measurement amplification system --- solar heating systems
[NASA-CASE-MFS-23775-1] N82-16474
Temperature change, period/amplitude relation for classical cepheids N82-16989
Review of ground-based measurements
N82-17016

TEMPERATURE PROFILES
A climatology of a newly defined tropopause using simultaneous ozone temperature profiles
[AD-A106399] N82-16671
Solidification of a binary mixture N82-17067

TENSILE PROPERTIES
Tensile properties and mirostructure of helium-injected and reactor-irradiated V-20 Ti
[DE81-032005] N82-16220
Influence of irradiation on the tensile properties of austenitic stainless steel weldments
[DE81-032002] N82-16222

TENSILE STRENGTH
Stressed Kevlar strand test
[DE81-030769] N82-16430
A study of optically contacted quartz at cryogenic temperatures N82-17060

TENSILE STRESS
Failure loads for model adhesive joints subjected to tension, compression or torsion
[AD-A106724] N82-16424
Stressed Kevlar strand test
[DE81-030769] N82-16430

TERMINAL GUIDANCE
Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS). Part 3: A comparison of waypoint guidance algorithms for RNAV/MLS transition
[NASA-CR-3512] N82-16060
An investigation of automatic guidance concepts to steer a VTOL aircraft to a small aviation facility ship
[NASA-CR-152407] N82-16087

TERMINOLOGY
Medical Subject Headings: Tree structures, 1982
[PB81-227472] N82-16931
Medical subject headings: Annotated alphabetic list, 1982
[PB81-227480] N82-16932

TERRAIN
Nocturnal drainage flow over complex terrain using a generalized shallow-fluid approximation
[DE81-028693] N82-16460
An overview, current status, and future plans for the DOE atmospheric studies in complex terrain (ASCOT) program
[DE91-024417] N82-16651
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672

TEST CHAMBERS
Calibration of the Ames Anechoic Facility. Phase 1: Short range plan
[NASA-TM-84081] N82-16091

TEST FACILITIES
Infrared equipment, general
[AD-A106711] N82-16854

TEST PATTERN GENERATORS
Semiconductor measurement technology: The design, testing, and analysis of a comprehensive test pattern for measuring CMOS/SOS process performance and control
[PB81-245342] N82-16361

TEXTURES
Texture classification with change point statistics
[AD-A106814] N82-16789

THEMATIC MAPPING
Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] N82-16437

THEORETICAL PHYSICS
Nature abhors an empty vacuum --- the possibility of satisfying classical mechanics in a quantized world
[AD-A106362] N82-16920

THERMAL BATTERIES
Compatibility and accelerated aging study for Li(Si)/FeS2 thermally activated batteries
[DE81-030210] N82-16503

THERMAL CONDUCTIVITY
Feasibility study for long lifetime helium dewar
[NASA-CR-166254] N82-16145
Overall effective thermal resistance of corrugated fiberboard containers
[AD-A106569] N82-16183
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] N82-16918

THERMAL CONTROL COATINGS
Design considerations of a thermally stabilized continuous flow electrophoresis chamber 2
N82-17074

THERMAL CYCLING TESTS
Rotor testing in FY 1981
[DE81-028340] N82-16536

THERMAL DEGRADATION
Thermal degradation of graphite/epoxy composite
[AD-A106425] N82-16185
THERMAL ENERGY
Compatibility and accelerated aging study for Li(Si)/FeS2 thermally activated batteries
[DE81-030210] N82-16503
THERMAL EXPANSION
Thermal expansion of alkali-graphite intercalation compounds
[DE82-000080] N82-16429
THERMAL INSULATION
Smoldering combustion hazards of thermal insulation materials
[PB82-107046] N82-16215
Precision measurements on fibrous glass insulation
[PB81-239634] N82-16308
Risk of producing energy, and conserving it
[DE81-030807] N82-16507
THERMAL POLLUTION
Studies on toxicity of OTEC plant components on marine animals from the Gulf of Mexico
[DE81-030167] N82-16564
Pollution Problems of the Great Lakes Region. Report of the Great Lakes Region Conference
[PB81-246951] N82-16625
THERMAL REACTORS
Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] N82-16283
THERMAL RESISTANCE
Overall effective thermal resistance of corrugated fiberboard containers
[AD-A106569] N82-16183
Surface conforming thermal/pressure seal --- tail assemblies of space shuttle orbiters
[NASA-CASE-MSC-18422-1] N82-16408
THERMAL SHOCK
Thermal degradation of graphite/epoxy composite
[AD-A106425] N82-16185
THERMAL STABILITY
Evaluation of three partially volatile neutron shields for high-performance shipping casks
[DE82-000245] N82-16631
THERMIONIC CONVERTERS
Thermionic-combustor combined-cycle system. Volume 3: A thermionic converter design for gas-turbine combined-cycle systems
[DE82-000729] N82-16509
THERMOCHEMICAL PROPERTIES
Alternate thermochemical cycles
[DE81-030248] N82-16502
THERMOCHEMISTRY
Concepts of fundamental processes related to gasification of coal
[DE82-000763] N82-16282
Calcium inorganic electrolyte battery development
[AD-A106199] N82-16497
THERMODYNAMIC CYCLES
New features and applications of PRESTO, a computer code for the performance of regenerative, superheated steam turbine cycles
[NASA-TP-1954] N82-16477
Alternate thermochemical cycles
[DE81-030248] N82-16502
THERMODYNAMIC EFFICIENCY
Summary and evaluation of the conceptual design study of a potential early commercial MHD power plant (CSPEC)
[NASA-TM-82734] N82-16481
THERMODYNAMIC PROPERTIES
Thermal degradation of graphite/epoxy composite
[AD-A106425] N82-16185
Thermodynamic data for flue-gas desulfurization processes
[DE81-030545] N82-16557
Effect of thermomechanical properties on initial cavity growth
[DE81-030839] N82-16918
THERMODYNAMICS
Air desorption from a water film
[DE81-031961] N82-16203
Catalytic coal conversion support: Use of laser flash-pyrolysis for structural analysis
[DE82-004221] N82-16275
Concepts of fundamental processes related to gasification of coal
[DE82-000763] N82-16282
Experimental study of the multiple steady states in an adiabatic coal-liquefaction reactor
[DE82-000770] N82-16283
Heat source: Materials interactions during fusion welding
[AD-A107717] N82-16414
Study of shock-induced signals and coherent effects in solids by molecular dynamics
[DE81-030412] N82-16917
THERMONUCLEAR EXPLOSIONS
Thermonuclear model for gamma-ray bursts
[DE81-030635] N82-17003
THERMONUCLEAR REACTIONS
Solar nutrinos N82-17022
THERMOPHILES
Engineering and economic assessment of autoheated thermophilic aerobic digestion with air aeration
[PB82-102310] N82-16620
THERMOPLASTICITY
Heat sealable, flame and abrasion resistant coated fabric --- clothing and containers for space exploration
[NASA-CASE-MSC-18382-1] N82-16238
THERMOREGULATION
Ways and means of maintaining heat balance in pilots and cosmonauts N82-16706
THERMOVISCOELASTICITY
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533] N82-16080
THESAURI
Permuted Medical Subject Headings, 1982
[PB81-227464] N82-16930
Medical Subject Headings: Tree structures, 1982
[PB81-227472] N82-16931
Medical subject headings: Annotated alphabetic list, 1982
[PB81-227480] N82-16932
THICKNESS
Precision measurements on fibrous glass insulation
[PB81-239634] N82-16308
THIN FILMS
Biaxial and electrostatic tensioning effects on thin membrane materials N82-16166
Mechanical properties of adhesively bonded aluminum structures protected with hydrated inhibitors
[AD-A106222] N82-16241
Stability of optical coatings in hostile excimer laser environments
[AD-A106756] N82-16397
Study of the photovoltaic effect in thin film barium titanate
[NASA-CR-165061] N82-16479
A conceptual design study of point focusing thin-film solar concentrators
[NASA-CR-163472] N82-16492
Photovoltaic mechanisms in polycrystalline thin-film silicon solar cells
[DE82-000668] N82-16543
THIN WINGS
Some experimental investigations on transonic flutter characteristics of thin plate wing models with sweptback and tapered tips
[NAL-TR-682] N82-16050
THORAX
Review of literature and regulation relating to thoracic impact toleance and injury criteria
[PB82-108697] N82-16736
THORIUM
Improvements in explosive charges
[DE81-028977] N82-16276
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446
THORIUM ISOTOPES
Neutron capture gamma-ray spectroscopic measurements in the actinide region
[DE81-030316] N82-16832
THREAT EVALUATION
Threat perception while viewing single intruder conflicts on a cockpit display of traffic information
[NASA-TM-81341] N82-16076
THREE DIMENSIONAL FLOW
Calculation of three-dimensional, inviscid, supersonic, steady flows
[NASA-CR-165110] N82-16047
Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805
THREE DIMENSIONAL MOTION
Investigations of nonreactive vibrational and rotational excitation in small, potentially reactive ion molecule systems at energies below 6eV
[MPIS-4/1981] N82-16816
The 3-D on the 7600-Star-Cray
[DE81-030689] N82-17004
THRUST MEASUREMENT
Fuel optimal maneuvers for spacecraft with fixed thrusters N82-17046
THUNDERSTORMS
Precipitation field and intrastorm flow of supercell convective storms
[AD-A106752] N82-16867
Synoptic climatology of bell-shaped thunderstorms
[AD-A106158] N82-16868
Thunderstorm electric field modelling N82-17065
TIDES
Tide tables 1982 high and low water predictions. East Coast of North and South America including Greenland
[PB81-241622] N82-16696
The combined solar and tidal influence in climate N82-17038
Predominant periods in the time series of drought area index for the Western High Plains AD 1700 to 1962 N82-17039
TIMBER IDENTIFICATION
Discrimation of unique biological communities in the Mississippi lignite belt N82-16453
Thermal vegetation canopy model studies
[AD-A106422] N82-16455
TIMBER VIGOR
Remote sensing applications to resource problems in South Dakota
[E82-10027] N82-16445
TIME
Underground coal mining section data
[NASA-CR-168393] N82-16454
TIME DEPENDENCE
Time- and space-dependence of particulate effluent in the exhaust plume of a pulsed liquid bipropellant engine
[AD-A106525] N82-16173
TIME FUNCTIONS
Time integrating optical signal processing
[AD-A106776] N82-16851
TIME LAG
An FM/CW method for the measurements of time delays of large Cassegrain antennas N82-16110
TIME MEASUREMENT
Auxiliary subprograms for calculating the navigational parameters of artificial Earth satellites. FORTRAN IV
[NASA-TM-75684] N82-16140
TIME OPTIMAL CONTROL
Research in multirate estimation and control optimal sample rate selection --- application to aircraft control
[AD-A106043] N82-16792
Fuel optimal maneuvers for spacecraft with fixed thrusters N82-17046
TIME SERIES ANALYSIS
Testing for Gaussianity and linearity of stationary time series
[AD-A017548] N82-16781
ARMA spectral estimation: An efficient closed form procedure
[AD-A106753] N82-16788
TIME SIGNALS
Time correction of data from the NAVSTAR Geodetic Receiver System
[AD-A107643] N82-16066
TIN ALLOYS
Crevice corrosion and metal-ion concentration cell-corrosion resistance of candidate materials for OTEC heat exchangers, parts 1 and 2
[DE82-000909] N82-16227
TIRES
Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers
[PB81-238461] N82-16963

TISSUES (BIOLOGY)
Succinate dehydrogenase and cytochrome oxidase activity in tissues of rats submitted to long-term hypokinesia N82-16723

TITANIUM ALLOYS
Tensile properties and microstructure of helium-injected and reactor-irradiated V-20 Ti
[DE81-032005] N82-16220
Resistance of (Fe,Ni)sub3V long-range-ordered alloys to radiation damage
[DE81-032006] N82-16221
Crevice corrosion and metal-ion concentration cell-corrosion resistance of candidate materials for OTEC heat exchangers, parts 1 and 2
[DE82-000909] N82-16227

TITANIUM COMPOUNDS
A process for the production of a scale-proof and corrosion-resistant coating on graphite and carbon bodies
[NASA-TM-76785] N82-16179

TOKAMAK DEVICES
Neutral density measurements in Doublet 3
[DE82-000497] N82-16829
Compact Commercial Tokamak Reactor (CCTR): A concept for a 500-MWe commercial-Tokamak fusion system
[DE81-030406] N82-16871
Fusion plasma control using TRAIL: A nondamageable limiter
[DE81-030825] N82-16873
High-beta studies with beam-heated, non-circular plasmas in ISX-B
[DE81-032003] N82-16874
Neutral-beam systems for magnetic-fusion reactors
[DE81-027940] N82-16876

TOLERANCES (MECHANICS)
Tolerance analysis of optical telescopes using coherent addition of wavefront errors N82-17048

TOPOGRAPHY
A preliminary evaluation of the system for Inventorying Road Surface Topography (SIRST)
[PB81-249336] N82-16294
Coherent scatter of microwaves from moderately rough surfaces
[AD-A106133] N82-16331
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system — the Bearlodge area of northeastern Wyoming
[E82-10026] N82-16446
Impact of topographic circulations on the transport and dispersion of air pollutants
[PB82-102435] N82-16584
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672
Northern Gulf of Mexico topographic features study, executive summary
[PB81-248643] N82-16691
Nothern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography
[PB81-248650] N82-16692

TORQUE
A system for measuring steady-state torque on a rotating shaft
[PB81-240632] N82-16384
Small passenger car transmission test: Chevrolet Malibu 200C transmission with lockup
[NASA-CR-165182] N82-16410

TORQUEMETERS
A system for measuring steady-state torque on a rotating shaft
[PB81-240632] N82-16384

TORSIONAL STRESS
Failure loads for model adhesive joints subjected to tension, compression or torsion
[AD-A106724] N82-16424

TORUSES
Effect on ambipolar potential of ion cyclotron heating N82-16898

TOTAL ENERGY SYSTEMS
Technology development for phosphoric acid fuel cell powerplant, phase 2
[NASA-CR-165426] N82-16482
Develop and test fuel cell powered on-site integrated total energy systems. Phase 3: Full-scale power plant development
[NASA-CR-165455] N82-16483

TOUGHNESS
Development of toughened epoxy polymers for high performance composite and ablative applications N82-17044

TOXIC HAZARDS
Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] N82-16586
NEIC manual for groundwater/subsurface investigations at hazardous waste sites
[PB82-103755] N82-16590
Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103870] N82-16591
Use of remote sensing techniques in a systematic investigation of an uncontrolled hazardous waste site
[PB82-103696] N82-16593

TOXICITY AND SAFETY HAZARD
Studies on toxicity of OTEC plant components on marine animals from the Gulf of Mexico
[DE81-030167] N82-16564
Assessment of the Region V water monitoring activities
[PB82-103334] N82-16587

TOXICOLOGY
Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine N82-16718

THACKING (POSITION)
Lie groups and lie algebras in video tracking
[AD-A107858] N82-16780

TRACKING STATIONS
Block 1 phase 2 very long baseline interferometry implementation N82-16104
Voyager mission support, 1 N82-16106
Voyager mission support, 2 N82-16107
DSS 13 unattended operations station controller N82-16118
CNPq/INPE: LANDSAT system — operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] N82-16441

TRACTION
Traction contact performance evaluation at high speeds
[NASA-CR-165226] N82-16409

TRADEOFFS
Predesign study for a modern 4-bladed rotor for the NASA rotor systems research aircraft
[NASA-CR-166153] N82-16042

TRAFFIC
Carbon monoxide commuter exposure data base: A 5-day study in Los Angeles
[PB82-103607] N82-16589
Evaluation of retro-reflective measurement devices
[PB81-243594] N82-16951

TRAFFIC CONTROL
Evaluation of retro-reflective measurement devices
[PB81-243602] N82-16952

TRAINING EVALUATION
Assessment of MSFC's supervisory training programs and courses — marshall space flight center N82-17068

TRAJECTORIES
A generalized escape system simulation computer program: A user's manual
[AD-A106152] N82-16055

TRAJECTORY ANALYSIS
Radio frequency interference by Earth orbiting satellites: Deep Space Interference Prediction Program N82-16125
Modifications of trajectory models needed for pollutant source-receptor analysis
[DE81-029915] N82-16553

TRAJECTORY CONTROL
A unified thermal and vertical trajectory model for the prediction of high altitude balloon performance
[NASA-CR-156884] N82-16048

TRAJECTORY OPTIMIZATION
Automation of on-board flightpath management
[NASA-TM-84212] N82-16088

TRANSDUCERS
Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096

TRANSFORMATIONS (MATHEMATICS)
Natural modes and real modal variables for flexible spacecraft
[CRC-1348] N82-16146

Lie groups and lie algebras in video tracking
[AD-A107858] N82-16780

TRANSISTOR AMPLIFIERS
Characterization of power MESFETs at 21 GHz
[AD-A106673] N82-16349

TRANSISTORS
Advanced electronic technology
[AD-A106671] N82-16348

TRANSITION TEMPERATURE
Compatibility and accelerated aging study for Li(Si)/FeS2 thermally activated batteries
[DE81-030210] N82-16503

TRANSLATING
A translator for the high level language sequel 2/query statement
[INPE-2184-RPE/395] N82-16757

TRANSMISSION EFFICIENCY
Computational study of magnetic dam effects in a high impedance diode
[AD-A106154] N82-16818

TRANSMISSION LINES
Kafjord, Norway transmission line VLF antenna tests, 1979 - 1980
[AD-A106430] N82-16325

TRANSMISSIONS (MACHINE ELEMENTS)
Small passenger car transmission test: Chevrolet Malibu 200C transmission with lockup
[NASA-CR-165182] N82-16410
Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] N82-16485

TRANSONIC FLOW
The analysis and design of two-element airfoil configuration in transonic flow
[AD-A107547] N82-16052

TRANSONIC FLUTTER
Some experimental investigations on transonic flutter characteristics of thin plate wing models with sweptback and tapered tips
[NAL-TR-682] N82-16050

TRANSONIC WIND TUNNELS
Programs for the transonic wind tunnel data processing installation. Part 9: Pressure measurements updated
[AD-A106271] N82-16095
Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096

TRANSPONDERS
A digital filter implementation of the deep space transponder phase lock loop integrator N82-16119

TRANSPORT AIRCRAFT
Symposium on commercial-aviation energy-conservation strategies
[DE81-028406] N82-16057

TRANSPORT PROPERTIES
Multi-species ambipolar phenomena in the ELMO Bumpy Torus N82-16878
EBT transport and ambipolar potential formation with rapid loss of high energy impurity ions N82-16886
Anomalous transport and the ambipolar field in EBT N82-16891

TRANSPORTATION
Carbon monoxide commuter exposure data base: A 5-day study in Los Angeles
[PB82-103607] N82-16589
Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE82-000967] N82-16833
Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE81-025399] N82-16837

TRANSPORTATION ENERGY
Transport and energy
[DE81-030287] N82-16946

TRANSPORTATION NETWORKS
Systems studies of waste transportation
[DE81-030840] N82-16941

TREES (MATHEMATICS)
The K-D-B-tree: A search structure for large multidimensional dynamic indexes
[AD-A106550] N82-16773

TRIANGULATION
Passive trilateration positioning procedure error analysis
[AD-A106690] N82-16061

TRIBOLOGY

Tribological characteristics of a composite total-surface hip replacement
[NASA-TP-1853] N82-16239

Effects of artificially produced defects on film thickness distribution in sliding EHD point contacts
[NASA-TM-82732] N82-16412

TRIGGER CIRCUITS

Tape recording and triggering systems
[PB81-243248] N82-16382

TRINITROTOLUENE

Far field overpressure from TNT explosions: A survey of available models
[AD-A107952] N82-16370

TROPICAL METEOROLOGY

Tropical cyclone intensity change: A quantitative forecasting scheme
[AD-A106157] N82-16669

On the analysis of Seasat winds
[PB81-245649] N82-16675

Frequency and motion of Atlantic tropical cyclones
[PB81-247258] N82-16682

TROPICAL STORMS

Annual data and verification tabulation Atlantic tropical cyclones, 1980
[PB81-246050] N82-16681

TROPOPAUSE

A climatology of a newly defined tropopause using simultaneous ozone temperature profiles
[AD-A106399] N82-16671

TROPOSPHERE

Proper frequencies of a down-looking water-vapor radiometer over sea surface N82-16103

Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A106366] N82-16640

Effects of diabatic heating on the ageostrophic circulation of an upper tropospheric jet streak
[NASA-CR-3497] N82-16658

TRUCKS

An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100538] N82-16953

TRUSSES

Preliminary design of tetrahedral truss reflector structure N82-16160

TUBE HEAT EXCHANGERS

Fluid mechanics and heat transfer spirally fluted tubing
[AD-A107983] N82-16369

TUNGSTATES

Preparation and characterization of conducting iron tungstates
[AD-A106541] N82-16193

TUNGSTEN OXIDES

Catalytic hydrogenation of coal-derived liquids
[DE82-003250] N82-16212

TUNNELING (EXCAVATION)

Earthquake engineering of large underground structures
[PB81-247918] N82-16291

TURBIDITY

Water turbidity measurements in Gulf Saint Vincent
[AD-A106274] N82-16684

TURBINE BLADES

Variable gain for a wind turbine pitch control
[NASA-TM-82751] N82-16478

TURBINE ENGINES

Elevated temperature fatigue testing of metals
[NASA-TM-82745] N82-16419

TURBINE PUMPS

Development of high strength, high temperature ceramics N82-17050

TURBINES

The NASA Lewis large wind turbine program
[NASA-TM-82761] N82-16495

Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] N82-16522

TURBOCOMPRESSORS

A computer program for variable-geometry single-stage axial compressor test data analysis (UD0400)
[AD-A106676] N82-16086

Energy exchanger performance and power cycle evaluation, experiments and analysis
[DE82-001060] N82-16525

TURBOGENERATORS

New features and applications of PRESTO, a computer code for the performance of regenerative, superheated steam turbine cycles
[NASA-TP-1954] N82-16477

Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)
[PB81-239568] N82-16547

TURBOMACHINERY

Compressed air energy storage preliminary design and site development program in an aquifer. Turbomachinery design
[DE82-000672] N82-16524

TURBOPROP AIRCRAFT

Turboprop cargo aircraft systems study
[NASA-CR-165813] N82-16070

A shock wave approach to the noise of supersonic propellers
[NASA-TM-82752] N82-16809

TURBULENCE

Dynamics of magnetosphere-ionosphere coupling including turbulent transport
[NASA-CR-165096] N82-16636

TURBULENCE EFFECTS

Effects of strong turbulence on short wavelength laser: Experimental determination of mean square wander angle
[AD-A106776] N82-16852

TURBULENT BOUNDARY LAYER

A prediction method for turbulent boundary layers in adverse pressure gradients
[AD-A107849] N82-16371

TURBULENT DIFFUSION

Air pollution and related phenomena in South Africa
[SR-APRG-12] N82-16551

Determination of upper atmospheric winds and turbulent diffusion and dissipation from artificial cloud expansion and growth
[AD-A106387] N82-16638

TURBULENT FLOW

A computer code for swirling turbulent axisymmetric recirculating flows in practical isothermal combustor geometries
[NASA-CR-3442] N82-16082

A comprehensive model to determine the effects of temperature and species fluctuations on reaction rates in turbulent reacting flows
[NASA-CR-165106] N82-16364

Near-bottom velocities in waves with a current
[PB81-238685] N82-16689

TURBULENT WAKES

Noise generation by gas jets in a turbulent wake
[AD-A106223] N82-16811

TWO PHASE FLOW

Noise generation by gas jets in a turbulent wake
[AD-A106223] N82-16811

U

ULTRASONIC TESTS

Near surface flaw detection by ultrasonic angle imaging
[PB81-235939] N82-16418

ULTRAVIOLET SPECTRA

Search for promethium-like gold lines and other transitions of interest to fusion research
[DE81-029917] N82-16872

IUE observations of a new BL lac object from the S5 radio catalogue N82-16990

Optical and ultraviolet spectra of Seyfert galaxies N82-16991

ULTRAVIOLET TELESCOPES

Design study of imaging techniques for the Starprobe mission
[NASA-CR-168392] N82-16849

UNDERGROUND COMMUNICATION

Development of a through-the-earth monitor system
[PB81-237646] N82-16470

UNDERGROUND STORAGE

Use of remote sensing techniques in a systematic investigation of an uncontrolled hazardous waste site
[PB82-103896] N82-16593

Tape extensometer sensitivity and reliability
[DE82-000064] N82-16842

Nuclear waste management
[DE82-001605] N82-16845

UNDERGROUND STRUCTURES

Earthquake engineering of large underground structures
[PB81-247918] N82-16291

UNDERWATER ACOUSTICS

Noise generation by gas jets in a turbulent wake
[AD-A106223] N82-16811

Approximate fluid-structure interaction theories for acoustic echo signal predictions
[AD-A106349] N82-16812

UNDERWATER COMMUNICATION

Advanced underwater telemetry and voice links for inland and coastal waters research
[PB81-241408] N82-16144

UPLINKING

ATCRBS uplink environment measurement near Jacksonville, Florida
[AD-A106053] N82-16063

Sine wave ranging revisited N82-16124

UPPER ATMOSPHERE

Determination of upper atmospheric winds and turbulent diffusion and dissipation from artificial cloud expansion and growth
[AD-A106387] N82-16638

Analysis of data for the development of density and composition models of the upper atmosphere
[AD-A106420] N82-16650

NASA/MSFC FY-81 Atmospheric Processes Research Review
[NASA-CP-2204] N82-16660

UPSETTING

High-current resistance welding of nuclear-waste containers
[DE81-030403] N82-16415

UPWASH

A method of estimating upwash angle at noseboom-mounted vanes
[AD-A106160] N82-16051

URANIUM

Improvements in explosive charges
[DE81-028977] N82-16276

URANIUM ISOTOPES

Neutron capture gamma-ray spectroscopic measurements in the actinide region
[DE81-030316] N82-16832

URANUS (PLANET)

Voyager mission support, 2 N82-16107

URBAN PLANNING

A comparison of energy technologies and their use in urban planning
[PB81-239592] N82-16546

URBAN RESEARCH

Simplified noise strategy manual
[PB81-243016] N82-16624

URBAN TRANSPORTATION

Foreign noise research in surface transportation, 1976-1981
[PB82-100306] N82-16954

Paratransit, Inc., Special transportation service in Sacramento
[PB82-106204] N82-16955

Los Angeles Downtown People Mover (DPM) operational analysis
[PB81-241416] N82-16964

URINE

Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine N82-16718

USER MANUALS (COMPUTER PROGRAMS)

A method of estimating upwash angle at noseboom-mounted vanes
[AD-A106160] N82-16051

Instructions for TI-59 combined card/module calculations for in-plane and flexural properties of symmetric laminates --- programmable calculator operations
[AD-A107964] N82-16189

The APRAC-3/MOBILE 1 emissions and diffusion modeling package: User's manual
[PB82-103763] N82-16468

OPS5 user's manual
[AD-A106558] N82-16763

QUSER user's guide
[DE81-030681] N82-16767

Random network generation
[AD-A106360] N82-16796

USER REQUIREMENTS
A versatile data acquisition system for a low speed wind tunnel
[AD-A106069] N82-16097
User considerations in computer-based information system
[AD-A106184] N82-16928
Regional needs regarding technical information
[DE82-001772] N82-16929
UTAH
Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah
[DE82-000416] N82-16461

V

VACUUM
Nature abhors an empty vacuum — the possibility of satisfying classical mechanics in a quantized world
[AD-A106362] N82-16920
VACUUM DEPOSITION
Automatic gas-levitation system for vacuum deposition of laser-fusion targets
[DE82-000296] N82-16406
Aluminum and chromium ion particle studies for enhancement of surface properties N82-17071
VACUUM MELTING
Heat loss and drag of spherical drop tube samples
N82-17079
VACUUM SYSTEMS
X-ray astronomy instrumentation studies — design of a proportional counter and measurements of fluorescent radiation
[NASA-CR-161948] N82-17001
VANADIUM ALLOYS
Tensile properties and mirostructure of helium-injected and reactor-irradiated V-20 Ti
[DE81-032005] N82-16220
Resistance of (Fe,Ni)sub3V long-range-ordered alloys to radiation damage
[DE81-032006] N82-16221
VAPOR DEPOSITION
Development of a polysilicon process based on chemical vapor deposition (phase 1)
[NASA-CR-163475] N82-16488
VAPOR PHASE EPITAXY
Research on long wavelength bias-assisted photoemitters
[AD-A107615] N82-16912
VAPOR PHASES
Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions
[AD-A107718] N82-16198
Reactions of metal ions and their clusters in the gas phase using laser ionization: Ion cyclotron resonance spectroscopy
[DE81-029015] N82-16915
VAPOR PRESSURE
Carbon vapor pressure in the range 3450 to 4500 K and evidence for melting at approximately 3800 K
[AD-A106134] N82-16196
Effects of confining pressure, pore pressure and temperature on absolute permeability — of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652
VARIABILITY
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672
Solar variability indications from Nimbus 7 satellite data N82-17020
Solar radius measurements N82-17027
VARIABLE STARS
Monitoring solar-type stars N82-17035
VARIATIONS
Temperature change, period/amplitude relation for classical cepheids N82-16989
Sensitivity of the Earth's climate to changes
N82-17015
Change in the solar constant between 1968 and 1978 N82-17017
The horizontal and vertical semi-diameters of the Sun observed at the Cape of Good Hope (1834 - 1887) and Paris (1837 - 1906): A report on work in progress N82-17024
Sciera solar diameter observations N82-17026
Estimating short-term solar variations by a simple envelope matching technique N82-17028
Effects of changes in convective efficiency on the solar radius and luminosity N82-17030
Evolutionary variations of solar luminosity
N82-17032
On the seat of the solar cycle N82-17033
Short and long term variations in the solar constant N82-17034
Monitoring solar-type stars N82-17035
Solar pulsations and long-term solar variability
N82-17036
Observations of large-scale motions of the Sun
N82-17037
Variation of the solar He I 1830 A line: 1977 - 1980 N82-17040
A prospectus for a theory of variable variability
N82-17041
VECTOR ANALYSIS
Vector electric fields
[AD-A106784] N82-16642
The 3-D on the 7600-Star-Cray
[DE81-030889] N82-17004
VECTORS (MATHEMATICS)
Domination problem for vector measures and applications to nonstationary processes
[AD-A106375] N82-16778
VEGETATION
Wetland mapping from digitized aerial photography — Sheboygan Marsh, Wisconsin
[E82-10019] N82-16437
VEGETATION GROWTH
Acid rain and forest productivity
[DE81-030916] N82-16555
VELOCITY
Small passenger car transmission test: Chevrolet Malibu 200C transmission with lockup
[NASA-CR-165182] N82-16410
VELOCITY DISTRIBUTION
Near-bottom velocities in waves with a current
[PB81-236665] N82-16689
VELOCITY MEASUREMENT
Laser velocimeter measurements in turbulent and mixing flows, Part 3
[AD-A106130] N82-16368
In vivo recording of blood velocity profiles and studies in vitro of profile alterations induced by known stenoses
[PB81-244139] N82-16736
VENTING
A study of the vent pipe for the gravity probe-B
N82-17053
VENTURI TUBES
Venturi design for metering solids flow in gas-solids suspensions
[DE81-031944] N82-16380
VERTICAL TAKEOFF AIRCRAFT
An investigation of automatic guidance concepts to steer a VTOL aircraft to a small aviation facility ship
[NASA-CR-152407] N82-16087
VERY LONG BASE INTERFEROMETRY
The telecommunications and data acquisition report
[NASA-CR-165111] N82-16101
Block 1 phase 2 very long baseline interferometry implementation N82-16104
A VLBI survey of the northern polar cap region
N82-16108
Arcsecond positions for milliarsecond VLBI nuclei of extragalactic radio souces. Part 1: 546 sources
N82-16109
VERY LOW FREQUENCIES
Kafjord, Norway transmission line VLF antenna tests, 1979 - 1980
[AD-A106430] N82-16325
VESTIBULAR NYSTAGMUS
Method of recording rotatory eye reflexes
N82-16727
VESTIBULAR TESTS
Method of recording rotatory eye reflexes
N82-16727
VIBRATION EFFECTS
Resonance tests on a Piper PA-32R tailplane before and after damage
[AD-A106273] N82-16071
Physiological and hygienic evaluation of vibration in the cockpit of a cargo helicopter N82-16709
VIBRATION MEASUREMENT
Ice phobics blade tracking and comparison of vibration analysis techniques
[AD-A106121] N82-16074
VIBRATIONAL SPECTRA
Vibrational overtone spectroscopy of benzene and pyridine on Ag(111)
[AD-A106396] N82-16191
Rate enhancement resulting from reagent vibrational excitation as estimated by the BEBO method
[AD-A106431] N82-16400
VIBRATIONAL STRESS
Investigations of nonreactive vibrational and rotational excitation in small, potentially reactive ion molecule systems at energies below 6eV
[MPIS-4/1981] N82-16816
VIDEO DATA
The design, development, demonstration, and transfer of advanced command and control (C2) computer-based systems
[AD-A106787] N82-16319
Lie groups and lie algebras in video tracking
[AD-A107856] N82-16780
VIKING MARS PROGRAM
Ridge systems of Mars N82-17012
VINYL POLYMERS
Behavior of construction adhesives under long-term load
[AD-A106565] N82-16240
VISCOELASTICITY
A finite element model of a White-Metzner viscoelastic polymer extrudate
[AD-A106740] N82-16242
VISCOPLASTICITY
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533] N82-16060
VISIBILITY
Winter and summer measurements of European very low altitude volume scattering coefficients
[AD-A106363] N82-16666
VISIBLE SPECTRUM
Spectrally balanced chromatic landing approach lighting system
[NASA-CASE-ARC-10990-1] N82-16059
VISION
The prevalence of visual deficiencies among 1979 general aviation accident airmen
[AD-A106489] N82-16054
Detection of amblyopia utilizing generated retinal reflexes
[NASA-CR-161944] N82-16732
VISUAL CONTROL
Spectrally balanced chromatic landing approach lighting system
[NASA-CASE-ARC-10990-1] N82-16059
VISUAL DISCRIMINATION
Remote sensing data applied to land-use survey at the Paraiba Valley — Brazil
[E82-10025] N82-16443
VITRIFICATION
Development of in-can melting process and equipment, 1979 and 1980
[DE82-001050] N82-16834
Immobilization of high-level waste
[DE81-025595] N82-16835
VLASOV EQUATIONS
Double layers on auroral field lines
[NASA-CR-165113] N82-16635
VOCODERS
The effects of microphones and facemasks on LPC vocoder performance
[AD-A107906] N82-16744
VOICE COMMUNICATION
Voice flow control in integrated packet networks
[AD-A106722] N82-16330
VOLATILITY
Techniques for handling landborne spills of volatile hazardous substances
[PB82-105230] N82-16609
VOLCANOES
Quantitative data on the abundances and distribution of seamounts in the Pacific Ocean
[AD-A107853] N82-16685
VOYAGER PROJECT
The telecommunications and data acquisition report
[NASA-CR-165111] N82-16101
Voyager mission support, 1 N82-16106

Voyager mission support, 2 N82-16107

W

WAFERS

Advanced electronic technology
[AD-A106871] N82-16348

Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] N82-16490

Processing experiments on non-Czochralski silicon sheet
[NASA-CR-163473] N82-16491

WAGE SURVEYS

Some employment and earnings implications of regional biomass energy utilization: New England and the Cornbelt States
[DE81-030689] N82-16520

WALL PRESSURE

Effects of gas-flow pattern on cavity shape
[DE82-000347] N82-16375

WALL TEMPERATURE

Design considerations of a thermally stabilized continuous flow electrophoresis chamber 2
N82-17074

WALLS

Design of first walls and beam dumps for tandem mirror experiment upgrade
[DE81-030888] N82-16875

WARNING SYSTEMS

Aircraft alerting systems standardization study. Volume 2: Aircraft alerting system design guidelines
[AD-A106732] N82-16077

Criteria for evaluating the implementation plan required by the Earthquake Hazards Reduction Act of 1977
[PB81-241663] N82-16630

WASTE DISPOSAL

Development of potential uses for the residue from fluidized-bed-combustion processes
[DE81-030157] N82-16211

Denitrification of nitrate-containing heavy-metal-filtrate solutions
[DE82-000701] N82-16558

Hazardous waste preliminary planning requirements for SRC-1 demonstration plant in Newman, Kentucky
[DE82-001346] N82-16561

Full-scale demonstration of industrial wastewater treatment utilizing Du Pont's PACT (trade name) process
[PB81-248122] N82-16569

NEIC manual for groundwater/subsurface investigations at hazardous waste sites
[PB82-103755] N82-16590

Use of remote sensing techniques in a systematic investigation of an uncontrolled hazardous waste site
[PB82-103896] N82-16593

Hourly diurnal flow variations in publicly-owned wastewater treatment facilities
[PB82-107954] N82-16601

Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] N82-16607

Evaluation of on-site wastewater treatment and disposal options
[PB82-101635] N82-16616

Possible use of house fly larvae for utilization of organic waste in biological life-support systems
N82-16719

Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE82-000967] N82-16833

Development of in-can melting process and equipment, 1979 and 1980
[DE82-001050] N82-16834

Immobilization of high-level waste
[DE81-025595] N82-16835

Operational and regulatory impacts of regional management on transportation of commercial low-level radioactive waste
[DE81-025399] N82-16837

STAFF-5, a two-dimensional computer model for simulation of the performance of spent fuel in storage/disposal
[DE82-000043] N82-16838

Leaching of nuclear-waste forms
[DE81-030490] N82-16843

Nuclear waste management
[DE82-001605] N82-16845

WASTE ENERGY UTILIZATION

Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] N82-16537

WASTE TREATMENT

Electrorefining of aluminum
[PB81-243693] N82-16230

Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] N82-16537

Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants
[AD-A107552] N82-16552

Use of a phenolic-carboxylic acid cation resin in the treatment of low-level liquid waste at Oak Ridge National Laboratory
[DE82-000500] N82-16554

Denitrification of nitrate-containing heavy-metal-filtrate solutions
[DE82-000701] N82-16558

Full-scale demonstration of industrial wastewater treatment utilizing Du Pont's PACT (trade name) process
[PB81-248122] N82-16569

Assessment of emerging technologies for metal finishing pollution control: Three case studies
[PB81-244485] N82-16571

On-site wastewater treatment problems and alternatives for western North Carolina
[PB81-240541] N82-16572

Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103870] N82-16591

Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 1: Wastewater facilities existing environment technical reference document
[PB82-107913] N82-16599

Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 2: Alternatives evaluation technical reference document
[PB82-107921] N82-16600

Hourly diurnal flow variations in publicly-owned wastewater treatment facilities
[PB82-107954] N82-16601

Performance of trickling filter plants: Reliability, stability, variability
[PB82-108143] N82-16603

Heavy metal sources and flows in a municipal sewage system: Literature survey and field investigation of the Kokomo, Indiana sewage system
[PB82-108366] N82-16604

An application of decision analysis to technology assessment: An assessment of decentralized waste treatment methods
[PB82-109018] N82-16605

Guidelines for the use of chemicals in removing hazardous substance discharges
[PB82-107483] N82-16615

Engineering and economic assessment of autoheated thermophilic aerobic digestion with air aeration

[PB82-107921] N82-16600

Hourly diurnal flow variations in publicly-owned wastewater treatment facilities
[PB82-107954] N82-16601

Wastewater management plan for the Lake Washington/Green River Basins
[PB82-105982] N82-16612

Density levels of pathogenic organisms in municipal wastewater sludge, a literature review
[PB82-102286] N82-16619

Operation and maintenance costs for municipal wastewater facilities
[PB81-249971] N82-16628

WASTES

Sulfur gas emissions from stored flue gas desulfurization solids
[DE82-900859] N82-16568

WATER

Air desorption from a water film
[DE81-031961] N82-16203

Materials testing for solar-thermal chemical process heat
[DE82-002003] N82-16530

Effects of confining pressure, pore pressure and temperature on absolute permeability --- of consolidated sandstone and unconsolidated sand cores
[DE81-030336] N82-16652

Microbiologically-mediated mutagenic activity of crude oil
[PB82-105131] N82-16702

Solidification phenomena of binary organic mixtures N82-17047

WATER CIRCULATION

Cook inlet circulatory survey: 1973-75
[PB81-245235] N82-16688

WATER CURRENTS

Near-bottom velocities in waves with a current
[PB81-238685] N82-16689

WATER FLOW

Water repellent soils: A state-of-the-art
[PB81-248270] N82-16305

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-17), NOAA ship George B. Kelez, April 1978
[PB82-100983] N82-16576

MESA (Marine Ecosystem Analysis) New York Bight projcet. Expanded water column characterization cruise (XWCC-18), NOAA ship George B. Kelez, Jun. 1978
[PB82-100991] N82-16577

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-19), NOAA ship George B. Kelez, July 1978
[PB82-101007] N82-16578

MESA (Marine Ecosystem Analysis) New York Bight project. Expanded water column characterization cruise (XWCC-20), NOAA ship George B. Kelez, July-August 1979
[PB82-101016] N82-16579

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-21), NOAA ship George B. Kelez, April 1979
[PB82-101023] N82-16580

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-22), NOAA ship George B. Kelez, May-June 1979
[PB82-101031] N82-16581

MESA (Marine Ecosystem Analysis) New York Bight project: Expanded water column characterization cruise (XWCC-24), NOAA ship George B. Kelez, August 1979
[PB82-101056] N82-16583

WATER HEATING

Potential for using parabolic trough collectors to supplement power cycle boilers
[SAND-81-0672C] N82-16505

Development of a high-efficiency gas-fired water heater
[DE81-030025] N82-16506

Choice and Utilization of Energy-using Durables
[DE81-804228] N82-16513

Case studies of retrofit applications of solar energy in the MASEC region
[DE82-001712] N82-16532

Boise Cascade: INEL solar home
[DE82-003778] N82-16534

Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A108366] N82-16640

WATER MANAGEMENT

Remote sensing applications to resource problems in South Dakota
[E82-10027] N82-16445

Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] N82-16607

WATER POLLUTION

Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] N82-16566

Assessment of emerging technologies for metal finishing pollution control: Three case studies
[PB81-244485] N82-16571

Polychlorinated biphenyl transport in the Hudson River, New York
[PB81-249757] N82-16573

Assessment of the Region V water monitoring activities
[PB82-103334] N82-16587

Evaluation of pollution abatement alternatives: Picillo property, Coventry, Rhode Island
[PB82-103666] N82-16592

Heavy metal sources and flows in a municipal sewage system: Literature survey and field investigation of the Kokomo, Indiana sewage system
[PB82-108366] N82-16604

Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] N82-16607

Pollution Problems of the Great Lakes Region. Report of the Great Lakes Region Conference
[PB81-246651] N82-16625

WATER QUALITY

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] N82-16439

Environmental impacts associated with using peat for energy
[DE81-032000] N82-16463

The source and transport of arsenic in northeastern Ohio groundwaters
[PB81-240525] N82-16471

On-site wastewater treatment problems and alternatives for western North Carolina
[PB81-240541] N82-16572

Vocational education training in environmental health sciences: Collecting stream samples for water quality, module 16
[PB81-249660] N82-16574

Assessment of the Region V water monitoring activities
[PB82-103334] N82-16587

Pennsylvania baseline
[PB82-101742] N82-16617

Relationship of water quality of Hudson River, New York during peak discharges to geologic characteristics of contributing subbasins
[PB81-249740] N82-16627

Hygienic principles of ongoing monitoring of quality of recycled water during space flights N82-16717

Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine
N82-16718

WATER RECLAMATION

Toxicological and hygienic aspects of improving additional purification of water reclaimed from urine
N82-16718

WATER RESOURCES

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447

A model for solving multiperiod multireservoir water resources problems with stochastic inflows
[AD-A106769] N82-16456

Water resources appraisal for hydroelectric licensing: Jordan River Basin, Utah
[DE82-000416] N82-16461

Implications of land, water and energy resource policies on agricultural production
[PB81-244063] N82-16467

Adequacy and economics of water supply in northeastern Illinois, 1985 - 2010
[PB82-105495] N82-16469

Hydrogeologic setting of the Glacial Lake Agassiz Peatlands, Northern Minnesota
[PB81-249326] N82-16473

Wind energy planning considerations
[PM-80-4] N82-16496

Coal development in rural America: The resources at risk
[PB81-243313] N82-16545

Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 1: Wastewater facilities existing environment technical reference document
[PB82-107913] N82-16599

WATER RUNOFF

Water repellent soils: A state-of-the-art
[PB81-248270] N82-16305

Analysis of stream-aquifer system interrelationships in the Big Blue and Little Blue River Basins in Gage and Jefferson Counties, Nebraska
[PB81-245870] N82-16466

WATER TREATMENT

A solar powered water purification system at Goldstone (DSS 13) N82-16138

Assessment of emerging technologies for metal finishing pollution control: Three case studies
[PB81-244485] N82-16571

On-site wastewater treatment problems and alternatives for western North Carolina
[PB81-240541] N82-16572

Heavy metal sources and flows in a municipal sewage system: Literature survey and field investigation of the Kokomo, Indiana sewage system
[PB82-108366] N82-16604

Wastewater treatment facilities. Twining Water and Sanitation District, Taos County, New Mexico
[PB82-104670] N82-16607

Guidelines for the use of chemicals in removing hazardous substance discharges
[PB82-107483] N82-16615

Evaluation of on-site wastewater treatment and disposal options
[PB82-101635] N82-16616

Wastewater dechlorination state-of-the-art field survey and pilot studies
[PB82-102336] N82-16621

Operation and maintenance costs for municipal wastewater facilities
[PB81-249671] N82-16628

WATER VAPOR

Proper frequencies of a down-looking water-vapor radiometer over sea surface N82-16103

Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A108366] N82-16640

WATER WAVES

Near-bottom velocities in waves with a current
[PB81-238685] N82-16889

An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] N82-16897

An introduction to sea state forecasting
[PB81-242887] N82-16899

WATERSHEDS

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] N82-16439

Remote sensing applications to resource problems in South Dakota
[E82-10027] N82-16445

WAVE EQUATIONS

Applications of random differential equations to engineering science. Wave propagation in turbulent media and random linear hyperbolic systems
[AD-A108020] N82-16782

WAVE EXCITATION

Observing solitons in one dimensional magnetic systems
[DE81-029919] N82-16828

WAVE FRONT DEFORMATION

Reduction of anisoplanatic errors
[AD-A108689] N82-16855

WAVE FRONTS

Tolerance analysis of optical telescopes using coherent addition of wavefront errors N82-17048

WAVE PROPAGATION

Wave propagation through axially symmetric dielectric shells
[AD-A106762] N82-16326

Near-bottom velocities in waves with a current
[PB81-238685] N82-16889

Applications of random differential equations to engineering science. Wave propagation in turbulent media and random linear hyperbolic systems
[AD-A108020] N82-16782

WAVE REFLECTION

Critical angles and grazing incidence: The breakdown of regular shock reflection in solids
[AD-A107665] N82-16426

WAVE SCATTERING

High frequency scattering by a sphere with complex surface impedance N82-16799

WAVEGUIDES

A model to calculate EM fields in tropospheric duct environments at frequencies through SHF
[AD-A107710] N82-16335

WAVELENGTHS

Analysis of results of mini round robin reflectance test
[PB81-244673] N82-16394

WEAK ENERGY INTERACTIONS

Oasis in the desert: Weakly broken parity in grand unified theories
[DE81-031963] N82-16826

WEAR

Effects of artificially produced defects on film thickness distribution in sliding EHD point contacts
[NASA-TM-82732] N82-16412

WEAR INHIBITORS

Technology for improving the wear resistance of aggregates by materials impregnation
[PB81-246191] N82-16306

WEAR TESTS

Laboratory pavement polishing device (wear machine) versus field friction test units and accumulative traffic (ADT). Phase 2. Correlation study
[PB81-233256] N82-16293

Technology for improving the wear resistance of aggregates by materials impregnation
[PB81-246191] N82-16306

WEATHER

NASA/MSFC FY-81 Atmospheric Processes Research Review
[NASA-CP-2204] N82-16660

Global weather research N82-16662

Severe storms and local weather research
N82-16663

Climatic conditions at Air Force bases in Australia
[AD-A108275] N82-16664

WEATHER FORECASTING
A climate index derived from satellite measured spectral infrared radiation
[AD-A106733] N82-16648
Synoptic scenario of the invasion of cold air during the freeze of May 1979 and frost mapping to forecast areas of major risk
[INPE-2166-RPE/383] N82-16654
Tropical cyclone intensity change: A quantitative forecasting scheme
[AD-A106157] N82-16669
An introduction to sea state forecasting
[PB81-242687] N82-16699
Models of weather environments adverse to electro-optical systems
[AD-A107637] N82-16659
WEIBULL DENSITY FUNCTIONS
Transient error reliability models based on data analysis
[AD-A106554] N82-16751
WEIGHT (MASS)
Weight estimates and packaging techniques for the microwave radiometer spacecraft --- shuttle compatible design N82-16161
An investigation of truck size and weight limits: Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-100536] N82-16953
WEIGHTING FUNCTIONS
Use of weight functions to determine the stress intensity for a cracked thick-walled cylinder
[AD-A106270] N82-16423
WEIGHTLESSNESS
Cathepsin activity of skeletal muscle and myocardia myofibrils after exposure to weightlessness and accelerations N82-16714
Cytokinetic evaluation of erythropoiesis during long-term orbital flights N82-16715
WELD STRENGTH
High-current resistance welding of nuclear-waste containers
[DE81-030403] N82-16415
WELDED JOINTS
Influence of irradiation on the tensile properties of austenitic stainless steel weldments
[DE81-032002] N82-16222
WELDING
High-current resistance welding of nuclear-waste containers
[DE81-030403] N82-16415
On relationship between microfissuring and microstructure in the HAZ of Inconel 718
N82-17078
WETLANDS
Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] N82-16437
Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 1: Wastewater facilities existing environment technical reference document
[PB82-107913] N82-16599
Central Hillsborough County-Tampa, Florida: 201 facilities plan. Volume 2: Alternatives evaluation technical reference document
[PB82-107921] N82-16600
WETTING
Surface chemical technology for improved wetting of coal dust
[PB82-104654] N82-16608
WHEAT
Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] N82-16448
WHISKERS (CRYSTALS)
Development of a particle collector for absolute measurements of particle form, particle size and particle concentration --- by precipitation on whiskers
[BMFT-FB-T-81-029] N82-16214
WILDLIFE
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] N82-16447
WIND (METEOROLOGY)
Nocturnal drainage flow over complex terrain using a generalized shallow-fluid approximation
[DE81-028693] N82-16460
Wind energy planning considerations
[PM-80-4] N82-16496
Determination of upper atmospheric winds and turbulent diffusion and dissipation from artificial cloud expansion and growth
[AD-A106367] N82-16638
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672
Mesoscale Aspects of Convective Storms
[PB81-247249] N82-16679
Frequency and motion of Atlantic tropical cyclones
[PB81-247256] N82-16682
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] N82-16697
WIND DIRECTION
Study of the nocturnal drainage flow over a sloping plateau in North-Central New Mexico
[DE81-028744] N82-16459
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672
Guide to biological wind prospecting
[DE82-001425] N82-16674
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] N82-16697
WIND EFFECTS
Guide to biological wind prospecting
[DE82-001425] N82-16674
WIND MEASUREMENT
Guide to biological wind prospecting
[DE82-001425] N82-16674
On the analysis of Seasat winds
[PB81-245649] N82-16675
WIND PROFILES
Numerical and flight simulator test of the flight deterioration concept
[NASA-CR-3500] N82-16655
WIND SHEAR
Numerical and flight simulator test of the flight deterioration concept
[NASA-CR-3500] N82-16655
WIND TUNNEL APPARATUS
A versatile data acquisition system for a low speed wind tunnel
[AD-A106269] N82-16097
WIND TUNNEL CALIBRATION
Calibration of the Ames Anechoic Facility. Phase 1: Short range plan
[NASA-TM-84081] N82-16091
WIND TUNNEL MODELS
Some experimental investigations on transonic flutter characteristics of thin plate wing models with sweptback and tapered tips
[NAL-TR-682] N82-16050
WIND TUNNEL TESTS
Summary of theoretical considerations and wind tunnel tests of an aerodynamic spoiler for stall proofing a general aviation airplane
[NASA-CR-165100] N82-16046
Some experimental investigations on transonic flutter characteristics of thin plate wing models with sweptback and tapered tips
[NAL-TR-682] N82-16050
Study of controlled diffusion stator blading. 1. Aerodynamic and mechanical design report
[NASA-CR-165500] N82-16061
Comparison of acoustic data from a 102 mm conic nozzle as measured in the RAE 24-foot wind tunnel and the NASA Ames 40- by 80-foot wind tunnel
[NASA-TM-81343] N82-16083
Documentation for program SIMICE
[AD-A106777] N82-16761
WIND TUNNELS
Calibration of the Ames Anechoic Facility. Phase 1: Short range plan
[NASA-TM-84081] N82-16091
A versatile data acquisition system for a low speed wind tunnel
[AD-A106269] N82-16097
WIND VELOCITY
Tropical cyclone intensity change: A quantitative forecasting scheme
[AD-A106157] N82-16669
Implication of spatial averaging in complex terrain wind studies
[DE81-024451] N82-16672
Why windspeeds increase on high mountain slopes at night
[PB81-243909] N82-16680
WIND VELOCITY MEASUREMENT
A study of the geographic coverage properties of a satellite borne Doppler lidar wind velocity measuring system N82-17058
WINDMILLS (WINDPOWERED MACHINES)
Wind energy planning considerations
[PM-80-4] N82-16496
WINDPOWER UTILIZATION
The NASA Lewis large wind turbine program
[NASA-TM-82761] N82-16495
Wind energy planning considerations
[PM-80-4] N82-16496
The wind characteristics program element
[DE82-004876] N82-16673
WINDPOWERED GENERATORS
The NASA Lewis large wind turbine program
[NASA-TM-82761] N82-16495
Dynamics of single- and multi-unit wind-energy conversion plants supplying electric utility systems
[DE82-000666] N82-16522
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)
[PB81-239566] N82-16547
WING LOADING
Integration of a code for aeroelastic design of conventional and composite wings into ACSYNT, an aircraft synthesis program --- wing aeroelastic design (WADES)
[NASA-CR-137805] N82-16069
Ground calibration of a strain-gauged CT-4A aircraft (1979)
[AD-A107847] N82-16073
WINGS
Integration of a code for aeroelastic design of conventional and composite wings into ACSYNT, an aircraft synthesis program --- wing aeroelastic design (WADES)
[NASA-CR-137805] N82-16069
WIRE WINDING
Laser measuring system for incremental assemblies --- measuring wire-wrapped frame assemblies in spark chambers
[NASA-CASE-GSC-12321-1] N82-16396
WIRELESS COMMUNICATION
VLF/LF/MF Whispering gallery propagation studies
[AD-A106517] N82-16324
WISCONSIN
Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] N82-16437
Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] N82-16439
WOODEN STRUCTURES
Strength and stiffness of small glued-laminated beams with different qualities of tension laminations
[AD-A106562] N82-16421
WORDS (LANGUAGE)
Anaphora for limited domain systems
[AD-A106559] N82-16762
WORKLOADS (PSYCHOPHYSIOLOGY)
Pilot workload: A survey of operational problems
[AD-A107758] N82-16745
WYOMING
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] N82-16446

X

X RAY ANALYSIS
Determination of the efficiency of a proportional counter for detecting X-rays N82-17066

X RAY ASTRONOMY
X-ray astronomy instrumentation studies — design of a proportional counter and measurements of fluorescent radiation
[NASA-CR-161948] N82-17001
X RAY SCATTERING
Determination of the efficiency of a proportional counter for detecting X-rays N82-17066
X RAY SOURCES
Laser heated gas-jet: A soft X-ray source
[DE81-029827] N82-16407
X RAY SPECTROSCOPY
Determination of yttrium in high density silicon nitride by emission and X-ray fluorescence spectroscopy
[AD-A107596] N82-16199
Surface studies of plastic-bonded PETN and RDX by X-ray Photoelectron Spectroscopy (XPS) and Ion-Scattering Spectroscopy (ISS)
[DE81-030402] N82-16207
X RAY TELESCOPES
Design study of imaging techniques for the Starprobe mission
[NASA-CR-166392] N82-16849
Fabrication of X-ray telescopes for sounding rocket flights
[NASA-CR-165112] N82-17002
XENON FLUORIDE LASERS
Recyclability issues in XeF lasers
[AD-A107759] N82-16405

Y

YTTRIUM
Determination of yttrium in high density silicon nitride by emission and X-ray fluorescence spectroscopy
[AD-A107596] N82-16199

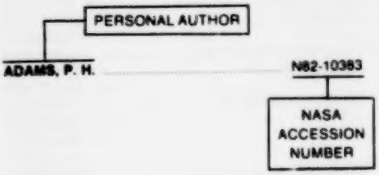
Z

ZINC
Atmospheric deposition of heavy metals and their interaction with acid precipitation in a North American deciduous forest
[DE81-032004] N82-16556
Mechanisms of cadmium absorption in rats
[PB82-108184] N82-16703
ZINC COMPOUNDS
Substitutes for paraformaldehyde hardener and zinc acetate as an accelerator in Wattle-Tannin based adhesives for exterior grade particle board
[PB81-245755] N82-16253
ZINC OXIDES
Heterojunctions in semiconductors
[AD-A106546] N82-16905
ZINC SELENIDES
Research on development of low-resistance p-n junctions in ZnSe
[AD-A108006] N82-16909
ZINC-BROMIDE BATTERIES
Design and cost analysis of a 20-kWh bipolar zinc-bromine battery
[DE81-030117] N82-16521
ZINCBLENDE
Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236
ZONE MELTING
Surface control temperatures for the Bridgman-Stockbarger and float zone techniques
N82-17073

PERSONAL AUTHOR INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 7

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

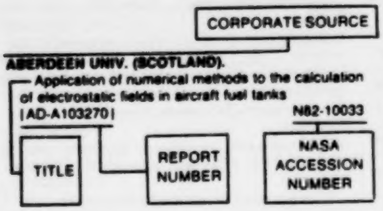
CORPORATE SOURCE INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 7

Typical Corporate Source Index Listing



CORPORATE SOURCE
ABERDEEN UNIV. (SCOTLAND).
Application of numerical methods to the calculation of electrostatic fields in aircraft fuel tanks
[AD-A103270]
N82-10033
TITLE
REPORT NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ACADEMY FOR EDUCATIONAL DEVELOPMENT, INC., WASHINGTON, D. C.

Satellite options for rural telecommunications in developing countries
[PB81-244706] N82-16339

ACADEMY OF SCIENCES (USSR), MOSCOW.

The evolution of density perturbation in an open universe
[REPT-670] N82-17005

The role of the critical ionization velocity phenomena in the production of inner coma cometary plasma
[REPT-626] N82-17007

ACUREX CORP., MOUNTAIN VIEW, CALIF.

Fuel NOx control by catalytic combustion
[PB82-102351] N82-16623

ADVANCED RESEARCH AND APPLICATIONS CORP., SUNNYVALE, CALIF.

Metal-semiconductor reaction phenomena and microstructural investigations of laser-induced regrowth of silicon on insulators
[AD-A106357] N82-16904

AEROJET ENERGY CONSERVATION CO., SACRAMENTO, CALIF.

Combustion enhancement and pollutant-control research with acoustically induced mixing
[DE82-001100] N82-16567

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).

Resonance tests on a Piper PA-32R tailplane before and after damage
[AD-A106273] N82-16071

Ground calibration of a strain-gauged CT-4A aircraft (1979)
[AD-A107847] N82-16073

Programs for the transonic wind tunnel data processing installation. Part 9: Pressure measurements updated
[AD-A106271] N82-16095

Current pressure measuring system in the transonic wind tunnel
[AD-A106272] N82-16096

A versatile data acquisition system for a low speed wind tunnel
[AD-A106269] N82-16097

NDI of composite materials
[AD-A106276] N82-16186

A prediction method for turbulent boundary layers in adverse pressure gradients
[AD-A107849] N82-16371

AEROSPACE CORP., EL SEGUNDO, CALIF.

Carbon vapor pressure in the range 3450 to 4500 K and evidence for melting at approximately 3800 K
[AD-A106134] N82-16196

Kafjord, Norway transmission line VLF antenna tests, 1979 - 1980
[AD-A106430] N82-16325

Rate enhancement resulting from reagent vibrational excitation as estimated by the BEBO method
[AD-A106431] N82-16400

Vibrational relaxation of DF (v=1 and 3) in H2, D2, N2, and HF at 200 K
[AD-A106142] N82-16401

The role of hiss in magnetospheric chorus emissions
[AD-A106479] N82-16643

Low-energy ion pitch-angle distribution in the outer magnetosphere: Ion zipper distributions
[AD-A106153] N82-16646

Magnetic shell tracing: A simplified approach
[AD-A106714] N82-16647

Iterative abel inversion of optically thick, cylindrically symmetric radiation sources
[AD-A106239] N82-16865

AGBABIAN ASSOCIATES, EL SEGUNDO, CALIF.

Investigation of reinforced brick masonry buildings undamaged by the San Fernando earthquake
[PB82-104217] N82-16432

AIR FORCE ENGINEERING AND SERVICES CENTER, TYNDALL AFB, FLA.

Method and technologies for reducing the generation of metal-bearing sludges at AFLC industrial waste treatment plants
[AD-A107552] N82-16552

AIR FORCE FLIGHT DYNAMICS LAB., WRIGHT-PATTERSON AFB, OHIO.

Flight dynamics technology development: Structures and dynamics, vehicle equipment/subsystems, flight control and aeromechanics
[AD-A096636] N82-17062

AIR FORCE FLIGHT TEST CENTER, EDWARDS AFB, CALIF.

A method of estimating upwash angle at noseboom-mounted vanes
[AD-A106160] N82-16051

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.

The conversion of aircraft ice crystal measurements into terms of liquid water using simulated data
[AD-A106419] N82-16644

Development of a large scale cloud system, 23-27 March 1978
[AD-A106417] N82-16665

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.

Aircraft position measurement using laser beacon optics
[AD-A107973] N82-16067

Feasibility of interfacing a microcomputer with a multichannel analyzer to perform gamma ray spectroscopy
[AD-A106176] N82-16194

A finite element model of a White-Metzner viscoelastic polymer extrudate
[AD-A106740] N82-16242

Analysis of maximin matched-filter design for communication through a nonlinearly distorting channel
[AD-A106789] N82-16327

A model for solving multiperiod multireservoir water resources problems with stochastic inflows
[AD-A106769] N82-16458

Gravitational agglomeration of post-HCDA LMFBR nonspherical aerosols
[AD-A106766] N82-16641

Comparison of the dynamic processes during major and minor stratospheric warmings in a numerical model
[AD-A106371] N82-16645

A climate index derived from satellite measured spectral infrared radiation
[AD-A106733] N82-16648

An alternate approach to the measurement of soil surface heat flux
[AD-A106741] N82-16649

Synoptic climatology of bell-shaped thunderstorms
[AD-A106158] N82-16668

Tropical cyclone intensity change: A quantitative forecasting scheme
[AD-A106157] N82-16669

An observational study of blocking
[AD-A106739] N82-16670

The H-function and probability density functions of certain algebraic combinations of independent random variables with H-function probability distribution
[AD-A106768] N82-16777

Molecular dynamics calculations for sodium using pseudopotential theory
[AD-A108014] N82-16821

Angular interferometry-resolution enhancement using half-wave plates
[AD-A107974] N82-16960

AIR FORCE WEAPONS LAB., KIRTLAND AFB, N. MEX.

Parametric considerations for inductively driven plasma implosions
[AD-A106679] N82-16863

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.

A computer program for variable-geometry single-stage axial compressor test data analysis (UD0400)
[AD-A106676] N82-16086

Instructions for TI-59 combined card/module calculations for in-plane and flexural properties of symmetric laminates
[AD-A107984] N82-16189

Synthesis of articulated all-para polymers
[AD-A107554] N82-16247

AIRESEARCH MFG. CO., PHOENIX, ARIZ.

Advanced Gas Turbine (AGT) powertrain system initial development report
[NASA-CR-165130] N82-16485

Advanced Gas Turbine (AGT) powertrain system development for automotive applications
[NASA-CR-165175] N82-16937

AKRON UNIV., OHIO.

Failure loads for model adhesive joints subjected to tension, compression or torsion
[AD-A106724] N82-16424

ALABAMA A & M UNIV., HUNTSVILLE.

Solidification phenomena of binary organic mixtures N82-17047

A study of component design loads due to dynamic environment N82-17056

Determination of the efficiency of a proportional counter for detecting X-rays N82-17066

An investigation of the uniform random number generator N82-17077

ALABAMA ENERGY MANAGEMENT BOARD, MONTGOMERY.

Opelika resource recovery project: Report on the technological and economic evaluation
[DE81-030098] N82-16537

ALABAMA UNIV., UNIVERSITY.

The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043

Digital compensation techniques for the effects of time lag in closed-loop simulation using the 6 DOF motion system N82-17069

ALABAMA UNIV. IN HUNTSVILLE.

X-ray astronomy instrumentation studies
[NASA-CR-161948] N82-17001

The 1981 NASA/ASEE Summer Faculty Fellowship Program: Research reports
[NASA-CR-161855] N82-17043

Synthesis of aminosilane and aromatic diamine intermediates for polymerization N82-17065

Surface contour of a biaxially strained, doubly curved antenna reflective mesh N82-17063

Assessment of MSFC's supervisory training programs and courses N82-17068

A new SPS antenna design to reduce grating lobes N82-17070

Aluminum and chromium ion particle studies for enhancement of surface properties N82-17071

Statistical Analysis of daily mean temperatures N82-17072

Surface control temperatures for the Bridgman-Stockbarger and float zone techniques N82-17073

Heat loss and drag of spherical drop tube samples N82-17079

ALASKA UNIV., FAIRBANKS.

Numerical simulation of the interaction of the plasma sheet with the lobes of the Earth's magnetotail
[NASA-CR-168506] N82-16634

ALBERTA UNIV., EDMONTON.

Vibrational spectroscopy of the electrode-electrolyte interface. Use of Fourier transform infrared Spectroscopy
[AD-A106231] N82-16192

Reductions in aprotic media. 1: Cathodic reduction limits in acetonitrile at a platinum electrode
[AD-A106615] N82-16195

AMERICAN GAS ASSOCIATION LABS., CLEVELAND, OHIO.

Corrosive effects of condensate
[PB81-244782] N82-16233

AMERICAN UNIV., WASHINGTON, D. C.

Appropriation reimbursements
[PB81-245409] N82-16925

AMSTERDAM UNIV. (NETHERLANDS).

The formation of compact objects in binary systems N82-16961

ANALYTIC SCIENCES CORP., READING, MASS.

Research in multirate estimation and control optimal sample rate selection
[AD-A106043] N82-16792

ANALYTICAL MECHANICS ASSOCIATES, INC., HAMPTON, VA.

Terminal area automatic navigation, guidance, and control research using the Microwave Landing System (MLS) Part 3: A comparison of waypoint guidance algorithms for RNAV/MLS transition
[NASA-CR-3512] N82-16060

ANALYTICAL MECHANICS ASSOCIATES, INC., MOUNTAIN VIEW, CALIF.

An investigation of automatic guidance concepts to steer a VTOL aircraft to a small aviation facility ship
[NASA-CR-152407] N82-16087

APPLIED MICROWAVE PLASMA CONCEPTS, ENCINITAS, CALIF.

Multi-species ambipolar phenomena in the ELMO Bumpy Torus N82-16878

APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.

Human reactions to elf electric and magnetic fields: An annotated bibliography of current literature
[PB82-102567] N82-16737

Computer simulation of the effect of road roughness on tire-pavement forces for an articulated vehicle performing braking and cornering maneuvers
[PB81-238461] N82-16963

APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., SILVER SPRING, MD.

Experimental comprehensive solar flare indices for major and certain lesser flares, 1975-1979
[PB82-109497] N82-17042

APPLIED RESEARCH ASSOCIATION, INC., ALBUQUERQUE, N. MEX.

Evaluation of the feasibility of establishing a national testing capability for the simulation of earthquake loads on large-scale structures
[PB81-243875] N82-16295

APT, INC., SAN DIEGO, CALIF.

Spray charging and trapping scrubber for fugitive particle emission control
[PB82-115304] N82-16598

ARGONNE NATIONAL LAB., ILL.

Crevice corrosion and metal-ion concentration cell-corrosion resistance of candidate materials for OTEC heat exchangers, parts 1 and 2
[DE82-000909] N82-16227

Environmental assessment of the use of alcohol fuels in highway vehicles
[DE82-000887] N82-16259

Analysis of state-energy-program capabilities
[DE82-001963] N82-16523

Design, construction, and initial operation of the ANL research
[DE82-001961] N82-16528

Effects of ammonia contamination by water on OTEC power system performance
[DE82-001832] N82-16535

OTEC performance tests of the Trane plate-fin heat exchanger
[DE82-001833] N82-16541

Flue-gas desulfurization: Review of selected commercial and advanced technologies
[DE82-001960] N82-16559

Public health hazards of Lurgi/Fischer Tropsch coal liquefaction
[DE82-001617] N82-16566

MHD Heat and Seed Recovery Technology Project
[DE82-001608] N82-16900

Technical support for open-cycle MHD program
[DE82-001955] N82-16901

Transport and energy
[DE81-030287] N82-16946

ARIZONA UNIV., TUCSON.

Choice and Utilization of Energy-using Durables
[DE81-904228] N82-16513

The stochastic evolution of asteroidal regoliths and the origin of brecciated and gas-rich meteorites N82-17011

Sclera solar diameter observations N82-17026

Solar pulsations and long-term solar variability N82-17036

ARMY AVIATION ENGINEERING FLIGHT ACTIVITY, EDWARDS AFB, CALIF.

Ice phobics blade tracking and comparison of vibration analysis techniques
[AD-A106121] N82-16074

ARMY AVIATION RESEARCH AND DEVELOPMENT COMMAND, ST. LOUIS, MO.

Products of multiple Fourier series with application to the multiblade transformation
[NASA-TM-81340] N82-16746

ARMY MATERIALS AND MECHANICS RESEARCH CENTER, WATERTOWN, MASS.

Determination of yttrium in high density silicon nitride by emission and X-ray fluorescence spectroscopy
[AD-A107596] N82-16199

ARMY MOBILITY EQUIPMENT RESEARCH AND DEVELOPMENT COMMAND, FORT BELVOIR, VA.

Identification of synthetic fluids utilizing pyrolysis gas liquid chromatographic techniques
[AD-A106117] N82-16200

ARMY RESEARCH AND TECHNOLOGY LABS., FORT EUSTIS, VA.

Test and evaluation of improved aircrew restraint systems
[AD-A107576] N82-16056

ARO, INC., ARNOLD AIR FORCE STATION, TENN.

Time- and space-dependence of particulate effluent in the exhaust plume of a pulsed liquid bipropellant engine
[AD-A106525] N82-16173

Multipole expansion for transient electric and magnetic fields in an internally excited spherical cavity contaning dampers of finite thickness with distributed electrical properties
[AD-A106384] N82-16329

ASTRO RESEARCH CORP., CARPINTERIA, CALIF.

Efficient structures for geosynchronous spacecraft solar arrays. Phase 1, 2 and 3
[NASA-CR-163471] N82-16493

ASTRONOMICAL INST., UTRECHT (NETHERLANDS).

Mass loss from early type stars N82-16980

Magnetic activity in cool stars N82-16983

ASTRONOMISCHE GESELLSCHAFT, HAMBURG (WEST GERMANY).

Astronomical Society Information no. 50. Reports of the Scientific Meetings
[REPT-50] N82-16967

A Fokker-Planck model for the stellar initial mass function N82-16968

The Galactic centre and Aquila regions in the near infrared N82-16969

The dynamics of molecular gas in the Galactic center N82-16970

Far infrared balloon-borne observations N82-16972

The hydrostatic equilibrium of interstellar gas and magnetic fields in the 6kpc region of the galaxy N82-16973

The generation of spiral waves in galaxies N82-16974

Astronomical society information number 51. Review articles 2
[REPT-51] N82-16975

Astronomical society information no. 52. Report of the meeting
[ISSN-0374-1958] N82-16986

High resoluton IUE observations of the MG II resonance lines in the T Tauri Star S CrA N82-16987

Star populations in the galactic halo N82-16988

Temperature change, period/amplitude relation for classical cepheids N82-16989

IUE observations of a new BL lac object from the S5 radio catalogue N82-16990

Optical and ultraviolet spectra of Seyfert galaxies N82-16991

Simultaneous IUE and optical observations of the short period spot active binary XY Ursae Majoris N82-16992

The mass (star number)-radius relations for the clusters of the large Magellanic Cloud N82-16993

Non-stationary viscous gaseous disks in nuclei of dense stellar systems N82-16994

Equilibrium and stability of rotating stellar cores with finite entropy N82-16995

Infrared-excess of peculiar B- and A-stars N82-16996

Evolution and nucelosynthesis of massive Pop 111 stars N82-16997

The new optical (300 nm less than lambda lambda less than 1000 nm) ESO photometer N82-16998

Nuclear activity in SO, SBO - galaxy nuclei N82-16999

The 1 mm observations of optically selected quasars N82-17000

ATHENS COLL., ALA.

Design considerations of a thermally stabilized continuous flow electrophoresis chamber 2 N82-17074

ATLANTIC RESEARCH CORP., ALEXANDRIA, VA.

Restoring hazardous spill-damaged areas: Technique identification/assessment
[PB82-103870] N82-16591

AUBURN UNIV., ALA.

A study of the geographic coverage properties of a satellite borne Doppler lidar wind velocity measuring system N82-17058

AVCO-EVERETT RESEARCH LAB., MASS.

Recyclability issues in XeF lasers
[AD-A107759] N82-16405

B

BALL AEROSPACE SYSTEMS DIV., BOULDER, COLO.

Breadboard stellar tracker system test report, volume 1
[NASA-CR-161953] N82-16170

Breadboard stellar tracker system test report, volume 2
[NASA-CR-161954] N82-16171

Design study of imaging techniques for the Starprobe mission
[NASA-CR-168392] N82-16849

BALLISTIC RESEARCH LABS., ABERDEEN PROVING GROUND, MD.
An experimental study of forced asymmetric oscillations in a rotating liquid-filled cylinder
[AD-A107948] N82-16372
Critical angles and grazing incidence: The breakdown of regular shock reflection in solids
[AD-A107665] N82-16426

BATTELLE COLUMBUS LABS., OHIO.
Techniques for handling landborne spills of volatile hazardous substances
[PB82-105230] N82-16609

BATTELLE PACIFIC NORTHWEST LABS., RICHLAND, WASH.
Metal production by electrolysis of molten salt-metal sulfide slurries
[PB81-235434] N82-16236
Development of a low-cost black-liquid solar collector, phase 2
[DE82-000033] N82-16527
Nuclear waste management
[DE82-001605] N82-16845
Analysis of federal incentives used to stimulate energy consumption

SOUTH CAROLINA STATE COLL., ORANGEBURG.

The design and evaluation of superconducting connectors N82-17059

A study of optically contacted quartz at cryogenic temperatures N82-17060

SOUTH CAROLINA UNIV., COLUMBIA.

Multiple microcomputer control algorithm feasibility breadboard
[AD-A107940] N82-16753

SOUTH COAST TECHNOLOGY, INC., DEARBORN, MICH.

Augmentation of research and analysis capabilities for timely support of automotive fuel economy activities
[PB81-247553] N82-16947

SOUTH DAKOTA STATE UNIV., BROOKINGS.

Remote sensing applications to resource problems in South Dakota
[E82-10027] N82-16445

SOUTHWEST RESEARCH INST., SAN ANTONIO, TEX.

Development of the automated AFAPL engine simulator test for lubricant evaluation
[AD-A106128] N82-16093

Residual stress measurements in structural steels
[PB81-241499] N82-16229

Alternate fuels in medium-speed diesel engines: Off-specification diesel fuels, simulated coal-derived fuel and methanol
[PB81-242562] N82-16286

Unregulated exhaust emissions from noncatalyst baseline cars under malfunction conditions
[PB82-101130] N82-16596

Estimating mobile source pollutants in microscale exposure situations
[PB82-101114] N82-16597

SPECTRON DEVELOPMENT LABS., INC., COSTA MESA, CALIF.

Development of a pipe location system
[PB81-246530] N82-16386

Near surface flaw detection by ultrasonic angle imaging
[PB81-235939] N82-16418

SPIRE CORP., BEDFORD, MASS.

Development and fabrication of a solar cell junction processing system
[NASA-CR-163474] N82-16490

SRI INTERNATIONAL CORP., MENLO PARK, CALIF.

The APRAC-3/MOBILE 1 emissions and diffusion modeling package: User's manual
[PB82-103763] N82-16468

An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] N82-16697

STANFORD UNIV., CALIF.

Calibration of the Ames Anechoic Facility. Phase 1: Short range plan
[NASA-TM-84081] N82-16091

Piezoelectric PVF2 polymer films and devices
[AD-A107642] N82-16243

Research on algorithms for adaptive antenna arrays
[AD-A106684] N82-16321

Report of significant accomplishments
[AD-A107607] N82-16353

Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system
[E82-10028] N82-16446

An application of decision analysis to technology assessment: An assessment of decentralized waste treatment methods
[PB82-109018] N82-16605

Effects of confining pressure, pore pressure and temperature on absolute permeability
[DE81-030336] N82-16652

Toward a unified logical basis for programming languages
[AD-A106772] N82-16765

STEARNS-ROGER CORP., DENVER, COLO.

Bi-Gas pilot plant operation
[DE82-000223] N82-16271

STEWART (COULTER) AND ASSOCIATES, INC., DAVIS, CALIF.

Feasibility of geothermal heat use in the San Bernardino Municipal Wastewater Treatment Plant
[DE81-030068] N82-16942

SURFACE TECHNOLOGY, INC., PRINCETON, N. J.

Surface chemical technology for improved wetting of coal dust
[PB82-104654] N82-16606

SYDNEY UNIV. (AUSTRALIA).

Experiments on continuous composite beams
[PB81-247116] N82-16434

Bolted connections in composite structures
[PB81-247124] N82-16435

SYSTEMS RESEARCH LABS., INC., DAYTON, OHIO.

Characterization of microstructures
[AD-A106351] N82-16217

T

T AND E INTERNATIONAL, INC., BEL AIR, MD.

Infrared equipment, general
[AD-A106711] N82-16854

TACTICAL AIR WARFARE CENTER, EGLIN AFB, FLA.

QOT and E of the F-16 20mm ammunition loading system's ability to upload/download A-7D aircraft
[AD-A108007] N82-16099

TECHNICAL UNIV. OF DENMARK, COPENHAGEN.

Heat storage with an incongruently melting salt hydrate as storage medium based on the extra water principle
[DE82-901186] N82-16526

TECHNISCHE HOCHSCHULE, DARMSTADT (WEST GERMANY).

Digital single sideband modulaters for analog signals
[IND-FB-105] N82-16316

TECHNISCHE HOGESCHOOL, DELFT (NETHERLANDS).

Indoor climate, outdoor climate and energy consumption: A new approach to the calculation of the effect of the outdoor and indoor climate on the energy consumption in buildings based on methods of statistical analysis N82-16476

Wind energy planning considerations
[PM-80-4] N82-16496

TELEDYNE GEOTECHNICAL, ALEXANDRIA, VA.

Use of back azimuth measurements in seismic event location with regional data
[AD-A106429] N82-16639

TELEDYNE MICRONETICS, SAN DIEGO, CALIF.

Adaptive processing for low RCS targets
[AD-A106685] N82-16317

TEMPLE UNIV., PHILADELPHIA, PA.

Community noise attitudinal survey guidelines
[PB81-244295] N82-16626

TENNESSEE TECHNOLOGICAL UNIV., COOKEVILLE.

Conversion of ORNL waste paper to sugar using acid hydrolysis
[DE82-000462] N82-16205

Development of toughened epoxy polymers for high performance composite and ablative applications N82-17044

TENNESSEE UNIV., KNOXVILLE.

Process for the formation of biaxially oriented films of poly(p-phenylene terephthalamide) (PPD-T) from liquid crystalline solutions
[AD-A108058] N82-16244

TENNESSEE UNIV. SPACE INST., TULLAHOMA.

Solidification of a binary mixture N82-17067

TERRA TEK, INC., SALT LAKE CITY, UTAH.

Small business innovation research: Oil recovery enhancement by acoustic means
[PB81-243842] N82-16472

TETRA TECH, INC., MELVILLE, N.Y.

Proceedings of the Gulf Circulation Studies Workshop
[PB81-248254] N82-16690

TEXAS A&M UNIV., COLLEGE STATION.

Summary of theoretical considerations and wind tunnel tests of an aerodynamic spoiler for stall proofing a general aviation airplane
[NASA-CR-165100] N82-16046

A unified thermal and vertical trajectory model for the prediction of high altitude balloon performance
[NASA-CR-156884] N82-16048

Precipitation field and intrastorm flow of supercell convective storms
[AD-A106752] N82-16867

Northern Gulf of Mexico topographic features study, executive summary
[PB81-248643] N82-16691

Northern Gulf of Mexico topographic features study. Volume 1: Management geology, biology, water and sediment dynamics. Summary and bibliography
[PB81-248650] N82-16692

Northern Gulf of Mexico topographic features study. Volume 2: Methods, fossil coccoliths, chemical analyses
[PB81-248668] N82-16693

Northern Gulf of Mexico topographic features study, volume 3
[PB81-248676] N82-16694

Northern Gulf of Mexico topographic features study. Volume 4: Other banks
[PB81-248684] N82-16695

Northern Gulf of Mexico topographic features study. Volume 5: Florida Middle Ground
[PB81-248692] N82-16696

Analytical study of twin-jet shielding
[NASA-CR-165102] N82-16801

Analytical study of twin-jet shielding
[NASA-CR-165103] N82-16802

Analytical study of twin-jet shielding
[NASA-CR-165104] N82-16803

Analytical study of twin-jet shielding
[NASA-CR-165105] N82-16804

Analytical study of twin-jet shielding development of a 3-dimensional model
[NASA-CR-165106] N82-16805

Analytical study of twin-jet shielding two-dimensional model
[NASA-CR-165107] N82-16806

TEXAS RESEARCH AND ENGINEERING INST., INC., PORT NECHES.

Silicon production process evaluations
[NASA-CR-163470] N82-16486

TEXAS TECHNOLOGICAL UNIV., LUBBOCK.

Lie groups and lie algebras in video tracking
[AD-A107858] N82-16780

TEXAS UNIV. AT ARLINGTON.

Digital correlation of DDRS data
[NASA-CR-167494] N82-16452

A study pertaining to inertial energy storage machine designs for space applications
[NASA-CR-163465] N82-16489

Nonpolynomial and inverse interpolation for line search: Synthesis and convergence rates
[AD-A106680] N82-16776

Measurements and analysis of acoustic bottom interaction in the Northwestern Mexican Basin
[AD-A107551] N82-16813

The study of atom-atom electron-molecule and photon-molecule processes
[AD-A107991] N82-16820

THOMAS ELECTRONICS INC., WAYNE N. J.

Manufacturing Methods and Technology (MM&T) specification for miniature cathode ray tube
[AD-A106433] N82-16345

Manufacturing Methods and Technology (MM&T) specifications for miniature cathode ray tube
[AD-A106432] N82-16346

TOLEDO UNIV., OHIO.

Search for promethium-like gold lines and other transitions of interest to fusion research
[DE81-029917] N82-16872

TRANSMISSION RESEARCH, INC., CLEVELAND, OHIO.

Traction contact performance evaluation at high speeds
[NASA-CR-165226] N82-16409

TRANSPORTATION RESEARCH BOARD, WASHINGTON, D.C.

Air service, airport access and future technology
[PB82-105958] N82-16100

Bridge and pavement maintenance
[PB81-247504] N82-16309

TRANSPORTATION SYSTEMS CENTER, CAMBRIDGE, MASS.

An investigation of truck size and weight limits. Technical supplement. Volume 3: Truck and rail fuel effects of truck size and weight limits
[PB82-10[illegible]338] N82-16953

Los Angeles Downtown People Mover (DPM) operational analysis
[PB81-241416] N82-16964

TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF.
Digital Avionics Information System (DAIS): Development and demonstration
[AD-A107906] N82-16079
Development of a surface panel measurement system
[NASA-CR-163469] N82-16315
The 403 MHz SAW oscillator
[AD-A107588] N82-16378

TRW, INC., CLEVELAND, OHIO.
Fabrication of boron/aluminum fan blades for SCR engines
[NASA-CR-165294] N82-16176

TRW, INC., MCLEAN, VA.
Alternatives to ceramic bricks and ceramic-brick systems
[DE81-032029] N82-16427

TRW, INC., REDONDO BEACH, CALIF.
Ambipolar potential control by fast wave heating in Bumpy Tori N82-16897

TULANE UNIV., NEW ORLEANS, LA.
Parasites in southern sludges and disinfection by standard sludge treatment
[PB82-102344] N82-16622

TUSKEGEE INST., ALA.
A test and instrumentation system or the investigation of degradation of electrical insulating materials
[NASA-CR-165109] N82-16341

U

UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE, GENEVA (SWITZERLAND).
Exchange of national experience in the field of new energy sources: In particular, solar, wind, and geothermal energy: The 25 m experimental horizontal axis wind turbine (25 m HAT)
[PB81-239568] N82-16547

UNITED TECHNOLOGIES RESEARCH CENTER, EAST HARTFORD, CONN.
Research and development program for non-linear structural modeling with advanced time-temperature dependent constitutive relationships
[NASA-CR-165533] N82-16080
Energetics and collision dynamics of electronic transition lasers
[AD-A107591] N82-16404

UNIVERSITIES SPACE RESEARCH ASSOCIATION, COLUMBIA, MD.
CAS22 - FORTRAN program for fast design and analysis of shock-free airfoil cascades using ficitious-gas concept
[NASA-CR-3507] N82-16044

UNIVERSITY COLL., LONDON (ENGLAND).
Tropospheric: Stratospheric tidal investigations. Part 3: Hough components of surface pressure
[AD-A106386] N82-16640

UNIVERSITY OF CENTRAL FLORIDA, ORLANDO.
A preliminary study of the particulate fallout from the space shuttle (STS-1) N82-17051

UNIVERSITY OF SOUTH FLORIDA, TAMPA.
COMSTAR satellite 19/29 GHz propagation experiment
[AD-A106001] N82-16334
Microprocessor digital fault
[AD-A106707] N82-16752

UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.
Reactive and energy transfer processes of the neutral radical species HgBr in gas phase collisions
[AD-A107718] N82-16196
Research in electronics: JSEP
[AD-A107624] N82-16354
Laser kinetic spectroscopic studies (a) the unimolecular reactions of nitroalkanes and, (b) elementary reactions important in combustion
[AD-A107620] N82-16402
Three papers of network programs
[AD-A106799] N82-16769
The effect of solute-vacancy pairs on the physical properties of Si doped GaAs and other compound semiconductor systems
[AD-A107598] N82-16910

UNIVERSITY OF WESTERN CAROLINA, CULLOWHEE, N.C.
On-site wastewater treatment problems and alternatives for western North Caroline
[PB81-240541] N82-16572

UNIVERSITY OF WESTERN KENTUCKY, BOWLING GREEN.
Ray tracing studies of Jupiter's magnetosphere N82-17064

URBAN SYSTEMS RESEARCH AND ENGINEERING, INC., CAMBRIDGE, MASS.
Energy and environmental quality: Case histories of impact management
[DE81-028435] N82-16565

URS/BLUME (JOHN A.) AND ASSOCIATES, SAN FRANCISCO, CALIF.
Earthquake engineering of large underground structures
[PB81-247918] N82-16291

UTAH DEPT. OF TRANSPORTATION, SALT LAKE CITY.
Evaluation of flexible pavement crack sealing methods used in Utah
[PB81-239462] N82-16290

UTAH UNIV., SALT LAKE CITY.
Studies of the effect of orientation on the elastic constants of stretched and hydrostatically extruded poly(chlorotriflouroethylene): A model of affine orientation in semi-crystalline polymers
[AD-A107909] N82-16245
Assignment of an anomalous peak in the Brillouin spectrum of oriented polymer films
[AD-A107897] N82-16246
Concepts of fundamental processes related to gasification of coal
[DE82-000763] N82-16282

V

VANDERBILT UNIV., NASHVILLE, TENN.
A determination of the current density in electron beams N82-17045

VARIAN ASSOCIATES, PALO ALTO, CALIF.
Research on InGaAs FETs
[AD-A106016] N82-16355
Research on long wavelength bias-assisted photoemitters
[AD-A107815] N82-16912

VERSAR, INC., SPRINGFIELD, VA.
Environmental assessment, source test and evaluation report: Coal preparation plant no. 2
[PB82-103573] N82-16618

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE82-001076] N82-16226
Modeling and Analysis of Power Processing Systems (MAPPS). Volume 2: Appendices
[NASA-CR-165539] N82-16748
Testing for Gaussianity and linearity of stationary time series
[AD-A017548] N82-16761
ARMA spectral estimation: An efficient closed form procedure
[AD-A106753] N82-16766
User considerations in computer-based information system
[AD-A106194] N82-16926

VIRGINIA UNIV., CHARLOTTESVILLE.
Impact of topographic circulations on the transport and dispersion of air pollutants
[PB82-102435] N82-16584

W

WASHINGTON STATE UNIV., PULLMAN.
Characteristics of coal/light hydrocarbon slurries in spray combustion
[DE82-000387] N82-16213
Study of non-Darcy natural convection from a vertical heated surface in a saturated porous medium
[DE81-030081] N82-16374
Venturi design for metering solids flow in gas-solids suspensions
[DE81-031944] N82-16380
Stability of optical coatings in hostile excimer laser environments
[AD-A106756] N82-16397
Nanosecond and picosecond spectroscopy and kinetics of dynamic absorbing materials
[AD-A107733] N82-16403

WASHINGTON UNIV., SEATTLE.
Static stress-intensity factors and dynamic crack propagation in pipes
[DE82-900365] N82-16431
Quark-gluon plasma and the little bang
[DE81-030320] N82-16840
Photoacoustic spectroscopy of dielectric and semiconducting solids
[AD-A107613] N82-16911

WASHINGTON UNIV., ST. LOUIS, MO.
Dynamic behavior of moving-bed coal-gasification reactors
[DE82-000595] N82-16265
Quantitative data on the abundances and distribution of seamounts in the Pacific Ocean
[AD-A107853] N82-16685

WATER AND POWER RESOURCES SERVICE, DENVER, COLO.
Closed-system freezing of soils in linings and earth embankment dams
[PB81-240491] N82-16289

WAYNE STATE UNIV., DETROIT, MICH.
Applications of random differential equations to engineering science. Wave propagation in turbulent media and random linear hyperbolic systems
[AD-A106020] N82-16782

WEST VIRGINIA UNIV., MORGANTOWN.
Investigation of the use of coal refuse-fly ash compositions as highway base course material
[PB82-101940] N82-16301

WESTINGHOUSE ELECTRIC CORP., CONCORDVILLE, PA.
Compressed air energy storage preliminary design and site development program in an aquifer. Turbomachinery design
[DE82-000672] N82-16524

WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Compact Commercial Tokamak Reactor (CCTR): A concept for a 500-MWe commercial-Tokamak fusion system
[DE81-030406] N82-16871

WESTON (ROY F.), INC., WEST CHESTER, PA.
Hourly diurnal flow variations in publicly-owned wastewater treatment facilities
[PB82-107954] N82-16601

WINTER (STEVEN) ASSOCIATES, INC., NEW YORK, N.Y.
Code workbook for active and passive solar design: Single-family residential construction
[DE82-000637] N82-16531

WISCONSIN UNIV. - MADISON.
Wetland mapping from digitized aerial photography
[E82-10019] N82-16437
Effects of diabatic heating on the ageostrophic circulation of an upper tropospheric jet streak
[NASA-CR-3497] N82-16658
Potential measurements in Phaedrus - Wisconsin's Tandem Mirror N82-16882

WISCONSIN UNIV. - PLATTEVILLE.
Incipient failure detection (IFD) of SSME ball bearings N82-17080

WISCONSIN UNIV., MADISON.
Multidisciplinary research on the application of remote sensing to water resources problems
[E82-10021] N82-16439
Optically pumped polarized ion sources
[DE81-026306] N82-16796

WRIGHT STATE UNIV., DAYTON, OHIO.
Operator's manual for variable weight, variable CG helmet simulator
[AD-A106093] N82-16078

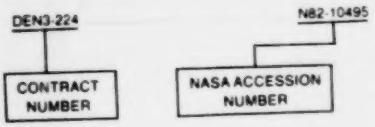
Y

YALE UNIV., NEW HAVEN, CONN.
Sparse matrices
[AD-A105187] N82-16775

CONTRACT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 7

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

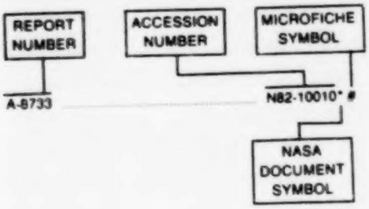
REPORT / ACCESSION NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 7

Typical Report / Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an * following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library
NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and *, from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

NAS 1.9/4:

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402, United States of America.

Semimonthly issues

Annual subscription rates: $90.00 domestic; $112.00 foreign. Price per single copy: $4.75 domestic; $5.95 foreign.

Annual index issues

Pricing based upon pagination.

Domestic subscription rates

Apply to the United States, Canada, Mexico, and all Central and South American countries except as noted below.

Foreign subscription rates

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH

Scientific and Technical Aerospace Reports, Volume 20, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through March 31, 1982.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR*, and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, ***The NASA Scientific and Technical Information System ... and How to Use It***, available without charge from the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

HOW TO USE *STAR* SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche(1) are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Adminstration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its' Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free. (See discussion of patents and patent applications below.)

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02 ($6.00 domestic; $12.00 foreign). Microfiche are sold at price code A01 ($4.00 domestic; $8.00 foreign). The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at 50 cents per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP-1
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services, in addition to the distribution of NASA scientific and technical reports and of *STAR* and its cumulative indexes, is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;
2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
Attn.: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $50.00 North America; $100.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

VOLUME 20 NUMBER 8 APRIL 23, 1982

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) 1017

02 AERODYNAMICS 1022

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

03 AIR TRANSPORTATION AND SAFETY 1024

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation*.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 1025

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications*.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 1027

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics*.

06 AIRCRAFT INSTRUMENTATION 1029

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography*.

07 AIRCRAFT PROPULSION AND POWER 1031

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power*, *28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

08 AIRCRAFT STABILITY AND CONTROL 1038

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 1038

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space)*.

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*.

12 ASTRONAUTICS (GENERAL) 1039

For extraterrestrial exploration see *91 Lunar and Planetary Exploration*.

13 ASTRODYNAMICS 1040

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) 1040

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air)*.

15 LAUNCH VEHICLES AND SPACE VEHICLES 1040

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 1042

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation*.

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING 1042

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications*.

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 1043

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man System Technology and Life Support*. For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics*.

19 SPACECRAFT INSTRUMENTATION 1043

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography*.

20 SPACECRAFT PROPULSION AND POWER 1043

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power*, *28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) 1044

Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS 1045

Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY 1046

Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.

For related information see also *77 Thermodynamics and Statistical Physics.*

26 METALLIC MATERIALS 1056

Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS 1059

Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS 1063

Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

For related information see also *Physics.*

31 ENGINEERING (GENERAL) 1065

Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS 1067

Includes land and global communications; communications theory; and optical communications.

For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING 1070

Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.

For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER 1072

Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.

For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY 1075

Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.

For aerial photography see *43 Earth Resources.* For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation.*

36 LASERS AND MASERS 1077

Includes parametric amplifiers.

37 MECHANICAL ENGINEERING 1079

Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY 1081

Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS 1081

Includes structural element design and weight analysis; fatigue; and thermal stress.

For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.

For related information see also *Space Sciences.*

42 GEOSCIENCES (GENERAL) 1085

43 EARTH RESOURCES 1085

Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION 1092

Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION 1099

Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 1105

Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.

For space radiation see *93 Space Radiation.*

47 METEOROLOGY AND CLIMATOLOGY 1112

Includes weather forecasting and modification.

48 OCEANOGRAPHY 1119

Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) 1121
Includes genetics.

52 AEROSPACE MEDICINE 1127
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES 1131
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT 1131
Includes human engineering; biotechnology, and space suits and protective clothing.

55 PLANETARY BIOLOGY N.A.
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) 1132

60 COMPUTER OPERATIONS AND HARDWARE 1132
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering*.

61 COMPUTER PROGRAMMING AND SOFTWARE 1133
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS 1135
Includes computer networks.

63 CYBERNETICS 1136
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support*.

64 NUMERICAL ANALYSIS 1136
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY 1141
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS 1142
Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS 1143
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering*.

70 PHYSICS (GENERAL) 1144
For geophysics see *46 Geophysics*. For astrophysics see *90 Astrophysics*. For solar physics see *92 Solar Physics*.

71 ACOUSTICS 1144
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution*.

72 ATOMIC AND MOLECULAR PHYSICS 1144
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS 1149
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation*.

74 OPTICS 1149
Includes light phenomena.

75 PLASMA PHYSICS 1150
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics*. For space plasmas see *90 Astrophysics*.

76 SOLID-STATE PHYSICS 1153
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers*.

77 THERMODYNAMICS AND STATISTICAL PHYSICS 1157
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer*.

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) 1157
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT 1157
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE 1158

Includes information storage and retrieval technology; micrography; and library science.

For computer documentation see *61 Computer Programming and Software*.

83 ECONOMICS AND COST ANALYSIS N.A.

Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE 1158

Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION 1159

Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.

For related information see *03 Air Transportation and Safety*, *16 Space Transportation*, and *44 Energy Production and Conversion*.

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.

For related information see also *Geosciences*.

88 SPACE SCIENCES (GENERAL) N.A.

89 ASTRONOMY 1161

Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS 1162

Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION 1164

Includes planetology; and manned and unmanned flights.

DEVELOPMENT AND EVALUATION OF AUTOMATIC LANDING CONTROL LAWS FOR LIGHT WING LOADING STOL AIRCRAFT

B. Feinreich, O. Degani, and G. Gevaert Jul. 1981 371 p refs

(Contract NAS2-9410)

(NASA-CR-166160) Avail: NTIS HC A16/MF A01 CSCL 01C

Automatic flare and decrab control laws were developed for NASA's experimental Twin Otter. This light wing loading STOL aircraft was equipped with direct lift control (DLC) wing spoilers to enhance flight path control. Automatic landing control laws that made use of the spoilers were developed, evaluated in a simulation and the results compared with these obtained for configurations that did not use DLC. The spoilers produced a significant improvement in performance. A simulation that could be operated faster than real time in order to provide statistical landing data for a large number of landings over a wide spectrum of disturbances in a short time was constructed and used in the evaluation and refinement of control law configurations. A longitudinal control law that had been previously developed and evaluated in flight was also simulated and its performance compared with that of the control laws developed. Runway alignment control laws were also defined, evaluated, and refined to result in a final recommended configuration. Good landing performance, compatible with Category 3 operation into STOL runways, was obtained. Author

AN EXPERIMENTAL STUDY OF AIRFOIL ICING CHARACTERISTICS

Robert J. Shaw, Ray G. Sotos, and Frank R. Solano 1982 37 p refs Presented at Twentieth Aerospace Sci. Conf., Orlando, Fla., 11-14 Jan. 1982; sponsored by AIAA

(NASA-TM-82790; E-1114) Avail: NTIS HC A03/MF A01 CSCL 01B

A full scale general aviation wing with a NACA 63 sub 2 A415 airfoil section was tested to determine icing characteristics for representative rime and glaze icing conditions. Measurements were made of ice accretion shapes and resultant wing section drag coefficient levels. It was found that the NACA 63 sub 2 A415 wing section was less sensitive to rime and glaze icing encounters for climb conditions. E.A.K.

BUILT-IN-TEST EQUIPMENT REQUIREMENTS WORKSHOP. WORKSHOP PRESENTATION Final Report, 1 Oct. 1980 - 28 Feb. 1981

Aug. 1981 235 p refs Workshop held at Arlington, Va., 11-13 Feb. 1981

(Contract MDA903-79-C-0320)

(AD-A107842; AD-E500460; IDA-P-1600) Avail: NTIS HC A11/MF A01 CSCL 09/3

A workshop was held for the purpose of assessing progress and problems in specifying and testing Built-In-Test (BIT) used in complex electronic equipment. The workshop's principal recommendation is that the current specification and test approach be broadened to include all capabilities associated with the detection and isolation of faults. Current practices generally address only a narrow subset of these capabilities, namely, BIT. The workshop participants defined this broad capability as '100 Percent Diagnostics.' The diagnostic capability is considered to have two components--'automatic' and 'manual.' The automatic component consists of BIT or semi-automatic BIT with technical manuals, while the manual component consists of personnel using logic, external test equipment and/or manual test procedures. Observations on current experience with BIT, recommendations to improve specification and testing of '100 Percent Diagnostics' that can be put into practice in the near term, and proposed research areas are presented. THE EFFECT OF INCREASINGLY MORE COMPLEX AIRCRAFT AND AVIONICS ON THE METHOD OF SYSTEM DESIGN c06

J. T. Martin *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 5 p (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF A01

The evolution of aircraft and their associated avionics is described. The evolutionary progress is considered as starting from a simple low speed aircraft with rudimentary flight instruments and sighting systems, through the interconnection of some of these systems and progressing to recent avionic systems with centralized digital computing. It is shown how the changes in aircraft systems, from the simple analog connection of a few systems, through the analog sensor/interface box/centralized digital system, to the sensor producing digital outputs/interface box/centralized digital system, have produced comparatively small changes in the methodology used for the design of these systems. The move to systems containing distributed processing interconnected by digital highways is shown to be revolutionary rather than evolutionary and to require a new approach to the system design problem so as to reap the maximum advantage from the available computing capability. A TUTORIAL ON DISTRIBUTED PROCESSING IN AIRCRAFT/AVIONICS APPLICATIONS c06

Bernard A. Zempolich *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 11 p (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF A01

An overview of the state of the art in real time distributed processing as applied to aircraft/avionics is presented. Definitions and concepts are presented starting with the total aircraft as a real time distributed computer controlled system. The relationship of aircraft mission and avionic system architectures is discussed. Overall system architectural considerations are identified and their impact upon a real time distributed computer-controlled system is detailed. A top-down hierarchical, architectural structure is presented. This top-down structuring is described in terms of the logical functional decomposition of the system as follows: total aircraft/avionic system partitioning of aircraft/avionic subsystems, interconnect bus structure (network), system-wide processing architecture, subsystems definition, and computer systems.

PERFORMANCE STUDY OF A DISTRIBUTED MICROPROCESSOR ARCHITECTURE FOR USE ABOARD MILITARY AIRCRAFT c06

Kang G. Shin and C. M. Krishna *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 13 p refs (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF A01

An analysis of the performance of the Distributed Microprocessor Airborne Computing System (DMACS) developed at Rensselaer Polytechnic Institute is presented. The DMACS consists of a number of quasi-independent computer subsystems loosely coupled in a highly decentralized structure that yet exhibits high cogency as a system. Some important parameters in the system such as job scheduling and starting delays, bus access delay, and system reliability are studied. In order to highlight the implications of the design options chosen, the structure of the DMACS and that of the Draper Laboratory's Fault-Tolerant Multiprocessor (FTMP) system are compared and the impact of structure on performance is discussed qualitatively.

THE DEVELOPMENT OF ASYNCHRONOUS MULTIPROCESSOR CONCEPTS FOR FLIGHT CONTROL SYSTEM APPLICATIONS c08

S. M. Wright and J. G. Brown *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 11 p refs Sponsored in part by RAE (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF A01

The use of multiple microprocessors, each functionally dedicated and running asynchronously with a short program cycle time, is described. This approach promises benefits in a number of areas: ease of generating/proving high integrity software, reduced propagation delays, reduced hardware/software synchronization overheads, retention of classical feedback control design techniques, and extendable processing power. A flight dynamics research program using a RAE Hunter aircraft converted to fly-by-wire is discussed. This program has identified a need for a flexible digital flight control processor for such research and has provided a focus and stimulus for multiprocessor studies. The development of digital full authority flight control computer for this specific application, with a view to installation in the aircraft, is discussed.

FUNCTIONAL VERSUS COMMUNICATION STRUCTURES IN MODERN AVIONIC SYSTEMS c06

K. Brammer and A. Weimann *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 11 p refs (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF 01

The implications of the increase in functional and communication interfaces on avionic system structures are analyzed. Especially the passage from functional design to implemented communication structure of the airborne electronic system is scrutinized. The distributed organization of an avionic system, the realization of which is greatly simplified by bus type intrasystem signal transmission, is compared to the conventional hierarchical system organization. Advantages and drawbacks of both organizations are reviewed especially with respect to interface efficiency, cabling requirements, and the typical topology of avionic systems.

CONTINUOUS RECONFIGURATION IN A MULTI-MICROPROCESSOR FLIGHT CONTROL SYSTEM c08

Scott L. Maher and Stanley J. Larimer *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 9 p refs (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF A01

A microprocessor based flight control system design is presented. This system is characterized by a collection of cooperatively autonomous distributed microcomputers interconnected by an arbitrary number of common serial multiplex busses. Each processor in the system independently determines its assignments using a simple algorithm that dynamically redistributes system functions from processor to processor in a never-ending process of reconfiguration. This approach offers several potential benefits in terms of system reliability, and the architecture in general incorporates many state of the art features which promise improved system throughput, expandability, and above all, ease of programming. The Continuously Reconfiguring Multi-Microprocessor Flight Control System (CRM2FCS) represents a significant data point in multiprocessor control system research. Promising ideas from a variety of references have been included and integrated in its design.

EXPERIENCES WITH THE EXPERIMENTAL FFM-MCS c60

Hermann von Issendorff *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 8 p refs (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF A01

The FFM-Multicomputer System (FFM-MCS), built up to investigate the utilization of microprocessor based computing networks for the various requirements of embedded data processing and control in military systems is described. Being designed as an adaptable building block system the FFM-MCS serves as a testbed for research on distributed data processing. A general method for the design of process networks followed by the adaption of adequate hardware networks is discussed. Several types of messages are introduced for efficient and safe communication between autonomous process modules. Some improvements of the hardware building block system are presented.

SAVANT: A DATABASE MANIPULATION TECHNIQUE FOR SYSTEM ARCHITECTURE DESIGN VERIFICATION AND ANALYSIS c60

A. A. Callaway *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 9 p refs (For primary document see N82-17086 08-01)

Avail: NTIS HC A18/MF A01

The SAVANT (System Architecture Verification and Analysis Technique), a computer program developed to provide a tool for automatic system design verification and analysis is described. Its application is oriented towards loosely-coupled bus connected systems but is not exclusively confined to these. Flexibility has been built into the program to characterize aspects of the system architecture. The SAVANT program provides the facilities for interactively initiating, extending, modifying, filing, and retrieving the data base, which represents various facets of the system under investigation, and for configuring a system from the data base information. The system thus configured can be analyzed in a number of ways and the analyses performed suggest how the basic information should be modified in order to correct errors and inconsistencies or to improve efficiency. A consistent system can be further modified and tuned, although SAVANT still checks the validity of all operations performed. Finally, the user is able to 'firm up' the system when it has reached a satisfactory state, producing design requirements and a system description in a form which can input as a schedule to a bus control processor. SIGNAL PROCESSING WITH SYSTOLIC ARRAYS c32

R. W. Priester, K. Bromley, H. J. Whitehouse, and J. B. Clary *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 11 p refs (For primary document see N82-17086 08-01)
(Contract N66001-80-C-0118)
Avail: NTIS HC A18/MF A01

Systolic arrays are formed by providing nearest-neighbor interconnections between a large number of elemental processors to form either a one or two dimensional array. With the possible exception of boundary elements, each processing element performs identical computations in synchronism with other elements in the array. Important problems for which systolic arrays hold potential are mentioned and the systolic array processor definition, in a number of its forms, are reviewed. When applied to strongly band-limited matrices, systolic array processors can be characterized as highly efficient from the standpoint of both hardware utilization and algorithm time. However, as the bandwidth becomes large, this high performance is degraded. A data transformation which, when applied to an n x n dense matrix, results in an improved banded structure with attendant hardware savings is introduced and evaluated. Some efficient testability features of these processors which can be exploited concurrently are summarized. B.W.

ECONOMIC CONSIDERATIONS FOR REAL-TIME NAVAL AIRCRAFT/AVIONICS DISTRIBUTED COMPUTER CONTROL SYSTEMS c06

Bernard A. Zempolich *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 10 p (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

Economic considerations for Distributed Computer Control Systems (DCCS) are discussed. Centralized, distributed and federated processing architectures are used as the primary set of systems alternatives from which economic factors are developed. The economic impact of subsequent logistic support for standardized computer hardware and software versus non-standard products is identified. System considerations such as reliability, maintainability, availability, built-in-test, fault tolerance, and redundancy are examined from the standpoint of resources available to design and develop the DCCS, and also from the viewpoint of economic impact of failure of the DCCS to perform as expected. The economic impact of external factors such as the rate of technology advancement, technology independence, limited production runs, and the general lack of economic leverage upon the market are examined and related to the life-cycle support requirements of the DCCS. FUNCTIONAL DOCUMENTATION. A PRACTICAL AID TO THE ORDERLY SOLUTION OF THE SYSTEM DESIGN PROBLEM c60

J. J. Martin *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 18 p (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

A method of breaking down a Customer Requirement in an orderly manner so as to produce progressively more detailed design levels such that at any one stage of the System Design the particular part of the design under consideration can firstly be easily understood and secondly comparatively isolated from the other parts of the design is described. The most important characteristic of the design methodology is that the Requirement is considered in purely Functional terms until a highly detailed level of the design is reached. An example of this design methodology and the technique of Functional Documentation is given and the advantages that can accrue from a sensible use of the design methodology are discussed. Author

A CONSISTENT APPROACH TO THE DEVELOPMENT OF SYSTEM REQUIREMENTS AND SOFTWARE DESIGN c61

A. O. Ward *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 16 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

Some of the problems encountered in the development of system and software requirements are discussed and generalized solutions suggested. A specific approach is described, the SAFRA Project, including extensions into the area of software design. This approach embraces the use of a methodology, Controlled Requirements Expression (CORE) interfaced with a computer based System Description Language for storage and automatic analysis. Software design assumes the use of a MASCOT rationalized executive and CORAL as the implementation language. Experimental procedures for the automatic extraction of CORAL programmes from detailed requirements held on a data base are discussed. Author

A PEARL SOFTWARE SYSTEM FOR MULTI-PROCESSOR SYSTEMS c61

P. Elzer and H.-J. Schneider *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 6 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

A High-Order-Language-System based on PEARL to program Multi-Processor-Systems in an airborne or similar environment was developed. It was necessary to minimize the overhead produced by the operating system. The generated code was optimized to a very high efficiency with respect to time and memory. Originally the aim of PEARL was process-control. Due to the application area here, subsetting of PEARL was possible. This was done with high efficiency of code and a smaller modular operating system in mind. On the other hand extensions to allow distributed processing were implemented. It exists on a host-computer and is written in FORTRAN for portability. The system was successfully used in several applications. Author

DISTRIBUTED AND DECENTRALIZED CONTROL IN FULLY DISTRIBUTED PROCESSING SYSTEMS c60

Philip H. Enslow, Jr. *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 p 16 refs (For primary document see N82-17086 08-01)
(Contract F30602-78-C-0120)
Avail: NTIS HC A18/MF A01

A number of the characteristics of a distributed and decentralized control system and some of its operational features are identified and discussed. Extremely loose coupling, both physical and logical, is an essential characteristic of an FDPS. This mode of organization and operation is quite different from the control of centralized systems. Various models of control that may provide these features and the operational characteristics of those models are described. B.W.

N82-17102# INRIA, Rocquencourt (France).

RECOVERY IN DISTRIBUTED PROCESSING SYSTEMS c62

Liba Svobodova *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 9 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

A powerful control abstraction called an atomic action was developed as a general mechanism for controlling access to shared distributed data. In order to preserve consistency of the system, if an atomic action fails, all of its effects are undone; thus if a long complex computation is reprsented as an atomic action, an important amount of possibly useful work might be lost. The proposed scheme which facilitates selective internal recovery from detected errors, mode failures, and communication failures employes nested atomic action. When an atomic action terminates, its results are not made permanent until the outermost atomic action is committed, but they survive local model failures. Each subtree of nested atomic actions is recoverable (undoable) individually, thus making it possible to switch to an alternative algorithm, service, or physical mode upon a failure. Finally, a recovery point is established in stable storage as part of a remote request, so that work done outside of the requesting node is not lost if this node fails. Author

GENERALIZED POLLING ALGORITHMS FOR DISTRIBUTED SYSTEMS c62

Jack Keil Wolf *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 9 p refs (For primary document see N82-17086 08-01)
(Grant NSF ESC-79-21140)
Avail: NTIS HC A18/MF A01

A polling algorithm for a distributed system is an algorithm which can be simultaneously run at all terminals in a network and which has as its aim the determination of which terminals have a positive response to a specific query. Of particular interest is the situation where one expects very few of the terminals to respond positively and where a terminal signifies a negative response by not transmitting at all. In such a case it is inefficient to poll the terminals in a round robin manner. A more efficient procedure is to group the terminals into subsets in which all terminals in a subset are queried simultaneously. Then if all respond negatively no further queries need be addressed to that subset. If the responses from the terminals in the subset are mixed than this subset is further subdivided into smaller subsets until the responses of all the terminals are determined. Two distinct algorithms for polling are considered. In both algorithms, the terminals of the network are represented by leaves in a binary tree and the subsets are subtrees in the overall tree. The two systems differ in the assumptions made regarding the types of responses sent and how the responses are interpreted. The performance of these two schemes are compared with each other and with ordinary round robin polling. Author

STAGE-STATE RELIABILITY ANALYSIS TECHNIQUE c38

Alan D. Stern *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 7 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

An advanced flight control system reliability analysis technique must properly account for the defined success criteria, redundancy level, redundancy management, technique, system dependencies, and failure detection coverage. The stage state reliability analysis technique properly accounts for these factors. It is also computationally simple such that triplex redundant systems have been analyzed using an early 1970's desktop computer. This method is well suited for analysis by the system architect. The process begins with a system block diagram showing all element connections. A success logic diagram is then written reflecting all possible success states. The probability of success equation is written directly from the logic diagram and evaluated by substituting the probability expression for each system element. Multiple success criteria can be applied to one problem formulation simply by deleting those states which do not satisfy the success criterion. Author

METHODOLOGY FOR MEASUREMENT OF FAULT LATENCY IN A DIGITAL AVIONIC MINIPROCESSOR c06

John C. McGough, Fred Swern, and Salvatore J. Bavuso *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 18 p refs Prepared in cooperation with Bendix Corp., Teterboro, N.J. (For primary document see N82-17086 08-01)
(Contract NAS1-15946)
Avail: NTIS HC A18/MF A01 CSCL 01D

Using a gate level emulation of a typical avionics miniprocessor, fault injection experiments were performed to (1) determine the time to detect a fault by comparison monitoring, (2) forecast a program's ability to detect faults and (3) validate the fault detection coverage of a typical self test program. To estimate time to detect, six programs ranging in complexity from 6 to 147 instructions, were emulated. Each program was executed repetitively in the presence of a single stuck at fault at a gate node or device pin. Detection was assumed to occur whenever the computed outputs differed from the corresponding outputs of the same program executed in a nonfaulted processor. Histograms of faults detected versus number of repetitions to detection were tabulated. Using a simple model of fault detection, which was based in an analog with the selection of balls in an urn, distributions of time to detect were computed and compared with those obtained empirically. A self test program of 2,000 executable instructions was designed expressly for the study. The only requirement imposed on the design was that it should achieve 95% coverage. The program was executed in the presence of a single stuck-at fault at a gate node on device pin. The proportion of detected faults are tabulated. In all experiments faults were selected at random over gate nodes or device pins. Author

HIERARCHICAL SPECIFICATION OF THE SIFT FAULT TOLERANT FLIGHT CONTROL SYSTEM c08

P. M. Melliar-Smith and Richard L. Schwartz *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 15 p refs (For primary document see N82-17086 08-01)
(Contract NAS1-15428)
Avail: NTIS HC A18/MF A01 CSCL 01B

The specification and mechanical verification of the Software Implemented Fault Tolerance (SIFT) flight control system is described. The methodology employed in the verification effort is discussed, and a description of the hierarchical models of the SIFT system is given. To meet the objective of NASA for the reliability of safety critical flight control systems, the SIFT computer must achieve a reliability well beyond the levels at which reliability can be actually measured. The methodology employed to demonstrate rigorously that the SIFT computer meets as reliability requirements is described. The hierarchy of design specifications from very abstract descriptions of system function down to the actual implementation is explained. The most abstract design specifications can be used to verify that the system functions correctly and with the desired reliability since almost all details of the realization were abstracted out. A succession of lower level models refine these specifications to the level of the actual implementation, and can be used to demonstrate that the implementation has the properties claimed of the abstract design specifications. RECONFIGURATION: A METHOD TO IMPROVE SYSTEMS REALIABILITY c60

J. Szlachta *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 8 p (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

A system with hardware and software reconfiguration capabilities was developed to improve the reliability of a flight-augmentation computer. The system consists of a network of n redundant computers, linked via m serial buses. A two computer processing units and two or more input/output drivers. A fault in one of the components of the redundant computers causes a hardware reconfiguration which replaces the faulty component by its still functioning twin. If a redundant computer fails altogether, all tasks allocated to it are transferred to one of the still working computers of the network. This is made possible by loading dormant copies of the tasks into at least one other computer of the initial system. These dormant copies are periodically supplied with the program status of the active copy. Author

A RECONFIGURABLE CHANGE NETWORK FOR DISTRIBUTED PROCESS CONTROL [RESEAU D'ECHANGE RECONFIGURABLE POUR CONTROLE DE PROCESSUS REPARTI] c60

Ch. Meraud and B. Maurel (Societe. Anonyme de Telecommunications) *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 10 p refs In FRENCH (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

A highly reliable, high output system of change is described which permits decentralized exchange between the diverse equipment onboard an aircraft or other type of vehicle in order to integrate and reconfigure the functions, no matter how critical. Very large scale integration and fiber optics which are insensitive to electromagnetic perturbations made possible a performing decentralized solution by incorporating intelligence in a universal type linking module called the subsystem interface. For the traditionally programmed mechanism for generating change, a dynamic mechanism immediately adapted to modification, is substituted which permits a great degree of synchronization.

PROTOCOL LEVEL MODULES FOR COST EFFECTIVE STANDARD COMPUTER COMMUNICATION c60
Oyvind Hvinden, Yngvar Lundh, and Oystein Sandholt *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 8 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

A set of microcomputer modules for implementation of network front-end, gateway and specilized host computers are being developed. A highly modular design approach is taken. One or more of these protocol modules may be interconnected to constitute the units referred to. A 'library' of tested hardware sub modules is established, new modules may quickly be developed using these sub modules. A framework for unified protocol implementation and protocol interconnection is defined. This includes a real time operating system kernel with functions for buffer management, timing, pseudo parallel process execution and process communication. Author

RETRANSMISSION STRATEGIES FOR ERROR CONTROL IN PACKET TRANSMISSION PROTOCOLS [LES STRATEGIES DE RETRANSMISSION POUR LE CONTROLE D'ERREUR DANS LES PROTOCOLES DE TRANSFERT DE DONNEES] c32
Guy Juanole *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 8 p refs In FRENCH (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

Packet transmission is based on a hierarchial model in which each of several levels uses the services of a lower level. This approach, which is essential for good visualization of the different functions necessary for transmission, also allows for the distinction of two levels in error control. A higher level is related to control on packet arrial (implemented by mechanisms of numbered packets, of responses to numbered packets, and to retransmission of nondischarged numbered packets). The lower level is related to the contents of numbered packets to responses (implemented by error detecting codes). These two levels clearly and precisely define different retransmission strategies. Two classes of strategies are defined: when the retransmission is due uniquely to a temporization which is implemented in the higher level, or when the retransmission is equally implemented following errors detected by the inferior level. In each class, different strategies are defined which result from different possible modalities.

The data bus offers many potential advantages over hardwired or dedicated data transmission systems in the design of Avionic Systems. Systems are interconnected by a single or redundant twisted pair of wires via standard interfaces, so reducing intersystem wiring and the types and numbers of interfaces. The quantity of data transferred no longer has a direct influence on the inter system wiring and distributed computing becomes feasible. However in spite of the obvious advantages of a data bus system there are certain limitations which could be the source of much heartache to the system designer. Problems may result from transmission delays, digital sampling noise and the fundamental upper limit on data item-data rate product. Also, since interconnection between systems is via a common path, faults in the communication medium can have serious consequences, and therefore the use of redundancy and error correction techniques need to be employed. A stores management and weapon aiming system is discussed. Author

THE TRAFFIC FLOW IN A DISTRIBUTED REAL TIME COMPUTING SYSTEM (RDC-SYSTEM) WITH A FIBER-OPTIC RINGBUS SYSTEM c60
Dirk Heger and Reinhard Baehre *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 14 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

The new generation of automatic systems is essentially characterized by distributed multi-computer systems. The architecture is based on distributed microcomputer stations linked together by a bus system. These systems give much more design alternatives than conventional single or multicomputer systems, the danger of obtaining bottle necks of system performance is considerably greater than it was by using functional modules operating independently and simultaneously. Therefore, mathematical modeling of bus-linked multicomputer systems and the experimental evaluation of these models is online operation by means of measurements is of increasing importance. The 'really distributed control computer' system, and the traffic flow on its fiber optic ringbus system are described. Author

DISPERSED SENSOR PROCESSING MESH PROJECT c32
Vincent A. Megna *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 14 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

The F-8 dispersed sensor processing mesh project is an exploratory program involved in the development and test of the concept of a network communication structure. The elements of the structure are a bus controller and a number of nodes all of which are interconnected by multiple data flow paths. This structure is proposed as the communication medium between the subsystems of a distributed avionic system. In order to test and establish a data base for this proposed communication structure, the elements that comprise it must be designed and built. These elements are not just the hardware that is inherent to the structure, they also include the algorithms mechanized in the bus controller's software, the operating characteristic of the network, and the communication protocol used. The design and associated decisions made during the development of the network hardware and software are considered. A.R.H.

NEXT GENERATION MILITARY AIRCRAFT WILL REQUIRE HIERARCHICAL/MULTILEVEL INFORMATION TRANSFER SYSTEMS c06
James W. McCuen *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 8 p refs (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

Changes in avionic subsystems and mission roles of next generation aircraft require new concepts in data transfer. New aircraft need total airframe/weapon system integration which means new approaches must be developed for the interconnection of avionic subsystems. Effort has begun to develop a Military Standard (MIL-STD) which will define the requirements for a high speed data bus network. The standard shall characterize a higher order information transfer system (ITS) that will interconnect avionic systems, that contain their own multiplex ITS, into a fully integrated data complex. The higher order ITS shall employ an operational protocol that will provide subsystems and common sensors, independence and fault isolation by distributed control of the common data bus. Author

SIFT: AN ULTRA-RELIABLE AVIONIC COMPUTING SYSTEM c06
Kurt Moses *In* AGARD Tactical Airborne Distributed Computing and Networks Oct. 1981 10 p (For primary document see N82-17086 08-01)
Avail: NTIS HC A18/MF A01

Software implemented fault tolerance (SIFT) is an ultra-reliable computing system which is based on a multiprocessor architecture that achieves fault tolerance by replicating computing tasks among processing units. Error detection and system configuration are performed by software to maintain the operational integrity of the computing system. The high speed inter-computer communication system required for operation realized by dedicated serial links arrayed in a star connection. Software algorithms are used for failure detection by means of voting, failure isolation to the faulty processor, and reconfiguration after fault detection. Frame synchronization between processors is employed to reduce data skew and minimize false alarms. The architecture of SIFT, its hardware implementation, and the test stand used for evaluation. Potential applications of this technique to current and anticipated ultra-reliable electrical flight control systems are given. A.R.H

Avail: NTIS HC A18/MF A01

The F/A-18A Hornet tactical computer subsystem consists of two central mission computers and a number of distributed processors embedded in various sensor and display subsystems. This distributed processing system is interconnected by and communicates over a MIL-STD-1553A serial 1 MHz command/response multiplex network. The distributed processing system architecture is discussed and the rationale is presented for the partitioning of the computational tasks between the central mission computers and the distributed processors embedded in the sensor subsystems. The salient features of the central mission computer and the distributed processors are discussed along with a description of the functional operation of the interconnecting MIL-STD-1553A multiplex communications system. The development process for the Operational Flight Program (OFP) for the Central mission computers is described and the support facilities which were used for the software integration and validation are discussed. Avail: NTIS HC A18/MF A01

The U.S. Navy is currently acceptance-testing the McDonnell Douglas F/A-18 aircraft. Since the F/A-18 is so much more complex than any aircraft current deployed, more sophisticated support tools will be required. The main support tool is to be a weapons system support facility including all of the hardware and software necessary to test, modify, and validate all of the avionics hardware, software, and firmware. A distributed processing approach is used in the facility, which contains several minicomputers and super minicomputers. Author

BLADE PLANFORM FOR A QUIET HELICOPTER Final Report
D. S. Janaki Ram Sep. 1980 31 p refs
(NASA Order A-65550B)
(NASA-CR-166256; T-35584) Avail: NTIS HC A03/MF A01 CSCL 01C

The effects of blade planform and tip speed on noise and performance for a Hughes 500 C rotor system were studied. A cursory examination of the effects of such planform shapes as regular, inverse, and no taper on the noise and performance of the rotor was conducted. It was found that a constant width wide chord planform at lower tip speed provided the best performance and lowest noise. The tapered planforms had lower performance figures due to the reduced solidity. However, some noise reductions were achieved. R.J.F.

(Contract NAS3-21733)
(NASA-CR-3508; MDC-A6930) Avail. NTIS
HC A07/MF A01 CSCL 01A

A D vented thrust deflecting nozzle applicable to subsonic V/STOL aircraft was tested behind a simulated turbofan engine in the verticle thrust stand. Nozzle thrust, fan operating characteristics, nozzle entrance conditions, and static pressures were measured. Nozzle performance was measured for variations in exit area and thrust deflection angle. Six core nozzle configurations, the effect of core exit axial location, mismatched core and fan stream nozzle pressure ratios, and yaw vane presence were evaluated. Core nozzle configuration affected performance at normal and engine out operating conditions. Highest vectored nozzle performance resulted for a given exit area when core and fan stream pressure were equal. Its is concluded that high nozzle performance can be maintained at both normal and engine out conditions through control of the nozzle entrance Mach number with a variable exit area. E.A.K.

A NEW METHOD OF ESTIMATING THE LATERAL WALL EFFECT ON THE AIRFOIL INCIDENCE DUE TO THE SUCTION AT SIDE WALLS
Hideo Sawada, Seizo Sakakibara, Mamoru Sato, Hiroshi Kanda, and Toshio Karasawa Aug. 1981 20 p refs In JAPANESE; ENGLISH summary
(NAL-TR-680; ISSN-0389-4010) Avail: NTIS
HC A02/MF A01

The velocity component is approximated from the pressure difference across the plates by the aid of an experimental equation which states that the normal velocity component to a porous plate induced by the pressure difference across the plate is proportional to the square root of the pressure difference. In this method, the proportional constant number need not be known. An experiment was carried out in which the pressure in a suction box, one side of which consisted of a porous plate, was set at various values in this experiment. The lift coefficient of an airfoil model changed with the variation of the pressure in the suction box even at the same uniform flow speed and the same incidence. The unique value of the lift coefficient was determined from several such lift coefficients at the same incidence. The corrected lift coefficient curve obtained is very close to one obtained in a test section with fully solid side walls. T.M.

SURVEYS OF FLOW-FIELD AROUND EMPENNAGE OF THE NAL STOL-RESEARCH-AIRCRAFT MODEL
Jul. 1981 80 p refs In JAPANESE; ENGLISH summary
(NAL-TR-677; ISSN-0389-4010) Avail: NTIS
HC A05/MF A01

The flow field around the empennage for the STOL landing were measured. The down wash angle, the side wash angle, and the dynamic pressure at the aerodynamic center of the empennage were obtained by linear interpolation at the two sections perpendicular to the free steam. Effects of the engine thrust coefficient and the two types of vortex generator on the flow field, and the directional stability in the case of an inner engine becoming inoperative, were studied. EXPERIMENTAL STUDY OF DELTA WING LEADING-EDGE DEVICES FOR DRAG REDUCTION AT HIGH LIFT M.S. Thesis
Thomas Dwight Johnson, Jr. Dec. 1980 139 p refs
Avail: NTIS HC A07/MF A01

Future fighter aircraft requirements specify efficient supersonic cruise and high-g maneuverability at high lift. The slender delta wing meets the first requirement but has large lift induced drag increments at high lift. One method to alleviate the drag is to control the flow at the wind leading edge (LE) by means of small LE devices, so as to maintain locally attached flow to higher angles of attack and thus increase the level of aerodynamic thrust. The devices selected for evaluation were the fence, slot, pylon-type vortex generator (VG), and sharp leading-edge extension (SLEE). These devices were tested on a 60 deg flatplate delta (with blunt LE) in the Langley Research Center (NASA) 7- by 10-foot high-speed tunnel at low-speed and to angles of attack of 28 degrees. Balance and static pressure measurements were taken. The results indicate that all the devices have significant drag reduction capability and improved longitudinal stability while a slight loss of lift and increased cruise drag occurred. T.M.

EXPERIMENTAL TRIM DRAG VALUES FOR CONVENTIONAL AND SUPERCRITICAL WINGS M.S. Thesis
Peter Fredric Jacobs Dec. 1981 165 p refs Sponsored by NASA
(NASA-CR-168500) Avail: NTIS HC A08/MF A01 CSCL 01A

Supercritical wings were studied to determine whether they incur higher trim drag values at cruise conditions than wide body technology wings. Relative trim drag increments were measured in an experimental wind tunnel investigation. The tests utilized high aspect ratio supercritical wing and a wide body wing in conjunction with five different horizontal tail configurations, mounted on a representative wide body fuselage. The three low tail configurations and two T tail configurations were chosen to measure the effects on horizontal tail size, location, and camber on the trim drag increments for the two wings. The increase in performance (lift to drag ratio) for supercritical wing over the wide body wing was 11 percent for both the optimum low tail and T tail configurations. S.L.

ROLL UP MODEL FOR ROTOR WAKE VORTICES, PART 5
Maarten Landahl Stockholm Aeronautical Research Inst. of Sweden 13 Nov. 1981 28 p refs
(Contract NE-5061-014)
(ASRL-TR-194-4; FFA-HU-2262-Pt-5) Avail: NTIS
HC A03/MF a01

Conservation of momentum and energy is used to estimate the core size of a rolled-up vortex from a propeller or rotor blade tip. A simplified planar model due to Prandtl is employed to determine the strength, position, and vore size of the rolled-up vortices. This model is valid when the number of blades is large such that the distance between the wake vortex sheets is much less than the diameter of the rolled-up vortex spirals. The vortex is assumed to have a core of constant vorticity (Rankine vortex). Three dimensionality is then accounted for by modeling the actual spiral wake vortex as a row of regularly spaced vortex rings. The core diameter is found to be about 40 percent of this distance, with a slight decrease with increase in spacing-to-diameter ratio. The core velocity is found to increase with increased spacing from 0.5 of the wake velocity at zero spacing to about 0.7 of the wake velocity at a spacing of three times the wake radius. Author

A WIND TUNNEL STUDY OF THE FLUTTER CHARACTERISTICS OF A SUPERCRITICAL WING
R. Houwink, A. N. Kraan, and R. J. Zwaan 28 Jan. 1981 10 p refs Presented at 22nd SDM/Dyn. Specialists Conf., Atlanta, 6-10 Apr. 1981 Sponsored by Netherlands Agency for Aerospace Programs Prepared in cooperation with Royal Netherlands Aircraft Factories Fokker, Amsterdam
(NLR-MP-81002-U) Avail: NTIS HC A02/MF a01

A wind-tunnel flutter test on a supercritical wing model is described. Objectives of the test were to investigate the transonic dip and to enable comparison with calculated flutter characteristics in which a quasi-three dimensional transonic theory was used. The beginning of a transonic dip was measured and a satisfactory agreement with theory could be found. An additional flutter instability in the bottom of the transonic dip could be correlated with the loose of transition strip effectivity at low Reynolds numbers. Author

EXPERIMENTAL VERIFICATION OF AN AERODYNAMIC PARAMETER OPTIMIZATION PROGRAM FOR WIND TUNNEL TESTING Final Report, Oct. 1980 - Sep. 1981
Richard L. Palko and Margaret Anne Crawford AEDC Nov. 1981 32 p refs
(AD-A107727; AEDC-TR-81-23) Avail: NTIS HC A03/MF A01 CSCL 20/4

The optimization algorithm developed for the SOFT wing program has been revised to make it more applicable for use in routine wind tunnel testing. The algorithm modification removed some unused routines and simplified the control input requirements. The modified optimization algorithm was demonstrated in the 1-ft transonic Aerodynamic Wind Tunnel (1T) using a 3-degree-of-freedom model. The test Mach number was 0.8. The algorithm was successfully demonstrated for all three optimization runs attempted. These included minimization of drag coefficient for a specified coefficient of lift, maximization of lift coefficient for a specified coefficient of drag, and maximization of lift-to-drag ratio for a specified coefficient of drag. FINITE DIFFERENCE COMPUTATION OF THE CONICAL FLOW FIELD OVER A DELTA WING
L. Vigevano Aug 1981 55 p refs
(VKI-TN-140) Avail: NTIS HC A04/MF A01

A numerical approach using finite differences applied to a nonlinear governing equation was adopted in order to introduce compressibility effects in a model of the vertical flow past a sharp leading edge on a delta wing. A conical line vortices model was adapted to a through field computation. From numerical experiments, criteria for the representation of a mathematical vortex in a finite difference scheme are derived Comparison of the numercial results with the Brown and Michael analytical solution shows that the first order scheme employed preserves satisfactory accuracy in the prediction of the wing loads. INVESTIGATION OF A LAMINAR TWO-COMPONENT BOUNDARY LAYER ALONG AN EVAPORATION LIQUID FILM BY MEANS OF A FINITE DIFFERENCE METHOD
Heinrich Eickhoff, Joerg Schroeppel, and Frank Thiele Nov. 1981 43 p refs Transl. into ENGLISH of "Untersuchung der Laminaren Zweistoffgrenzschicht Laengs eines Verdunstenden Fluessigkeitsfilms mit Hilfe eines Differenzenverfahrens" Rept. DFVLR-FB-80-34 Cologne, Sep. 1980 Original report in GERMAN previously announced as N81-22330
(ESA-TT-711; DFVLR-FB-80-34) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 11,10

A flat liquid film of constant thickness, at rest, unilaterally wetting a plate is described as it evaporates into a stream of hot air. The two component boundary layer flow which is generated by this system as well as the coupled mass and heat transfer at the liquid film surface is calculated by means of an implicit finite difference method of Hermitian type, taking into account temperature and concentration dependent properties. The solutions of the coupled partial differential equations for mass, momentum, and energy are compared with other investigations with respect to accuracy, required iterations and grid points. The results underline the precision and the reliability of the numerical method used. Author (ESA)

AIRCRAFT ACCIDENT REPORT - UNIVERSAL AIRWAYS, INC., BEECH 65-A80/EXCALIBUR CONVERSION, N100UV, NEAR MADISONVILLE, TEXAS, JULY 2, 1981
17 Dec. 1981 25 p
(NTSB-AAR-81-17) Avail: NTIS HC A02/MF A01

About 1230 Central Daylight Time, on July 2, 1981, a Universal Airways, Inc. Beech 65-A80, N100UV, crashed into an open, level field about 7 nautical miles east southeast of Madisonville, Texas. Witnesses heard a small explosion and saw the aircraft descend from a dark cloud; the wings and the empennage were not attached during the observed portion of the aircraft's descent. The pilot and the two passengers were killed. The aircraft was destroyed. The National Transportation Safety Board determines that the probable cause of the accident was a pilot induced airframe overload following loss of aircraft control which resulted in the structural breakup of the aircraft. The reason(s) for the loss of aircraft control could not be determined. Contributing to the loss of control was the pilot's lack of instrument proficiency in multiengine aircraft. R.J.F.

AIRCRAFT ICING AVOIDANCE AND PROTECTION
9 Sep. 1981 16 p
(PB82-108135; NTSB-SR-81-1) Avail: NTIS HC A02/MF A01 CSCL 01C

The problems of aircraft icing from the standpoint of icing statistics, the meteorological factors which cause icing, the certification of aircraft by the FAA for the flight into known icing conditions, and the forecasting of icing conditions are investigated. It is noted that icing accidents are a problem primarily for general aviation aircraft and that in addition to the accidental losses due to icing, there are significant operational losses due to inadequacies in the weather forecasting system. The problems revealed can be alleviated, but in order to do so new technology will have to be developed based upon a better understanding of ice formation and improvements in the quality of icing forecasts. (NASA-CR-168440; TM-81) Avail: NTIS HC A02/MF A01 CSCL 17G

A commutated automatic gain control (AGC) system was designed and built for a prototype Loran C receiver. The receiver uses a microcomputer to control a memory aided phase-locked loop (MAPLL). The microcomputer also controls the input/output, latitude/longitude conversion, and the recently added AGC system. The circuit designed for the AGC is described, and bench and flight test results are presented. The AGC circuit described actually samples starting at a point 40 microseconds after a zero crossing determined by the software lock pulse ultimately generated by a 30 microsecond delay and add network in the receiver front end envelope detector. TERMINAL AREA AUTOMATIC NAVIGATION, GUIDANCE, AND CONTROL RESEARCH USING THE MICROWAVE LANDING SYSTEM (MLS). PART 2: RNAV/MLS TRANSITION PROBLEMS FOR AIRCRAFT Final Report
Samuel Pines Washington, D.C. NASA Jan. 1982 139 p refs
(Contract NAS1-15116)
(NASA-CR-3511; AMA-80-12-Pt-2) Avail: NTIS HC A07/MF A01 CSCL 17G

The problems in navigation and guidance encountered by aircraft in the initial transition period in changing from distance measuring equipment, VORTAC, and barometric instruments to the more precise microwave landing system data type navaids in the terminal area are investigated. The effects of the resulting discontinuities on the estimates of position and velocity for both optimal (Kalman type navigation schemes) and fixed gain (complimentary type) navigation filters, and the effects of the errors in cross track, track angle, and altitude on the guidance equation and control commands during the critical landing phase are discussed. A method is presented to remove the discontinuities from the navigation loop and to reconstruct an RNAV path designed to land the aircraft with minimal turns and altitude changes. B.W.

DOT SHOULD TERMINATE FURTHER LORAN-C DEVELOPMENT AND MODERNIZATION AND EXPLOIT THE POTENTIAL OF THE NAVSTAR/GLOBAL POSITIONING SYSTEM
18 Sep. 1981 16 p
(AD-A107768; GAO/MASAD-81-42) Avail: NTIS HC A02/MF A01 CSCL 17/7

The U.S. Coast Guard is planning to modernize its existing LORAN-C navigation system, even though LORAN-C can potentially be replaced by the Department of Defense's NAVSTAR/Global Positioning System (GPS) in the early 1990s. The Coast Guard and the Research and Special Programs Administration have also devoted little effort to evaluating and developing GPS' capability as a civil marine and land navigation system. Because LORAN-C can be effectively maintained and reliably operated at least until the early 1990s and because the Coast Guard has not been able to validly demonstrate the cost effectiveness of the replacement program on a station-by-station basis, GAO recommends that the Coast Guard terminate its planned replacement of existing LORAN-C equipment. GAO also recommends that the Coast Guard discontinue developing new LORAN-C applications and focus efforts and resources on demonstrating GPS' potential as a marine and land navigation system. REQUIREMENTS FOR INSTRUMENT APPROACHES TO CONVERGING RUNWAYS
L. C. Newman, W. J. Swedish, and T. N. Shimi Sep. 1981 116 p refs
(Contract DTFA01-81-C-10001)
(AD-A108075; MTR-81W230; FAA-EM-82-4) Avail: NTIS HC A06/MF A01 CSCL 01/2

This document discusses the technical issues relevant to converging approaches and examines the feasibility of conducting instrument approaches as a means of increasing airport capacity. The main considerations in the analysis were: runaway geometry; missed approach paths; and pilot acceptance. A safety analysis was conducted to determine requirements and control procedures to provide protection against: random lateral variation from the missed approach path; Heading blunder; and rare and unexpected events. Requirements for final and missed approach are presented as are strategies for applying these requirements to airports with a wide variety of converging runway geometries. Preliminary recommended procedures are presented for conducting independent instrument approaches to Category I minima. GRA

OPTICAL DATA PROCESSING FOR MISSILE GUIDANCE Annual Report, 1 Oct. 1980 - 31 Sep. 1981
David Casasent 1 Oct. 1981 70 p refs
(Grant AF-AFOSR-0091-79; AF Proj. 2305)
(AD-A107592; AFOSR-81-0730TR) Avail: NTIS HC A04/MF A01 CSCL 17/7

The initial phase of our synthetic discriminant function optical pattern recognition research has been completed. This hyperspace description allows the use of off-line synthesis of a filter function that provides both intra-class recognition (of a key object independant of geometrical distortions) and inter-class discrimination (of a key object from candidate false targets). A new theoretical model for multi-sensor data, a description of a general multi-sensor processor and a statistical analysis of both have also been completed. Initial experimental correlations were obtained and found to be in agreement with our model and theoretical analysis. A new parameter, the correlation measure, was found to be of use in determining the multi-sensor nature of input imagery and a (GRAD) digital preprocessing operator was found to be quite adequate for the cases considered. Our initial optical correlations on the autonomous terminal homing data base were also completed. In this research, aperture correlation effects were overcome by a new technique, optical and digital correlations on the same data base were obtained and compared (with a high pass filter model for the optical matched filter found to be adequate and appropriate for many applications), and sensed/synthetic optical image correlations were obtained (with the help of photoreduced imagery and advanced preprocessing operations). DIFFERENTIAL OMEGA SYSTEM DEVELOPMENT AND EVALUATION Final Report, 27 Aug. 1977 - 15 Aug. 1981
T. M. Watt, L. E. Abrams, and F. G. Karkalik Washington FAA Aug. 1981 105 p refs
(Contract DOT-FA75WA-3662)
(AD-A107857; FAARD-81-69) Avail: NTIS HC A06/MF A01 CSCL 17/7

This report describes a development and evaluation program for Differential Omega in general aviation. The program was a cooperative venture between the FAA and Transport Canada. SCT performed system design, program management, and flight test on behalf of the FAA. Tracor, Inc. provided modified Omega airborne receivers under subcontract to SCT. Flight tests took place in Alaska aboard a Convair 580 provided by the FAA. Monitor stations were located in Anchorage and at Deadhorse. The most definitive results were obtained from flight tests conducted in October 1980 and February 1981. Important results included: (a) data-link range varied from 44 nm to 198 nm, (b) random component of navigation error was 0.25 nm, 2-D RMS, (c) range decorrelation error was about 2 nm over a distance of 550 nm, (d) transient response of the system-following aircraft procedure turns was characterized by a positional overshoot of about 1.5 nm, followed by a monotonically decreasing error with a two-minute time constant. Recommendations are made for improving system performance. Author (GRA)

ACTIVE BEACON COLLISION AVOIDANCE LOGIC EVALUATION. VOLUME 2: COLLISION AVOIDANCE (BCAS) THREAT PHASE Final Report, Apr. 1979 - Jun. 1980
A. Adkins, J. Thomas, B. Billmann, and J. Windle Sep. 1981 59 p refs
(FAA Proj. 052-241-320)
(AD-A107805; FAA-CT-80-51-2-Vol-2; FAA-RD-80-125-2) Avail: NTIS HC A04/MF A01 CSCL 01/2

The purpose of this project was to evaluate and refine the April 1979 version of the Beacon Collision Avoidance System (BCAS) logic prior to Active BCAS prototype flight testing. The April 1979 version of the BCAS logic added changes to support multiple aircraft conflict resolution, Conflict Indicator Register (CIR) interfacing and new surveillance logic interfacing. The results of the first phase of the Active BCAS logic, evaluating the Air Traffic Control Radar Beacon System (ATCRBS) threat phase, identified several improvements that should be made to the BCAS logic. These improvements were incorporated into the logic prior to beginning the second phase, the BCAS equipped threat phase. The second phase was conducted from September to November 1979 and was designed to evaluate the BCAS performance against BCAS equipped threats. The results are presented in this report. Several logic improvements have been identified. These changes have been implemented in both the threat logic and the BCAS command coordination logic (CIR logic). In general, BCAS performance for equipped threats was not as sensitive to vertical rate tracker noise as in the ATCRBS threat case. Resolution performance has been improved through a reduction in undesirable BCAS alarms and by reducing excessive separation with the inclusion of a projected vertical miss distance (VMD) filter for equipped threats. A better method of selecting threat volume parameters has been incorporated. GRA

INVESTIGATION OF WILCOX MODEL 585B VERY HIGH FREQUENCY OMNIDIRECTIONAL RADIO RANGE (VOR) SYSTEM, PART 3 Final Report, Mar. 1980 - Feb. 1981
Wayne E. Bell Oct. 1981 53 p refs
(FAA Proj. 041-305-830)
(AD-A107855; FAA-CT-81-46; FAA-RD-81-52; ACT-100) Avail: NTIS HC A04/MF A01 CSCL 17/7

A three-part investigation of the Wilcox 585B Very High Frequency Omnidirectional Radio Range (VOR) System was conducted. In Part 1, the magnitude of the ground error was reduced by modification and suitable adjustment of antenna element lengths of the field detector. In Part 2, investigation developed an acceptable calibration procedure for system 30 hertz (Hz) modulation. Obtaining compatible 30 Hz modulation reading between aircraft (far-field) and edge of counterpoise (near-field) measurements was an additional requirement. In Part 3, tests resolved any discrepancies in the tuning adjustments prescribed by the manufacturer's equipment manuals. This report, which is the last in a series of three, contains an outline of the tests and procedures for setting the lengths of the adjustable field detector elements, a recommended procedure for obtaining compatible near-field and airborne 30 Hz modulation readings, and recommended changes to the manufacturer antenna tuning procedures in order that the system meet required operational tolerances. AERONAUTICAL INFORMATION DATA SUBSYSTEM (AIDS): A GROUND-BASED COMPONENT OF AIR NAVIGATION SERVICES SYSTEMS
Frank W. Fischer 1981 5 p Presented at 11th AIDS Symp., Cologne, 22-24 Sep. 1981 Sponsored by DFVLR
Avail: NTIS HC A02/MF A01

The construction of an air navigation services information data base for internal and external use (airspace users before and during flight) of internally and externally produced information data is advocated. A data bank, which holds all current operational information data, controls the data switching and processing machine which constitutes the data communication subsystem. Benefits of AIDS include costs in data compiling and the provision of precise data for air traffic control, flight planning or rescue operations. Apart from the airlines, AIDS is of most use to general aviation operators. Author (ESA)

USE OF OPTIMIZATION TO PREDICT THE EFFECT OF SELECTED PARAMETERS ON COMMUTER AIRCRAFT PERFORMANCE Progress Report
Valana L. Wells and Richard S. Shevell Feb. 1982 45 p refs
(Grant NAG1-202)
(NASA-CR-168439) Avail: NTIS HC A03/MF A01 CSCL 01C

The relationships between field length and cruise speed and aircraft direct operating cost were determined. A gradient optimizing computer program was developed to minimize direct operating cost (DOC) as a function of airplane geometry. In this way, the best airplane operating under one set of constraints can be compared with the best operating under another. A constant 30-passenger fuselage and rubberized engines based on the General Electric CT-7 were used as a baseline. All aircraft had to have a 600 nautical mile maximum range and were designed to FAR part 25 structural integrity and climb gradient regulations. Direct operating cost was minimized for a typical design mission of 150 nautical miles. For purposes of C sub L sub max calculation, all aircraft had double-slotted flaps but with no Fowler action. (Contract NAS1-16434)
(NASA-CR-165820; LR-29984) Avail: NTIS HC A09/MF A01 CSCL 01C

A study was performed to quantify the potential benefits of utilizing advanced aluminum alloys in commercial transport aircraft and to define the effort necessary to develop fully the alloys to a viable commercial production capability. The comprehensive investigation (1) established realistic advanced aluminum alloy property goals to maximize aircraft systems effectiveness (2) identified performance and economic benefits of incorporating the advanced alloy in future advanced technology commercial aircraft designs (3) provided a recommended plan for development and integration of the alloys into commercial aircraft production (4) provided an indication of the timing and investigation required by the metal producing industry to support the projected market and (5) evaluate application of advanced aluminum alloys to other aerospace and transit systems as a secondary objective. The results of the investigation provided a roadmap and identified key issues requiring attention in an advanced aluminum alloy and applications technology development program. Author

(Contract NAS2-10772)
(NASA-CR-166280; Rept-699-099-046) Avail: NTIS HC A04/MF A01 CSCL 01C

The experimental data were obtained from hover tests for a scaled model of an advanced bearingless main rotor. Both isolated rotor and ground resonance conditions were tested. Test parameters included blade built-in cone and sweep angles, rotor inplane structural damping, pitch link location and fuselage structural damping. Analytical results for the conditions tested were obtained using current Bell Helicopter analyses. In addition, variations in the analytical models were made to assess their impact on the correlation between computed and measured results. Results are presented in tabular and graphical form. T.M.

(AD-A107681; Rept-1783-01-1-2405) Avail: NTIS HC A06/MF A01 CSCL 01/3

Results of a 6-month study of standardization criteria and characteristics are presented that may be effectively applied to the Advanced Aircraft Armament System (AAAS) Program. System elements feasibly for standardization are identified. Standardization characteristics for those feasible elements are developed for various levels of standardization (subsystem, module, piece part) and standardization approaches (horizontal, vertical, area, functional, logistical, and cooperative). Alternative standardization characteristics are also postulated and recommendations are formulated for application to the AAAS Program. Author (GRA)

OPTIMAL DOLPHIN HANG GLIDER FLIGHT [OPTIMALER DELPHIN-SEGELFLUG]
E. D. Dickmanns Mar. 1981 71 p refs In GERMAN
Avail: NTIS HC A04/MF A01

Time minimal gliding flight in vertical air currents is discussed. If the vertical current wavelength is large as opposed to the trajectory oscillation taken by an airplane, an optimal flight with approximately n sub z = 1 can be obtained. In short vertical currents the dynamic warming up maneuver in the downwind gives great advantages. During the transition local conditions may interfere. Two fundamentally different control maneuvers of equal value to the sail functions are described. Transl. by E.A.K.

APPLICATIONS OF STOCHASTIC DIFFERENTIAL EQUATIONS IN FLIGHT MECHANICS
Karl-Heinz Keil 15 May 1981 53 p refs Sponsored by Bundesministerium fuer Forschung und Technologie
(MBB-UA-589-81-O; LFF-8002-5) Avail: NTIS HC A04/MF A01

The behavior of the mean values and covariances of states of stochastically influenced systems in flight mechanics can be analyzed using the covariance theory of linear systems and statistical linearization if the models are not too complex. The necessary mathematical tools (random processes and stochastics differential equations, white and colored noise) are explained. These analytical methods are applied to a simplified model of the automatic landing approach influenced by turbulence. The limitation of the elevator acts as a nonlinearity. Author

ANALYSIS METHODS FOR PREDICTING STRUCTURAL RESPONSE TO PROJECTILE IMPACT
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 27-44 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

Analysis methods and data available for predicting the response of metal and fiber composite structure to projectile impact are presented. The analysis methods discussed are applicable to impacts from small arms projectiles, missile warhead fragments, and the fragmentation and blast effects of high-explosive projectiles. The responses addressed include penetration capability, damage size and type, strength degradation of damaged structure, and internal load redistribution. T.M.

N82-17163# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
ANALYSIS METHODS FOR BALLISTIC DAMAGE SIZE AND TYPE
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 45-78 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

The parameters which influence the size and character of projectile impact damage are described. Predicting damage size is the first step is assessing the structural capability of impacted structure, since damage size determines net section strength loss, stiffness loss, and the flaw size for failure analysis. The discussion is organized according to projectile type as follows: non-exploding projectiles; high explosive projectiles; and engine debris projectiles. Within each projectile category the responses of both metallic and fiber composite structure are discussed. The effects of fluid pressure in causing damage, a phenomenon known as hydrodynamic ram, are discussed. T.M.

N82-17164# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
DAMAGE FROM HIGH EXPLOSIVE (HE) PROJECTILES
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 79-135 refs (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

The structural damage done by HE projectiles (20- to 30-mm, for example) is the result of multiple fragment penetrations and internal blast pressures, acting separately and in combination. The fragments are created as the metal casing surrounding the explosive bursts due to the intense pressures generated by the detonation. Fragment damage degrades structural strength and stiffness, and blast pressures added to the existing flight loads can cause excessive deformations and element failures. The nature and extent of structural damage from HE projectile fragments and blast pressure depend upon these variables: material type and thickness; projectile size and delay characteristics; striking velocity and obliquity; distance from detonation to impacted structure (standoff); and internal volume of structural cell and extent of venting. The significance of each of these variables is discussed. Qualitative descriptions of HE projectile damage in metallic and fiber composite structure are presented followed by a discussion of damage prediction analysis techniques for blast and fragments. T.M.

N82-17165# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
DAMAGE FROM ENGINE DEBRIS PROJECTILES
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 136-139 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

The effects of uncontained projectile emanating from an engine and subsequently striking an adjacent portion of the airframe are assessed. The effects are treated the same as for effects resulting from nonexploding military projectiles. There is an important distinction, however, in that the engine debris projectile is typically an irregular fragment (as opposed to a bullet), behaving more like a warhead fragment or the fragments generated from a high-explosive projectile. T.M.

N82-17166# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
HYDRODYNAMIC RAM DAMAGE
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 140-152 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

Hydrodynamic ram is a phenomenon that may cause extensive structural failure of aircraft fuel cells when they are subjected to ballistic impact. During impact and penetration of the fuel cell, intense pressure waves are generated within the liquid by the projectile. The response of the fuel cell to this pressure loading varies according to its construction. For example, the walls of an integral fuel cell are formed by the aicraft skin, which is usually constructed of high-strength metal designed to withstand normal flight loads. This type of structure can fail catastrophically in response to hydrodynamic ram pressure loading due to fracturing of the walls of the cell. Self-sealing fuel cells can also be defeated due to hydrodynamic ram by gross tearing of the material or by misalignment of the wound edges, thereby defeating the self-sealing process. Both of these effects become increasingly severe as fuel cells become smaller, or projectile kinetic energies increase. An analysis method to predict hydrodynamic ram pressures generated by small arms ammunition was developed. The analysis method is based on the conversion of projectile kinetic energy to pressure field energy and includes the effects of reflections from the tank walls. T.M.

N82-17167# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
EFFECTS OF CYCLIC LOADING ON PROJECTILE IMPACT DAMAGE
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 153-157 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

The cyclic loading induced during flight can influence the severity of existing impact damage by initiating fatigue cracks at the damage site, subsequent crack sharpening or blunting and crack growth. There can be significant time dependent changes in the residual strength of the structure due to these alterations in the size and character of the impact damage. Projectile produce a wide variety of damage types, including cracks, holes, tears, large determination, even totally severed structural elements. The response of the damaged structure when exposed to cyclic loads reflects this wide variety of structural damage. For example, the cyclic loading can result in immediate growth when the projectile damage is a crack. There may be, however, a time (number of cycles) devoted to crack nucleation. Several important aspects of the fatigue response of impact damaged structure are described in terms of crack initiation and extension. An approach which basically consists of assuming immediate fatigue crack initiation at the damage site, and then applying conventional crack growth analysis is suggested. T.M.

N82-17168# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
STIFFNESS DEGRADATION OF IMPACT DAMAGED STRUCTURE
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 159-160 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

Stiffness reduction in impact damaged structural elements can be important from two standpoints. The first is the alteration of load distribution within the structure, potentially causing overloading and failure of undamaged elements. The second area of potential concern is the residual stiffness of major structural components, since stiffness degradation may lead to instability and control inadequacy. These two topics are discussed, however, there are few verified analysis methods for predicting stiffness degradation associated with ballistic damage. Both of these stiffness degradation effects, but particularly the latter, become increasingly significant as the extent of the inflicted damage becomes larger. Stiffness degradation may well be a problem for HE projectile impacts, but it is generally insignificant with small arms. T.M.

N82-17169# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France)
STRENGTH DEGRADATION OF IMPACT DAMAGED STRUCTURE
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 161-194 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

Projectile damage destroys a portion of the load carrying capability of the structure, alters the distribution of internal loads, and introduces a flaw which may cause failure by locally disturbing the stress field. The latter effect is most significant with regard to the relatively small damage induced by small arms projectile and dispersed warhead or engine debris fragments. High explosive projectiles can often create damage of sufficient size to substantially degrade structural performance by all three effects. Estimating the residual strength of structure damaged by projectile impact is a major step in predicting structural capability. The analysis methods presented for evaluating strength capability are organized according to structural complexity: analysis of monolithic panels; analysis of multiple load path panels; and analysis of multielement structure. The application of conventional and modified fracture mechanics analysis to ballistic damaged panels is discussed. The extension of these approaches to the requirements of panels having discrete stiffening members are discussed. T.M.

ANALYSIS OF MULTIPLE LOAD PATH PANELS CONTAINING IMPACT DAMAGE
In its Design Manual for Impact Damage Tolerant Aircraft Struct. Oct. 1981 p 195-209 (For primary document see N82-17160 08-05)
Avail: NTIS HC A11/MF A01

Many structural configurations cannot be represented as monolithic panels in assessing strength degradation from impact damage. The wings of transport aircraft, for example, often consist of skin with riveted stiffeners. The stiffeners can provide damage containment or crack assessment capability that is not considered in element residual strength analysis. Since the crack arrestment capability can significantly improve the residual strength of damaged structure, the stiffening must be included in the analysis. The response of stiffened panels to projectile damage, and available analytical techniques for residual strength prediction, are discussed. T.M.

CORROSION CONTROL TEST METHOD FOR AVIONIC

COMPONENTS Final Report, 27 Sep. 1979 - 27 May 1981
A. W. Morris 25 Sep. 1981 60 p refs
(AD-A108061; NADC-81174-60) Avail: NTIS HC A04/MF A01 CSCL 01/3

The program objective was to develop an accelerated laboratory corrosion test capable of simulating the severe corrosive effects of an aircraft carrier deployment environment. The current standard 5% salt fog test is not severe enough to simulate the carrier environment, thus limiting its usefulness in forecasting corrosion failures. To provide test standards, representative electrical and electronic units were exposed on an oil burning carrier during a 9 month tropical cruise and on a nuclear carrier during a 10 month tropical cruise. A series of laboratory tests were run to identify corrosion environments which provide good correlation with actual carrier results. The tests were also judged on their ability to promote moisture related electrical failures. During the final phase of the program, 25 electronic and electrical components were exposed to the two most promising test methods. The selected test method is a modification of the NADC sulfur dioxide salt fog test. It utilizes a much higher exposure temperature and a dilute substitute ocean water solution for fog generation. In one week this test method produces both corrosion damage and electrial failures that correlate with the condition of the test articles exposed for nine to ten months on an aircraft carrier. DIGITAL AVIONICS INFORMATION SYSTEM (DAIS) DOCUMENTATION Final Report, Aug. 1979 - Jun. 1981
F. Forster and R. Gregory Wright-Patterson AFB, Ohio AFWAL Sep. 1981 97 p
(Contract F33615-79-C-1818; AF Proj. 2052)
(AD-A108000; AFWAL-TR-81-1162) Avail: NTIS HC A05/MF A01 CSCL 09/2

This report covers the work performed by SYSTRAN Corporation in providing Configuration control, technical editing and generation of documentation for the DAIS Program Branch. This effort encompassed the following functions: (1) maintaining the DAIS library, (2) generating certain specifications, plans, drawings and/or test reports, (3) performing configuration audits per MIL-STD-1521, (4) assuring that DAIS documents conformed to MIL-STD-490 and 483, (5) technical editing and configuration control over all DAIS documentation. The DAIS documentation effort was highly successful and could set an example for other R&D programs on how to properly document their efforts in MIL-STD format. Author (GRA)

FUNCTION SPECIFICATIONS FOR THE A-7E FUNCTION DRIVER MODULE Interim Report
P. C. Clements 27 Nov. 1981 177 p refs
(XF21242101)
(AD-A107922) Avail: NTIS HC A09/MF A01 CSCL 09/2

As part of the experimental redesign of the flight software for the Navy's A-7E aircraft, software modules were designed to encapsulate the characteristics of the behavioral requirements of the system. The purpose of these Function Driver modules is to allow the remainder of the software to remain unchanged when the required system behavior is modified without associated hardware changes. This document specifies the behavior of the system without regard to specific hardware devices. This report contains an explanation of the standard organization of each functional description, a description of the review procedures, specifications for all of the functional aspects of the A-7E software, and a set of indices and cross-references to help integrate this module with the rest of the system. As well as serving as development and maintenance documentation for the A-7E redesign, this document is intended to serve as a model for other people interested in applying our documentation and structuring techniques to other software projects. (Contract NAS3-20629)
(NASA-CR-165555; R82AEB115) Avail: NTIS HC A07/MF A01 CSCL 21E

An improved high pressure turbine stator reducing fuel consumption in current CF6-50 turbofan engines was developed. The feasibility of the roundness and clearance response improvements was demonstrated. Application of these improvements will result in a cruise SFC reduction of 0.22 percent for new engines. For high time engines, the improved roundness and response characteristics results in an 0.5 percent reduction in cruise SFC. A basic life capability of the improved HP turbine stator in over 800 simulated flight cycles without any sign of significant distress is shown. E.A.K.

(Grant NsG-3266)
(NASA-CR-168410; PSU/TURBO-82-1) Avail: NTIS HC A05/MF A01 CSCL 21E

The flow in a turbomachinery blade passage has a predominant flow direction. The viscous diffusion in the streamwise direction is usually small and the elliptic influence is transmitted upstream through the pressure field. Starting with a guessed pressure field, it is possible to converge on the full elliptic solution by iterating between a parabolic solution and an iteration of the pressure field. The main steps of the calculation are given. The blade boundary layers which are three dimensional with laminar, transitional, turbulent, and separation zones are investigated. The kinetic energy is analyzed, and the dissipation equation is presented. Measurements were made of the three dimensional flow inside an axial flow compressor passage. S.L.

DAMAGE TOLERANT DESIGN FOR COLD-SECTION TURBINE ENGINE DISKS Final Report, Aug. 1977 - Feb. 1981
C. H. Cook, H. E. Johnson, and C. E. Spaeth Wright-Patterson AFB, Ohio AFWAL Jun. 1981 243 p
(Contract F33615-77-C-2064; AF Proj. 3066)
(AD-A107863; PWA-FR-14442; AFWAL-TR-81-2045) Avail: NTIS HC A11/MF A01 CSCL 21/5

This report describes the development, test evaluation, and refinement of a Damage Tolerant Design System for cold-section turbine engine disks. To substantiate the Design System the 42-month effort included the design and test of a functional replacement 2nd-stage fan disk for the F100 engine. This disk would be able to support a 0.030-inch crack for three maintenance intervals without a rapid fracture failure. The program was totally successful and resulted in a disk design that was three pounds heavier than the Bill of Material (B/M) disk but had over ten times the B/M life even with a 0.030-inch crack in the bolthole and a 0.020 inch elox crack starter in the rim slot. Included in this report are the design criteria and rationale used in creation of the damage tolerant configuration, the testing and analysis methodology, and results as well as recommendations for application and improvements. MAINTENANCE POSTURE FOR QUICK START Final Report
John M. Connolly 12 Aug. 1981 46 p
(AD-A107553; SAC/LGME-ER-P-328) Avail: NTIS HC A03/MF A01 CSCL 12/5

Quick start is an aircraft modification which installed cartridge starters on all engines of the B-52G/H and non-fan KC-135 aircraft. Routine peacetime use of the modification was suspended due to an excessive amount of smoke and toxic gases created by the cartridge exhaust. The SAC Aircraft Engineering Division then investigated respiratory and eye protection for ground crew personnel. As an interim solution, they found that an aircraft firefighter's smoke mask connected to a Mine Safety Appliance Corp Type N model SW as filter canister adequately protects the user. To minimize the crew chief's exposure to the smoke cloud, the Division designed and tested a roll-over chock, evaluated a wireless interphone communication system, and implemented alert B-52 battery engine starts. With these new concepts, response timing is only limited to aircrew checklist items and engine start time. GRA

THROUGH FLOW CALCULATIONS IN AXIAL TURBOMACHINES
C. Hirsch, ed. (Vrije Universiteit, Brussels) and J. D. Denton, ed. (Cambridge Univ.) Oct. 1981 330 p refs
(AGARD-AR-175) Avail: NTIS HC A15/MF A01

The objectives were to review the existing information on blade performance and wall effect prediction, and to extend this information by systematic application of numerical methods to representative geometries. Only axial turbomachines were examined and they were split into a turbine sub-group and a compressor sub-group. Axial turbine performance predicted included an examination of the influence of correlations and computational procedures on the prediction of overall efficiency. A comprehensive survey of the various loss and deviation mechanisms was conducted for the compressor sub-group. For individual titles, see N82-17179 through N82-17202.

REVIEW OF PERFORMANCE PREDICTION METHODS
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 13-28 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

The methods are split into two major categories. The first category groups together the so-called overall stage methods. The use of such methods does not in general require any details of the blading and the complex flow patterns in the turbine are deliberately ignored. Turbines are treated more or less as black boxes. These methods are in general derived from overall performance measurements of a large number of turbines with similar characteristics. Their use is justified in the initial design phase for the selection of the turbine design parameters. The optimization of a turbine for a given duty requires, however, a deep understanding of the flow, and only very refined performance prediction methods, which take into account details of the blading and of the meridional flow channel, can be of real help. This is attempted by the second category of performance estimation methods which evaluate the total losses as the sum of a great number of individual loss components, each of which is influenced by a large number of geometric and aerodynamic parameters. T.M.

INFLUENCE OF CORRELATIONS AND COMPUTATIONAL METHODS ON THE PREDICTION OF OVERALL EFFICIENCY

In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 29-31 refs (For primary document see N82-17178 08-07)

Avail: NTIS HC A15/MF A01

The process of designing a gas turbine or a steam turbine begins with an evaluation of the influence of component design parameters on the overall cost. For both the steam turbine and the gas turbine, energy costs are rapidly increasing and component efficiency is therefore a primary design objective. For the aircraft gas turbine, the weight of the component influences the fuel consumption and is therefore also an important energy cost consideration. Turbine efficiency predictions, together with information which influence the weight and cost, were obtained from flow field calculations which define the thermodynamic properties and velocity triangles throughout the turbine. These computational methods may be full span through flow calculations which predict the fluid properties from the hub to the tip between each blade row or they may be mean line calculations. In either case they are dependent upon loss and deviation models for their effectiveness in the efficiency optimization stage of the design process. The loss and deviation correlations which are in common use by steam turbine and gas turbine manufacturers are frequently developed internally and are maintained as proprietary information. The overall efficiency predictions which are discussed are therefore limited to results obtained using the correlations built into the methods which are described. T.M.

INFLUENCE OF CORRELATIONS AND COMPUTATIONAL PROCEDURES ON FLOW FIELD PREDICTIONS

In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 33-56 refs (For primary document see N82-17178 08-07)

Avail: NTIS HC A15/MF A01

In order to understand the influence of the empirical input on the results of through flow calculations it is necessary to examine the relative magnitudes of the terms in the radial equilibrium equation. This equation is effectively the momentum equation applied along quasi-orthogonal lines which are roughly perpendicular to the streamlines through the machine. The influences of the streamline slope and curvature, the blade exit, and the loss estimate were examined. The distribution of secondary deviation is discussed. Three dimensional calculations are presented for a two stage gas turbine. T.M.

CAMBRIDGE TURBINE: GEOMETRY, TEST DATA AND SAMPLE CALCULATION

In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 59-68 refs (For primary document see N82-17178 08-07)

Avail: NTIS HC A15/MF A01

The turbine is a free vortex design with hub:tip ratio 0.7 and with incompressible flow. Hence in the absence of viscous and secondary flow effects the axial velocity profiles would be everywhere uniform and constant. At design conditions there should be no absolute swirl at exit from the rotor and the experimental flow rate was set to satisfy this condition at mid-height. The turbine was tested with various values of rotor-stator spacing but only results for a single build were used for comparison with calculations. This build has a larger stator-rotor gap than is usual in axial turbine design practice. Details of the machine and blading are given and all geometrical details are based on design rather than on measured data. T.M.

N82-17183# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

THE TWO STAGE AERO ENGINE TURBINE

In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 69-83 ref (For primary document see N82-17178 08-07)

Avail: NTIS HC A15/MF A01

The turbine was a model of the H.P. and I.P. stages of an aircraft gas turbine with the two rotors running at different speeds. It was 'cold flow' tested using air at 420 K and 2.95 bar. Both hot wire and pressure probe instrumentation was used with radial and circumferential traverses after each blade row. The through-flow program used to provide sample results is based on a method of solution for axisymmetric and steady flow in axial turbomachines; it solves the complete radial equilibrium equation - acounting for enthalpy and entropy gradients and streamline curvature effects - in a specified number of stations ahead of and after the blade rows. An orthogonal curvilinear system of coordinates, having the meridional coordinates coincident with the generatrices of the flow stream surfaces, is used in the solution. Overall predicted efficiency is 89.1% of the measured results. T.M.

N82-17184# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

ANSALDO STEAM TURBINE. GEOMETRY, TEST DATA AND SAMPLE CALCULATION

In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 85-98 refs (For primary document see N82-17178 08-07)

Avail: NTIS HC A15/MF A01

The turbine geometry is fairly typical of large low pressure 3000 RPM machines, having 6 stages with a very high casing flare to accommodate the large increase of volume flow. This results in very high blade speeds and pressure ratios for the last stage. The Ansaldo machine has a last stage pressure ratio of over 6:1 which, coupled with a low hub:tip radius ratio, results in very high relative Mach numbers at nozzle root and rotor tip. The layout of the turbine is shown and full geometric details of stage 3-6 are given. Details of steam conditions, bleed flow rates and blade clearances are also given. A complete set of all measurements necessary to obtain a heat balance for the turbine were performed in parallel with the traverse measurements. These consisted of 42 pressure, 67 temperature and 6 mass flow measuring devices. The overall electrical output was also monitored and the LP cylinder output was measured by means of a shaft torquemeter and telemetry. These measurements enabled the LP cylinder efficiency to be evaluated separately from that of the whole turbine. Comparisons of measured and computed results are shown. The agreement is good and similar results were obtained from other calculation methods on this machine. T.M.

N82-17185# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

HANNOVER TURBINE. GEOMETRY, TEST DATA AND SAMPLE CALCULATION

In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 99-107 refs (For primary document see N82-17178 08-07)

Avail: NTIS HC A15/MF A01

The facility was basically laid out for a four-stage turbine which was designed to have the same blade sections in all stages at a given radius. The blading is of the free vortex type and the nominal mass flow of the turbines is m=7.8kg/s and the nominal rotational speed is 7500 RPM. The set up allows each stage of the four-stage turbine to be tested separately. The tests referred to are concerned only with stage No. 4 which was tested in the single-stage mode. Details of the meridional flow path are presented. The turbine has a constant hub diameter of DH=270 mm. The outer casing is cylindrical except across the blading where it is conical. The rotor has extremely small radial clearances: S=0.24. mm at nominal RPM. The stator is shrouded and the leakage flow across the stator hub is minimized by multiple seals. Predicted efficiency is compared with the measured results. T.M.

N82-17186# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
SURVEY ON DIFFUSION FACTORS AND PROFILE LOSSES
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 115-126 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

Emphasis is placed upon the development of stage and blade design procedure that will replace the simple loss prediction techniques in use today. These techniques are difficult to apply to real machine design because extensive iterative hub-to-tip, blade-to-blade, and boundary-layer flow calculation is needed. Parametric studies with blade-to-blade flow and boundary layer calculation codes were examined which attempt to refine the diffusion factor concept and loss correlation at design as well as off-design compressor operation. The codes begin to demonstrate how the flow parameters (including Mach- and Re-number) and the details of blade geometry interact to produce performance characteristics. T.M.

N82-17187# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
SURVEY OF MODELS FOR SHOCK AND SHOCK/BOUNDARY LAYER INTERACTION LOSS PREDICTION
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 127-136 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

The calculation of the shock losses has to take into account the losses due to normal shocks as well as the additional losses caused by the shock/boundary layer interaction. Due to the very complex flow behavior, at present this is only possible by empirical correlations for very simplified assumptions. Therefore, additional effort has to be directed to the practical application of analytical methods and to better understanding of the shock/ boundary layer interaction. Basically, transonic cascades have to be designed in such a way that the shocks are not present or occur at minimum shock Mach number. It seems to be possible that for high subsonic inlet Mach numbers the use of new blading design concepts (i.e., supercritical profiles) can meet the first condition, whereas the second condition of minimal shock Mach numbers was successfully verified by the use of wedge type profiles. T.M.

END-WALL BOUNDARY LAYER CALCULATION METHODS
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 137-150 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

The end-wall boundary layer (EWBL) approach to secondary losses is based on the integration of the pitch-averaged three-dimensional boundary layers along the hub and tip walls, with extra assumptions for the blade force defect terms. From there an efficiency drop is calculated including secondary flow effects, as well as blockage. The method allows in principle for the influence of inlet blockage, clearance, axial gap, aspect ratio and other parameters to be included through their effect on the end-wall boundary layers. From the knowledge of the velocity profiles inside the boundary layers, the full radial variations of incidence and turning can be predicted by coupling a radial equilibrium calculation to the EWBL calculation. T.M.

N82-17189# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
CORRELATION FOR SECONDARY FLOWS AND CLEARANCE EFFECTS
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 151-165 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

It is concluded that correlations obtained from straight cascade data will at least provide correct trends for the effect of clearance in compressors. With cascade data, the effect of variation of blade circulation with span is not known. This will cause problems if spanwise distributed correction for losses and angle are to be considered. For turbine, it is well known that for secondary flow effect the loss level as obtained from cascade data may differ of an order of magnitude from the machine losses. This is linked most probably to the effect of relative motion when passing from nozzle to rotor or vice-versa. In compressors this effect tends to bring back the end-wall boundary layer to a more collateral state, and the difference might be somewhat less. T.M.

EFFECTS OF REYNOLDS NUMBER AND TURBULENCE LEVEL ON AXIAL CASCADE PERFORMANCE
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 164-170 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

A semiempirical theory was developed which will predict the behavior of the shear layer across a laminar separation bubble. The method is proposed for two dimensional incompressible flow and is applicable down to short bubble bursting. The method can be used to predict the length of the laminar bubble, the bursting Reynolds number, and the development of the shear layer through the separated region. As such, it is a practical method for calculating the profile losses of axial compressor and turbine cascade in the presence of laminar separation bubbles. It can also be used to predict the abrupt leading edge stall associated with thin airfoil sections. The predictions made by the method are compared with the available experimental data. T.M.

N82-17191# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).
SURVEY ON THE EFFECT OF BLADE SURFACE ROUGHNESS ON COMPRESSOR PERFORMANCE
In its Through Flow Calculation in Axial Turbomachines Oct. 1981 p 171-180 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

Analysis of limited experimental data reveals that critical roughness Reynolds number of compressor blades manufactured with typical present day methods as forging/etching and electrochemical machining are around 90 and therefore very close to sand type roughness if roughness height is based on the largest peaks. Modern high pressure ratio engines suffer from blade surface roughness in the back stages of the compression system. Surface quality needed to keep the flow hydrodynamically smooth exceeds considerably the best present day quality achievable, thus limiting the potential efficiency gain at high Reynolds number flight conditions, i.e., essentially low level flight conditions. L.F.M.

PART SPAN DAMPER LOSS PREDICTION FOR TRANSONIC AXIAL FAN ROTORS
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 181-183 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

For off design conditions, the maximum loss due to the damper and region of influence at design point are calculated and these values are used as reference quantities for all off design calculations. The point of intersection of a constant throttle or area operating line through the design point with a speed line defines the reference point where the PSD loss is minimum.

From this point the suction surface incidence at the damper location is determined from experimental data or off design analysis code. Then the damper maximum loss region of influence is calculated for any point on the speed line by taking the difference in suction surface incidence at that point and the reference incidence. To minimize damper loss, several things should be taken into consideration. Both approaches agree on the following: the damper should be as thin as possible so as to minimize the area influenced; the damper should be located as near to the hub as possible; work input should be minimized at the PSD location. Correlation of experimental results shows further that damper trailing and leading edge thickness should be as sharp as possible. L.F.M.

DEVIATION/TURNING ANGLE CORRELATIONS
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 184-211 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

In the past, compressor through flow solutions used substantial input from experimental measurements made in actual fan and compressor flow messages or in flows simulating real compressor conditions. For example, almost total reliance was placed on experimentally supported methods for estimation of fluid turning angles in individual blade rows. Compressor design is, as a result, heavily dependent on the quality of the experiment and data correlations associated with these methods. The three principal currently used prediction methods for flow turning angle were developed during the period 1945 to 1960. One of these methods directly predicts fluid turning angles in terms of cascade geometry and aerodynamic parameters. The others predict the exit flow deviation angle, defined as the angle between the average exit flow direction and the direction of a line tangent to the blade section camber line at the trailing edge. There has been no substantial modernization of these deviation/turning angle procedures since 1960, while during this time the methods have been widely applied to airfoil section profiles and in aerodynamic regimes far outside the limits suggested by the original derivations and data correlations. A discussion of these problems is presented. L.F.M.

AXIAL COMPRESSOR STALL AND SURGE
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 212-213 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

The so called surge line evaluation is an extremely complex area, which deserves in itself full attention. The intention here was only to define the problem. The existing methods of prediction do not take the real physics of the flow into account, and cannot explain or consider or identify all the parameters of importance. They are however quick and useful for the range in which they have been calibrated, but are mostly not available in public literature. A more generalized use of the pseudoend wall boundary layer approach seems interesting. Satisfactory solutions will come however only from the logical approach of instability detection, second flow regime and system response characterization, for which solid elements are now in hand but require further development. SINGLE STAGE TRANSONIC COMPRESSOR AND EQUIVALENT PLANE CASCADE
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 221-228 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

The working group 12 activities cover primarily turbomachinery off design performance prediction, however include also blade to blade calculation on relevant test cases to get more information on those basic flow phenomena that affect flow losses and turning in blade rows. One of the test cases selected is the DFVLR single stage transonic compressor that was tested in great detail with the results well documented, particularly intrablade velocity data of the rotor are available from extensive flow studies with laser velocimetry. The data allow to compare blade to blade calculations to actual transonic compressor flow. Additionally to the rotor tests the rotor blade section at 45% span was investigated in the DFVLR transonic cascade windtunnel. L.F.

RESULTS OF CALCULATIONS
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 245-246 ref (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

The types of calculations were performed by various participants, each using his own method for through flow calculations and blade to blade calculations. The Working Group's task was to demonstrate that the use of systematic blade to blade calculations could provide a support for the confirmation of an existing correlation or the development of a new one. It is believed that the present development and state of the numerical tools available in order to compute complex flow structures, should be used more and more extensively in order to develop a deeper understanding of the flow mechanism of loss production and of turning. EVALUATION OF PROFILE LOSS PREDICTIONS BASED ON DIFFUSION FACTORS
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 269-280 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

A comparison between theoretically predicted and measured profile losses was made, in order to evaluate the precision of the different prediction methods. These prediction methods are based on the relation between suction side diffusion and profile losses. The evaluation concerns as well the prediction of diffusion factor as predicted values of profile losses. It is further shown

that these correlations are not universally valid for all blade shapes and that some correlations perform as well at design as at off design if the suction side diffusion is correctly predicted.

BLADE-TO-BLADE COMPUTATIONS AND BOUNDARY LAYER CORRECTIONS IN AXIAL COMPRESSORS AND TURBINES
In its Through Flow Calculations in Axial Turbomachines Oct. 1981 p 307-326 refs (For primary document see N82-17178 08-07)
Avail: NTIS HC A15/MF A01

The number of inviscid calculation methods available today is quite impressive, and they allow an accurate prediction of inviscid incompressible, subsonic compressible and transonic flow. Recent progress has also resulted in a remarkable decrease of required computational effort, which makes them even more attractive to industrial applications. However, as these methods do not account for viscosity, the field of application is quite restricted, and good predictions can be obtained only for flow configurations where viscous effects can be neglected (e.g., turbines and low loaded compressor cascades). A similar conclusion can be drawn about boundary layer methods, with a limitation on shock boundary layer interaction, where complete solutions still require a large amount of computational effort. The combination of these two types of calculations started quite recently, and a lot of progress can be expected in the near future. Improvements which can be expected from a better combination of these two types of calculations will be more important than an improvement in the inviscid calculations. Based on the present state of the art concerning shock boundary layer interaction calculations, it appears that integral or inverse methods are the best suited to industrial calculations. However, in view of the considerable efforts currently made towards the development of the Navier-Stokes equation solution, it is more likely that, in the near future, this method will lead to more reasonable computation times and permit practical applications. Avail: NTIS HC A13/MF A01

Helicopter propulsion systems are reviewed, and it is noted that helicopter development is paced to a major extent by the power plant. Power available, reliability, fuel consumption, power-to-weight ratio, and life cycle costs are key parameters. The application of emerging technologies such as microelectronics, ceramics and other new materials and approaches, and the continuing refinement of the aerodynamics and dynamics of gas turbine power plants are discussed and noted to result in a significant benefit to the helicopter and its operator. Important airframe-propulsion system interface requirements are given, and the need is discussed for new innovative certification procedures that provide for emergency operation with acceptable economics. Finally, future propulsion system capabilities are projected and their dramatic benefit for the helicopter noted. Author

DEVELOPMENT TEST PROGRAMS ADAPTED TO HELICOPTER ENGINES [PROGRAMMES D'ESSAIS DE DEVELOPMENT ADAPTES AUX MOTEURS D'HELICOPTERES]
J. Fresco *In* AGARD Helicopter Propulsion Systems Sep. 1981 9 p In FRENCH (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

The path to follow in a general program of engine development is shown with constraints of various kinds. There are regulatory requirements established by laws of navigability for civil aviation engines, and particular technical specifications for military aviation engines. Requirements of an operational order happen to be juxtaposed to precedents which are set by the different types of usages envisioned: flight profiles of various missions, and the environmental conditions likely to be encountered. This second factor is particularly important for a helicopter turbine because of the different utilizations and environmental conditions compared to a jet or turboprop engine. To address all these requirements, a test program must be built which, among others, takes into consideration this group of sometimes contradictory constraints in order to obtain certification and as well as to bring about development and operation without major risk. Specific tests for a helicopter turbine are examined with emphasis on the MAKILA program turbine which is on the AS-332 super PUMA. Transl. by A.R.H.

The T700 engine program was conducted during the 1970's and is representative of recent practices employed in the development of turboshaft engines for U.S. military application. The engine, which is in the 1,600 horsepower class, recently entered service in the twin engine U.S. Army UH-60A Black Hawk helicopter. The T700's field introduction follows an extensive program of technology demonstration, development, qualification and maturity. Requirements applied in the T700 program and associated benefits, challenges and penalties are surveyed. Suggested improvements for future programs are offered, and technology needs revealed during T700 development are identified. Post-qualification maturity testing, which was conducted to provide early exposure of high time failure modes, is described. Program features which are important for development costs payback are summarized. J.D.H.

Avail: NTIS HC A13/MF A01

Mechanical components have a significant influence on the efficiency of a small gas turbine engine. Some of the performance losses associated with the design of the power transmission and internal air system are defined and discussed. Improvements in engine efficiency must be considered in conjunction with cost, reliability and size or weight. Many of the problems considered are applicable to gas turbines in general but become acute in small engines due to the adverse effects of scale on many components design parameters. To meet the increasing demand for more efficient powerplants the mechanical research engineer must improve the analysis of mechanical component behavior to produce optimized engine designs. Author

REGENERATIVE HELICOPTER ENGINES: ADVANCES IN PERFORMANCE AND EXPECTED DEVELOPMENT PROBLEMS
H. Grieb and W. Klussmann *In* AGARD Helicopter Propulsion Systems Sep. 1981 12 p ref Sponsored by Ministry of Defence of the Federal Republic of Germany (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

On the basis of modern engine component technology, including and emphasizing recent progress in high temperature heat exchanger technology, a conventional and a regenerative helicopter engine in the 900 kW power class are compared in design, performance and life cycle costs. The comparison shows that the installation properties of the two engines are roughly the same. The variable power turbine, being an indispensable part of a regenerative engine, leads to an extremely favorable transient behaviour with a moderate influence of severe cyclic loading on hot-part lifetime. No significant difference exists in infrared (IR) emission at part load, due to the design of the IR suppressor for the same exhaust temperature at maximum power. The life-cycle costs of a future fleet of attack helicopters equipped with regeneratived engines can be lower than with conventional engines. J.D.H.

LUBRICATION BREAKDOWN BETWEEN GEAR TEETH
B. A. Shotter *In* AGARD Helicopter Propulsion Systems Sep. 1981 11 p (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

Damage to gear teeth attributable to lubrication failure is an important failure mode. Detailed observations of the early stages of breakdown suggest that one may not be dealing with a single process: hence great care is necessary when drawing conclusions from observing a damaged pair of gears. A study of a number of these critical areas and discussion about others highlights the complexity of the problem. J.D.H.

N82-17214# Sikorsky Aircraft, Stratford, Conn.
ADVANCED TRANSMISSION COMPONENT DEVELOPMENT
Kenneth M. Rosen and Harold K. Frint *In* AGARD Helicopter Propulsion Systems Sep. 1981 17 p refs (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

Design innovations in helicopter gearbox development which permit high temperature operation at increased speeds without degrading strength or weight goals are discussed. One avenue of investigation, which shows promising strength or weight advantages, is high contact ratio gearing. The means taken to obtain a high contact ratio tends to produce an inherently weaker tooth and reliance must be placed on the multiple load-sharing feature of this design to achieve an advantage over low contact ratio gears. The appropriate consideration which must be addressed in the design stage to achieve optimum results is described. To provide high temperature capability, two UH-60A helicopter main transmission housings were fabricated from a stainless steel alloy to replace the conventional magnesium alloy casing. Design details and fabrication procedures are discussed. J.D.H.

HELICOPTER DEVELOPMENT IN FRANCE [LE DEVELOPPEMENT DES HELICOPTERES EN FRANCE]
Daniel Berthault *In* AGARD Helicopter Propulsion Systems Sep. 1981 9 p In FRENCH (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

For the French helicopter industry, the last two decades correspond to a period of rapid growth. The national armed forces were supplied with significant quantities of good quality military equipment well adapted to their operational objectives. Considerable successes were met in the sale for exploration of military helicopters as well as other machines for civilian use, which were developed by taking account of market requirements. These were often classed in a very favorable manner in relation to the products of competitors. The essential characteristics of helicopter development in France during this period are traced. The lines of direction and the modality of action taken by various public services in this regard are analyzed. By defining future needs and the centers of action, perspectives for the future are outlined. Transl. by A.R.H.

HELICOPTER AIR INLETS [ENTREES D'AIR D'HELICOPTERES]
A. Vuillet *In* AGARD Helicopter Propulsion Systems Sep. 1981 9 p refs In FRENCH (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

Because of engine architecture, air inlets on low and medium tonnage helicopters are located behind the rotor head, which makes feeding very difficult. This is particularly the case of the Ecureuil AS 350 and the Dauphin SA 365 which are equipped with new generation engines. These turbines have axial or annular intakes behind which the reductor is located beside either the blast pipe or the compressor. An indepth study of the air intakes from the project stage can permit their design with a minimum of unlucky repercussions on the power supplied by the engine, on the layer of the device, and on risks to pumping. For this reason, such a study is needed to reduce the delays and costs of operating such an intake in flight. Methods used at Aerospatial and results obtained on different devices are described.

PROBLEMS OF ENGINE RESPONSE DURING TRANSIENT MANEUVERS
Dino Dini *In* AGARD Helicopter Propulsion Systems Sep. 1981 14 p refs (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

Helicopter transition flight regime and extreme flight maneuvers which determine abrupt variation of the rotor drag torque during each revolution, and the corresponding effects on the engine are discussed. Repeated surging and the attendant transient torsional loads from the engine cause damage to the airframe components. The angular rotor acceleration, cyclically variable, influences the turbine gas producer rotor speed, introducing flow distortions and aeromechanical effects in all the engine. It is found that periodic and inertial blade loading has serious consequences to discs and shaft to which the blades are attached. The higher harmonics of the excitation over the discs provokes relevant flexural modes of forced vibration. Operation in transient rating with pitch increase or decrease has the greatest effect on the helicopter flight performance, owing to the power application capability and the fuel control system adaptability. It is shown that to obtain sufficient engine/airframe dynamic compatibility, aircraft developments have to incorporate technical advances, which include harmonic integrated controls for propulsion and flight systems. E.A.K.

HELICOPTER PROPULSIONS SYSTEMS. 1: VIBRATION PREVENTION SYSTEMS ON HELICOPTERS 2: PROBLEM OF NOISE IN THE CABIN
Gerard Genoux and Henri-James Marze *In* AGARD Helicopter Propulsion Systems Sep. 1981 19 p refs (For primary document see N82-17203 08-07)
Avail: NTIS HC A13/MF A01

Two different facets of the propulsion system/structure interaction are presented. The first interaction deals with low frequency vibration associated with the operation of the main rotor. These problems are either mechanical material fatigue and stressing or related to comfort. Implementation for reduction excitations and filtration of their transfer from the source to the cabin are described. The second interaction type is cabin noise associated with the operation of the reduction gear box. The vibratory energy generated at the gears propagates all the way to the passengers via the air and the structure. Cutting the intensity of transmission noise sources, the energy transfer between such sources and the structure and the energy radiation from the structure to the passengers is discussed. E.A.K.

AN INVESTIGATION OF MULTI-AXIS ISOMETRIC SIDE-ARM CONTROLLERS IN A VARIABLE STABILITY HELICOPTER
M. Sinclair and M. Morgan Aug. 1981 25 p ref
(AD-A106759; NAE-LR-606; NRC-19629) HC A02/MF A01 CSCL 01/4

The test aircraft was the NAE Airborne Simulator, an extensively modified Bell Model 205A-1, and the evaluation flights encompassed a wide range of demanding tasks from hover maneuvering and transitions to cruising flight, to nap-of-the-earth flight and precision IFR tracking. The isometric control systems included several two-handed and one-handed configurations with force-pedals for directional control, and one fully-integrated system which provided full control of the helicopter with either hand. PARALLEL COMPUTATION FOR DEVELOPING NONLINEAR CONTROL PROCEDURES Final Report, 1 Sep. 1977 - 30 Sep. 1979
Howard Kaufman and Richard Travassos Jul. 1981 238 p refs
(Grant AF-AFOSR-3418-77; AF Proj. 2307)
(AD-A107914; AFWAL-TR-81-3016) Avail: NTIS HC A11/MF A01 CSCL 09/2

Efforts since 1 October 1978 have been concerned with the application of the developed parallel optimization procedures to the design of non-linear flight control systems. Consideration has been given to the advantages to be gained from the direct use of the non-linear equations of motion and to the potential for rapid on-line optimization in response to tracked parameter changes and/or changes in the mission objectives. To date, based upon the non-linear longitudinal equations for the F-8, it has been shown that parallel optimization procedures alone can reduce the time required for optimization by at least 30% and that the direct use of the nonlinear (rather than the linearized) equations of motion does indeed improve attitude control. A study of further incorporation of parallelism into the basic utility routines such as integration and matrix manipulation has shown that the convergence time for a representative optimal control computation can be reduced by a factor of 20. Thus, it was concluded that incorporation of parallel computers might indeed permit online control computation and/or adaptation. To this effect possible architectural structures for such computers have also been studied. GRA

SCALE-MODEL STUDIES FOR THE IMPROVEMENT OF FLOW PATTERNS OF A LOW-SPEED TUNNEL Final Report, 1 Mar. - 31 May 1981
P. Stephen Barna Jan. 1982 46 p refs
(Grant NsG-1563)
(NASA-CR-169413) Avail: NTIS HC A03/MF A01 CSCL 14B

Parameters affecting the performance of a scale model V/STOL wind tunnel were measured. These included: (1) static pressure variation around the closed tunnel circuit as affected by the application of various screens; (2) pressure rise and radial distribution of flow through the fan; (3) variation of screen parameters and screen location affecting the flow; and (4) effects of multiple screens on the velocity distribution in the fourth diffuser. In these tests the fan was driven through a long shaft by an externally situated 11,190-W (15-HP) motor equipped to turn at 4 speeds. B.W.

SURVEY OF 101 US AIRPORTS FOR NEW MULTIPLE INSTRUMENT APPROACH CONCEPTS

L. C. Newman, T. N. Shimi, and W. J. Swedish Sep. 1981 85 p refs

(Contract DOT-FA01-81-C-10001)

(AD-A107812; MTR-81W234; FAA-EM-82-3) Avail: NTIS HC A05/MF A01 CSCL 01/5

Several new concepts for multiple instrument approaches have been proposed to improve capacity and reduce delays at U.S. airports. The concepts include: dependent parallel approaches at reduced runway spacing; independent parallel approaches at reduced runway spacing; converging approaches; and triple approaches. One of the runways involved may be a separate short runway for general aviation and commuter traffic. A survey of 101 top U.S. airports was performed to determine the potential for applying the concepts to the existing runways. Specific applications of each relevant concept are provided. Calculations were performed for the top 30 U.S. air carrier airports to determine the actual delay improvement which could be expected to result from application of the multiple-approach concepts. Additionally, some general results are obtained for the remaining 71 airports. Author (GRA)

MODEL SIZE AND HUMIDITY EFFECTS ON SELECTED CALIBRATION PARAMETERS FOR THE 16-FT TRANSONIC WIND TUNNEL AT AEDC Final Report, 1 Oct. 1978 - 31 Dec. 1980

Ernest J. Lucas AEDC Nov. 1981 50 p refs

(AD-A107728; AEDC-TR-81-17) Avail: NTIS HC A04/MF A01 CSCL 14/2

Analyses of wind tunnel wall surface pressure data and model force data from tests conducted in the Propulsion Wind Tunnel (16T) with 1/9- and 1/4-scale fighter models were conducted to determine the effect of model size, location, and attitude, and tunnel flow humidity and Reynolds number on the test section calibration. The tests were conducted at Mach numbers from 0.6 to 1.4 at Reynolds numbers from 1,800,000/ft to 4,800,000/ft, depending on model structural limits and Mach number. The model influence was localized and did not affect the set conditions of the flow entering the test section. The currently used Reynolds number calibration is valid within the uncertainty of the instrumentation installed in the Tunnel 16T system. Analysis of the data indicates that the test section dewpoint should be below the free-stream static temperature to prevent humidity effects on model force data. Author (GRA)

TUBING SYSTEMS FOR THE MEASUREMENT OF FLUCTUATING PRESSURES IN WIND ENGINEERING

Stephen J. Gumley 1981 266 p refs Sponsored in cooperation with Ministry of Agriculture, Fisheries and Food and a Rhodes Scholarship

(Contracts F3/2/219; SRC-GR/B/6442.0)

(OUEL-1370/81) Avail: NTIS HC A12/MF A01

The computer aided design of pneumatic tubing networks incorporated in systems for the measurement of fluctuating pressures, which satisfy the dual requirements of unity amplitude transfer function and linear phase transfer function between the pressure at the surface being tested and a remote pressure transducer, was analyzed. Single tube systems, using restrictors to damp resonant peaks, and pneumatic averaging systems, using manifolds and restrictors, were studied. Calibration of networks, calculation of settling time of pneumatic systems after transients, design of surface tappings, effects of bends in tubing, effects of nonsymmetry of averaging manifolds, and the higher frequency behavior of tubing systems were included in the analysis. Results confirm that such devices can be used to control acoustic resonances, while the computer program enables tube dimensions to be chosen for optimum performance. Experiments performed in a 4 m x 2 m low speed wind tunnel. Author (ESA)

GLASS SHELL MANUFACTURING IN SPACE Final Report, Dec. 1978 - Dec. 1981

Raymond L. Downs, Matthias A. Ebner, and Robert L. Nolen, Jr. 21 Dec. 1981 104 p refs

(Contract NAS8-33103)

(NASA-CR-161972) Avail: NTIS HC A06/MF A01 CSCL 22A

Highly-uniform, hollow glass spheres (shells), which are used for inertial confinement fusion targets, were formed from metal-organic gel powder feedstock in a vertical furnace. As a result of the rapid pyrolysis caused by the furnace, the gel is transformed to a shell in five distinct stages: (a) surface closure of the porous gel; (b) generation of a closed-cell foam structure in the gel; (c) spheridization of the gel and further expansion of the foam; (d) coalescence of the closed-cell foam to a single-void shell; and (e) fining of the glass shell. The heat transfer from the furnace to the falling gel particle was modeled to determine the effective heating rate of the gel. The model predicts the temperature history for a particle as a function of mass, dimensions, specific heat, and absorptance as well as furnace temperature profile and thermal conductivity of the furnace gas. A model was developed that predicts the gravity-induced degradation of shell concentricity in falling molten shells as a function of shell characteristics and time. T.M.

COMMENTARY ON SOVIET-FRENCH AUREOLE-3 SATELLITE

B. Konovalov *In its* USSR Rept.: Space, No. 14 (JPRS-79711) 22 Dec. 1981 p 1-3 Transl. into ENGLISH from Izv. (Moscow), 24 Sep. 1981 p 3 (For primary document see N82-17235 08-12)

Avail: NTIS HC A05/MF A01

The 'Aureole-3' satellite developed by Soviet and French specialists, designed to study processes of energy transfer from Sun to Earth and investigate interrelationships of phenomena in the magnetosphere and ionosphere of our planet is discussed. The satellite's elliptical orbit from from 400 to 2000 kilometers high observes Earth's geoactive polar 'caps'. It was developed on the basis of the Soviet AUOS (automatic universal orbital station) series of satellites. It carries instruments, half Soviet half French, including those which register magnetic and electrical fields, detect and measure fluxes of low, medium and high energy particles in near-Earth space and measure fluxes of energy in the X-ray, ultraviolet, visible and near infrared ranges. The instruments will obtain data characterizing the state of matter at every point on the satellite's orbit. An on-board microcomputer (French) collects information from sensors, does preliminary processing, and distributes it in digital form. The value of the project and USSR-French cooperation in the study of space is also discussed. M.D.K.

COMMENTARY ON INTERCOSMOS-BULGARIA 1300 SATELLITE c15

Kirill Serafimov *In its* USSR Rept.: Space, No. 14 (JPRS-79711) 22 Dec. 1981 p 4-6 Transl. into ENGLISH from Izv. (Moscow), 12 Aug. 1981 p 5 (For primary document see N82-17235 08-12)

Avail: NTIS HC A05/MF A01

A Bulgaria-Soviet satellite 'Intercosmo-Bulgaria 1300', designed to obtain data on the interaction between processes taking place in the magnetosphere and ionosphere is discussed. The mechanism whereby solar disturbances are transmitted to the Earth, and investigations of near-Earth plasma were studied. Systems for energy supply, stabilization, orientation, telemetry and telecommunication were designed and incorporated. The satellite's complex of instrumentation and equipment was divided into four groups: (1) systems and instruments for studying electrons and ions, determining their concentration, temperature, and distribution, and for detecting flows of ionospheric plasma; (2) a system for determining permanent and varying electric fields and a magnetometer; (3) an electro-photometer and a device for detecting and recording ultraviolet radiation; and (4) the angular laser reflector. M.D.K.

N82-17238# Joint Publications Research Service, Arlington, Va.

FURTHER COMMENTARY ON INTERCOSMOS-BULGARIA 1300 SATELLITE c15

In its USSR Rept.: Space No. 14 (JPRS-79711) 22 Dec. 1981 p 7-8 Transl. into ENGLISH from Kommunist (Yerevan, USSR), 13 Sep. 1981 p 2 (For primary document see N82-17235 08-12)

Avail: NTIS HC A05/MF A01

'Intercosmos-Bulgaria 1300', the second satellite to carry Bulgarian geophysical instruments, was designed to provide information about physical phenomena occurring in near-Earth space. Electron-ion processes which exert an energetic effect on the lower layers of the atmosphere and influence meteorological conditions were of concern. Study of convection movements of ionospheric plasma and their relation to phenomena in other zones of the Earth's magnetosphere and in planetary space, investigations of turbulence phenomena in the near-Earth plasma, detection and study of inhomogeneities in the ionospheric plasma and of dynamic links between the ionosphere and the magnetosphere and measurements during heightened solar activity were made. Total electromagnetic compatibility of all of the scientific satellite apparatus and high experiment fidelity was accomplished. Soviet specialists devised a technical solution by developing a system of multiple-joint boom devices so that instruments could be positioned up to 5 meters away from the body of the satellite. Special coatings were developed and used for the body, the instruments, and solar batteries. The problem of heat elimination from instruments operating in open space was also solved. M.D.K.

N82-17239# Joint Publications Research Service, Arlington, Va.

STATUS OF SPACE BIOMEDICAL PROGRAMS c52

Avadalik Ignatyevich Burnazyan *In its* USSR Rept.: Space, No. 14 (JPRS-79711) 22 Dec. 1981 p 29-33 Transl. into ENGLISH from Pravda (Moscow), 15 Jun. 1981 p 3 (For primary document see N82-17235 08-12)

Avail: NTIS HC A05/MF A01

Four specialized biological satellites in the Cosmos series conducted research to study the mechanisms of the effect of weightlessness, the combined effect of weightlessness and ionizing radiation, and the biological effect of artificial gravity on living systems. Devices developed included: a centrifuge for the creation of artificial gravity, an irradiator, instruments for rowing and fixing plant organisms. The cardiovascular system as studied during the so-called period of acute adaptation to weightlessness (the first 7 days of a flight). Special features of central and peripheral blood circulation and blood circulation in the brain were studied. A ballistic cardiography method judged the contractive function of the evaluated dynamics of blood flow, and detected functional disruptions in the cardiovascular system. A densiotography method was also used. An 'Oxygen' physiological experiment was performed utilizing a portable 'Oxymeter' instrument to determine oxygen pressure level changes and its consumption by body tissues. Radiation safety tests were also conducted using thermoluminescent dosimeters. Results of these tests are given. A center for processing of the data and hygienic and biophysical information that serves as a consultative-prognostic group is also described. M.D.K.

INSTITUTE DIRECTOR DISCUSSES KRT-10 AND OTHER SPACE ANTENNAS c32

I. Zagura *In its* USSR Rept.: Space, No. 14 (JPRS-79711) 22 Dec. 1981 p 38-41 Transl. into ENGLISH from Stroitelnaya Gazeta (Moscow), 12 Apr. 1981 p 3 (For primary document see N82-17235 08-12)

Avail: NTIS HC A05/MF A01

The KRT-10 radiotelescope space antenna is described. It has a 10 meter umbrella, collapsible support radiators, four megaphones for the 12 centimeter band and a spiral for the 72 centimeter band attached to its body, high frequency radiation meter amplifiers, and a heat regulation system located in the hermetically sealed compartment. The antenna mirror has a reflective surface made from a specially knitted grid bed, woven from 50 micrometer thick metallic fibers. Onboard astrophysical studies using the antenna were conducted for the development of radioastronomical methods in space in two modes: circular rotation of the craft around a transverse axis for mapping of the Milky Way and constant orientation of the craft for observation of a pulsar, together with a 70 meter radiotelescope in the Crimea. Geophysical studies produced high resolution in measurements from space of the radio temperature brightness of the Earth and the world's oceans. Evaluations were conducted of the actual resolution of the antenna and data were taken on the quality of its opening. Signal reception capability was found dependent on the 'mirror' surface. Antennas of large ground radiotelescopes with diameters of approximately 100 meters are being constructed and design of folding antennas with diameters of 30 and 10 meters using the same principle as the 'KRT-10' is being implemented. M.D.K.

N82-17241# Joint Publications Research Service, Arlington, Va.

GAMMA-RAY INSTRUMENTATION AND ITS USES IN SPACE c93

V. G. Kirillov-Ugryumov, R. Z. Sagdeyev, and Yu. P. Semenov *In its* USSR Rept.: Space, No. 14 (JPRS-79711) 22 Dec. 1981 p 42-50 Transl. into ENGLISH from Zemlya i Vselennaya (Moscow), no. 4, Jul. - Aug. 1981 p 4-8 (For primary document see N82-17235 08-12)

Avail: NTIS HC A05/MF A01

Studies to examine astrophysical objects in various ranges of the electromagnetic spectrum using gamma ray instrumentation are described. Particular features of gamma-ray telescopes and orbital space observatories are discussed. Structural design criteria and specifics of instrumentation are described in detail for both American and U.S.S.R. programs. Equipment diagrams, specifically for gamma-ray telescopes spark chambers and scintillation counters are presented. Similar diagrams and descriptions are given for gamma-ray telescopes for soft gamma radiation and for medium-energy telescopes. M.D.K.

N82-17242# Joint Publications Research Service, Arlington, Va.

ADVANTAGES OF SPACE STATIONS AT THE EARTH-MOON LIBRATION POINTS

A. Brykov *In its* USSR Rept.: Space, No. 14 (JPRS-79711) 22 Dec. 1981 p 51-54 Transl. into ENGLISH from Aviats. Kosmonavt. (Moscow), no. 7, Jul. 1981 p 42-43 (For primary document see N82-17235 08-12)

Avail: NTIS HC A05/MF A01

The utilization of space near the libration points in the Earth-Moon system for the effective solution of scientific and national economic problems is considered and discussed. The distinct advantages of locating space stations at these libration points is of specific concern. Control of spacecraft motion is simplified and the volume of required navigational information is reduced in these locations. Diagrams and descriptions of parameters in libration points in the Earth-Moon system are given. Utilization of these spaces, with long-base interferometers and other equipmentation, will provide opportunities for studying galactic nuclei, stars, intergalactic gases, and other basic research. The significance and application of Euler and Lagrange theoretical constructs in determining and using libration points is also discussed. The potential for using the libration points for creation of global communication systems is considered. M.D.K.

13 ASTRODYNAMICS

ON THE SHAPE AND ORIENTATION CONTROL OF AN ORBITING SHALLOW SPHERICAL SHELL STRUCTURE

P. M. Bainum and A. S. S. R. Reddy 9 Jul. 1982 11 p refs Proposed for presentation at the Joint IFAC/ESA Symp. on Automatic Control in Space, Noordwijkerhout, Netherlands, 5-9 Jul. 1982

(Grant NsG-1414)

(NASA-CR-168420) Avail: NTIS HC A02/MF A01 CSCL 22A

The dynamics of orbiting shallow flexible spherical shell structures under the influence of control actuators was studied. Control laws are developed to provide both attitude and shape control of the structure. The elastic modal frequencies for the fundamental and lower modes are closely grouped due to the effect of the shell curvature. The shell is gravity stabilized by a spring loaded dumbbell type damper attached at its apex. Control laws are developed based on the pole clustering techniques. Savings in fuel consumption can be realized by using the hybrid shell dumbbell system together with point actuators. It is indicated that instability may result by not including the orbital and first order gravity gradient effects in the plant prior to control law design. E.A.K.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE)

Includes launch complexes, research and production facilities; ground support equipment, mobile transporters; and simulators.

THE CONSTRUCTION OF A NEUTRAL MOLECULAR BEAM FACILITY AND ITS APPLICATION TO MASS SPECTROMETERS CARRIED ON SPACE VEHICLES Ph.D. Thesis

John Otto Ballenthin 1981 149 p

Avail: Univ. Microfilms Order No. 8125932

The design and implementation of a beam system intended for the simulation of the motion of planetary probes is discussed. The beam system employed the technique of isentropic expansion of gas through a free jet. Beam velocities of up to 6.3 Km/sec were obtained raising the temperature of the gas behind the nozzle orifice to 2400 K and by 'seeding' a small percentage of the gas of interest into a light mass carrier gas, i.e., hydrogen. This molecular beam was used as a tool to investigate the response of open source mass spectrometers to neutral gas beams. A method of calibrating the response of open source mass spectrometers against an idealized closed source was demonstrated. Measurements of this calibration constant for mass spectrometers similar to those employed on several Earth satellites and on several planetary entry probes show that correction factors of up to 30% are required for some instruments. Dissert. Abstr.

OPTIMAL CONTROL AND ESTIMATION FOR STRAPDOWN SEEKER GUIDANCE OF TACTICAL MISSILES

P. L. Vergez and J. R. McClendon Feb. 1982 25 p refs Backup document for AIAA Synoptic scheduled for publication in Journal of Guidance, Control and Dynamics in May/Jun. 1982

Avail: NTIS HC A02/MF A01

Recent advances in seeker technology have increased the fields-of-view significantly, such that future missiles could have the seeker fixed to its body (eliminating the gimbals) with fields-of-view in excess of 90 degrees. These body-fixed (strap-down) seekers introduce large measurement errors caused by their optics and electronics. Conventional guidance and filtering techniques do not work well with strapdown seeker measurements. Recent dither adaptive approaches to generate inertial measurements from the body fixed measurements in order to use conventional guidance have failed to work in higher engagements. However, guidance and estimation algorithms derived from optical control theory can function well with strapdown seeker measurements in high g engagements, resulting in greatly improved missile performance. L.F.M.

A RAPID ESTIMATION OF THE LIFETIME OF NEAR EARTH SATELLITES FOR MISSION ANALYSIS

Nellore S. Venkataraman and Kondapalli Rama Rao Jul. 1981 28 p refs Presented at the 33rd Ann. Meeting of the SBPC, Salvador, Brazil, 8-15 Jul. 1981

(INPE-2158-RPE/377) Avail: NTIS HC A03/MF A01

The prediction of the lifetime of satellites in mission planning, programming, and planning of onboard scientific experiments, and the design of satellite equipment like batteries is discussed. In the initial stages of mission planning, the lifetime estimates are required for various launch conditions. Lagrange's orbit equations are used with the air drag as the chief perturbation force. It is shown that by making a proper choice of the exospheric temperature, the CIRA-1972 model gives very good results when compared with more detailed atmospheric description where the density is calculated as a function of the altitude, latitude and other geophysical parameters. The lifetime is calculated for several satellites assuming constant drag coefficient. E.A.K.

ECONOMY OF SMALL REUSABLE LEO SATELLITE PLATFORMS

Dietrich E. Koelle 1981 13 p Presented at 32nd Intern. Astronautical Federation, Rome, 6-12 Sep. 1981 Submitted for publication

(MBB-UR-498-81-O) Avail: NTIS HC A02/MF A01

A concept for future small Shuttle launched reusable platforms, considered as a means of cost reduction for LEO missions is described. The first platform of this type of spacecraft is SPAS-01 to be launched in 1982. Follow on concepts are presented for astronomy missions (ASTRO-PLATFORM) and space processing activities (SP-PLATFORM) which have quite different requirements. Further, a 'standard platform' is discussed which could be equipped with payload modules of different nature. The operational and management aspects of this new approach are considered. Author

APPLICATION TO MISSILE DYNAMICS

C. P. Schneider 1980 16 p refs

(MBB-UA-553-80-O; AGARD-LS-18-1) Avail: NTIS HC A02/MF A01

In theoretical dynamics, missile motion is described in six degrees of freedom. The corresponding system of equations of motion contains external forces lift, drag and side force besides motor thrust and gravity, and as external moments the moments of pitch, yaw and roll. Forces and moments - which are dependent on flight conditions such as angles of attack, yaw, and roll, flight speed, acceleration and the angular velocities of pitch, yaw and roll - may be given as partial derivatives of these variables. The connection between aerodynamic modelling and the equation of motions is explained. Simple missile motions are chosen to explain steady and dynamic stability. The influence of steady and dynamic (quasisteady) derivatives is estimated. From literature, examples for the simulation of complicated flight motions caused by non-linear unsteady forces and moments are selected and shown in diagrams. Author

STUDY ON THE ACCOMMODATION POTENTIALS OF NADIR-ORIENTED PAYLOADS ON SPACE SHUTTLE

J. Pirls, A. Drescher, H. vanderPiepen, and A. Rossbach Jul. 1981 63 p refs

(DFVLR-FB-81-27) Avail: NTIS HC A04/MF A01; DFVLR, Cologne DM 11,70

Experiments of Earth observation were selected for a NADIR-oriented space shuttle mission. The application fields are Earth observation over land and water, cartography, and climate research. Accommodation of the different experiments on the Spacelab pallet was investigated. It is demonstrated that the pallet is unnecessary when an experiment support structure configurated by standard elements is used. Moreover the mission costs can be reduced by approximately 25 percent. J.M.S.

WIND TUNNEL TESTS OF THE SPACE SHUTTLE FOAM INSULATION WITH SIMULATED DEBONDED REGIONS Final Report

D. W. Stallings and A. S. Hartman AEDC Apr. 1981 36 p refs

(AF Proj. 921E)

(AD-A108079; AEDC-TSR-81-V13) Avail: NTIS HC A03/MF A01 CSCL 22/2

The tests were conducted to investigate the survivability of the external tank protection system with a hole in the insulation caused by area debonding and insulation tear-out. The material samples were tested using the wedge technique. The tests were run at a free-stream Mach No. 10 and a free stream total temperature of 1900 R. The wedge angle was varied to provide test conditions which were representatives of those expected during launch. Selected results are presented to illustrate the test techniques and typical data obtained. GRA

NASA/ROCKWELL INTERNATIONAL SPACE SHUTTLE ORBITER YAW HEATING TEST (OH-108) Final Report, 28 Oct. - 24 Nov. 1980

K. W. Nutt and L. A. Ticatch Jan. 1981 56 p refs Prepared in cooperation with AEDC

(AD-A107703; AEDC-TSR-81-V6) Avail: NTIS HC A04/MF A01 CSCL 20/4

Thin-skin thermocouple heat transfer tests were conducted on two 0.0175 scale and one 0.04 scale model of the space shuttle orbiter. In addition, a phase-change paint heat transfer test was conducted on a 0.0175 scale SILTS Pod tail of the orbiter. Oil flow data were also obtained on the orbiter's upper surface. The primary objective of the thin skin thermocouple entry was to obtain better identification of regions of peak heating on the upper surface of the orbiter with attention to the Orbiter Maneuvering System (OMS) pods. The objective of the phase-change paint entry was to establish the peak heating location on the orbiter SILTS tail configuration. Data were recorded at Mach 8 in the AEDC-VKF Hypersonic Wind Tunnel B at free stream Reynolds numbers ranging from 500,000 to 3,700,000. The model angle of attack ranged from 20 to 40 degrees with yaw angle varying from -2 to 2 degrees. Author (GRA)

QUEUEING ANALYSIS OF SYNCHRONOUS TIME DIVISION MULTIPLEXING WITH INDIVIDUAL SOURCE BUFFERING
L. Clare 1 Feb. 1982 68 p refs
(Contract NAS7-100)
(NASA-CR-168443; JPL-Pub-81-107) Avail: NTIS
HC A04/MF A01 CSCL 17B

Synchronous time division multiplexing is analyzed. Packets of information arrive at the system as a compound Poisson process, and are transmitted only during individual periodic intervals. Packet arrivals are blocked (lost) if the system has a finite capacity and is congested. Using the theory of semiregenerative processes, the distribution of the number of packets in the system (system size) is found. This nonstationary distribution is used to determine the complete system behavior, including the delay distributions, the blocking probability, and the density of the system size at arrival instants. Numerical examples illustrate applications of the results given. S.L.

HC A06/MF A01 CSCL 17B

Significant changes in the Nation's electric power systems are expected to result from the integration of new technology, possible during the next decade. Digital communications for monitor and control, exclusive of protective relaying, are expected to double or triple current traffic. A nationwide estimate of 13 Mb/s traffic is projected. Of this total, 8 Mb/s is attributed to the bulk-power system as it is now being operated (4 Mb/s). This traffic could be accommodated by current communications satellites using 3- to 4.5-m-diameter ground terminals costing $35,000 to $70,000 each. The remaining 5-Mb/s traffic is attributed to new technology concepts integrated into the distribution system. Such traffic is not compatible with current satellite technology because it requires small, low-cost ground terminals. Therefore, a high effective isotropic radiated power satellite, such as the one being planned by NASA for the Land Mobile Satellite Service, is required. A.R.H.

ROCKET-BORNE INSTRUMENTATION FOR THE MEASUREMENT OF ATOMIC OXYGEN BASED ON CHEMICAL RELEASE IN THE LOWER THERMOSPHERE
E. vanHemelrijk and E. vanRansbeek 1981 33 p refs Submitted for publication
(Contract NFWO-10.089)
(Aeronomica-Acta-A-231-1981) Avail: Issuing Activity

Rocket-borne instrumentation, which determines atomic oxygen density as a function of altitude, was tested. A technique where NO gas is ejected in the backward direction of the flight is outlined. A 6.8 g explosive charge punches a 40 mm hole in the gas bottles. At 80 to 105 km altitude 99% of the gas is ejected within 0.07 sec over a 60 m release interval, assuming rocket velocity = 100 m/sec. The initial Gaussian radius of the cloud is 60 to 70 m, satisfying the point release principle. Cloud altitudes, and wind speeds are derived from ground based photographs. Oxygen concentration is determined by analyzing the chemiluminescence of the point releases. Rocket flights confirm the usefulness of the system. Author (ESA)

AUTOMATED POWER SYSTEMS MANAGEMENT (APSM) Final Report
A. O. Bridgeforth 15 Nov. 1981 65 p refs
(Contract NAS7-100)
(NASA-CR-168423; JPL-Pub-81-106) Avail: NTIS HC A04/MF A01 CSCL 22B

A breadboard power system incorporating autonomous functions of monitoring, fault detection and recovery, command and control was developed, tested and evaluated to demonstrate technology feasibility. Autonomous functions including switching of redundant power processing elements, individual load fault removal, and battery charge/discharge control were implemented by means of a distributed microcomputer system within the power subsystem. Three local microcomputers provide the monitoring, control and command function interfaces between the central power subsystem microcomputer and the power sources, power processing and power distribution elements. The central microcomputer is the interface between the local microcomputers and the spacecraft central computer or ground test equipment.

A STUDY OF THE SELECTION OF MICROCOMPUTER ARCHITECTURES TO AUTOMATE PLANETARY SPACECRAFT POWER SYSTEMS
A. Nauda (Bucknell Univ.) 1 Jan. 1982 36 p refs
(Contract NAS7-100)
(NASA-CR-168412; JPL-Pub-82-1) Avail: NTIS HC A03/MF A01 CSCL 22B

Performance and reliability models of alternate microcomputer architectures as a methodology for optimizing system design were examined. A methodology for selecting an optimum microcomputer architecture for autonomous operation of planetary spacecraft power systems was developed. Various microcomputer system architectures are analyzed to determine their application to spacecraft power systems. It is suggested that no standardization formula or common set of guidelines exists which provides an optimum configuration for a given set of specifications. E.A.K.

PATCHES-3. USER'S GUIDE FOR INVOLUTE COMPOSITES Final Report, Oct. 1978 - Jan. 1981
E. L. Stanton and T. E. Kipp Edwards AFB, Calif. AFRPL Aug. 1981 69 p refs
(Contract F04611-78-C-0082; AF Proj. 3059)
(AD-A107750; PDA-1437-00-02; AFRPL-TR-81-43) Avail: NTIS HC A04/MF A01 CSCL 21/8

A user's guide is provided for the nozzle analyst who needs to use the computer program PATCHES-III to model an involute component, but who does not want to become expert in all the modeling capabilities of the program. The analyst is expected to have a finite element background and should be familiar with how an involute is constructed. Models of test cylinders, involute billets and beam specimens excised from involute rings are described in detail. The bulk data input for these models are annotated and the output is illustrated with computer plots.

SLD REACTION CONTROL AND PROPULSION SYSTEM. PRELIMINARY DESIGN STUDY Final Report
F. Coss 11 Nov. 1980 28 p
(Contract N00173-79--0342)
(AD-A107560; S-1525) Avail: NTIS HC A03/MF A01 CSCL 21/8

The Reaction Control and Propulsion System has been established on a preliminary basis. The overall system has been conceived using one TMC R-40B thruster, operating at 900 pounds thrust and ten TMC R-6C 5 pound thrust attitude control thrusters. The R-40B bipropellant thruster is a modified Space Shuttle Orbiter Attitude Control Engine (the R-40A). The R-40A has been modified only slightly with resized nozzle and chamber assembly optimized for the available space in the SLD. The R-6C bipropellant attitude control thrusters qualified for commercial and DoD spacecraft are packaged in two five thruster modules attached externally to the stage structure. Author (GRA)

ONE-ELECTRON MECHANISMS IN ORGANOMETALLIC CHEMISTRY Ph.D. Thesis
Gregory Maxwell Williams 1981 156 p
Avail: Univ. Microfilms Order No. 8127757

The oxidation of zirconocene bis(phosphine) by alkyl halides is considered. The oxidative adduct, Cp2ZrRX, as well as zirconocene dihalide, are formed by competitive processes which partition a Zr(II) monophosphine species. The dihalide is formed by successive halogen atom transfers resulting in two equivalents of akyl radical in addition to the Zr(IV) product. The intermediacy of organic radicals was established by conventional product analysis, while EPR spectroscopy was used to chracterize the Zr(III) intermediates. Attempts to activate carbon-carbon bond-forming reactions or organonickel(II) complexes are described. The reaction between Cr(acac)2 and methallylnickel bromide dimer in the presence of aryl halides was examined. The reduction with Cr(II) appears to produce a highly reactive reduced nickel species which can be trapped by aryl halide. The formation of methallyl benzene competes with aggregation of the reduced nickel complex. Dissert. Abstr.

PERFORMANCE OF PTFE-LINED COMPOSITE JOURNAL BEARINGS
Harold E. Sliney and Frank J. Williams (North American Aviation, Inc., Los Angeles) 1982 18 p refs Presented at Ann. Meeting of the Am. Soc. of Lubrication Engr., Cincinnati, 10-13 May 1982
(NASA-TM-82779; E-1110) Avail: NTIS HC A02/MF A01 CSCL 13I

Plain cylindrical journal bearings consisting of aramid fiber reinforced epoxy outer shells and glass fiber reinforced PTFE lubricating liners were evaluated. All materials in these bearings are electrically nonconductive; thus eliminating the problem of galvanic corrosion sometimes encountered with metal bearings installed in dissimilar metal mountings. Friction and wear characteristics were determined for loads, temperatures, and oscillating conditions that are typical of current airframe bearing applications. Friction and wear characteristics were found to be compatible with most airframe bearing requirements from -23 C to 121 C. Contamination with MIL H-5606 hydraulic fluid increased wear of the PTFE liners at 121 C, but did not affect the structural integrity of the aramid/epoxy composite. Author

THE REPRESENTATION OF IMAGE TEXTURE
Michael Dennis Riley Sep. 1981 70 p refs
(Contract N00014-80-C-0505; Grant NSF MCS-79-23110)
(AD-A107636; AI-TR-649) Avail: NTIS HC A04/MF A01 CSCL 20/11

This thesis explores how to represent image texture in order to obtain information about the geometry and structure of surfaces, with particular emphasis on locating surface discontinuities. Theoretical and psychophysical results lead to the following conclusions for the representation of image texture: (1) A texture edge primitive is needed to identify texture change contours, which are formed by an abrupt change in the 2-D organization of similar items in an image. The texture edge can be used for locating discontinuities in surface structure and surface geometry and for establishing motion correspondence; (2) Abrupt changes in attributes that vary with changing surface geometry -- orientation, density, length, and width -- should be used to identify discontinuities in surface geometry and surface structure; (3) Texture tokens are needed to separate the effects of different physical processes operating on a surface. They represent the local structure of the image texture. Their spatial variation can be used in the detection of texture discontinuities and texture gradients, and their temporal variation may be used for establishing motion correspondence. What precisely constitutes the texture tokens is unknown; it appears, however, that the intensity changes alone will not suffice, but local groupings of them may; and (4) The above primitives need to be assigned rapidly over a large range in an image. CONTROL OF INTERFACE REACTIONS IN SIC/TI COMPOSITES Final Progress Report, Nov. 1977 - Jun. 1981
C. R. Houska and V. Rao Feb. 1982 61 p refs
(Grant NsG-1470)
(NASA-CR-168416) Avail: NTIS HC A04/MF A01 CSCL 11D

The reaction between a 0.5 to 1.0 Al film and a thick Ti substrate to form TiAl3 occurs very rapidly on heating to 635 C and causes the Al to be confined to the surface region. After heating to 900 C Ti3Al is formed with little release of Al into alpha Ti. Further annealing at 900 C eventually causes the Ti3Al phase to decompose and a substantial amount of Al is released into alpha Ti. The interdiffusion coefficient for Al in alpha Ti at 900 C increases by less than one order of magnitude as Al is varied from 0 to 20 at %. These data were obtained from the (101) X-ray diffraction intensity band using polycrystalline samples. Improvements in the analysis of X-ray diffraction data for the determination of composition profiles are discussed. S.L.

EFFECTS OF HIGH ENERGY RADIATION ON THE MECHANICAL PROPERTIES OF EPOXY/GRAPHITE FIBER COMPOSITES Status Report, 1 Jan. - 31 Dec. 1981
R. E. Fornes and J. D. Memory 31 Dec. 1981 121 p refs
(Grant NsG-1562-S4)
(NASA-CR-168421) Avail: NTIS HC A06/MF A01 CSCL 11D

Studies on the effects of high energy radiation on graphite fiber reinforced composites are summarized. Studies of T300/5208 and C6000/PMR15 composites, T300 fibers and the resin system MY720/DDS (tetraglycidyl-4,4'-diaminodiphenyl methane cured with diaminodiphenyl sulfone) are included. Radiation dose levels up to 8000 Mrads were obtained with no deleterious effects on the breaking stress or modulus. The effects on the structure and morphology were investigated using mechanical tests, electron spin resonance, X-ray diffraction, and electron spectroscopy for chemical analysis (ESCA or X-ray photoelectron spectroscopy). Details of the experiments and results are given. Studies of the fracture surfaces of irradiated samples were studied with scanning electron microscopy; current results indicate no differences in the morphology of irradiated and control samples. THE STRUCTURAL FORMATION AND PHYSICAL BEHAVIOUR OF CROSS-LINKED EPOXY RESINS
M. Fisher, F. Lohse, and R. Schmid Apr. 1981 43 p refs Transl. into ENGLISH from Makromol. Chem. (Basle), no. 181, 1980 p 1251-1287
(RAE-LIB-Trans-2067; BR81270) Avail: NTIS HC A03/MF A01

Network structures and physical properties of products obtained either by crosslinking polyepoxides with polyphenols, and by dicyandiamide or by catalytic polymerization are discussed and compared with those obtained by amine or anhydride curing. The highest crosslinking density was achieved by the polymerization of epoxy compounds. Amine and phenol curing resulted in similarly structured networks with mobile aliphatic segments and comparatively low crosslinking densities. Impact resistance, increased as network density decreased, a maximum being achieved with a medium chain length of 25-35 atom intervals between crosslinking points. The mechanical stability of polymers is limited by the cohesive strength KF which corresponds to the maximum shear strength of bonds. The cohesive strength and fracture toughness have a dual relationship. The model discussed for cohesive strength explains the relationship between chemical structure and the physical behavior of an epoxy resin over a wide range of temperature. M.D.K.

FATIGUE BEHAVIOR OF FIBER-RESIN COMPOSITES
J. F. Mandell Apr. 1981 58 p refs Submitted for publication Sponsored by Goodrich (B. F.) Co., Lord Corp. and Dow Chemical Co.
(MIT-RR-R81-2) Avail: NTIS HC A04/MF A01

The process of fatigue breakdown in fiber composites usually involves the progressive accumulation of matrix/interface cracking, with an associated loss in residual strength and modulus. This may continue until the residual strength is reduced to the cyclic stress, resulting in failure. However, tensile fatigue failure in many glass dominated composites appears to be a fiber or strand property, independent of the matrix or interface. This is true both of cyclic and static fatigue, and the S-N properties also translate into resistance to crack initiation and propagation from notches in notch-sensitive cases. Exceptions to the fiber dominated behavior occur when a more severe fatigue mechanism operates, as with short fibers in very ductile matrices, or woven fabric reinforcement. The general characteristics of the fatigue of composites is reviewed with emphasis on recent developments in glass fiber dominated behavior. Author

THE INFLUENCE OF NOTCH LENGTH AND LIGAMENT LENGTH ON THE TOUGHNESS OF BORON FIBER REINFORCED ALUMINUM Ph.D. Thesis - Tech. Hochschule, Aachen
Petrus W. M. Peters Jan. 1981 123 p refs In GERMAN; ENGLISH summary
(DFVLR-FB-81-22) Avail: NTIS HC A06/MF A01; DFVLR, Cologne DM 23,80

The applicability of linear elastic fracture mechanics (LEFM, material parameter: toughness K sub o, K sub max) and of the point-stress criterion (material parameter: characteristic length d sub o) was investigated on several B/Al laminates. On DEN-specimens the load at the beginning of crack extension and at specimen fracture was measured and in some cases the resulting plastic zone and notch (tip) opening displacement or specimen extension. From these experiments the influence of notch length and ligament length on the respective material parameter was determined. It was found that the investigated parameters are notch-length-dependent and below a critical ligament length ligament-length-dependent. The notch length dependency at larger notch lengths is probably caused by the extension of the plastic zone, which cannot be described by a stress intensity factor. Author

EFFECTS OF BEARING/BYPASS LOAD INTERACTION ON

LAMINATE STRENGTH Final Report, 15 Feb. - 15 Sep. 1981
Samuel P. Garbo Wright-Patterson AFB, Ohio AFWAL Sep. 1981 31 p ref
(Contract F33615-77-C-3140; AF Proj. 3114)
(AD-A108006; AFWAL-TR-81-3114) Avail: NTIS HC A03/MF A01 CSCL 13/5

The subject of this program was structural evaluation of mechanically fastened composite joints. An add-on contract effort was performed to further evaluate the effects of bearing/bypass interaction on laminate strength. The results of the add-on contract are the subject of this report. The work performed under the original contract indicated additional studies were needed to further verify bolted composite joint strength methodology. The objective of this add on effort was evaluation of bearing versus bypass load interactions on laminate strength. Three laminates from the family of 0 deg, + or - 45 deg, and 90 deg ply orientations were tested to failure under a range of tension bypass to bearing load ratios. Predictions of laminate strength were obtained using the Bolted Joint Stress Field Model (BJSFM) described in Volumes 1 and 3 of AFWAL-TR-81-3041. Failure behavior of laminates was documented using ultrasonic C-scan techniques, and failure zones about the fastener hole were correlated with predictions. This report documents test procedures, test data, and theory/test correlations. GRA

A STATIC SCREENED POTENTIAL METHOD FOR THE CALCULATION OF ELECTRONIC TRANSITION PROPERTIES OF AZABENZENES Ph.D. Thesis
Kurt Delmas Donaldson 1981 192 p
Avail: Univ. Microfilms Order No. 8125764

A method based on using the static screened potential within the combined formalism of Green function theory and density response theory was developed. This method is applied to the calculation of electronic transition properties of a series of azabenzenes. This method consists of three basic stages of calculation. The first consists of a Pariser-Parr-Pople calculation using the Mataga-Nishimoto approximation for the potential producing set of zero order molecular orbitals and energies which serve as input into the second state. The first step in this stage is calculation of the free propagator from which the dressed polarization propagator is obtained. Using this, the static screened potential is calculated in three different ways. The first based on free propagator, the other two based on two different dressed propagators calculated. Once these potentials are obtained, the entire process is then repeated until the static screened potentials become self-consistent and self-consistent potentials, molecular orbitals, energies, and generalized bond orders are obtained. These serve as input into the equations of stage 3 in which transition energies and oscillator strengths are calculated. Dissert. Abstr.

AN AUTOMATED REAGENT PREPARATION SYSTEM FOR FAST REACTION-RATE ANALYSES Ph.D. Thesis
Rytis Tomas Balciunas 1981 182 p
Avail: Univ. Microfilms Order No. 8126467

The design, operation, and evaluation of an automated system for fast reaction rate measurements that utilizes a microcomputer controlled reagent preparation device is described. The modular, stepper motor driven syringe based reagent preparation system features a dilution range of up to five orders of magnitude from a single stock solution, with 0.1% RSD or better. Reagents are prepared from up to three different stock solutions and a diluent. Reproducibility of the delivered stock solutions and of the dilution process is better than Class A glassware in all cases tested. The operational hardware and software descriptions are presented, with detailed circuitry and timing of the microcomputer operations. The results of several chemical complexation studies are presented as a demonstration of the precision and utility of the system. Dissert. Abstr.

SOME ANALYTICAL ASPECTS OF FIELD DESORPTION MASS SPECTROMETRY Ph.D. Thesis
David Fuller Fraley 1981 341 p
Avail: Univ. Microfilms Order No. 8125575

Field desorption mass spectrometry (FDMS) is used for the analysis of thermally labile, nonvolatile compounds. Current trends in FDMS including ion formation, experimental methods involving emitter production and ion current recording are investigated. The FDMS behavior of the anticancer drug analogs of 2-(methoxystyrl)-quinolines is investigated. The FDMS method gave superior signal intensity, ease of analysis, and molecular weight information, but little structural information. Thirty protected amino acids and oligopeptides containing the most common synthetic protecting groups were analyzed by FDMS. Even cystine derivatives and peptides with as many as 6 labile protecting groups gave the molecular ion as the base peak. Various techniques to modify carbon FD emitter surfaces are studied. Modifications to reduce surface interaction met with limited success. Dissert. Abstr.

N82-17275 Michigan State Univ., East Lansing.
ZEEMAN BACKGROUND CORRECTION WITH AN ELECTROTHERMAL GRAPHITE BRAID ATOMIZER Ph.D. Thesis
James Thorburn Gano 1981 189 p
Avail: Univ. Microfilms Order No. 8126502

The characterization of an electrothermal atomic absorption spectrometer employing an analyte-shifted Zeeman background correction technique is described. The spectrometer utilizes a microcomputer for data acquisition and to control the heating levels of the graphite braid electrothermal atomizer. In this Zeeman background correction technique, a constant magnetic field is applied to the atomizer in a direction perpendicular to the incident hollow cathode light. The absorption-time profile of the hollow cathode light polarized parallel and perpendicular to the magnetic field is recorded and the difference in these absorptions is proportional to the atomic density. Transmittance vs. magnetic field strength studies were performed on several elements to determine the optimum conditions for analysis. The background correction capabilities of the spectrometer were also tested by analyzing cadmium in the presence of a NaCl matrix. Dissert. Abstr.

N82-17276 Washington Univ., Seattle.
IN SITU ANALYSIS OF THIN LAYER CHROMATOGRAPHY PLATES USING AN IMAGING DETECTOR Ph.D. Thesis
Mary Lucille Gianelli 1981 147 p
Avail: Univ. Microfilms Order No. 8126103

Thin layer chromatography (TLC) plates were imaged onto a SIT vidicon camera to obtain both normal two dimensional images and spectral images of components by emission and absorption. Fluorescent fingerprinting of components on thin layer plates was accomplished by imaging the spots on the entrance slit of a monochromator and removing the exit slit, preserving both the emission spectra and the retention profile of the components. Absorption spectra were obtained by scanning the plate over the wavelength region of interest while simultaneously storing the images. The data is in the form a two dimensional matrix (fluorescence), or a series of two dimensional matrices (absorption), allowing the use of complex mathematical analysis methods to obtain qualitative and quantitative information of the compounds. In the normal image modes of both fluorescence and absorption, the instrument was found to be reproducible to within a half percent. Dissert. Abstr.

FORMATION CONSTANT AND PHOTOLABELING OF GRAMICIDIN CHANNELS IN LIPID BILAYER MEMBRANES Ph.D. Thesis
Hsiao Yung Guh 1981 161 p
Avail: Univ. Microfilms Order No. 8126505

Gramicidin, a polypeptide of 15 alternating D and L amino acids, increases the cation permeability of biological membranes. Ion transport across the membrane is mediated by gramicidin via the pore mechanism and the gramicidin channel consists of two molecules. By use of the charge injection technique, the formation constants of gramicidin channels in lipid membranes are obtained as well as the partition coefficients of gramicidin between the bilayer and torus phases. Both of the parameters depend greatly on the membrane thickness. A correlation was discovered between the dimerization constant and partition coefficient between the membrane and torus regions. Although relaxation experiments were performed on the membranes, the resulting physical parameters represent the equilibrium values for the same parameters prior to the charge perturbation.

THE CHEMISTRY AND DETECTION OF NICKEL CARBONYL Ph.D. Thesis

David Alan Hikade 1981 210 p

Avail: Univ. Microfilms Order No. 8125127

Nickel carbonyl has important industrial applications. However, relatively low concentrations of gaseous nickel carbonyl can have devastating effects on man. The ability to analyze the presence of low levels of nickel carbonyl is important. Development of a chemiluminescent method for metal carbonyl analysis culminated in the portable instrument built for the present study. It contains a heated charcoal CO source and a thermal differentiator which can distinguish among the three known chemiluminescing species: $Ni(CO)_4$, $Fe(CO)_5$, and NO. With good sensitivity, selectivity, monitoring ability, portable qualities, and low operating cost, the detector proved able to analyze both iron and nickel carbonyl. A study of homogeneous oxidation of $Ni(CO)_4$, resulted in determination of activation parameters for the unimolecular decay rate constant. The energy and entropy of activation for the reaction were determined to be 23.8 kcal/mole and + 12.4 eu, respectively. Other studies found the presence of one or both metal carbonyls in pressurized CO cylinders, a CO stream passed over Ni powder, cigarette smoke, and in the portable instrument's CO source. Field studies demonstrated potential for metal carbonyl formation under some industrial situations.

A COMPARISON OF METHODS TO ENHANCE SENSITIVITY IN ANALYTICAL MOLECULAR LUMINESCENCE AND PHOTOACOUSTIC CONDENSED PHASE SPECTROMETRY Ph.D. Thesis

Arthur Robert Jurgensen 1981 217 p

Avail: Univ. Microfilms Order No. 8127437

The room temperature fluorescence analytical figures of merit for 60 polynuclear aromatic hydrocarbons (PAHs) are presented. The limits of detection for most of the compounds are below 50 ng/mL and the average % relative standard deviation is 1.4%. The fluorescence excitation and emission peak wavelengths are listed. The low temperature phosphorescence and fluorescence analytical figures of merit for 60 PAHs are presented. In addition, the low temperature phosphorescence heavy atom enhancements factors of several PAHs in heptane and in ethanol/water in the red region are presented. Iodoethane, dimethymercury, I(-), Ag(+), Tl(+), and Pb(2+) were used as heavy atom perturbers with iodoethane, dimethymercury and Ag(+) giving the largest enhancement factors. Low temperature phosphorescence and fluorescence for most of the compounds are below 100 ng/mL and the average % relative standard deviation is 6%. The phosphorescence and low temperature fluorescence peak wavelengths are listed.

MULTICOMPONENT CONTINUOUS FLOW KINETIC ANALYSIS Ph.D. Thesis

David John Hooley 1981 320 p

Avail: Univ. Microfilms Order No. 8126262

An instrumentation system for Multicomponent Continuous Flow Kinetic Analysis was designed and constructed. It is useful for performing dilutions, flow injection analysis and continuous flow kinetics with relative standard deviations of less than 10 percent. The flow controller was able to regulate the flow of a conducting liquid and the light emitting diode colorimeter was able to detect $KMnO_4$ linearly at concentrations of 10 to 600 micro M. The reaction of $KMnO_4$ with KI was employed as a single component continuous flow test reaction. The feasibility of using the instrument for multicomponent continuous flow kinetic analysis was demonstrated. The flowmeter and flow controller are potential alternatives to the relatively expensive pumps used for flow injection analysis. Evaluation of the instrument's operation in flow injection mode indicates that it is useful as a convenient continuous flow kinetic detector for flow injection analysis and for testing developments in flow injection theory.

RESONANCE RAMAN SPECTROELECTROCHEMISTRY OF THE TETRACYANOQUINODIMETHANE DIANION, PART 1. DOUBLE POTENTIAL STEP CHRONOCOULOMETRY STUDIES OF ABSORPTION ON A SILVER ELECTRODE, PART 2 Ph.D. Thesis

Joseph Michael Lakovits 1981 186 p

Avail: Univ. Microfilms Order No. 8124935

The resonance Raman spectrum of electrogenerated tetracyanoquinodimethane dianion and the frequency shifts which accompany its formation from the radial anion were measured. A reasonable, qualitative correlation between these shifts and the weighted bond order and the weighted bond length changes was obtained for all of the observed modes except one. This Raman data was used to determine that the TCNQ in the coordination complex $(Co(acacen)(py)_2)_2$ TCNQ is, in fact, TCNQ=. The utility of double potential step chronocoulometry (DPSCC) for measuring surface excesses of adsorbed electroactive species was used on the solid silver electrode. It was possible to measure the amount of adsorbed 4-acetylpyridine and to put an upper limit on the amount of adsorbed 4-cyanopyridine. By an extension of the standard DPSCC method to form composite DPSCC plots, the anion-induced adsorbtion of Cd(II) on a silver electrode from thiocyanate and from chloride media was measured.

SECONDARY ION MASS SPECTROMETRY OF CHEMICALLY BOUND ORGANOSILANE FILMS AND PLASMA POLYMERIZED VINYLFERROCENE FILMS ON CONDUCTIVE AND SEMICONDUCTIVE SUBSTRATES Ph.D. Thesis

Michael Roy Ross 1981 259 p

Avail: Univ. Microfilms Order No. 8126010

The use of secondary ion mass spectrometry (SIMS) as a means of mass analyzing simple chemically bound organic films was demonstrated. Ion fragments (fragmentation patterns) for the bound en-silane and Pr-silane films are very similar to those found for gas phase ionization of ethylene-diamine and propylamine. Ion fragments formed give a means of suggesting fragmentation mechanisms as well as possible structural information about the bound films. The use of SIMS in the analysis of more complex film structures was not as successful at assigning actual molecular ion fragments to observed ions present in the SIMS spectrum. Cationized fragments of Cu(II) containing en-silane films were not observed. Where the auger electron spectrometry (AES) technique does not differentiate ultrathin films from monolayer films, SIMS detection shows substantial differences in film thicknesses. Both the damage to the film and the scrambling of the substrate-film region affect the SIMS ion yields in different ways. Evidence that thin film thickness determinations can be achieved from films which sputter in a non-ideal fashion is provided.

Dissert. Abstr.

MODELING CHEMICAL SYSTEMS TO IMPROVE ANALYTICAL RESPONSE Ph.D. Thesis

Bohdan Sachok 1980 215 p

Avail: Univ. Microfilms Order No. 8126942

Modeling, it is demonstrated, can be a significant aid to the understanding and improvement of analytical responses from chemical systems. Two different divalent electrodes, a liquid ion-exchange type and a solid matrix type, were studied to determine their sensitivities to monovalent sodium interference in the determination of calcium. The combined effects of two mobile phase factors were determined by fitting a mechanistic model to experimental data obtained at nine factor combinations. The multifactor strategy is extended to the reversed phase liquid chromatographic separation of a nine-component mixture. Discussions of other response criteria, such as retention time and elution order, are also presented. Amplification of detector response by means of detector-sensitive ion-pairing reagents is shown to be feasible in reversed phase liquid chromatographic systems. Dissert. Abstr.

N82-17284 Michigan State Univ., East Lansing.

ELECTROCHEMICAL INVESTIGATION OF SOLVENT EFFECTS ON THE ELECTRODE KINETICS AND THERMODYNAMICS OF SOME TRANSITION-METAL REDOX COUPLES Ph.D. Thesis

Saeed Sahami 1981 216 p
Avail: Univ. Microfilms Order No. 8126549

Electrochemical methods were used in order to explore the influences of the solvent upon the electrode kinetics and thermodynamics of some transition metal redox couples. For the following redox couples: (1) couples containing aromatic ligands, (2) couples containing ammine and ethylenediamine ligands, (3) anionic redox couples, formal potential E sub f were evaluated using cyclic voltammetry as a function of temperature in eight solvents. The reaction entropies for each redox couple in each solvent were obtained from the temperature dependence of E sub f using a nonisothermal cell arrangement. The values of the reaction entropies for all redox couples investigated, it was found, are substantially larger in nonaqueous solvents compared with water. Normal pulse and d.c. polarography were employed to investigate the one-electron reduction kinetics in various solvents at mercury electrodes. Dissert. Abstr.

N82-17285 Illinois Univ. at Urbana-Champaign.

SINGLET-DELTA MOLECULAR OXYGEN AS A TOOL FOR SELECTIVE CHEMILUMINESCENT DETECTION IN CHROMATOGRAPHY Ph.D. Thesis

Brian Shoemaker 1981 146 p
Avail: Univ. Microfilms Order No. 8127689

Chemiluminescence induced by the single delta state of molecular oxygen has potential as a tool for selective detection in high performance liquid chromatography. Luminescence occurs in a three liquid confined spray aspirator cell. This unit displays dead volume behavior dependent on gas and liquid flow rates. The cell represents a straightforward add-on to any chromatography setup. Signal processing can occur by either digital or analog means, mounting the cell by the entrance slit to the polychromator of a diode array spectrometer permits accumulation of luminescence spectra. Results to date have demonstrated the unique selectivity, and potential practical utility, of detection by single oxygen induced luminescence in the spray cell. The current technique can provide information of interest in the environmental, medical, and textile fields. Gas phase single oxygen reactions should provide a new method for selective gas chromatography detection; other luminescence systems are available for use in the spray cell. Dissert. Abstr.

N82-17286 North Carolina Univ. at Chapel Hill.

CORRELATION AND INTERFEROMETRIC DATA ANALYSIS APPLIED TO GAS CHROMATOGRAPHY FOURIER TRANSFORM INFRARED SPECTROSCOPY Ph.D. Thesis

Richard Claburn Wieboldt 1981 140 p
Avail: Univ. Microfilms Order No. 8125636

Gas chromatography Fourier transform infrared spectroscopy provides the chemist with the ability to separate and identify, simultaneously, mixture components. Effective analysis of data generated requires algorithms that rapidly identify portions of data which contain useful information and provide assistance in identification. The development of such algorithms and their application to the analysis of shale oil mixtures is reported. The optical design for a gas chromatograph FTIR interface is described along with its limitations. A correlation technique which allows the FTIR to be used as a specific detector for the gas chromatograph is also discussed. The use of fast Fourier transform subroutines is described in detail as part of the method for generating the synthetic interferograms. With this approach, the key absorption features for nine functional groups were determined. Dissert. Abstr.

N82-17287 Illinois Univ. at Urbana-Champaign.

APPLICATIONS OF NUCLEAR QUADRUPOLE DOUBLE RESONANCE SPECTROSCOPY Ph.D. Thesis

Leslie Gordon Butler 1981 294 p
Avail: Univ. Microfilms Order No. 8127558

Nuclear quadrupole double resonance techniques have been developed to facilitate observation of NQR spectra of the light elements. A new instrument was constructed which employs the established technique of nuclear quadrupole double resonance by adiabatic demagnetization in the laboratory frame. NQR spectra in zero applied magnetic field can be obtained from 500 mg or less of polycrystalline material. NQR spectroscopy provides information about the electric field gradient about a quadrupolar nuclei and details of chemical bonding. D and 17O NQR spectra were obtained on a wide variety of inter- and intramolecular hydrogen bonds and electric field gradient parameters were interpreted by a theoretical analysis of the formaldehyde-water hydrogen bonding interaction. Large changes in the electric field gradient parameters were observed at the deuterium and oxygen sites. The first complete NQR spectrum for an S = 3 spin system, B, was obtained from a study of boric acid. Techniques developed were applied to the study of the 10B and 11B NQR of decaborane(14) and ortho-carborane. Dissert. Abstr.

N82-17288 Michigan State Univ., East Lansing.

EXCITED-STATE PHENOMENA ASSOCIATED WITH SOLVATION SITE HETEROGENEITY Ph.D. Thesis

Kheder Ahmad Al-Hassan 1981 190 p
Avail: Univ. Microfilms Order No. 8126463

The role of microenvironmental heterogeneity in electronic spectra is examined by studying the effects of medium polarity, rigidity, temperature, concentration and excitation wavelength dependence of the spectra of pyridine merocyanine dye, 2-amino 7-nitrofluorene (ANF), 4,4'-amino nitro diphenyl (AND) and methyl- and tertbutyl-esters of 9-anthroic acid (9MA and 9TBA respectively). The absence of excitation wavelength dependence of the fluorescence at room temperature in fluid polar media is explained in terms of orientational and translational relaxations of various 'solute-solvent conformations' that occur prior to fluorescence. The fluctuations in the interaction of solutes with different solvation sites are dynamic in fluid media. Once the solution is made rigid (glass, polymer matrix, etc.) the dynamic character is lost. Dissert. Abstr.

N82-17289 Illinois Univ. at Urbana-Champaign.

HIGH PRESSURE NUCLEAR MAGNETIC RESONANCE STUDIES OF VISCOUS FLUIDS Ph.D. Thesis

Edward Rolf Arndt 1981 164 p
Avail: Univ. Microfilms Order No. 8127545

The technique of pulsed NMR is applied to the detailed study of molecular motions in a number of viscous liquids (eta > or approximately 1 poise). Pressure studies are performed in order to examine explicitly the effect of volume on the motional characteristics. Where appropriate, C-13 and D-2 NMR are employed to obtain exclusively reorientational information, and to observe specific portions of the molecule. The validity range of the common hydrodynamic relationships at high viscosity are determined. A foundation for the systematic investigation of high viscosity fluid dynamics is provided. Cumene, since it is the simplest of high viscosity, nonassociative liquids is studied. A number of experiments show that cumene displays rather remarkable properties, which are explained using models that coincidently are applied to glass transition phenomena. Dissert. Abstr.

N82-17290 Pennsylvania Univ., Philadelphia.

PICOSECOND STUDIES OF SOLVENT-SOLUTE INTERACTIONS Ph.D. Thesis

Leslie Ann DiVerdi 1981 158 p
Avail: Univ. Microfilms Order No. 8127015

Two types of solvent-solute interactions were studied with emphasis on measuring their dynamics. Using the solute ANF (2-amino, 7-nitrofluorene), the relaxation process caused by the interaction of the solute dipole and the solvent dielectric was investigated. Studies of the solute acridine were performed to demonstrate how hydrogen bond formation between solvent and solute can cause inversion of solute energy levels. A method for picosecond time resolution of fluorescence was developed.

Fluorescence decay times and radiative lifetimes were measured for acridine. For the hydrogen bonding solvents, the radiative lifetimes were constant while the florescence decay times varied with solvent hydrogen bonding strength and temperature. The radiative lifetimes of the non-hydrogen bonding solvents were seen to vary with solvent polarizability and polarity, while the decay times were temperature independent and varied little with solvent. Dissert. Abstr.

UNIMOLECULAR ISOMERIZATION DYNAMICS AND INSTABILITIES: RRKM THEORY Ph.D. Thesis
Nelson Hugo DeLeon 1981 194 p
Avail: Univ. Microfilms Order No. 8125271

A classical two degree of freedom Hamiltonian system capable of exhibiting an isomerization reaction was studied. An ensemble of trajectories, distributed microcanonically, are computed numerically. The application of a phenomenological rate equation to describe the reaction is considered. The prediction of the rate constant using statistical theories such as RRKM is described. The concepts of nonlinear dynamics are introduced in order to explain the observed results. Correlations between the critical energy and phenomenological behavior are introduced. Chirikov's overlapping resonance criterion for the theoretical prediction of the critical energy is investigated and interpreted into a phase space picture. The concept of the resonant torus in phase space is introduced. A reinterpretation of the overlapping resonance scheme is applied to the Ford-Walker Hamiltonian system. It is found to give an excellent prediction of the critical energy for small coupling constants. The reasons for failure of the scheme at large coupling constants are analyzed. Dissert. Abstr.

N82-17292 Virginia Polytechnic Inst. and State Univ., Blacksburg.
THE ELECTROCHEMICAL AND SPECTROPHOTOMETRIC DETERMINATION OF FREE AND COMBINED CHLORINE Ph.D. Thesis
Paul David Given 1981 125 p
Avail: Univ. Microfilms Order No. 8126258

The electrochemical reduction of hypochlorite and monochloramine at several electrodes was investigated by cyclic voltammetry, linear scan voltammetry, and differential pulse polarography. The electrochemical oxidation of N,N-diethyl-p-phenylenediamine (DPD) was investigated as a function of pH, scan rate, and electrode material. On the basis of the electrochemical studies, a modified amperometric titration for both free and combined chlorine was developed. Standard addition methods were shown to be possible. The indicator, bromothymol blue (BTB) was used to determine both free chlorine and monochloramine in mixtures by spectrophotometry. The method developed requires Bi as a catalyst for the determination of monochloramine in mixtures. Dissert. Abstr.

N82-17293 Yale Univ., New Haven, Conn.
LASER SPECTROSCOPY OF MOLECULAR BEAMS Ph.D. Thesis
James Henry Glownia 1981 217 p
Avail: Univ. Microfilms Order No. 8125680

Multiphoton ionization spectroscopy and photofragment spectroscopy of molecular beams are used to elucidate excited molecular electronic state structure and dynamics. The apparatus and techniques developed to combine multiphoton ionization and supersonic-expansion beams is described. Also described are experimental methods involving mass spectroscopic and photoelectron energy analyses following the multiphoton ionization process. The multiphoton ionization spectrum of ammonia and sulfur dioxide are analyzed in detail. The three-photon static gas line strength theory for two laser polarizations is tested, and band contour simulation performed. Deviations from the theoretical predictions can be attributed to dynamic effects. Features due to transitions to eleven electronic states are assigned in the 5.7 to 9.3 eV energy range, where only five band systems were previously assigned. Spectra of sulfur dioxide are recorded using transient lensing detection in a cell and multiphoton ionization in both a cell and a nozzle beam. Ultraviolet and visible photodissociation of collision-free-tetrazine show asymmetric dynamics with production of one translationally cool and one translationally hot hydrogen cyanide molecule. Dissert. Abstr.

N82-17294 Minnesota Univ., Minneapolis.
VIBRATIONAL CIRCULAR DICHROISM STUDIES IN THE CARBON-HYDROGEN AND CARBON-DEUTERIUM STRETCHING REGIONS Ph.D. Thesis
Henry Acken Havel 1981 256 p
Avail: Univ. Microfilms Order No. 8125965

Vibrational circular dichroism (VCD) spectroscopy is implemented in experimental and theoretical investigations of vibrational optical activity in two series of compounds: optically active deuterated phenylethanes and sugars. Vibrational circular dichroism instrumentation and theoretical methods are discussed, in addition to structural and dynamical interpretations of the solution phase VCD spectra of these molecules. The phenylethanes, (+)-(S)-Ph-C(=)HD-X(X=CH3, CH2D, CD2H, CD3), are studied in their C-H and C-D stretching regions as first tests of a charge flow model for vibrational rotational strengths. A vibrational assignment in these two regions is accomplished by analyzing their infrared absorption, Raman scattering and VCD spectra; the latter is particularly useful in identifying Fermi resonant vibrational bands. Normal coordinate calculations are made by constructing an initial force field and adjusting it to fit the observed frequencies in the phenylethanes. Dissert. Abstr.

N82-17295 Yale Univ., New Haven, Conn.
ELECTRONIC ABSORPTION SPECTROSCOPY OF MOLECULAR CATIONS IN ARGON MATRICES Ph.D. Thesis
Anabela Cristina Puiu 1981 144 p
Avail: Univ. Microfilms Order No. 8125695

Absorption spectra of argon matrix isolated hexafluorobenzene, para-difluorobenzene, biphenyl, diphenyl acetylene and cis- and trans-stilbene positive ions are presented and interpreted. Negative results for benzene and monofluorobenzene cations are discussed, as well as some new spectral features that appear upon the vacuum uv irradiation of benzene-h6 and benzene-d6 trapped in solid argon. In the course of this work, several techniques of detecting weak optical absorptions were developed or adapted for the spectroscopic investigation of unstable species in inert gas matrices and data comparing them are presented. Different sample preparation methods are also described. Dissert. Abstr.

N82-17296 Michigan State Univ., East Lansing.
THEORETICAL CALCULATIONS OF POWER-BROADENED MICROWAVE LINESHAPES Ph.D. Thesis
Keith L. Peterson 1981 223 p
Avail: Univ. Microfilms Order No. 8126542

The traditional method of analyzing high power microwave transitions is to assume the lineshape is a sum of Lorentzians--one for each m component pair connected by the microwave radiation. This assumption is tested by using extended Anderson Theory and infinite order energy sudden approximations to calculate relaxation cross sections. These cross sections appear in the power broadening term of an expression for high power line shapes which correctly takes into account the degeneracy of the rotational levels. The theoretical lineshape obtained with the relaxation coefficients is fit to a sum of Lorentzians using a computer program developed for fitting experimental lineshapes. The goodness of fit is a measure of the validity of the sum of Lorentzians approximation. The results for the J = 2 yields 1 transition in OCS and the (J,K) = (3,3) inversion transition of NH3 show that in both modified Anderson Theory and energy sudden approximations the value of T sub 1/T sub 2 obtained by fitting to a sum of Lorentzians is a good approximation to the calculated values of T sub 1/T sub 2. Dissert. Abstr.

PHOTOPHYSICS AND PHOTOCHEMISTRY OF MOLECULAR GASES IRRADIATED BY MEGAWATT CO2 LASER RADIATION Ph.D. Thesis
Vladimir Starov 1981 218 p
Avail: Univ. Microfilms Order No. 8126897

Energy absorption measurements were carried out in ammonia and silicon tetrafluoride over a wide range of pressures, 0.4-250 Torr. Both gases were irradiated by a TEA CO2 laser at fluences 0.01-1 J/sq cm. Chemical reactions induced by the laser-excited sensitizers in mixtures SiF4 - cyclopropane (CP) and NH3 - cyclobutanone (CB) were characterized. A phenomenological kinetic model was developed for applications to

absorption and dissociation results obtained in the collisional regime. From the energy absorption data, it was found that the results can be fitted by an empirical law (generalized Beer's law) for all systems studied under similarity conditions. Using the proposed absorption law, variation in the slopes of the Grunwald-dever plots for the SiF4 CP system studied at 5-30 Torr is explained. Analysis of the high pressure sensitized systems also indicated that the data are consistent with a model where laser energy absorbed by the sensitizer is mostly thermalized.

THE APPLICATION OF ELECTROCHEMICAL DETECTION IN HIGH PERFORMANCE LIQUID CHROMATOGRAPH (HPLC): SELECTIVE DETERMINATION OF READILY OXIDISABLE COMPOUNDS AT TRACE LEVEL
J. Frank Oct. 1981 30 p refs Transl. into ENGLISH from Chimia (West Germany), v. 35, 1981 p 24-31
(DRIC-T-6461; BR80786) Copyright. Avail: Issuing Activity

The electrochemical conversion of a substance at an electrode produces a faradic current which is recorded in a chromatogram as current strength in function of time. Chromatograms are given for compounds suited for oxidative detection at solid state electrodes as antioxidants, aromatic amines, catecholamines, estrogens, indoles, mercaptions, phenols, phenothiazines and vitamins, showing which compounds can be successfully detected at nano and picogram levels. The principle and selectivity of the detection, cell types, electrodes and practical aspects are described.

ZERO-GRAVITY GROWTH OF A SODIUM CHLORIDE-LITHIUM FLUORIDE EUTECTIC MIXTURE Final Report
A. S. Yue, C. W. Yeh, and B. K. Yue [1982] 27 p refs
(Contract NAS8-30579)
(NASA-CR-161966) Avail: NTIS HC A03/MF A01 CSCL 07D

Continuous and discontinuous lithium fluoride fibers embedded in a sodium chloride matrix were produced in space and on Earth, respectively. The production of continuous fibers in a eutectic mixture was attributed to the absence of convective current in the liquid during solidification in space. Image transmission and optical transmittance measurements of transverse sections of the space-grown and Earth-grown ingots were made with a light microscope and a spectrometer. It was found that better optical properties were obtained from samples grown in space. This was attributed to a better alignment of lithium fluoride fibers along the growth direction.

DEVELOPMENT OF W-Ta GENERATOR Interim Report
Dec. 1981 14 p refs
(Contract NAS9-16225)
(NASA-CR-167477) Avail: NTIS HC A02/MF A01 CSCL 07D

This research program was used to further develop the existing W-Ta generator and to evaluate alternative adsorbents, preferably inorganic materials, as supports for the generator. During the first half year, combinations of non-complexing eluents and a variety of adsorbents, both inorganic and organic, were evaluated. Some of these adsorbents were synthetic, such as chelate resins that could be specific for tungsten. In the second half of the year, the stress was mainly on the use of complexing eluents because of the high affinity of hydrous oxides for tantalum, on the synthesis of chelate resins and on the use novel techniques (electrolytic) to solve the tantalum-adsorption problem.

COMPUTERIZED GAMMA SPECTRUM ANALYSIS WITH APPLICATION TO MULTICOMPONENT ACTIVATION DETECTORS Ph.D. Thesis
Markku Koskelo 1981 14 p refs
Avail: NTIS HC A02/MF A01

Computerized gamma spectrum analysis and multicomponent activation detectors are discussed. The optimization of the multicomponent activation detectors using methods from the gamma spectrum analysis program is studied. A method for the determination of goodness-of-fit in gamma spectroscopy is a study which checks that peak area fitting. It is more sensitive than the chi squared test. The SAMPO80 code was developed. The basic ideas and equations used in the program are presented. Statistical methods show that the peak search algorithm and the peak fitting of the code are both precise and accurate. The considerations needed in developing the multicomponent activation detector concept are presented with emphasis on the material selection criteria and the general process of actually designing a feasible detector for reactor neutron spectroscopy.

MULTIPHOTON GAS PHASE SPECTROSCOPY Final Report
John E. Wessel 8 Jun. 1981 67 p refs Prepared for Univ. of Southern Calif., Los Angeles
(Grant AF-AFOSR-3438-77; AF Proj. 2302)
(AD-A107671; AFOSR-81-0749TR) Avail: NTIS HC A04/MF A01 CSCL 07/4

Multiphoton laser spectroscopy was investigated as a potential method to improve optical detection for large molecular species. Studies were conducted to establish the photophysics and spectroscopy relevant to molecular detection by multiphoton processes. Detection procedures were optimized on the basis of information derived from the spectroscopic investigations. Detection limits of less than 10 to the 5th power molecules/cubic centimeters were established for naphthalene, a representative aromatic species. This is a one-thousandfold improvement with respect to the most sensitive prior techniques. The new method was applied to gas chromatography, for which spectrally selective detection was demonstrated. In addition a new method of ultrahigh resolution two-wavelength multiphoton photoionization spectroscopy was proposed, and a preliminary demonstration was made for the iodine molecule.

ENERGY PARTITIONING IN THE DISSOCIATION OF CYANOGEN AT 193nm
William M. Jackson and Joshua B. Halpern 19 Nov. 1981 25 p refs Submitted for publication
(Grant NSG-5017; Contract N00014-80-C-0305; Grants NSF CHE-78-05375; E-40-1-5056; NR Proj. 051-733)
NASA-CR-164809; AD-A107773; TR-7-ONR Avail: NTIS HC A02/MF A01 CSCL 07/5

The quantum state distributions of CN radicals produced in the photodissociation of C2N2 at 193nm were measured. It was found that the rotational distribution is the same for radicals formed in the v'' = 0 and v'' = 1 level. This means, that the rotational motion is decoupled during the dissociation, from the vibrational and translational motion of the fragments. The partitioning of the 6795/cm of available energy between vibrational and translational motion in, turn has been found to be consistent with a simple statistical model. The observed rotational distribution was reproduced by assuming that there is no contribution to the angular momentum of CN other than the original angular momentum of the parent.

ANGLE-RESOLVED PHOTOEMISSION STUDY OF Co-Co (0001)
D. Heskett, F. Greuter, H.-J. Freund, and E. W. Plummer 4 Nov. 1981 8 p refs Submitted for publication
(Contract N00014-79-C-0991; NR Proj. SRO-013)
(AD-A107575; TR-8) Avail: NTIS HC A02/MF A01 CSCL 07/5

In this study the techniques of LEED and angle and energy resolved photoemission were used to investigate some of the properties of CO/Co(0001). The orientation of the CO molecules was determined using well established symmetry selection rules. The CO - CO direct interaction was measured by mapping out the E vs. k4 dispersion of the 4 sigma and combined 5 sigma/1 pi levels of CO in several directions in the Surface Brillouin Zone (SBZ) at two coverages of CO, corresponding to the saturated room and low (170 K) temperature phases. The dispersion can be related to the size and shape of the SBZ and correspondingly to the geometry of the CO overlayer in real shape. After preliminary LEED work, a photoemission study was performed at the Synchrotron Radiation Lab of the University of Wisconsin. Two distinct peaks were seen in the UPS spectra of CO/Co(0001) with p-polarization of the incident light, as is generally observed on other transition metals. The consensus is that the level with the higher binding energy (at approx. 11 eV) corresponds to the 4 sigma level of the isolated CO molecule, while the level at approx. 8 eV is a superposition of the molecular 5 sigma and I pi levels, with the 5 sigma level having undergone a bonding shift of approx. 3 eV with respect to the free molecule. Progress made to date in study of the atomization and evaporation characteristics of emulsified and alternative fuels in model gas turbine engines is reported. The development of spray drop-size diagnostics suitable for use in a combustion environment was studied. A disc-in-duct combustor with a pipe I.D. of 15.04 cm and a disc O.D. of 7.19 cm was constructed and operated. Optical access was available through 3 x 4 in. quartz windows. A delavan 5.0 gallon per hour 45 deg cone angle hollow-cone nozzle was completely characterized at atmospheric conditions on calibration fluid, Jet-A, a Jet-A/20% water macroemulsion, and a Jet-A/20% water microemulsion. Variations of drop size along the nozzle axis and radially outward were documented. Modifications to the drop-sizing laser diffraction equipment to permit combustor measurements are described. Preliminary data for a comparison of atomization of a neat fuel and a macroemulsion fuel are presented. Measurements in high temperature/pressure noncombusting air and measurements in an operating combustor are presented. Author

EFFECTS OF TEMPERATURE ON EXCITED-STATE DESCRIPTION OF LUMINESCENT PHOTOELECTROCHEMICAL CELLS EMPLOYING TELLURIUM-DOPED CADMIUM SULFIDE ELECTRODES

Arthur B. Ellis and Bradley R. Karas 6 Oct. 1981 15 p refs
(Contract N00014-78-C-0633; NR Proj. 051-690)
(AD-A107840; TR-7) Avail: NTIS HC A02/MF A01 CSCL 07/4

The need for alternate energy sources has led to the rapid development of photoelectrochemical cells (PECs). A PEC consisting of an n-type semiconductor, a counterelectrode, and a suitably chosen electrolyte can convert optical energy directly into chemical fuels and/or electricity (1,2,3,4). We recently reported that tellurium-doped CdS (CdS:Te) mimics undoped CdS in its ability to sustain the conversion of monochromatic ultraband gap light (> or about = 2.4 eV; lambda < or about = 500 nm (5)) into electricity at about 7% efficiency in PECs employing aqueous polychalcogenide electrolytes (6,7,8,9). A novel feature of the CdS:Te photoanodes is that they emit lambda sub max about 600 nm for 100 ppm CdS:Te) with about 0.1% efficiency while effecting the oxidation of polychalcogenide species. GRA

TEMPORAL AND TEMPERATURE DEPENDENCE OF THE ENERGY TRANSFER PROCESS AMONG Eu-3(+) IN AN AMORPHOUS SOLID

Jack R. Morgan and Mostafa A. El-Sayed 20 Nov. 1981 22 p refs Submitted for publication
(Contract N00014-75-C-0602; NR Proj. 056-498)
(AD-A107951; TR-40) Avail: NTIS HC A02/MF A01 CSCL 20/5

The time dependence of the 5DO-7FO excitation energy transfer between Eu3+ ions in different sites within the inhomogeneous profile for 30 mole percent Eu3+ in Ca (PO3)2 glass is studied at different temperatures. Fluorescence laser narrowing techniques are used and the decay curve of the resonant (donor) fluorescence was analyzed. The temporal fit to the Inokuti-Hirayama equation shows that while dipole-dipole, dipole-quadrupole-quadrupole mechanisms may describe the transfer at short time, the dipole-dipole mechanism describes the transfer at short time, the dipole-dipole mechanism describes the transfer until approx. Ninety percent of the excitation has been transferred. Only after 95% of the excitation is transferred in the concentrated samples and at T greater than or equal to 298 K was a fit to diffusion type behavior observed. GRA

(ZR0000101)
(AD-A107608; NSWC/TR-81-307) Avail: NTIS HC A02/MF A01 CSCL 07/4

A simple deconvolution algorithm based on a special case of the Scofield iterative technique was developed for use in deconvolving gas and liquid chromatograms. This algorithm required the use of only very limited computer equipment, such as a BASIC programmable integrator. This technique can in certain cases sharpen chromatographic peaks mathematically to the extent that nonresolved shoulders or doublets can be resolved and quantified. GRA

LUMINESCENT PHOTOELECTROCHEMICAL CELLS. 6: SPATIAL ASPECTS OF THE PHOTOLUMINESCENCE AND OF CADMIUM SELENIDE ELECTRODES

Holger H. Streckert, Jiu-ru Tong, and Arthur B. Ellis 6 Oct. 1981 41 p refs Submitted for publication
(Contract N00014-78-C-0633; NR Proj. 051-690)
(AD-A107580; TR-8) Avail: NTIS HC A03/MF A01 CSCL 07/5

Interfacial charge-transfer processes at semiconductor electrodes is under active investigation, as befits the semiconductor's role as the key element of photoelectrochemical cells (PECs). The use of luminescence as a tool for examining charge-transfer events occurring at n-type CdS and CdS:Te (Te-doped CdS) electrodes was reported. Photoluminescence was studied while these electrodes served as photoanodes in PECs employing polychalcogenide electrolytes. Photoluminescence could be initiated by using the semiconductors as dark cathodes in alkaline, peroxydisulfate media. Photoluminescence (PL) and electroluminescence (EL) represent two methods for populating the excited-state manifold of CdSe. PL studies were conducted in air and in a PEC. These experiments aid in the assignment of the emissive transition and detail its spectral distribution, efficiency, and perturbation by the passage of current in a PEC. The analogous EL charactristics of spectral distribution, efficiency and potential dependence, implications of comparisons of PL and EL properties are discussed. The effects of various surface treatments on the PL properties of CdSe are also discussed. GRA

LUMINESCENT PHOTOELECTROCHEMICAL CELLS. 7: PHOTOLUMINESCENT AND ELECTROLUMINESCENT

PROPERTIES OF CADMIUM SULFO-SELENIDE ELECTRODES
Holger H. Streckert, Jiu-ru Tong, Michael K. Carpenter, and Arthur B. Ellis 6 Oct. 1981 39 p refs Submitted for publication
(Contract N00014-78-C-0633; NR Proj. 051-690)
(AD-A107581; TR-9) Avail: NTIS HC A03/MF A01 CSCL 07/5

Photoelectrochemical cells (PECs) are being widely studied as devices for optical energy conversion. The excited-state properties of the semiconductors around which PECs are constructed are crucial to efficient energy conversion. We have employed luminescence as a probe of these excited-state-properties, generally using materials such as n-type CdS:Te(Te-doped CdS) which exhibit subband gap emission. Recently we examined emission of band gap energy from n-type CdS and CdSe, two materials which have been used extensively in PEC studies. Since these two compounds form solid solutions over the entire composition range, the mixed compounds represent a natural extension of our emissive studies. We report herein that luminescence from samples of n-type, single-crystal CdSXSe1-X can be used to probe interfacial charge-transfer events relevant to PECs. Specifically, we demonstrate that photoluminescence (PL) can be perturbed and electroluminescence (EL) initiated by interfacial charge-transfer processes. GRA

HYDROGEN BONDING IN ASPHALTENES AND COAL LIQUIDS Quarterly Report, 1 Aug. - 31 Oct. 1981
N. C. Li 1981 30 p refs
(Contract DE-AC22-80PC-30252)
(DE82-001131; DOE/PC-30252/T5) Avail: NTIS HC A03/MF A01

The middle distillate from Illinois No. 6 solvent-refined coal (SRC II) was studied and found relatively stable to aging by direct oxygenation at 335 K. Metallic copper accelerates oxygen aging as evidenced by an increase in viscosity and formation of pentane-insoluble components. Infrared spectra after aging showed a significant reduction in the intensity of the free hydroxyl band. FTIR spectra showed that oxygen-containing compounds of the coal liquid were concentrated in the pentane-insoluble fraction, and that the oxygen bubbled into the coal liquid was incorporated into the structure of this fraction. Gel permeation chromatograms also showed the formation of large molecular size aggregates during aging. 600 MHz NMR spectra of the aged pentane-soluble fraction were similar to those of the unaged acid-free fraction. GC-MS analysis of the aged pentane-soluble fraction showed that the phenol, cresol, xylenol and indanol peaks are much smaller in intensity, compared to the original middle distillate. DOE

Pore structure optimization study results predict that high reactivity chars require high porosities and a higher concentration of large pores. The dependence of these quantities on heating rate and final temperature was noted. Data for Texas Lignite suggest that heating rate does not affect pore structure to the extent that the pore structure will significantly affect reactivity but a tendency for higher heating rates to increase the relative number of large pores was observed. Increased final temperatures do tend to increase char porosities. Pyrolysis experiments at heating rates of 1 to 150 K/s and final temperatures of 800 to 13000 K were performed on PSOC 140 coal. Resulting chars were analyzed. It was found that the porosity increased from 0.15 for the coal to 0.40 for the 13000 K char. Mercury intrusion data suggest that a significant portion of this increased porosity lies in the micropores. This finding, however, is preliminary. The porosity, distribution of porosity with pore size, and the total mass loss are only weakly dependent on heating rate. Refinements in the theory of pore evolution, particularly in the generation of small pores, are depicted by the data generated. DOE

COAL-LIQUEFACTION CATALYST DEVELOPMENT Quarterly Progress Report, 1 Oct. - 30 Dec. 1980
J. A. Mahoney and J. J. Helstrom Mar. 1981 54 p
(Contract DE-AC22-79ET-14803)
(DE82-000137; DOE/ET-14803/T6; QPR-5) Avail: NTIS HC A04/MF A01

The materials initially deposited onto the catalyst were determined. A large amount of coke with an H/C ratio of 1.13 was deposited. The deposition of trace metals was also quite severe, and high levels of iron and titanium were found. At the same time there was a substantial corresponding reduction in surface area and pore volume. The sulfur is already at the usual level found in used catalysts, reflecting the condition that the major portion of the sulfur is probably combined with the sulfided cobalt and molybdenum; it would appear that only a minor part of the sulfur is combined with the coke. These results might indicate that, although a considerable amount of coke has been deposited, it is quite permeable in the early part of the experiment and becomes less permeable with time. DOE

CHEMISTRY AND CATALYSIS OF COAL LIQUEFACTION: CATALYTIC AND THERMAL UPGRADING OF COAL LIQUID AND HYDROGENATION OF CO TO PRODUCE FUELS Quarterly Progress Report, Apr. - Jun. 1981
Wendell H. Wiser Aug. 1981 56 p refs
(Contract DE-AC22-79ET-14700)
(DE82-000762; DOE/ET-14700/7) Avail: NTIS HC A04/MF A01

A technique was developed to measure active sites on a sulfided CoMo/Al2O3 catalyst by gravimetric measurements of O2 chemisorbed at -780 C in a dilute air/He stream. It was found that neither polarity nor concentration affected effective diffusivity of solutes in a porous catalyst support, which confirmed earlier results that surface diffusion is not operative in these systems, and that the dominant factor which determines diffusivity appears to be a drag coefficient. Reports of the following task groups with summaries are presented: chemical-catalytic studies; carbon-13 NMR investigation of CDL and coal; catalysis and mechanism of coal liquefaction; fundamental chemistry and mechanism of pyrolysis of bituminous coal; catalytic hydrogenation of CD liquids and related polycyclic aromatic hydrocarbons; denitrogenation and deoxygenation of CD liquids and related N- and O-compounds; and catalytic cracking of hydrogenated CD liquids. INDUCED LUMINESCENCE BY CHARGED PARTICLES ON GASEOUS, LIQUID AND SOLID ARGON Ph.D. Thesis
M. J. CarvalhoTorres 1980 286 p refs In FRENCH
(CRN-CPR-80-10) Avail: NTIS (US Sales Only) HC A13/MF A01; DOE Depository Libraries

A spectral and a kinetic study of the scintillation induced by (ALPHA) and (-) particles in gaseous, liquid and solid argon have been made in the wavelength region comprised between 1100 and 3000A. The radiative lifetimes and some spectroscopic parameters of the lowest dimer states have been determined. By applying an electric field the contribution of the electron-ion recombination mechanism to the gaseous argon scintillation is studied. For condensed argon, the dependence of the ratio between the fluorescence and the phosphorescence intensities on the ionization power of the impinging particle is verified. The continuum which extends from 1600 to 2900A and that is present only in the gas phase spectra, is ascribed to the radiative de-excitation of molecular ions. A time resolved study of the luminescence of high pressure (1-15atm) argon excited by a pulsed electric discharge has also been performed and is compared with that of the scintillation induced by nuclear particles. INFLUENCE OF STRAIN ON FLAME PROPAGATION IN LAMINAR FLOW
H. Daneshyar and J. M. C. Mendes-Lopes 1981 19 p refs
(PB82-114588; CUED/A-THERMO/TR-14-1981;
ISSN-0309-6513) Avail: NTIS HC A02/MF A01 CSCL 21B

The influence of velocity gradients, in a laminar approach flow, on the local burning velocity was investigated, to supplement and verify recent theoretical work. Different velocity profiles were obtained at the exit from a circular burner, using pipes of different lengths between the exit and a settling chamber, and these profiles were measured using hot wire anemometry. The burning velocity and the velocity component parallel to the flame front were obtained by means of the 'angle method' using direct photographs of the flame. The results, presented as burning velocity versus velocity gradient along the flame front, show that the local laminar burning velocity decreases as the rate of 'stretching' of the flame is increased. GRA

MODELING OF SO2 OXIDATION IN SMOG Final Report
David F. Miller Jun. 1981 150 p refs
(Grant EPA-R-805335)
(PB82-101932; EPA-600/3-81-040) Avail: NTIS
HC A07/MF A01 CSCL 07D

Smog chamber experiments were conducted to investigate the: (1) kinetics of free radical reactions of SO2 in smog and (2) SO2 transformation to sulfate for atmospheric simulations. Rate constants were derived for the following reactions: SO2+HO+M yields sulfate (60), SO2 + HO2 yields sulfate (61), SO2 + CH3O2 yields sulfate (64); k(60) = 1600 k(61 less than 0.2, k(64) less than 0.8 ppm min. Oxidation of SO2 by HO led exclusively to particulate sulfate. Even under favorable NOx conditions, particulate nitrate was not a product. Hydrocarbon mixtures typical of urban environments promoted SO2 oxidation faster than hydrocarbons selected to represent rural conditions. Maximum rates of SO2 oxidation occurred during periods of peak NO2 formation. SO2 oxidation rates for aged smog were 25-35% of the maximum values. Model calculations indicated that reaction 60 dominates sulfate production from SO2 in polluted air. Models that adequately estimate (HO) in smog should suffice to approximate the conversion rates. The model used in this study indicated that SO2 oxidation depends strongly on solar radiation intensity and pollutant conditions. GRA

HC A05/MF A01 CSCL 07D

The chemical separation of oxygen from air by the use of coordination complexes were identified and demonstrated. The formation and equilibrium constants of six Co(II) complexes, prepared from benzylated ligands, were determined. Benzylated bis(salicylidene)dipropylenetriamine (benzyl saldpt) provided the most encouraging results. Thus, saldpt was attached through its 5-imino position to polystyrene. This material was complexed with Co(II) to give polymer-attached Co(saldpt). The polymer-attached complex reversibly sorbed oxygen at -70 and 23C. An induction period of about 65 minutes was observed during oxygen sorption at 23 C. The maximum oxygen uptake during sorption-desorption cycling was 46% of theoretical assuming superoxide formation. Kinetic measurements were performed in dioxane solution with Co(saldpt) attached to uncross-linked polystyrene. A preliminary economic assessment suggested that capital and energy costs for a commercial oxygen separation process based on polymer-attached Co(saldpt) would be competitive with the cryogenic distillation and pressure-swing processes. GRA

AN EQUATION OF STATE FOR FLUID ETHYLENE
R. D. McCarty and R. T. Jacobsen Jul. 1981 164 p refs
(PB82-107673; NBS-TN-1045) Avail: NTIS HC A08/MF A01 CSCL 07D

A thermodynamic property formulation for ethylene, is presented. The formulation includes an equation of state, vapor pressure equation, and equation for the ideal gas heat capacity. The coefficients were determined by a least squares fit of selected experimental data. Comparisons of property values calculated using the equation of state with measured values are given. The equation of state is not valid in the critical region rho(c) + or - 0.3 rho(c) for temperatures of T(c) + or - 0.05 T(c). Errors on the order of 20 percent for derived properties and 10 percent for density are encountered near the critical point. Tables of the thermodynamic properties of ethylene for the liquid and vapor phases for temperatures from the freezing line to 450 K with pressure to 40 MPa are presented. GRA

INVESTIGATION OF SPECTROSCOPIC PROPERTIES OF FLAMES AND PLASMAS VIA COMPUTER CONTROLLED INSTRUMENTATION Ph.D. Thesis
John Donald Algeo 1981 248 p
Avail: Univ. Microfilms Order No. 8125750

Data showing the sensitivities observed with a Babington type nebulizer and a flame emission spectrophotometer at varying flow rates of both the nebulizing gas and the sample solution are presented, along with an evaluation of several nebulizer configurations and tip styles. This nebulizer was used to develop a method for the analysis of wear metals in oil which does not require sample pretreatment. The effect of polymeric viscosity index improving additives commonly added to motor oils on the sensitivity of the method was explored. A new method is described for numerically evaluating the inverted Abel integral equation, used to extract information about interior regions of flames and plasmas from spatially resolved data obtained from side-on measurements. The method is based upon cubic spline approximations. Results give a basis for selecting the best method for transforming experimental data of varying quality, and also for estimating the reliability of the results of the computation. Dissert. Abstr.

MECHANISTIC STUDIES ON THE EXTRACTION OF COPPER(11) BY HYDROPHOBIC REAGENTS Ph.D. Thesis
Stephen Paul Carter 1981 89 p
Avail: Univ. Microfilms Order No. 8126171

A high speed stirring apparatus for following the kinetics of very rapid solvent extractions was used to determine the rate law for the extraction of copper by 2-hydroxyl-5-nonyl benzophenone oxime (I) and 5-dodecyl-2-hydroxyl benzophenone oxime (II). The rate law for the extraction of copper by I catalyzed by 5,8-diethyl-7-hydroxy-6-dodecanone oxime (III) was also determined. Equilibrium data are used to characterize the stoichiometry of the extracted complexes. Distribution constants between chloroform and water were determined for each ligand. The rate equations for the extraction of copper by I and II, and for the extraction of copper by I catalyzed by III, are all first order in metal ion, second order in ligand, and inverse first order in hydrogen ion. The catalytic rate law is first order in each ligand. In the case of the reactions which are second order in ligand, the rate determining step is proposed to be the aqueous phase reaction of a 1:1 intermediate complex with the second ligand molecule. Second order reaction rate constants for I and II are calculated. In the case of the catalytic mechanism, the rate law cannot be used to discern which ligand reacts in the rate determining step. The homogeneous phase mechanism is found to be the better mechanistic interpretation of these reaction systems. Dissert. Abstr.

A RADIO-FREQUENCY MOVING-BOUNDARY DETECTOR AND ITS APPLICATION Ph.D. Thesis
Kuo-Shin Lee 1981 130 p
Avail: Univ. Microfilms Order No. 8127353

A radio frequency moving boundary detector for the measurement of transference numbers. The velocity of the boundary is determined by its passage past wire electrodes fixed to the external surface of the moving boundary tube. Cation transference numbers for magnesium chloride in water at 25 C, sodium and potassium dodecylsulfate in water at 25 and 40 C, respectively, and potassium and tetraethylammonium perchlorate in propylene carbonate at 25 C were measured and extrapolated to infinite dilution. The limiting cation constituent transference number was combined with the known limiting conductance for the chloride ion to give equivalent conductances. Transference numbers for aqueous sodium dodecylsulfate at 25 C were measured between 0.003 and 0.025 M, beyond which concentration the boundary movement became so slow that precise measurements were not possible. No evidence for premicellar association into dimers was produced. The effect of adding 1-heptanol to sodium dodecylsulfate were studied by both conductance and transference number experiments. In propylene carbonate, transference numbers of two strong electrolytes with a common anion were measured, and used to construct a table of the best estimated limiting ionic conductances for the calculation of partial molal ionic volumes from density and ultrasonic vibration measurements. Dissert. Abstr.

CHARACTERIZATION OF THE ELECTRONIC AND MOLECULAR STRUCTURES OF TRANSITION METAL SEMIQUINONE AND CATECHOLATE COMPLEXES Ph.D. Thesis
Michael William Lynch 1981 252 p
Avail: Univ. Microfilms Order No. 8127633

Several metal/quinone complexes were synthesized utilizing manganese, iron, cobalt, and nickel and the following two ligands: 9,10-phenanthrene quinone, (PhenQ, PhenSQ, and PhenCAT), and 3,5-di-tert-butyl-1,2-benzoquinone. (DBQ, DBSQ, and DBCAT). These complexes were studied by a variety of physical techniques. It was concluded that the semiquinone is a paramagnetic radical which can be stabilized by coordination to a metal. The electron distribution within these complexes is very sensitive to the specifics of the metal, quinone, and other ligands, to temperature, and to solvent media. An X-ray crystal structure was solved for one of the nickel complexes. The X-ray crystal structures of two manganese complexes are presented. Several other ion complexes were studied. Dissert. Abstr.

N82-17330 Ohio State Univ., Columbus.
PLANAR, SQUARE-PYRAMIDAL AND MACROCYCLIC TRANSITION METAL COMPLEXES PREPARED FROM LINEAR TETRADENTATE DIAMINEDIPHOSPHINE LIGANDS Ph.D. Thesis
Lawrence George Scanlon, Jr. 1981 205 p
Avail: Univ. Microfilms Order No. 8121851

Planar Ni(II), Co(II), and PD(II) complexes were prepared with trimethylene-bis [2-aminoethyl)phenylphosphine] (2,3,2-N2P2) and trimethylene-bis [(3-aminopropyl)phenylphosphine] (3,3,3-N2P2). Square-pyramidal cobalt(II) and nickel(II) complexes also were prepared with 3,3,3-N2P2. Macrocyclic complexes were synthesized by cid-catalyzed rearrangement of sexadentate phosphinamino Schiff-base Ni(II) complexes prepared from one equivalent of Ni(OAc)2 x 1 4H2O and bis(acetylacetone) trimethylene-bis [2-aminoethyl)phenylphosphine]. The metal complexes were characterized by elemental analyses, by magnetic and conductivity data, and by electronic, infrared, and nmr spectra. The crystal structures of [NiCl(3,3,3-N2P2)] PF6, [CoCl (3,3,3-N2P2]] BF4 x 0.8H2O, and [Ni(Me2 16] diene N2P2)] (PF6) 2 x 0.5H2O were also obtained. Dissert. Abstr.

SUBSTITUTION AND EXCITED STATE ELECTRON TRANSFER REACTIONS OF TRANSITION METAL COMPLEXES IN ORGANIZED MEDIA Ph.D. Thesis
Russell Hunter Schmehl 1981 246 p
Avail: Univ. Microfilms Order No. 8125617

The organization and reactivity of molecules incorporated into organized environments including monolayer films and assemblies and micelles is investigated. Two specific topics are addressed. The orientation and reactivity of free base porphyrins in monolayer films is discussed. The effect of aqueous micelles on excited state electron transfer reactions of transition metal complexes is also discussed. Monolayer films and assemblies were examined as probes of biological membranes and as model organized molecular systems for the study of energy and electron transfer. The photosynthetic chromophore, chlorophyll a, was examined in monolayer films and assemblies. Aqueous solutions of ionic surfactants forming micelles were proposed as possible microheterogeneous environments for the separation of the products of light induced electron transfer reactions. The quenching of a ruthenium bipyridyl complex, incorporated into the micelle, by both methyl and benzyl viologen adsorbed to the micelle is analyzed. Dissert. Abstr.

N82-17332 State Univ. of New York at Stony Brook.
THE STRUCTURAL CONSEQUENCES OF TRANSITION METAL BASICITY: INVESTIGATION OF VARIOUS GOLD COMPLEXES Ph.D. Thesis
Frederick E. Simon 1981 18[illegible] p
Avail: Univ. Microfilms Order No. 8126237

Bimetallic compounds with polar metal-metal bonds often have unusual molecular structures with acute angles between the acceptor metal and the adjacent ligands of the donor metal. In the past these unusual geometries were either ignored or explained in terms of semibridging ligands. The molecular structures of a series of compounds which contain metal-metal bonds between gold atoms and various first-row transition metal atoms were prepared. The metal-metal bonds in these compounds are among the most polar of known bonds and the resulting acute angle structures are due to the hybridization requirements of the transition metals which are acting as Lewis bases in these compounds. The results of experimental and theoretical studies have shown that the electrons of the polar bond are located primarily in d orbitals of the donor atom and thus have little stereochemical activity. These ideas can easily be extended to other known examples of bimetallic compounds with polar metal-metal bonds between atoms of the same or similar elements. Dissert. Abstr.

THE CLUSTER APPROACH TO THE MAGNETIC SUSCEPTIBILITIES OF LOW-DIMENSIONAL COPPER CLUSTERS Ph.D. Thesis
Robert Reynolds Weller 1981 249 p
Avail: Univ. Microfilms Order No. 8125631

Theoretical calculations on the magnetic susceptibilities of 0, 1, and 2-dimensional copper complexes were made. A new computational method which eliminates failures was developed. Algorithms based on numerical methods are used in computer programs CAMS and CAMSFIT which are capable of handling ten spin centers and any isotropic Heisenberg spin exchange Hamiltonian. The magnetic susceptibilities of copper cluster compounds and infinite chains and sheets were examined. Finite clusters (Cu-pen) were examined using Hamiltonians and infinite systems were approximated. Infinite chains examined were the alternating Heisenberg linear chain (Cu-OTS, Cu-HTS, (N-Melz) 2CuCl2, and (4-pic)2CuCl2) and the linear chain with nearest neighbor and next-nearest neighbor interactions ((HzH)CuCl3 and [Me3en]CuBr2). A closed form rational expression was developed. A two dimensional sheet polymer ((NH3)2CuCO3) was examined using arrays of spins which contain the spin interactions present in the sheet. Dissert. Abstr.

N82-17334 Princeton Univ., N. J.
INVESTIGATION OF OXIDE BOUND TRANSITION METAL COMPLEXES Ph.D. Thesis
Michael David Ward 1981 314 p
Avail: Univ. Microfilms Order No. 8127756

The preparation, characterization and reactivity of metal-oxide (silica, titania) bound transition metal (M = Zr,Rh) complexes (prepared by interaction of a homoleptic transition metal alkyl and oxide hydroxyl groups) were investigated. In particular, hydride complexes were studied and were discovered to exhibit catalytic activity towards a number of transformations. The behavior of these systems suggested the presence of high valent electrophilic metal centers, which may have been more favorable compared to lower valent species due to the strong metal-oxygen (oxide) bond of the former. The support was best described as a sterically large 'ligand' in these complexes, which possessed basic oxygen sites capable of stabilizing protron released from heterolytic H2 activation processes effected by these species. Since the identity of these complexes was preserved by the [M-O] bond, they could be considered as well defined species and the reactivity described along lines similar to those used for soluble systems. Dissert. Abstr.

REVIEW OF NASA PROGRESS IN THERMAL BARRIER COATINGS FOR STATIONARY GAS TURBINES
Philip E. Hodge, Robert A. Miller, Michael A. Gedwill, and Isidor Zaplatynsky 1981 16 p refs Presented at the Intern. Gas Turbine Conf., Houston, Tex., 9-12 Mar. 1981
(Contract EF-77-A-01-2593)
(NASA-TM-81716; DOE/NASA/2593-25; E-749) Avail: NTIS HC A02/MF A01 CSCL 11F

Ceramic thermal barrier coatings for industrial/utility gas turbines were investigated. In burner rig tests of a zirconia yttria/nickel chromium aluminum yttrium ZrO2-12w/OY2O3/NiCrAlY coating system on air cooled superalloy specimens, ceramic coating life (spallation) was sensitive to Na and V concentration in the fuel. The locations of coating spallation correspond to areas where combustion products were predicted to condense. Three new thermal barrier coating systems were identified. These are based on calcium silicate, ZrO2-8w/OY2O3, and a MgO-NiCrAlY cermet. The spall resistance can be increased by reducing the ceramic layer thickness from 0.038 to 0.013 cm and by the use of more oxidation/corrosion resistant bond coats. S.L.

DEVELOPMENT STATUS OF THE 'ADHESION OF METALS' EXPERIMENT AND OF THE UHV CHAMBER FACILITY
N. Adorni, A. Ceserani, G. Cortellazzi (Control Systems, Cremona, Italy), G. Ghersini, G. Grugni, A. Oriani, T. Rossini, F. Rossitto (Politecnico di Milan), P. G. Sona, A. Squilloni et al 1981 13 p ref Presented at 21st Intern. Sci. Meeting on Space, Rome, 25-26 Mar. 1981
(CISE-1700) Avail: NTIS HC A02/MF A01

The goal of the experiment 'Adhesion of Metals' is the characterization of surface forces and interface energies at the contact between real Metal surfaces, and the impulse probing of transient phenomena associated to the adhesion mechanism. In the experiment, a small metallic sphere impacts against a metal target, and restitution coefficients, contact times and time behavior of contact forces are measured as a function of incoming sphere velocity. Computer simulation indicates that, in microgravity environment and under ultrahigh vacuum, such data can give useful information on the characteristics of the surface forces and interface energies involved in the adhesion mechanisms between colliding bodies. The development status is reported of the physical model developed to design the experiment and to interpret its results, and of the facility 'UHV Chamber', expecially designed and constructed to perform the experiment on board the first Spacelab mission. SULFUR IN THE CORROSION OF SUPERALLOYS Final Report, 10 Dec. 1977 - 15 Jul. 1981

J. Bruce Wagner, Jr. 6 Nov. 1981 39 p refs
(Contract DAAG29-70-C-0049; Grants DAAG29-78-G-0032; DAAG29-78-G-0060)
(AD-A107867; - ARO-14925.2-MS) Avail: NTIS HC A03/MF A01 CSCL 11/6

Three interrelated sections of a study are reported. These were: (1) corrosion of nickel in SO2-O2-Ar gas mixtures at 800 C; (2) defect structure of calcia and of yttria-stabilized zirconia; and (3) diffusion of radio-tracer sulfur-35 and of tellurium 127m in calcia-stabilized zirconia. The corrosion study resulted in a confirmation of linear kinetics for corrosion of nickel in SO2-Argon gas mixtures at 800 C and an agreement of a self-consistent mechanism involving the migration of SO2 as a gas molecule through the outer NiO layer and dissociation at the inner sulfide layer as a rate determining step. The corrosion kinetics in 20 percent O2-variable SO2-balance argon and in 30 percent SO2 variable O2-balance argon were extremely rapid. These data did not show that interconnected stringers of sulfide through the outer NiO layer was responsible for the observed kinetics. GRA

(AD-A107760; SC5214.34FR; AFWAL-TR-81-3051) Avail: NTIS HC A10/MF A01 CSCL 11/6

With the development of a process to produce fine grain aluminum alloys, it is now possible to superplastically form (SPF) structural aircraft components. This document presents results from several important areas which are considered to be critical to providing a realistic assessment of the technical and economic potential for superplastic forming structures using a high strength 7475 aluminum alloy. Areas of study included (1) the evaluation of structural applications; (2) the determination of superplastic forming limits; (3) a microstructural study of cavities formed during superplastic deformation; (4) the application of hydrostatic gas pressures to suppress cavitation, and (5) the effect of superplastic deformation on subsequent service properties. (Contract DE-AS02-77ET-10460)
(DE82-003653; DOE/ET-10460/16/17) Avail: NTIS HC A04/MF A01

This report describes research aimed at establishing quantitative relationships between microstructure and wear resistance of highly alloyed materials, including high-Cr white irons and experimental Co-base and Ni-base powder metallurgy (PM) alloys now used or potentially to be used in coal mining, handling, and gasification. The specific types of wear under study are low-stress abrasion and gouging wear encountered in mining, coal conversion, and transfer applications. During this period, work was concentrated on analysis of results. The many detailed observations obtained in the work on scratch test simulations of abrasive wear mechanisms have been summarized in drafts of three papers. The first, A Study of Abrasive Wear Mechanisms Using Diamond and Alumina Scratch Tests, is included as an appendix to this report and is being submitted for publication. Revision of the other papers is in progress. DOE

EFFECT OF SENSITIZATION AND COLD WORK ON STRESS CORROSION SUSCEPTIBILITY OF AUSTENITIC STAINLESS STEELS IN BOILING WATER REACTOR (BWR) AND PRESSURIZED WATER REACTOR (PWR) CONDITIONS
Hannu Haenninen and Irina Aho-Mantila May 1981 67 p refs
(VTT-88; ISBN-951-38-1245-0; ISSN-0355-6395) Avail: NTIS HC A04/MF A01

The influence of metallurgical variables on stress corrosion cracking of austenitic stainless steels, in particular AISI 304 and OX18H10T, was examined in O2 enriched BWR conditions (8 ppm O2) and in typical PWR conditions. Cracking susceptibility in BWR conditions is especially sensitive to alpha martensite content and sensitization. Cracking in alpha martensite compounds is intergranular and transgranular; it can not be related to sensitization. Sensitization induces cracking only in creviced conditions (double U-bend specimens) in AISI 304 steels. In creviced conditions OX18H10T steel exhibits cracking in solution annealed, stabilized and sensitized conditions. The sensitized material is most susceptible. Cracking in solution annealed and stabilized OX18H10T steel is intergranular and transgranular. In PWR conditions (O2 content < 2 ppb) no cracking is observed. Author (ESA)

MECHANISMS OF CORROSION FATIGUE
D. J. Duquette *In* AGARD Corrosion Fatigue Oct. 1981 12 p refs Sponsored in part by Office of Naval Research (For primary document see N82-17342 08-26)
Avail: NTIS HC A05/MF A01

An overview of experimental variables which are considered critical to understanding the mechanisms of corrosion fatigue of high strength aluminum alloys is presented. Based on this overview, an examination of previously proposed mechanisms is attempted. These models include anodic dissolution, surface energy reduction, and hydrogen embrittlement. It is concluded that hydrogen embrittlement of process zones at alloy surfaces (for crack initiation) and at crack tips (for crack propagation) best explains observed results. A general model of corrosion fatigue of these alloys is proposed. This model suggests that the nature of the naturally formed oxide film on aluminum alloys may be a critical factor. Chemical or mechanical damage of the film allows hydrogen ingress. The presence of second phase particles which may act as sinks for dislocation transported hydrogen, may also be a necessary prerequisite to significant amounts of reduction in fatigue resistance associated with corrosion. FRACTURE MECHANICS BASED MODELLING OF THE

CORROSION FATIGUE PROCESS
David W. Hoeppner, Douglas Mann, and J. Weeks *In* AGARD Corrosion Fatigue Oct. 1982 17 p refs Sponsored in part by NSERC and Dept. of Energy, Mines and Resources of Canada
(For primary document see N82-17342 08-26)
Avail: NTIS HC A05/MF A01

Corrosion fatigue of structural elements involves a synergism between cyclic load and a chemical environment involving both time and temperature as rate-controlling parameters. The development of rational life prediction methods is hampered by both the lack of mechanistic understanding, the large number of corrosion-fatigue synergisms, and the inadequacies of fracture mechanics based models in both pre mode I fatigue cracking and initial mode I cracking. Aspects of mechanisms related to the formulation of corrosion fatigue life prediction models are discussed in relation to micromechanical modelling based on fracture mechanics. Emphasis was placed on the formation of mode I fatigue cracks from pits, and fretting surface damage. A discussion of the needs in this area is presented. It is believed that with further analytical and experimental information the models presented can be verified and provide useful guidance to engineers and scientists attempting to deal with corrosion and fretting fatigue. CORROSION FATIGUE BEHAVIOUR OF SOME ALUMINIUM ALLOYS
D. Aliaga and E. Budillon *In* AGARD Corrosion Fatigue Oct. 1981 12 p (For primary document see N82-17342 08-26)
Avail: NTIS HC A05/MF A01

An evaluation of corrosion fatigue strength of aluminum alloys currently used in the aeronautical industry was made. Crack propagation was evaluated in various different environments (dry argon, wet air, salt water). The effect of frequency, of test specimen thickness, and of ratio R (R = Kmin/Kmax) were investigated. And the effect of these various environments on the endurance limit of 10 to the 7th power cycles was likewise studied and some surface protections evaluated. The intent of the survey was to compare the response in fatigue of various aluminum alloys used in the aeronautical construction. The environments studied were the following: dry argon, wet air and salt-water. They were retained so as to simulate and amplify the more or less aggressive nature of these environments in which aircraft can find themselves both on the ground or in the air. The two major aspects of corrosion fatigue namely crack initiation and crack propagation were studied with an emphasis on in-service behaviour. As far as crack initiation is concerned some surface treatments and protections currently used in aeronautics were examined in various environmental conditions. M.D.K.

CORROSION FATIGUE OF OFFSHORE AND SHIP-BUILDING STEELS
Walter Schuetz *In* AGARD Corrosion Fatigue Oct. 1981 17 p refs (For primary document see N82-17342 08-26)
Avail: NTIS HC A05/MF A01

The results of several test programs on various steels are discussed where in addition to realistic variable loads a corrosive environment was simulated. For comparison, constant amplitude tests were also carried out as well as testing in air. It was shown that under constant amplitude loading the damaging effect of corrosion was always greater than under realistic loading. In addition, test frequency appears to be not so important as in constant amplitude test; this means that tests under variable amplitude can be carried out at normal test frequencies of the order of 10 Hz, saving time and costs. Finally the results of a research program on welded tubular joints in seawater are described in which the above conclusions were incorporated. Author

VARIABLE AMPLITUDE CORROSION FATIGUE BEHAVIOR OF A LOW CARBON STEEL
R. Guerbuez and M. Doruk *In* AGARD Corrosion Fatigue Oct. 1982 14 p refs (For primary document see N82-17342 08-26)
Avail: NTIS HC A05/MF A01

The results of an experimental study designed to determine the general characteristics of salt water-enhanced fatigue crack growth under conditions of variable amplitude loading are presented. The material used was a sheet of 0.22 percent carbon steel. The tests were done on 13 mm thick CT specimens in L-orientation. The crack mouth opening displacement on the loading line (C(M)OD) was varied at a constant rate, whereby the stress intensity factor varied between zero and the maximum value of C(M)OD. Negative stress ratios were eliminated by means of a special control. Comparison crack growth data were obtained by the more conventional constant load amplitude or K-increasing method and also under decreasing load amplitude. The crack growth rates were compared with reference data measured in the laboratory air. It was found that the rates of crack-growth measured at three different rates of displacement do not agree. However from the shift of curves on decreasing the rate, it is concluded that the growth rate curves would tend to become stationary. Author

FLIGHT-BY-FLIGHT CORROSION FATIGUE TESTS
Walter Schuetz *In* AGARD Corrosion Fatigue Oct. 1981 10 p refs (For primary document see N82-17342 08-26)
Avail: NTIS HC A05/MF A01

Corrosion fatigue tests should be conducted under realistic load sequences especially for tests with riveted specimens because the rare high loads of the spectrum may loosen the fasteners, damaging the corrosion protection system and therefore rendering it ineffective. Possibly this does not happen in constant amplitude tests because the loads may not be high enough to crack the protection system. This was the reasoning behind the test program carried out with flight-by-flight tests. Tests were carried out with two aluminum alloys typical for use in modern and in faying aircraft respectively, namely 7475-T 761 and 7075-T6. The sheet materials were exchanged between two laboratories so that both would use materials of the same heats. The specimens used differed, however, in the corrosion protection systems and in the manufacturing of the specimens by different firms. A project status report is made. M.D.K.

US NAVAL FLEET AIRCRAFT CORROSION
G. T. Browne *In* AGARD Aircraft Corrosion Aug. 1981 15 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

Water entry and its associated corrosion problems were minimized. A method for sealing environmental connectors without degrading wire quick disconnect capability was incorporated by sealing the back connector shell rubber grommet with clear room temperature vulcanizing silicone type sealant. The screw holes and equipment lids were also sealed in a similar manner. Drain holes were located and drilled in nonstructural areas at low points to remove trapped water and eliminate the corrosive agents. Hidden corrosion was detected by nondestructive inspection methods during rework. These include ultrasonic, X-ray and eddy current inspection and neutron radiography on double skin areas and on areas behind stringers, etc., where corrosion is caused by moisture entrapment. Stress corrosion cracking in high strength components was discovered occasionally. Standard fleet corrosion maintenance is accomplished in accordance with procedures provided in technical manuals. Paint and corrosion removal procedures and tools are discussed. N.W.

DETECTION AND PREVENTION OF CORROSION IN ROYAL AIR FORCE AIRCRAFT

C. R. Pye *In* AGARD Aircraft Corrosion Aug. 1981 10 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

The problems that sometimes are created by corrosion in Royal Air Force aircraft are outlined. The problem of the harsh environment facing some military aircraft is described, and some of the materials used in aircraft construction are considered. Corrosion prevention and rectification is also discussed briefly. Some typical examples of corrosion damage found during service are illustrated, and the nondestructive testing methods used for detecting corrosion are described. These methods include visual inspection, eddy current techniques, ultrasonic techniques and X-radiography. The use of neutron radiography and other future developments is also considered. Service methods of removing corrosion and re-protecting the aircraft are mentioned. Finally the need for the manufacturer to consider corrosion at the aircraft design stage is considered. N.W.

AN AIRLINE VIEW OF THE CORROSION PROBLEM

R. G. Mitchell *In* AGARD Aircraft Corrosion Aug. 1981 11 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

Although the corrosion phenomenon is well understood by aircraft manufacturers and operators alike, most current aircraft types continue to exhibit many of the fundamental corrosion defects shown by earlier designs. It is estimated that the total annual cost to IATA member airlines is around $100 million based on 1976 operations. Environmental and maintenance effects are important and should be fully understood in their importance in minimizing corrosive attack. In addition to the more common forms, filiform corrosion and microbiological contamination present hazards to aircraft operating in certain areas of the world. Temporary water displacing fluids are becoming common in their use, and subject to certain limitations are providing valuable short term protection. The FAA design rules require the effects of corrosion to be considered at the design stage which should result in an improved product for the operator. In addition the IATA document Guidance Material on Design and Maintenance Against Corrosion of Aircraft Structures specifies practices which should also improve the overall product. Author

SOME OBSERVATIONS ON THE CORROSION OF AIRCRAFT AT THE AIR FORCE BASE IN BANDIRMA, TURKEY

M. Doruk *In* AGARD Aircraft Corrosion Aug. 1981 8 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

The types and the causes of corrosion which have been observed primarily on aircraft of Type F-5A in Turkey are studied. Visual inspection showed many locations of concentration of corrosion. The vertical stabilizer attach angle (alloy 7075-T6) fails through exfoliation corrosion and galvanic attack in the bolt holes. Galvanic corrosion has also been observed around the jaw bolts under the main wings. Another case of exfoliation attack has been found on the uplock support rib (Alloy 7075-T6 or 7079-T6) in the main landing gear well. Damage in the honeycomb assembly which appears as a debonding between the honeycomb structure and the top plate has been regarded as a serious problem. Corrosion damage is attributed to the high corrosiveness of the atmosphere of Air Force Base laden with sea salt and polluted from industries in the neighborhood. Author

N82-17354# Technical Univ. of Istanbul (Turkey).

ON THE CORROSION PROBLEMS OF THE TAF F-5 AIRCRAFT

A. Inalhan *In* AGARD Aircraft Corrosion Aug. 1981 1 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

Corrosion problems of the F-5 aircraft in Turkey are examined. The importance of atmospheric effects are disputed. The investigation and conclusions are recounted. N.W.

THE EXPERIENCE OF CORROSION ON FRENCH MILITARY AERODYNES [L'EXPERIENCE DE LA CORROSION SUR AERODYNES MILITAIRES FRANCAIS]

Melle M. Huret *In* AGARD Aircraft Corrosion Aug. 1981 9 p In FRENCH (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

Several examples of corrosion occurring in French military aircraft in detail, e.g., honeycomb sections and metal-to-metal adhesively bonded structures were described. Information about the various measures which were taken to diminish the problem was given. The manufacturing specifications do not take care of all protection requirements. Furthermore, the paint systems which are applied are not the best available, or they have been applied in the wrong way. Bad sealing also occurs frequently. Other preventive measures, e.g., water displacing fluids, can given additional, short term, protection. N.W.

N82-17356# KLM Royal Dutch Airlines, Amsterdam (Netherlands).

DESIGN AND MAINTENANCE AGAINST CORROSION OF AIRCRAFT STRUCTURES

H. J. Versteegen and M. J. M. Versteeg *In* AGARD Aircraft Corrosion Aug. 1981 7 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

The publication 'Guidance Material on Design and Maintenance against Corrosion of Aircraft Structures' is reviewed. A greater understanding among manufacturers and airline managements of the magnitude of the corrosion problems and the need for measures to be taken at the design stage is considered. The best available anti-corrosion design knowledge in critical areas as a basic standard is addressed. The guidelines cover basic requirements, including material choice, design principles and manufacturing procedures. Furthermore, they cover the critical areas including origin of problems, design objectives and protective requirements. They are supplemented by an appendix giving a detailed acceptable means of compliance. N.W.

Avail: NTIS HC A09/MF A01

The philosophy behind selection of aircraft metallic materials based on resistance to corrosion and behind mandatory requirements for processes and materials used in the protection of aircraft structures is discussed. The impact of legislation, current and future, aimed at protecting the environment is reported. The necessity for finding replacements for cadmium, chromates, and various metal finishing operations used in aircraft construction is discussed in terms of both protecting the environment and corrosion control methods used in the aircraft industry. CORROSION PREVENTION METHODS DEVELOPED FROM DIRECT EXPERIENCE WITH AEROSPACE STRUCTURES
M. Scolaris *In* AGARD Aircraft Corrosion Aug. 1981 18 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

Some examples of various types of corrosion experienced during hardware service are reviewed and the significant remedial action adopted first to repair and then to eliminate the problem are presented. The changes in design incorporated during design development as a function of the experience and technical knowledge acquired are also presented. Examples of effective protection validated through service life and present trends for effective corrosion prevention are also illustrated. Author

Advances in materials and processes for aircraft corrosion control currently in use and those under development in the laboratory for future use are described. Areas covered are corrosion preventive compounds, organic and inorganic coatings, alloy selection and heat treatments. Available materials highlighted are water displacing compounds, sealant primers, aluminum alloys 7050 and 7010 including a state-of-the-art report on the use of exfoliation and stress corrosion resistant tempers. Materials under development that offer promise of contributing to future advances include water displacing paints, flexible primer, crack arrestment compounds, powder metallurgy, aluminum alloys and substitutes for cadmium plating. NEW CONCEPTS IN MULTIFUNCTIONAL CORROSION FOR AIRCRAFT AND OTHER SYSTEMS
M. Khobaib and F. W. Vahldiek *In* AGARD Aircraft Corrosion Aug. 1981 13 p refs (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

Multifunctional nonchromate inhibitors were developed for a Rinse Facility to reduce corrosion maintenance costs by removing corrosive contaminants from aircraft which operate in aggressive environments such as marine environments. These inhibitor systems are low cost, water soluble, nontoxic formulations which are effective against general corrosion, localized corrosion, and environmentally assisted crack growth under conditions of stress corrosion and corrosion fatigue. Extensive polarization, immersion, and galvanic-coupling experiments were conducted to determine effectiveness. A borax-nitrite-based inhibitor containing small additions of nitrate, silicate, phosphate, and mercaptobenzothiazole was found to provide excellent corrosion protection for high strength aluminum and steel alloys used in aerospace applications and for copper-bearing alloys used in electronic components and in parts of the Rinse Facility. Envionmental effects upon crack-growth rates of aluminum and high strength steel alloys were eliminated, reducing the rates in corrosion fatigue as compared to those obtained in air. A test program using these inhibitors is described. Tracking of maintenance costs and corrosion damage in being conducted to determine the effectiveness of the inhibited rinse in reducing corrosion costs. M.D.K.

CORROSION IN NAVAL AIRCRAFT ELECTRONIC SYSTEMS
Irving S. Shaffer *In* AGARD Aircraft Corrosion Aug. 1981 12 p refs (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

Naval aircraft electronic equipment suffer frequently from the effects of moisture and corrosion. The critical design features which have led to excessive susceptibility to these failure modes are described. Several examples are cited of inadequately protected equipment located in aircraft installations where they were subjected to repeated moisture intrusion during rainstorms, low level flights over water and high pressure fresh water washdowns. The specific deterioration effects that occurred on the various components that make up the avionic systems are presented. Maintenance data summaries are included to denote further the corrosion problem severity. Corrective measures in design, testing and maintenance are also discussed. Author

CORROSION PROTECTION SCHEMES FOR AIRCRAFT STRUCTURES: SOME EXAMPLES FOR THE CORROSION BEHAVIOUR OF Al ALLOYS
Henri Lajain *In* AGARD Aircraft Corrosion Aug. 1981 16 p (For primary document see N82-17349 08-26)
Avail: NTIS HC A09/MF A01

A summary of the main groups of aircraft surface protection procedures frequently applied is presented. In addition, some examples are given on the corrosive behavior of aluminum alloys. Information is also given on novel nondestructive test methods serving to recognize corrosion within the scope of aircraft maintenance. The following requirements which must be imposed with regard to the performance and quality of the surface protection are considered and discussed: (1) the potential differences of the materials used are to be kept as low as possible, i.e., constructive measures must be taken; (2) prevention of any local element activity by providing insulating protective coatings, i.e., by preventing a current; (3) inhibition by providing cover layers (e.g., chromate passivation); and (4) introducing layers which act as so-called sacrificial anodes. PERTURBED ANGULAR CORRELATION STUDIES OF ELECTRIC FIELD GRADIENTS IN METALLOPORPHYRINS Ph.D. Thesis
Oliver Clinton Mullins 1981 168 p
Avail: Univ. Microfilms Order No. 8127358

Electric field gradients (EFG) at the metal center were studied in seven chloroindium porphyrin complexes and in chloroindium phthalocyanine by the technique of perturbed angular correlation of gamma rays. These complexes were synthesized with the probe nucleus -111 In for use in polycrystalline and solution sources. The magnitudes of the EFG's of the metalloporphyrins span a wide range and are shown to correlate with the electron donating properties of the peripheral substituents. Electron withdrawing properties were observed in the phthalocyanine ring. This large EFG is attributed to the diminished cavity size of the phthalocyanine. All porphyrin complexes were characterized by the large chemical inhomogeneities. The deformable nature of the porphyrin macrocycle in contrast to the relatively planar, inflexible structure of the phthalocyanine was observed. The PCA spectra of metalloporphyrins dissolved in organic solvents were characterized and analyzed. Dissert. Abstr.

POLYMER COATED ELECTRODES AS MICROELECTRO-

CHEMICAL MEDIA Ph.D. Thesis
Nancy Linden Good 1981 121 p
Avail: Univ. Microfilms Order No. 8127598

Gold film electrodes were coated with polymer films less than 1000 A thick; then electrochemistry was done on samples absorbed into the film from solution. Detailed studies of potassium ferricyanide in a poly(4-vinyl pyridine) film showed that cyclic voltammetry can be done successfully with this system. The performance of the electrode was measured. The cationic polyelectrolyte is selective favoring multiply charged anions. Very roughly, 10% of the pyridine groups of the polymer are associated with a ferricyanide ion. Monitoring the cyclic voltammograms as the pH of the solution is varied from 7 to 1 lead to some knowledge of the environment within the film. At low pH near-theoretical peak shapes for reactants and products bound to electrode surfaces were observed. The structure of the film did not appear to retard mass transport on the timescale of the experiments, with 50 mV/sec scan rates. Preliminary work with providing multiple identical electrodes on a single glass slide was done, and future applications to analytical chemistry are discussed. Dissert. Abstr.

IMPROVED TACK PMR
R. A. Buyny Oct. 1981 108 p refs
(Contract NAS3-22026)
(NASA-CR-165432; TRW-36805-6016-UT-00) Avail: NTIS HC A06/MF A01 CSCL 07C

One reactive diluent and several high boiling solvents were investigated for providing long shelf life tack and drape to PMR polyimide prepreg materials. The most promising approach was to introduce dimethoxy ethyl ether (diglyme) to the normal methanol solvent. Compression and autoclave molding cycles were developed for the improved tack prepreg which provided up to 15% higher thermomechanical properties than conventional PMR-15 composites. Near the conclusion of this investigation, it was discovered that diglyme constituted a potential hazard because its auto ignition temperature is 464 K. Consequently, it was recommended that diglyme should not be used as a tackifier for PMR prepregs. Author

DEFECT DETECTION AND IDENTIFICATION IN Si3N4 AND SiC USING CONTROLLED RELUCTANCE ELECTROMAGNETIC TEST METHODS Final Report, Dec. 1980 - Sep. 1981
Duane P. Johnson and E. Kim Kietzman Watertown, Mass. AMMRC Oct. 1981 56 p
(Contract DAAG46-80-C-0095)
(AD-A107726; Rept-440-159; AMMRC-TR-81-52) Avail: NTIS HC A04/MF A01 CSCL 11/2

This test studied the feasibility of defect detection in Si3N4 and SiC using high frequency (32 MHz) electromagnetic techniques and focused field CREG test probes. Examined were test specimens which contained near surface defects - hardness indentation induced cracks, scratches, pits, and inclusions. While unable to detect cracks in the test pieces, it successfully demonstrated the ability to detect certain other defects - 19 microns high scratches in SiC, for example. Also observed were variations in electromagnetic signals which seemed to reflect variations in electrical and dielectrical properties of the test pieces, possibly due to variation in specimen microstructures and/or chemistry. Electron paramagnetic resonance saturation experiments have been carried out on undoped polyacetylene and in the doped polymer as a function of dopant concentration. The relaxation times of undoped trans- (CH)x show considerable variability from sample, T1 = (2.7 + or - 1.7) x 10 to the -5 sec and T2 = (7.8 + or - 1.0) x 10 to the -8 sec suggesting sensitivity to trace impurities. Exposure to air reduces T1 to 8.1 x 10 to the -6 sec and T2 to 6.6 x 10 to the -8 sec; this effect is reversible. Using radio-assay techniques with 125 sub I, it was possible to prepare and characterize samples of known dopant concentration at the level of parts per million (ppm). There are three distinct regimes which characterize the effect of iodine concentration on the EPR characteristics of trans-(CHIy)x. GRA

(AD-A107617) Avail: NTIS HC A03/MF A01 CSCL 11/2

The compressive strength of SiC, Si3N4, and Al2O3 was investigated over wide ranges in temperature and loading rate. Several distinct damage regimes were identified, all based upon tensile microfracture processes. Two aspects of the work are of special interest. The first is the identification of a high strain rate regime in which material inertial effects are responsible for unusually rapid strengthening; the basis for the effect is increased difficulty in either crack nucleation or extension. Secondly, it is found that at low loading rates, subcritical tensile microcrack growth is responsible for a thermally activated strength dependence. Selected area electron channeling experiments lead to the conclusion that the thermal activation process may involve crack tip plasticity. Author (GRA)

SYNTHESIS OF FUNGICIDAL VINYL AND ACRYLIC LATICES BY EMULSION POLYMERIZATION
L. V. Wake Jul. 1981 19 p refs
(AD-A107848; MRL-R-822; AR-002-424) Avail: NTIS HC A02/MF A01 CSCL 11/3

Latex emulsions were prepared in which experimental fungicidal compounds were copolymerized into the resin matrix. The latices were laboratory tested for antifungal activity and subsequently formulated as internal/external paints. The paints were exposed under tropical conditions for evaluation of long-term growth-free performance. The monomers pentachlorophenyl acrylate (PPA) and pentachlorophenyl methacrylate (PPMA) were synthesized and incorporated into latices by emulsion polymerization at various levels in the general vicinity of 2% w/w and 3% w/w. Emulsion copolymers were prepared by combining various mixtures of vinyl acetate, methyl methacrylate, methacrylic acid, ethyl and butyl acrylates with the experimental monomers. By appropriate formulation, stable fine-particle emulsions were prepared exhibiting both antifungal activity and suitable film-forming properties. Author (GRA)

EFFECTS OF SURFACE MORPHOLOGY AND CHEMICAL COMPOSITION ON THE DURABILITY OF ADHESIVELY BONDED ALUMINUM STRUCTURES Final Report
Tsishung Sun, Guy D. Davis, John D. Venables, and Jar-Mo Chen Oct. 1981 35 p refs
(Contract F49620-78-C-0097; AF Proj. 2303)
(AD-A107664; MML-TR-81-45C; AFOSR-81-0725TR) Avail: NTIS HC A03/MF A01 CSCL 11/3

The hydration of aluminum surfaces prepared for adhesive bonding by anodization in phosphoric acid was studied using surface behavior diagrams which trace the evolution of the aluminum adherend surface composition, obtained by X-ray photoelectron spectroscopy. When supplemented with high resolution scanning electron micrographs and Auger depth profiles, the surface behavior diagrams show that hydration proceeds in three steps. The first is reversible and consists of the adsorption of water by the monolayer of A/PO4 initially present on the surface with no change in the oxide morphology. The second, which appears to be rate controlling, involves slow dissolution of the phosphate followed by rapid hydration of the exposed aluminae to the oxyhydroxide, boehmite. Extensive morphological changes occur as the boehmite fills the pore cells and bridges the whiskers of the original surface. The final step consists of the nucleation and growth of the trihydroxide, bayerite, on top of the boehmite. The surface behavior diagram approach is proposed as a new tool for the study of surface reactions in general. GRA

DEVELOPMENT OF HIGH SENSITIVITY X-RAY AND ELECTRON-BEAM RESIST PROCESSES Final Report, 15 Dec. 1979 - 14 Jun. 1981
D. W. Hess 20 Jul. 1981 15 p refs
(Grant AF-AFOSR-0078-80; AF Proj. 2306)
(AD-A107833; AFOSR-81-0729TR) Avail: NTIS HC A02/MF A01 CSCL 20/7

Plasma-initiated polymerization was used to form ultrahigh molecular weight (greater than ten million grams per mole) poly (methylmethacrylate) (UHMW PMMA) from liquid methyl methacrylate (MMA). The PMMA thus obtained was exposed to beams of 10 KV electrons ranging in dose from 0.1 - 10 micro-coulombs per square centimeter. For comparison, identical exposures were carried out using commercial PMMA resist (KTI) with a molecular weight of about 0.7 million grams/mole. Using 1:1 methyl ethyl ketone and isopropanol to develop the exposed resist, 0.5 micron pattern sizes were formed in both resist materials. Pattern fidelity in the UHMW PMMA was virtually identical to that obtained with KTI PMMA, but a factor of three lower dose could be used with the UHMW material. This lowered dose arose because the dissolution rate of the unexposed resist was a factor of 30 lower for UHMA than for KTI PMMA. A new spinner was designed and built to allow improved control of spin-cast films. Modeling studies based upon non-Newtonian behavior were initiated to enable prediction of film thickness as a function of position on a wafer, solution viscosity, and spin speed. In an attempt to further improve the sensitivity of UHMW materials, synthetic studies were undertaken to introduce halogen atoms into the MMA molecule. Chlorinated MMA was synthesized and is currently being investigated for its plasma-initiation susceptability. Author (GRA)

ADHESIVES FOR FIELD REPAIR OF GRAPHITE/EPOXY COMPOSITE STRUCTURES Final Report, Sep. 1980 - Aug. 1981
David J. Crabtree Nov. 1981 61 p
(Contract N62269-80-C-0250)
(AD-A107870; NOR-81-161; NADC-79286-60) Avail: NTIS HC A04/MF A01 CSCL 11/4

Adhesive formulations were developed for the repair of damaged graphite/epoxy structures on board ship. These adhesives are two-part paste adhesives which can be cured at contact pressure at temperatures as high as 149C (300F). The adhesives were formulated from epoxy resins toughened by prereaction with carboxyl terminated butadiene acrylonitrile rubbers. Amine curing agents were used. An adhesive formulated from the reaction product of Epon 828 epoxy resin (Shell Chemical Co.) and CTBN 1300X8 (B. F. Goodrich) using PACM-20 amine curing agent (Du Pont) had lap shear strengths at -55C (-67F) and room temperature of approximately 5000 psi. At 115C (220F) the lap shear strength was approximately 2800 psi. These values are competitive with the highest quality film adhesives. The environmental durability was impressive. Lap shear specimens after exposure to 140F, 95% RH under a constant tensile stress of 1000 psi for 21 days and for 60 days under a stress of 500 psi showed only a 2 percent and an 11 percent reduction, respectively, in ultimate tensile shear strength compared to unexposed control specimens when tested to failure at 115C (220F). CRYSTALLINE FORMS IN A COPOLYMER OF VINYLIDENE FLUORIDE AND TRIFLUOROETHYLENE (52/48 MOL %)
Andrew J. Lovinger, G. T. Davis, T. Furukawa, and M. G. Broadhurst Nov. 1981 31 p refs Submitted for publication
(Contract N00014-79-F-0012)
(AD-A107809; TR-16) Avail: NTIS HC A03/MF A01 CSCL 20/2

The structure of 52/48 mol % copolymer of vinylidene fluoride and trifluoroethylene has been investigated at various temperatures by X-ray diffraction. Melt-solidified samples consist of a mixture of two disordered crystalline phases, one trans-planar, the other 3/1-helical. Samples may be transformed to either phase by appropriate means to reveal a hexagonal (or pseudo-hexagonal) molecular packing. The all-trans phase may be obtained by drawing or poling at low temperatures; both treatments cause a transformation of the disordered mixture of phases into a well-ordered planar zig-zag phase. Isolation of the disordered 3/1-helical phase is achieved by heating to high temperatures, where-upon all samples, irrespective of orientation or polarization, undergo transformation to a poorly ordered helical structure analogous to that of trifluoroethylene homopolymer; upon cooling,

the original, disordered mixture of phases is recovered.

STRUCTURAL AND DIELECTRIC INVESTIGATION ON THE NATURE OF THE TRANSITION IN A COPOLYMER OF VINYLIDENE FLOURIDE AND TRIFLUOROETHYLENE (54/46 MOL %)

G. T. Davis, T. Furukawa, A. J. Lovinger, and M. G. Broadhurst Nov. 1981 32 p refs Submitted for publication
(Contract N00014-79-F-0012)
(AD-A107846; TR-17) Avail: NTIS HC A03/MF A01 CSCL 11/9

The effect of temperature on the structure and dielectric properties of a copolymer of vinylidene chluoride and trifluoroethylene was investigated at temperatures up to 140 C. Undrawn or unpoled specimens contain an intimate mixture of two disordered crystalline phases, both of which undergo a large increase in d-spacing at 65-70 C, with eventual transformation to a single phase in which the chains assume a disordered 3/1-helical conformation above 90 C. The 70 C transition is accompanied by a dielectric anomaly. The changes in crystal phase and dipole orientation upon poling result in a reduction of the dielectric constant at room temperature, a shift of the dielectric anomaly to about 80 C, stability of the all-trans crystal phase to somewhat higher temperatures, and a discrete change in d-spacing at the transition region. Loss of polarization at this ferroelectric-to-paraelectric transition is attributable primarily to the molecular change from the polar all-trans conformation to its non-polar, disordered 3/1-helical counterpart. Rotational dipolar motions also lead to the dielectric anomaly. GRA

STRESS CORROSION OF CERAMIC MATERIALS Annual Report, 1 Oct. 1980 - 30 Sep. 1981

Stephen W. Freiman, Terry A. Michalske, R. C. Pohanka, K. Okazaki, S. Tashiro, C. J. Simmons, P. N. Krishnan, and G. E. Walrafen Oct. 1981 56 p refs
(Contract N00014-79-F-0030; RR0220201)
(AD-A108045) Avail: NTIS HC A04/MF A01 CSCL 11/2

The results of an experimental program to investigate mechanisms of stress corrosion in glasses and ceramics and to determine effects of composition and microstructure on the fracture of piezoelectric materials. One of the main reasons for strength degradation of structural ceramic materials is stress corrosion cracking. Caused mainly by water in the environment, stress corrosion cracking results in subcritical crack growth that leads to delayed failure of ceramic materials. As a consequence of this crack growth, ceramic components that are subjected to external stresses are liable to fail after an indeterminate period of time, leading to a considerable uncertainty in the safe design stress. One of the objectives of modern ceramics technology is to reduce the uncertainty associated with structural design, and hence, to improve our capabilities of designing ceramic components that exhibit reliable mechanical behavior. This objective can be accomplished in part through a better understanding of the fundamental processes that occur during stress corrosion cracking. GRA

NEW ENERGETIC MATERIALS. STRUCTURAL CHARACTERIZATION Annual Report, 1 Oct. 1980 - 30 Sep. 1981

Richard Gilardi, Clifford F. George, and Jerome Karle 15 Oct. 1981 38 p refs
(AD-A107714; LSM-81-1) Avail: NTIS HC A03/MF A01 CSCL 07/4

The molecular structures of five new materials developed in ONR-sponsored explosive/propellant research are reported. The material 3,3-bis-azidomethyl oxetane (BAMO) was studied in three different forms. Using gas electron diffraction analysis, the molecular structure of the monomer of BAMO in the vapor phase was determined. A cyclic tetramer of BAMO was characterized with X-ray single-crystal diffraction analysis. Finally, a linear polymer of BAMO was studied as a semi-crystalline fiber using X-rays. Most of the features of the polymer molecular structure were determined from the fiber diffraction pattern. The crystal and molecular structure of a tetra-nitro compound, 4,7-bis-dinitrofluoromethyl-1,3-dioxepane, is reported; this compound is a newly synthesized monomer developed during research on the synthesis of nitro-polymers. The crystal and molecular structure of bis(5-amino-1,2,4-oxadiazole) is also reported. It is an unusually stable synthetic intermediate obtained in research aimed at producing new types of high-density nitro-explosives.

Five different calculation methods, either for laboratory analysis or industrial application, which permit the modeling of plastic materials flow conditions in injection molding equipment are presented. Two of the methods are sufficiently developed to allow for computerized application in tooling design. The methods cover (1) optimization of molds, (2) description of a computer aided injection molding system, (3) better economy in injection molding through optimum equipment design, (4) the Moldflow system, and (5) calculation of the cavity wall thickness in molds for injection molding of plastomers. The impact of numerical control on plastics forming techniques is assessed. The automation of injection presses, mainly through application of microprocessors and digital techniques, is discussed. With hydraulic presses, considerable energy savings are realized through automation. The use of industrial robots is also mentioned and illustrated. Other equipment whose design and operation are influenced by the use of electronics are thermoplastic injection molds, screw in sleeve feeders, and extrusion machines. Author (ESA)

LOW TEMPERATURE BEHAVIOR OF EPOXY-RUBBER PARTICULATE COMPOSITES
S. C. Kunz and P. W. R. Beaumont 1981 36 p refs Prepared in cooperation with Cambridge Univ., England
(Contract DE-AC04-76DP-00789)
(PB82-113499; CUED/C-MATS/TR-75-1981;
ISSN-0309-6505) Avail: NTIS HC A03/MF A01 CSCL 11J

Toughness and mechanical property data are presented for a CTBN-rubber modified epoxy resin in the temperature range 20 C to -110 C. A toughening model based on the ultimate strain capability and tear energy dissipation of the rubber, present as dispersed microscopic particles in an epoxy matrix, is used to explain the suppression of composite toughness observed below -20 C. The toughness loss is attributed to a glass transition near -40 C in the epoxy resin which forms not only the primary matrix phase but also occlusions in the rubber particles themselves. On this basis a severe loss in ductility of the particles is anticipated which, along with reduced molecular mobility in the epoxy matrix, can account for an overall decrease in composite toughness. The low temperature data, used to test the particle stretching-tearing model for toughening, are found to be consistent with the proposed theory. GRA

A computer program is used to simulate the thermal motion of long chain molecules in solution, and the role of coordination effects in this process is investigated. The computer simulation results agree qualitatively with experiments using fluorescence spectroscopy and show that the activation energy of the process is insensitive to the degree of coordination. Theoretical analysis and computer simulation also show remarkable differences in the thermomechanical behavior of rigid and flexible models for the stretched two bond, freely jointed chain. GRA

EFFECTS ON SOLID-STATE REACTIONS DURING THERMAL DECOMPOSITION OF NITROCELLULOSE
K. M. Bucerius, N. Eisenreich, and A. Pfeil Oct. 1981 16 p refs Transl. into ENGLISH from Int. Jahrestag - Fraunhofer-Inst. fuer Trieb- und Explosivstoffe (ICT) (W. Germany), no. 7-29, 1979 p 331-344
(DRIC-T-6460; BR80787) Copyright. Avail: Issuing Activity

The influence of solid state reactions on the burning rate of modified double base solid rocket propellants was investigated. Solid phase pyrolosis was observed in an optical bomb. The decomposition reaction was thermoanalyzed and pyrolosis residues were analyzed. Carbonaceous fibers are produced by modifier effects in the solid material below the burn off surface. The thermal decomposition of nitrocellulose is accelerated by close contact with combustion modifiers, which also oxidize charcoal-like products formed during this decomposition. A direct bond of modifiers to nitrocellulose withstands solvents. The bond produces a good degree of distribution at smaller outlay than other methods. Author (ESA)

Very Low-Pressure Pyrolysis studies of 2,4-dinitrotoluene decomposition resulted in decomposition rates consistent with log (ks) = 12.1 43.9/2.3 RT. These results support the conclusion that previously reported 'anomalously' low Arrhenius parameters for the homogeneous gas-phase decomposition of ortho-nitrotoluene actually represent surface-catalyzed reactions. Preliminary qualitative results for pyrolysis of ortho-nitrotouene in the absence of hot reactor walls, using the Laser-Powered Homogeneous Pyrolysis technique (LPHP), provide further support for this conclusion: only products resulting from Ph-NO2 bond scission were observed; no products indicating complex intramolecular oxidation-reduction or elimination processes could be detected. The LPHP technique was successfully modified to use a pulsed laser and a heated flow system, so that the technique becomes suitable for study of surface-sensitive, low vapor pressure substrates such as TNT. The validity and accuracy of the technique was demonstrated by applying it to the decomposition of substances whose Arrhenius parameters for decomposition were already well known. IR-fluorescence measurements show that the temperature-space-time behavior under the present LPHP conditions is in agreement with expectations and with requirements which must be met if the method is to have quantitative validity. LPHP studies of azoisopropene decomposition, chosen as a radical-forming test reaction, show the accepted literature parameters to be substantially in error and indicate that the correct values are in all probability much closer to those measured in this work: log (k/s) = 13.9 - 41.2/2.3 RT. GRA

TRANSPORT CHARACTERISTICS OF ALTERNATE SLURRY FUELS Quarterly Technical Progress Report, Jul. - Sep. 1981
1981 9 p refs
(DE82-003019; DOE/TIC-2003019) Avail: NTIS HC A02/MF A01

Flow data for various alternate fuels, such as coal/water mixtures is obtained, in a pump loop which accurately simulates fuel feed systems found in boiler and furnace applications. Measurement and correlation of pressure loss as a function of slurry characteristics and system design is emphasized. Construction of a one inch loop was completed. Pressure transducers, thermocouples and a mass flow meter were installed and linked to a data acquisition system. A series of preliminary tests was conducted with flowing water, 60%, 63%, and 65% coal water mixtures. The bulk of the CWM's contained and additive, Lomar-D, at a dosage of approximately .5% by total mix weight. These tests were conducted primarily to evaluate the design of the loop, the adequacy of the instrumentation and the reproducibility of the CWM preparation method. The design of the loop is sound. BRIQUETTING OF FINE COAL USING A SODIUM CHLORIDE BINDER Final Report
E. Y. Crossmore, Jr., R. J. Kimball, and S. M. Kimball Oct. 1981 41 p refs
(Contract DE-AC01-79ET-14303)
(DE82-000632; DOE/ET-14303/T1) Avail: NTIS HC A03/MF A01

The economic and technological feasibility of producing dense, weather resistant briquettes from fine particulate bituminous coal was demonstrated. The binder consists of a sodium chloride dendritic crystalline matrix. The proclivity for liberation of pyritic sulfur and ash from fine coal particles for precombustion Deep Cleaning was investigated, in efforts to comply with clean air standards. Process technology as to coal beneficiation produces fine sized particles and handling the material after treatment is problematic. Reconstitution of this fine particulate was studied. Briquettes were produced which are equivalent to lump natural coal. Their heat value is greater as they contain less moisture and subjective burn tests for the product show a fouling index increase range. DOE

Fundamental information on the characteristics and behavior of both petroleum based oils and synthetic fuels in spray combustion was sought by applying advenced optical diagnostic techniques to study the processes of fuel injection and atomization, droplet ignition, and spray combustion. The program was conducted in three phases: cold flow spray experiments; monodispersed droplet combustion; and spray combustion experiments. Parametric testing of all candidate injectors with number 2 fuel oil was completed. Efforts on spray characterization study were limited to completion of the final design of the traverse system for the droplet sizing interferometry (DSI). Detailed design of the monodisperse droplet combustion was completed. M.D.K.

COAL-TO-METHANOL: AN ENGINEERING EVALUATION OF TEXACO GASIFICATION AND ICI METHANOL-SYNTHESIS ROUTE Final Report
P. A. Buckingham, D. D. Cobb, A. A. Leavitt, and W. G. Snyder Aug. 1981 126 p refs
(DE81-904235; EPRI-AP-1962) Avail: NTIS HC A07/MF A01

Results of a technical and economic evaluation of producing methanol from bituminous coal using Texaco coal gasification and ICI methanol synthesis is reported. The scope of work included: development of an overall configuration for a large plant comprising coal preparation, air separation, coal gasification, shift conversion, COS hydrolysis, acid gas removal, methanol synthesis, methanol refining, and all required utility systems and off-site facilities. Design data were received from both Texaco and ICI while a design and cost estimate were received from Lotepro covering the Rectisol acid gas removal unit. The plant processes 14,448 tons per day (dry basis) of Illinois No. 6 bituminous coal and produces 10,927 tons per day of fuel-grade methanol. An overall thermal efficiency of 57.86 percent was calculated on an HHV basis and 52.64 percent based on LHV. Total plant investment at an Illinois plant site was estimated to be $1159 million dollars in terms of 1979 investment. Using EPRI's economic premises, the first-year product costs were calculated to $4.74 per million Btu (HHV) which is equivalent to $30.3 cents per gallon and $5.37 per million Btu. DOE

H-COAL PROCESS IMPROVEMENT STUDY: BENCH-UNIT BASELINE RUN WITH PREHEATER/REACTOR
May 1981 57 p
(Contract DE-AC05-77ET-10152)
(DE82-002572; DOE/ET-10152/T2) Avail: NTIS HC A04/MF A01

The thermal dissolution of coal and its effects on the mechanism of coal liquefaction in an H-Coal system were investigated. The two-state coal liquefaction system consists of a coal slurry preheater and a liquefaction reactor, a catalytic-hydrogenation-reactor. The preheater design and unit modifications are discussed. The objective of the run reported was to obtain baseline data with the preheater integrated in the bench unit system. Operating conditions and results are summarized and compared with those of previous bench runs without a preheater. The effect a preheater has on product yields and product quality was determined. Based on comparison data it is concluded that a preheater tends to increase heavy liquid yields with more residual oil and a higher proportion of heavy distillates in the distillate product. However, more experimental data at comparable operating conditions, with and without a preheater, are needed to confirm this observation. The experimental run closely simulated the conditions of another run which also included a preheater; however, product yields differed by as much as 6 w %. The higher slurry space velocities in the preheater for this run correspond to lower slurry residence times, which resulted in lower yields of lighter fractions than obtained in PDU Run 5. DOE

N82-17400# Cummins Engine Co., Inc., Columbus, Ohio.
SYNFUEL MODIFIED DIESEL Quarterly Technical Progress Report, 1 Apr. - 30 Jun. 1981
1981 16 p
(Contract DE-AC03-79ET-15450)
(DE82-002298; DOE/ET-15450/T18) Avail: NTIS HC A02/MF A01

A two-year program was proposed to test three diesel engines operating on coal-derived liquid fuels and compare the results with standard diesel fuel oil No. 2; namely: (1) prechamber diesel; (2) dual fuel diesel (direct injection); and (3) spark-assisted diesel engines. The three types of diesel engines tested were to be modified in three forms; (1) conventional water-cooled; (2) waterless-uncooled; and (3) adiabatic (uncooled). Only the conventional water-cooled prechamber diesel engine and the spark assisted prechamber diesel engine were studied. Subcontracts were let to test the prechamber diesel engine and the spark-assisted prechamber. The direct injection dual fuel engine test will be delayed until the second year of the contract. No engine modifications for waterless-uncooled and adiabatic uncooled are scheduled for the first year. The selected engine models were installed in the laboratory. Preliminary operation was made. Both subcontractors began to construct a particulate measuring system according to recommendations. DOE

REFINING AND UPGRADING OF SYNFUELS FROM COAL AND OIL SHALES BY ADVANCED CATALYTIC PROCESSES Interim Report
R. F. Sullivan, D. J. ORear, and H. A. Frumkin Sep. 1981 319 p refs
(Contracts DE-AC22-76ET-10532; EF-76-C-01-2315)
(DE82-001127; DOE/ET-10532/T3; FE-2315-61; IR-5) Avail: NTIS HC A14/MF A01

Two coal syncrudes derived from Illinois No. 6 and Wyodak coals were refined in a extensive program which included pilot plant and laboratory studies. These studies demonstrated that advanced, commercial petroleum technology can be used to refine these syncrudes to gasoline, jet, diesel and heating fuels. The coal syncrudes have a low hydrogen content, compared to petroleum, and high concentrations of oxygen and nitrogen impurities. These syncrudes are a blend of two coal distillates boiling between C sub 5 and 680 F. Consequently, they contain no residual and have about 95% boiling in the gasoline or diesel fuel ranges. With these properties, an appropriate way to refine the syncrudes is by hydroprocessing. Hydroprocessing yields a volume of finished products which is almost equivalent to the original volume of syncrude. In addition, the heteroatoms are ultimately removed as sulfur and salable ammonia. The engineering studies provided estimates of the refining costs. DOE

A free-fall, laminar-flow reactor capable of studying the devolatilization of caking coals was constructed. The unit can provide kinetic data as a function of several process variables, including temperature, pressure, residence time and reactive gas composition at temperatures to 1600 F and pressures to 1500 psig. The reactor system was used successfully to obtain devolatilization data for two caking coals, Illinois No. 6 and Pittsburgh No. 8. Limiting (maximum) yields of CO, CO2, H2O, and CH4 were obtained for these two coals, and correlations were developd to predict the yield of these species from the H/C and O/C ratio of the raw coal. Integrated processes including production, harvesting, and conversion, to produce methane from land based crops that are cost competitive on a commercial basis with alternative sources of energy were developed. Sixteen candidate species of woody and herbaceous biomass were selected based on their superior productivity, adaptability to varying conditions, digestibility, and other selection criteria. Field samples of these species grown under relatively managed or monitored conditions were collected and analyzed for chemical composition. The composition analyses were completed, and on selected species anaerobic digestion and thermal gasification tests were conducted to obtain methane yield data. A regional program plan was also developed on production of methane from biomass for the state of Florida. GRA

INVESTIGATION OF IN-SITU GELATION TO CONTROL EMISSIONS FROM ABANDONED HAZARDOUS WASTE SITES Final Report
J. F. Porter 29 May 1981 97 p refs
(Grant NSF DAR-80-09895)
(PB82-103508; NSF/CEE-81032) Avail: NTIS HC A05/MF A01 CSCL 13B

Solutions containing nickel, cyanide, and phenol at concentrations normally expected in leachates from dump sites were permeated through soil, soil-polymer, and soil polymer ion exchange resins. The reduction in total mass flow of toxic species and the retention of toxic ions by the ion exchange resin of the soil polymer ion exchange matrix resin was determined. Results indicate that the leachate flows are reduced by an order of magnitude at approximately 10 percent polymer in soil by weight and to near zero flow at approximately 80 percent polymer in soil by weight. A continuous phase of the polymer in the soil polymer or soil polymer exchange resins matrix confirms a significant reduction in the mass flow of toxic ions dissolved in leachates. GRA

UPGRADING UNPAVED ROADS: ROAD BASE STABILIZATION USING LIME AND FLY ASH
Jack Howley and Chris Wohlers Sep. 1981 54 p
(Grant NSF ISP-80-07661)
(PB82-103524) Avail: NTIS HC A04/MF A01 CSCL 13B

A cost-effective alternative to upgrading unpaved roads using asphalt which may cost $100,000 per mile is proposed. In lime-fly ash stabilization, road aggregate is thoroughly mixed with lime, fly ash and water to form a new road base to a depth of five or more inches; this new road base is then compacted and covered with a minimum asphaltic surface layer such as a double chip seal. Guidelines are given for evaluating whether road base stabilization using lime and fly ash (an in-expensive waste product of coal-burning power plants) is an economical alternative to asphalt in upgrading a particular road. Detailed guidelines are presented for estimating the cost of materials for a lime-flyash project as well as a description of the necessary construction and maintenance procedures. GRA

ASSESSMENT AND CONTROL OF CHRYSOTILE ASBESTOS EMISSIONS FROM UNPAVED ROADS Final Report
Robert K. Serra and Michael A. Connor, Jr. May 1981 150 p refs
(Contract EPA-68-02-3059; ESED Proj. 7776)
(PB82-102526; EPA-450/3-81-006) Avail: NTIS HC A06/MF A01 CSCL 13C

The findings of field surveys and a test program to assess chrysotile asbestos emissions generated by vehicular use of unpaved roads surfaced with crushed serpentinite rock are presented. Included are discussions of Federal asbestos regulations, sampling and analysis procedures, human health effects, and various emission control techniques. The Enviromental Protection Agency believes that asbestos emissions which occur from unpaved roads and other dusty sources surfaced with serpentinite should be reduced to the greatest extent practical. Local, State, and Federal agencies responsible for road maintenance in the limited areas where asbestos emissions occur are in the best position to assess local conditions and implement the most appropriate control measures. DREDGING MANAGEMENT: DATA AND ANALYSIS FOR THE NEW ENGLAND/LONG ISLAND SOUND REGION
A. Gowen Sep. 1981 150 p Sponsored in part by Water Resources Council
(PB82-111626) Avail: NTIS HC A07/MF A01 CSCL 13B

This technical assistance report is one product of the New England River Basins Commission's Long Range Dredging Study funded by the Water Resources Council, and was directed primarily to state and local officials involved in dredging management. Part 1 summarizes past dredging and future dredging projections for the New England/Long Island Sound Region. In the past decade, approximately 33 million cu yd of sediment have been dredged from New England/Long Island Sound (NE/LIS) waters. In the next decade, 1.7 million yards per year can be expected annually from Non-Corps of Engineers (CE) projects in the region. Maintenance dredging of 9.5 million cu yd is projected for the next decade. GRA

GROOVE DEPTH REQUIREMENTS FOR TINE-TEXTURED RIGID PAVEMENT 5: DURABILITY OF TINE TEXTURING ON PCC PAVEMENTS Interim Report
John E. Grady and William P. Chamberlin Jun. 1981 41 p refs Sponsored by Federal Highway Administration
(PB82-104951; RR-86; FHWA/NY/RR-81/86) Avail: NTIS HC A03/MF A01 CSCL 13B

The required depth for grooves on new tine textured concrete pavements in order to assure an adequate skid resistance over their entire design life is discussed. Measurements of texture depth and skid resistance, with both ribbed and smooth tires were made on 0 to 5 year-old New York pavements. Initial groove depth needs of 3/16 in. minimum were calculated from two values estimated from the study data: the minimum depth (0.050 in.) to assure adequate skid resistance with a minimally legal treaded tire, and the mean groove wear rate (0.013 in./million vehicle passes). Groove depth measurements on new concrete pavements and bridge decks indicated 21 an 14 percent compliance, respectively, with the proposed new standard of 3/16 in. minimum, and 60 and 44 percent compliance with the current standard of 2/16 in. minimum. MATERIAL PROPERTIES TO MINIMIZE DISTRESS IN ZERO-MAINTENANCE PAVEMENTS. VOLUME 1: MODELS Final Report
J. Brent Bauhut, Freddy L. Roberts, and Thomas W. Kennedy Mar. 1981 170 p refs 2 Vol.
(Contract DOT-FH-11-9349)
(PB82-112905; FHWA/RD-80/155) Avail: NTIS HC A08/MF A01 CSCL 13B

This first volume provides results of a detailed study to: (1) identify distresses that cause significant loss of serviceability and/or maintenance in pavements; (2) identify material properties that significantly influence the occurrence of distress; (3) select the best theoretical or empirical models for predicting distress using material properties and other engineering parameters; and (4) develop a detailed research plan for utilizing the models selected to study the effects of the significant distresses and to optimize material properties for zero-maintenance pavements. The research resulting in the accomplishment of the goals described above also produced other separate and specific results that are reported and should prove useful in future research. GRA

MATERIAL PROPERTIES TO MINIMIZE DISTRESS IN ZERO-MAINTENANCE PAVEMENTS. VOLUME 2: PARAMETER STUDY Final Report
Freddy L. Roberts, Thomas W. Kennedy, and Gary E. Elkins Mar. 1981 183 p refs 2 Vol.
(Contract DOT-FH-11-9349)
(PB82-112913; FHWA/RD-80/156) Avail: NTIS HC A09/MF A01 CSCL 13B

This second volume provides a summary of a detailed study to: (1) identify distresses that cause significant loss of serviceability and/or maintenance in pavements; (2) identify material properties that significantly influence the occurrence of distress; (3) select the best theoretical or empirical models for predicting distress using material properties and other engineering parameters; and (4) utilize the selected models to study the effects of the significant distresses and to optimize material properties for zero maintenance pavements. The emphasis of this second volume was a discussion of the results of a parameter study with selected models using a range of material properties available in conventional and nonconventional pavement materials. The effects of varying these material properties on various distresses were evaluated and the tradeoffs required were discussed. GRA

THE SEISMIC RESISTANT DESIGN OF R/C COUPLED STRUCTURAL WALLS
A. E. Aktan and V. V. Bertero Jun. 1981 240 p refs
(Grant NSF PFR-79-0894)
(PB82-113358; UCB/EERC-81/07; NSF/CEE-81040) Avail: NTIS HC A11/MF A01 CSCL 13M

Integrated analytical and experimental research on the seismic response of R/C structural wall-frame structures was conducted at U.C. Berkeley for the past decade. Recently considerable efforts were devoted to the study of the seismic behavior of coupled structural walls and their behavior in wall-frame structural systems. A survey of existing analytical and experimental work regarding the seismic response of R/C wall and coupled wall-frame systems, as well as relevant documented post-earthquake studies on these systems, are presented. An assessment of the states of the art and practice regarding the design of building structures incorporating these systems is included. Studies and design and fabrication of the required testing facility necessary for conducting the experimental investigation of seismic behavior of a 1/3-scale model of a 4 1/2-story coupled wall subassemblage belonging to a 15-story prototype structure, are described. Analytical studies of the seismic responses of the prototype buildings are summarized briefly. GRA

LIMIT STATE DESIGN IN GEOTECHNICAL ENGINEERING
M. D. Bolton 1981 35 p refs
(PB82-113440; CUED/D-SOILS/TR-103-1981; ISSN-0309-7439) Avail: NTIS HC A03/MF A01 CSCL 13M

The development of design procedures are summarized. Uncertainty factors in design and problems in interpreting geotechnical data are discussed. Construction concerns were studied and they include: permeability, compressibility, angle of shearing, water pressures, and the selection of limit state models. T.M.

N82-17419# Bureau of Mines, Albany, Oreg. Metallurgy Research Center.
AN INVESTMENT MOLD FOR TITANIUM CASTING
Eugene D. Calvert Jul. 1981 41 p refs
(PB82-104662; BM-RI-8541) Avail: NTIS HC A03/MF A01 CSCL 13I

The Bureau of Mines, in its effort to promote greater utilization of domestically abundant materials, conducted research on an alternate mold material that has commercial potential for titanium investment casting. Using variations of the conventional lost wax molding process, investment shell molds were formed entirely of fused, calcia-stabilized ZrO2-forming binder. Optimization of binder/slurry properties, stucco grain size and distribution, and curing practices resulted in a structurally sound investment shell that was distortion free and thermally stable. GRA

CROSS-IMPACT STUDY OF FOREIGN SATELLITE COMMUNICATIONS ON NASA'S 30/20 GHz PROGRAM
Aug. 1980 244 p refs
(Contract NAS3-21500)
(NASA-CR-165154; FSI-251) Avail: NTIS HC A11/MF A01 CSCL 17B

A comprehensive traffic demand forecast and a scenario for the transition process from current satellite systems to more advanced systems of the 1990's are presented. Systems configurations with and without the use of 30/20 GHz are described and these two alternatives are compared. It is concluded that: (1) the use of 30/20 GHz will result in increased satellite capacity, which will be needed to satisfy demand; (2) the use of 30/20 GHz will decrease the transmission cost, especially for broadband communications; (3) in some areas, particularly Europe and Japan but also the U.S., 30/20 GHz is the only available frequency band for customer premise Earth stations because of the dense terrestrial microwave networks; and (4) the development of 30/20 GHz technology will improve U.S. markets for equipment and satellites in many world regions. MULTIPLE-ACCESS CHANNELS WITH DIFFERENT GENERALIZED FEEDBACK SIGNALS
Aydano Barreto Carleial Sep. 1981 39 p refs Presented at the IEEE Intern. Symp. on Inform. Theory, Grignano, Italy, 25-29 Jun. 1979
(INPE-2221-PRE/017) Avail: NTIS HC A03/MF A01

A communication channel with two senders and one receiver, in which each sender observes a private feedback signal is considered. The two feedback signals are not necessarily equivalent to, or derived from the signal observed by the receivers. An achievable rate region is demonstrated for this multiple-access channel by means of a superposition coding scheme. It is shown that a rate region, previously obtained for the multiple-access channel with 'perfect' feedback to both senders, remains achievable when the feedback connection to one of the senders is eliminated. PRELIMINARY CENTAUR SYSTEMS ANALYSIS Final Report
Robert G. Maronde, Jack K. Holmes, and Richard S. Iwasaki 10 Dec. 1981 150 p refs
(Contract NAS9-16067)
(NASA-CR-167499; R8112-2) Avail: NTIS HC A07/MF A01 CSCL 17B

The Centaur is stored in the Orbiter payload bay on the Centaur Integrated Support System (CISS). The CISS not only cradles the Centaur prior to deployment but also provides any signal conditioning required to make the Centaur/Orbiter hardwire interfaces compatible. In addition, the CISS provides other Centaur functions such as controlling all the avionics safety features and providing all the helium supplies for tank pressurizations. Problems associated with a Centaur design concept using a transponder and two switchable antennas are defined. Solutions to these problems are presented. S.L.

A VERY HIGH THROUGHPUT NETWORK: THE ESCALIBUR PROJECT
Jean-Alain Hernandez, Eric Horlatt, Rene Joly, and Guy Pujolle Sep. 1981 7 p refs
(ENST-D-81004) Avail: NTIS HC A02/MF A01

The analysis and construction of a communication network with a very high bandwidth (approximately 1 Giga-bit per second using fiber optics) are discussed. Two applications being considered for this multipurpose network are a high quality multiservice telephone, and a documentary system which creates digital archives. The topology adopted is a ring. The communication medium and the frame structure are described, as well as access to the channel. A functional diagram of the communicator is included. A.R.H.

IMPULSE RESPONSE DETERMINATION IN THE TIME DOMAIN

Tapan K. Sarkar, Donald D. Weiner (Syracuse Univ.), Vijay K. Jain (Univ. of South Florida), and Soheil A. Dianat Nov. 1981 23 p refs
(Contract N00014-79-C-0598; RR0210101)
(AD-A107828; TR-81-10) Avail: NTIS HC A02/MF A01 CSCL 12/1

In this paper two methods are presented for determining the impulse response of an object in the time domain when both the input and output time domain waveforms are specified. Pole extraction features can then be applied to the nonimpulsive portion of the impulse response to determine the SEM parameters of the object. The first method involves synthetic division and is comparatively straightforward. The second technique is a least squares method which is computationally more stable. The effect of measurement errors in the input and output waveforms is evaluated for each method. An investigation is made as to what form of the input minimizes the noise variances in the computation. Finally a generalized least squares technique is presented which yields a minimum variance unbiased estimate for the impulse response when the noise covariance matrix is known. Author (GRA)

ENHANCEMENT OF POLES IN SPECTRAL ANALYSIS

Fung I. Tseng and Tapan K. Sakar Nov. 1981 33 p refs
(Contract N00014-79-C-0598; NR Proj. 371-014)
(AD-A107739; TR-81-5) Avail: NTIS HC A03/MF A01 CSCL 17/9

This paper presents a new technique for detecting a small pole in the presence of a nearby strong pole. By simultaneously applying the chirp z-transform (CZT) and a recently developed window, the new technique is shown to be able to detect and resolve a small pole. The CZT is efficient since it employs the Fast Fourier Transform (FFT) to evaluate a convolution. But unlike the FFT which is limited to the evaluation of the spectrum on the jw axis, the CZT can evaluate the z-transform on the whole complex plane. And with the use of the new window, which is designed to have a near-sidelobe level of any specified value, the CZT is shown to be able to resolve two closely spaced poles with a large difference in amplitudes. Unlike the Prony's Method, the new technique does not require predetermining the system order. No matrix inversion or solution of polynomial roots is required. Further, the new technique is a linear operation, thus even under noisy environments it yields accurate, stable results for extraction of poles from transient response data. Author (GRA)

A MEASURE OF EFFECTIVENESS: ANALYSIS AND APPLICATION

Robert Podell Jun. 1981 39 p refs
(AD-A107886; DCEC-TN-12-81) Avail: NTIS HC A03/MF A01 CSCL 17/2

A measure of effectiveness (M.O.E.) for communications is formulated, in general, and applied to a digital path assuming: no queueing; independent Poisson (long and/or short) failures and exponentially distributed repairs. The M.O.E., the probability of reliable information completion within a tolerable delay given an environment, is evaluated for cases without and with dynamic restoral of failures via repeat transmission. Response time vs. packet length is also modelled. Without dynamic restoral, shown are: reliability is a limiting factor; relative robustness of higher bit rates for voice. With dynamic restoral, the M.O.E. approaches 1 as delay approaches infinity. Author (GRA)

WKB MODE SUMMING PROGRAM FOR DIPOLE ANTENNAS OF ARBITRARY ORIENTATION AND ELEVATION FOR VLF/LF PROPAGATION. CALCULATION OF VLF/LF FIELD STRENGTHS IN THE EARTH-IONOSPHERE WAVEGUIDE Interim Report, Oct. 1980 - May 1981

J. A. Ferguson and D. G. Morfitt 1 Oct. 1981 65 p refs
(Grant DNA-MIPR-81-504)
(AD-A107683; NOSC/TR-697) Avail: NTIS HC A04/MF A01 CSCL 20/14

A computer program was developed for calculating VLF/LF field strengths in the earth-ionosphere waveguide whose characteristics may vary along the direction of propagation. The computer program described in this report is a modified version of that described in NELC Interim Report 713, WKB Mode Summing Program for VLF/LF Antennas of Arbitrary Length, Shape, and Elevation. Changes consist of an increase in the number of waveguide slabs from 25 to essentially an unlimited number, more convenient formatting of the input data, especially in the reduction from three to two cards per waveguide mode, an increase in the number of allowable modes from 15 to 30, and the addition of two new output options. This program is referred to as WKBFLDS or FLD4. Use of this program is recommended in instances where the characteristics of the Earth or ionosphere vary slowly along the propagation path. GRA

HF PROPAGATION ASSESSMENT STUDIES OVER PATHS IN THE ATLANTIC Interim Report

D. R. Uffelman 26 Oct. 1981 22 p refs
(AF Proj. X0746CC)
(AD-A107599; NRL-MR-4599) Avail: NTIS HC A02/MF A01 CSCL 20/14

In September, 1980, NRL utilized Barry AN/TRQ-35 oblique sounding equipment which was deployed on board a ship operating in the Atlantic Ocean in order to test a concept to provide a real-time model update with the oblique sounder as a data source. The purpose of this work was to show that very accurate HF channel assessment was possible over paths in the local vicinity of the sounded path. Presented are initial results of an exercise encompassing two short paths (less than 900 km) in the North Atlantic. These initial results indicate that by utilizing the oblique sounder to update the MINIMUF 3.5 model developed by NOSC, a significant increase in the accuracy of short term forecasting of the Maximum Usable Frequency (MUF) can be obtained. Over a 24-hr period, RMS errors from a model driven by the 5-day running average of 10.7 cm flux were approximately 4 MHz. Utilizing the oblique sounder as an update tool, this RMS error dropped to below 1 MHz. Further results are required, however, to validate the technique over longer periods of time, different geographies, and larger operational areas. Author (GRA)

SHIELDED BALANCED AND COAXIAL TRANSMISSION LINES. PARAMETRIC MEASUREMENTS AND INSTRUMENTATION RELEVANT TO SIGNAL WAVEFORM TRANSMISSION IN DIGITAL SERVICE Final Report

W. L. Gans and N. S. Nahman Jun. 1981 260 p refs Sponsored in part by Army Communications-Electronics Engineering Installation Agency, Ft. Huachuca, Ariz.
(PB82-105297; NBS-TN-1042) Avail: NTIS HC A12/MF A01 CSCL 17B

The impulse and step responses of a shielded cable using time domain terminal measurements and a physically based mathematical model for the transmission line properties of the cable are determined. A computer controlled time domain measurement system was implemented using the automatic pulse measurement system. Data are also developed for the frequency domain complex propagation function (attenuation and its related minimum phase shift). The method is applied to 12 shielded paired conductor (balanced) cables and 5 coaxial cables. Time domain responses are presented for three nominal cable lengths, 60 m (200 ft), 150 m (500 ft), and 300 m (1000 ft). GRA

PHASE DEMODULATOR WITH HIGH TEMPORAL AND ANGULAR RESOLUTION FOR THE MEASUREMENT OF FARADAY ROTATION BY MEANS OF A CARRIER FREQUENCY [PHASENDEMODULATOR MIT HOHER ZEIT- UND WINKELAUFLOESUNG ZUR MESSUNG DER FARADAY-DREHUNG MIT EINEM TRAEGERFREQUENZ-POLARIMETER]

Thomas Vogel Jan. 1981 88 p refs In GERMAN
(IPF-81-4) Avail: NTIS HC A05/MF A01

The relative merits of ringmixers and phase locked loops as phase demodulators in a carrier frequency polarimeter designed to measure the poloidal field intensity in a Tokamak discharge through the induced Faraday rotation are reviewed. Test results on two commercially available demodulators indicate that phase locked loops have a larger linear range and yield much smaller phase errors in the presence of amplitude modulation. A carrier frequency polarimeter, using the selected demodulators, a CO2 laser and an acoustooptical modulator, was built and tested on a solid state InSb semiconductor plasma. A phase resolution of 0.001 radian at a carrier frequency of 40 MHz was achieved. Further improvements are expected in plasma experiments using lower carrier frequencies and increased integration times. Applications to interferometry are also discussed. Author (ESA)

The main objectives are to evaluate the polarization characteristics of Teflon bonded carbon electrodes in the Li/SOCl2 system and to improve cathode performance at high discharge rates and low operating temperatures (-40 F to 32 F). During the report period, we have studied the half-cell polarization and discharge performance characteristics of Li/SOCl2 cells with and without improved cathodes. In addition, the effect of catalysts on cyclic volt-ammograms and electrolyte viscosity and conductivity relationships with operating temperature have been examined. Electrolyte properties in Li/SOCl2 systems are found to contribute significantly towards the cathode overpotential. Cathodes doped with catalysts greatly minimized the activation polarization throughout the operating temperatures. Author (GRA)

AN OXYGEN ELECTRODE BASED ON NICKEL/COBALT SPINEL
William A. Armstrong Jul. 1981 23 p refs
(AD-A107602; DREO-R-845) Avail: NTIS HC A02/MF A01 CSCL 09/1

It has been demonstrated that nickel/cobalt spinel, NiCo2O4, can be prepared simply and inexpensively by the thermal decomposition of cobalt nitrate on sintered nickel plaque. Electrodes suitable for use in metal/air batteries and fuel cells have been developed which will reduce oxygen from the air at room temperature and a current density of 50mA/sq cm for more than a year. A modification of this electrode will perform satisfactorily for more than 200 cycles of oxygen reduction/oxygen evolution at 50mA/sq cm. Author (GRA)

IMPEDANCE MATCHING FOR LONG CABLES CARRYING ULTRASONIC SIGNALS
John Mittleman Oct. 1981 37 p
(AD-A107935; AD-E200015; NCSC-TM-325-81) Avail: NTIS HC A03/MF A01 CSCL 09/1

Long coaxial cables, when used for ultrasonic inspection, have been known to produce extraneous signals and attenuate valid signals. In this report, the theory of transmission lines is applied to such cables and is shown to predict the unwanted phenomena. The theory is then applied to the design of matching networks composed of one resistive and one inductive component. A series R-L network placed in parallel with the transducer is shown to produce a satisfactory impedance match, and its performance is demonstrated through experiments on a 1000-foot length of coaxial cable terminated by the network and an ultrasonic transducer. HIGH FREQUENCY SEMICONDUCTOR TESTING Final Report
L. A. Robinson Sep. 1981 16 p
(Contract DE-AC04-76DP-00613)
(DE82-000926; BDX-613-2685) Avail: NTIS HC A02/MF A01

High-frequency hybrids were tested on fixtures that used stripline techniques for matching and interconnection. A number of problems with proper grounding were encountered, along with hybrid breakage that occurred when increased force was used to improve ground reliability. The approach used in this effort generally overcame these problems. An adapter scheme was developed that permitted testing a wide variety of hybrid physical configurations on a single tester. DOE

Dielectric breakdown and loss measurements in liquid hydrogen and liquid hydrogen impregnated synthetic dielectrics are investigated at temperatures between 14 and 200K and at hydrostatic pressures up to five atmospheres. The effects of dissolved impurities/additives in the liquid are determined, and the self field and low field superconducting properties of high critical temperature materials at temperatures between approximately 14 and 200K are characterized. The construction of the dielectric test apparatus continued and the system of small electrodes was completed. Difficulties were encountered in the construction of the LH2 vessels and the junction box, which have retarded their completion. DOE

Solid state equipment offers a number of potential advantages in the coal mining industry. These advantages can only be realized, however, through careful and judicious design of the control and protection circuitry. Problems relating to the interaction of solid state equipment on the electrical system and the special design considerations that apply to solid-state circuitry are examined. Design guidelines are provided for solid-state applications in the areas of: (1) equipment operated from a dc trolley wire, (2) drive systems for surface mining equipment, (3) ac motor starters, and (4) electromagnetic interference. BROAD-BAND ROTATIONAL CARS THERMOMETRY IN NITROGEN GAS Ph.D. Thesis
Daniel Vincent Murphy 1981 120 p
Avail: Univ. Microfilms Order No. 8126362

Coherent anti-Stokes Raman scattering (CARS) from the pure rotational Raman lines of N2 is employed to measure the instantaneous rotational temperature of N2 gas at room temperature and below with good spatial resolution. A broad bandwidth dye laser is used to obtain the entire rotational spectrum from a single laser pulse; the CARS signal is then dispersed by a spectrograph and recorded on an optical multichannel analyzer. A best fit temperature is found in several seconds with the aid of a computer for each experimental spectrum by a least squares comparison with calculated spectra. The model used to calculate the theoretical spectra incorporates the temperature and pressure dependence of the pressure-broadened rotational Raman lines, includes the nonresonant background susceptibility, and assumes that the pump laser has a finite linewidth. Temperatures are fit to experimental spectra recorded over the temperature range of 135 to 296 K, and over the pressure range of 0.13 to 15.3 atm. Emphasis is placed on the quantitative evaluation of single pulse rotational CARS as a temperature measurement technique. Dissert. Abstr.

COMPARISON OF REZONE ALGORITHMS FOR INCOMPRESSIBLE FLUID FLOW CALCULATIONS
M. M. Sussman Mar. 1981 25 p refs Backup document for AIAA Synoptic scheduled for publication in the AIAA Journal in Jul. 1982
(LOG-J12823) Avail: NTIS HC A02/MF A01

The state of the art in computational fluid dynamics has progressed to the point that the computations are performed using mesh grids which conform with temporally changing features of the flow solution itself. A comparison of two rezone algorithms designed to account for the effects of temporally changing mesh grids are presented in order to determine the one with the lesser adverse effect on the fluid flow solution. Of the two algorithms tested, the one based on interpolation is preferred over the one based on conservation of momentum. S.L.

EFFECTS OF ARC CURRENT ON THE LIFE IN BURNER RIG THERMAL CYCLING OF PLASMA SPRAYED ZrOSUB2-YSUB2OSUB3
R. C. Hendricks and G. McDonald 1982 9 p refs Presented at the 6th Ann. Conf. on Composites, Cocoa Beach, Fla., 17-21 Jan. 1982; sponsored by the American Ceramic Society
(NASA-TM-82795; E-1129) Avail: NTIS HC A02/MF A01 CSCL 20D

An analysis of thermal cycle life data for four sets of eight thermal barrier coated specimens representing arc currents (plasma gun power) of 525, 600, 800, or 950 amps is presented. The ZrO2-8Y2O3/NiCrAlY plasma spray coated Rene 41 rods were thermal cycled to 1040 C in a Mach 0.3-Jet A/air burner flame. The experimental results indicate the existance of a minimum or threshold power level which coating life expectancy is less than 500 cycles. Above the threshold power level, coating life expectancy more than doubles and increases with arc current. T.M.

PRELIMINARY INVESTIGATIONS ON THE INJECTION OF A COAL-OIL-SLURRY INTO THE BLAST FURNACE Final Report
Ulrich Rejek and Friedrich Hermann Franke Bonn Bundesministerium fuer Forschung und Technologie Dec. 1981 83 p refs Sponsored by the Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-221; ISSN-0340-7608) Avail: NTIS HC A05/MF A01

The flow and pumping behaviour and sedimentation of coal-oil-slurries as a function of concentration, temperature, coal and oil type, grain size, size distribution, pipe geometry etc. were determined. The results are intended to facilitate the planning of an injection plant and to enable an assessment of the economic feasibility of such a plant. The results show that for trouble-free transportation, (without undue increase in viscosity) the maximum coal concentration is 50 percent by weight with lignite coal-oil-slurries and 65 percent by weight with bituminous low volatile coal-oil-slurries at 80 C. A fine grinding of the coals leads to high viscosity in the slurries. The utilization of coarse particles leads to a rapid sedimentation at low velocities. T.M.

TURBULENT BOUNDARY LAYER HEAT TRANSFER EXPERIMENTS: CONVEX CURVATURE EFFECTS INCLUDING INTRODUCTION AND RECOVERY Final Report
T. W. Simon, R. J. Moffat, J. P. Johnston, and W. M. Kays Washington NASA Feb. 1982 217 p refs
(Grants NsG-3124; NAG3-3)
(NASA-CR-3510; HMT-32) Avail: NTIS HC A10/MF A01 CSCL 20D

Measurements were made of the heat transfer rate through turbulent and transitional boundary layers on an isothermal, convexly curved wall and downstream flat plate. The effect of convex curvature on the fully turbulent boundary layer was a reduction of the local Stanton numbers 20% to 50% below those predicted for a flat wall under the same circumstances. The recovery of the heat transfer rates on the downstream flat wall was extremely slow. After 60 cm of recovery length, the Stanton number was still typically 15% to 20% below the flat wall predicted value. Various effects important in the modeling of curved flows were studied separately. These are: the effect of initial boundary layer thickness, the effect of freestream velocity, the effect of freestream acceleration, the effect of unheated starting length, and the effect of the maturity of the boundary layer. An existing curvature prediction model was tested against this broad heat transfer data base to determine where it could appropriately be used for heat transfer predictions. S.L.

FLUID FLOW AND GAS DISPERSION IN STIRRED TANK REACTORS Ph.D. Thesis
Jouko Laine 1981 40 p refs
Avail: NTIS HC A03/MF A01

Fluid flows, heat transfer, and dispersion of gas in stirred tank reactors was studied. Dead zone formation of the used pseudoplastic slurries was examined theoretically and experimentally to discover a suitable scale up method for these reactors. The theoretical calculations are based on theories of maximum gas flow in stirred tank reactors, and on Kolmogoroff's theories on length and velocity scales of turbulence. A method was developed for estimation of the reactor response by means of matrices. With this model the response of $\delta(t)$-pulse or step response for both batch and continuous system can be calculated. M.D.K.

EVALUATION OF THE DESIGN, CONSTRUCTION AND OPERATION OF A GAS FUELED ENGINE DRIVEN HEAT PUMP

C. A. Phillips Jan. 1981 76 p refs
(ERG-034) Avail: NTIS HC A05/MF A01

The design, construction, testing, and evaluation of a gas fueled engine driven heat pump are considered. The heat pump, using air as its source of heat is driven by a 360 cc single cylinder marine engine converted to run on natural gas. The unit was built, installed in a laboratory, and underwent intensive performance testing. The heat pump works well and justifies the design assumptions made, having allowed for a poor performance from the particular engine used. At 6 C (ambient) an output of 14 kW with an overall efficiency or C.O.P. (total heat output/gas input) of 1.1 was achieved. Results compare favorably with a seasonal efficiency of a gas boiler of around 0.65 to 0.70. J.M.S.

CONVEC: A COMPUTER PROGRAM FOR TRANSIENT INCOMPRESSIBLE FLUID FLOW BASED ON QUADRATIC FINITE ELEMENTS. PART 1: THEORETICAL ASPECTS

H. Laval 1981 54 p refs Submitted for publication 2 Vol.
(EUR-7427/I-EN-Vol-1) Avail: NTIS HC A04/MF A01

The theoretical and numerical aspects of the finite element computer code CONVEC designed for the transient analysis of two-dimensional plane or three-dimensional axisymmetric incompressible flows including the effects of heat transfer are described. The governing equations are the time-dependent incompressible Navier-Stokes equations and the thermal energy equation. The finite element method (FEM) is employed as a basic spatial discretization technique. The elements included in CONVEC are the isoparametric and subparametric quadrilaterals and triangles with quadratic local temperature and velocity fields. The pressure is given by a linear approximation and is discontinuous from one element to the other. A finite difference explicit integration scheme is used to advance the solution in time. J.M.S.

N82-17461# Commission of the European Communities, Ispra (Italy). Joint Research Centre.

CONVEC: A COMPUTER PROGRAM FOR TRANSIENT INCOMPRESSIBLE FLUID FLOW BASED ON QUADRATIC FINITE ELEMENTS. PART 2: USER'S MANUAL

H. Laval 1981 69 p ref Submitted for publication 2 Vol.
(EUR-7427/II-EN-Vol-2) Avail: NTIS HC A04/MF A01

The computer code CONVEC is a general computer program designed for the solution of transient two-dimensional incompressible fluid flow problems. The solution procedure is based on the finite element method. The class of problems treated by the present version of CONVEC are those described by the time-dependent, two-dimensional (plane or axisymmetric) form of the Navier-Stokes equations. The flow field is assumed to be laminar and the fluid Newtonian and incompressible within the Boussinesq approximation. An energy equation is also included in the formulation for problems in which heat transfer effects are important. The specific types of flow problems for which CONVEC is suitable include: isothermal flow problems; free or forced convection problems; and convective-conductive heat transfer problems including solid body heat conduction. The input data necessary to access and execute the code is described. J.M.S.

UNIAXIAL MODEL FOR A GAS LOADED VARIABLE CONDUCTANCE HEAT PIPE

J. vanderVooren, A. A. H. Delil, and A. Sanderse 16 Jun. 1980 56 p refs
(Contract NIVR-1833)
(NLR-TR-80048-U) Avail: NTIS HC A04/MF A01

A uniaxial model for a gas loaded variable conductance heat pipe (VCHP) is developed. This model takes into account the diffusion at the vapor gas interface as well as the inertial effects of the moving vapor. Only steady state conditions are considered. The generally accepted Edwards/Marcus model is shown to be a first order approximation of this model. Also a criterion derived to identify the conditions under which the Edwards/Marcus model is feasible. Numerical examples will show that there are substantial discrepancies between the results of the Edwards/Marcus model and the present model for high values of the equivalent radial thermal conductivity of the condenser wall and wick and operating temperatures not too far from the freezing point of the working fluid. Author

AN IMPROVED FLAT FRONT MODEL FOR A GAS LOADED VARIABLE CONDUCTANCE HEAT PIPE

J. vanderVooren and A. Sanderse 16 Jun. 1980 26 p refs
(Contract NIVR-1833)
(NLR-TR-80049-U) Avail: NTIS HC A03/MF A01

A uniaxial flat front theory is presented for a gas loaded variable conductance heat pipe. The theory takes into account the inertial effects of the moving vapor, which can grow large under certain circumstances, but neglects the axial heat conduction of the wall and wick. A limited number of numerical examples indicates excellent agreement with the corresponding diffuse front theory. The differences with a similar flat front theory, which neglects the inertial effects of the moving vapor, can become substantial. In comparison with diffuse front based calculations, the computation times are very short. Author

INVERSE AXISYMMETRIC BODY STUDY

J. J. Eisenhuth and G. H. Hoffman 19 Aug. 1981 284 p refs
(Contract N00024-79-C-6043)
(AD-A107662; ARL/PSU/TM-81-177) Avail: NTIS HC A13/MF A01 CSCL 20/4

A potential flow inverse body method was used to generate a family of underwater bodies that would generally possess extensive laminar flow by the use of surface heat addition. Parameters specifying the pressure coefficient distribution were varied in order to find the limits of these parameters beyond which a body could not physically be generated. Length-to-diameter ratios and prismatic coefficients were computed as a function of the parameters. Specific cases representing the limits of parameters are used as examples in the graphical presentation of body contours and pressure coefficient distributions. Curves of temperature and heat flux distributions showing limits for the effective use of heat in suppressing boundary layer transition are also presented for these cases. Author (GRA)

THE COHERENT STRUCTURE OF TURBULENT MIXING LAYERS. 1: SIMILARITY OF THE PRIMARY VORTEX STRUCTURE. 2: SECONDARY STREAMWISE VORTEX STRUCTURE
Luis P. Bernal Jun. 1981 108 p refs
(Contracts N00014-76-C-76-C-0260; N00014-C-0365; NR Proj. 062-431)
(AD-A108049) Avail: NTIS HC A06/MF A01 CSCL 20/4

The primary spanwise organized vortex structure and the secondary streamwise vortex structure of turbulent mixing layers have been investigated. Flow visualization motion pictures of a constant density mixing layer were used to measure the properties of the large scale vortices. It was found that after an initial transition region mean properties of the large scale vortices reach the expected linear growth with downstream distance required by similarity. In the self-similar region, the vortex core area and visual thickness increase continuously during its life-span. A theoretical model of probability distribution function for the large-scale vortex circulation was developed. This distribution is found to be lognormal and to have a standard deviation, normalized with the mean of 0.28. From this model the mean life-span of the vortices could also be obtained and was found to be 0.67 times the mean life-span position. The streamwise streak pattern observed by Konrad (1976) and Breidenthal (1978) in plan-view pictures of the mixing layer was investigated, using flow visualization and spanwise concentration measurements. It was confirmed that this pattern is the results of a secondary vortex structure dominated by streamwise, counter-rotating vortices. A detailed description of its spatial relation to the primary, spanwise vortex structure is presented. From time average flow pictures, the onset position and initial scale of the secondary structures were determined. GRA

STREAMWISE VORTICITY DECAY DOWNSTREAM OF A THREE DIMENSIONAL PROTUBERANCE Final Report
C. W. Kitchens, Jr., N. Gerber, R. Sedney, and J. M. Bartos Oct. 1981 48 p refs
(DA Proj. 1L1-61102-AH-43)
(AD-A108080; ARBRL-TR-02375) Avail: NTIS HC A03/MF A01 CSCL 20/4

Streamwise vortices generated in bounary layers are known to persist for hundreds of boundary-layer thicknesses. This remarkable property is the main topic of this report. The particular case of the flow field generated by a three-dimensional protuberance immersed in a flat plate boundary layer is studied using numerical modeling. Experimental measurements in a downstream crossflow plane are used to construct initial data for a marching calculation using the boundary-layer and boundary-region approximations; the latter includes crossflow diffusion terms. The former fails to predict the flow field, but results from the latter agree qualitatively in aspects of the flow field determined from the measurements of Tani, et al., and are also in fair quantitative agreement. METHOD FOR CALCULATING THREE-DIMENSIONAL FLOW IN BLADED TURBOMACHINE BY USING ARBITARY QUASI PERPENDICULAR INTERSECTING PLANES
Xin Xiaokang and Jiang Jinliang 9 Oct. 1981 20 p refs
Transl. into ENGLISH from Li-Hseuh(Mechanics) (China), n. 2, 1977 p 106-113
(AD-A106475; FTD-ID(RS)T-0928-81) Avail: NTIS HC A02/MF A01 CSCL 20/4

The mutual influence between two groups of flow surfaces is simultaneously considered, so that no correction need to be made from each other by successive substitution between these two groups of flow surfaces. The theory of a variable curve sample is applied. After appropriate successive substitutions of spatial streamlines, the three dimensional solution of the entire blade channel can be directly calculated, including shapes of arbitrary S sub 1 and S sub 2 flow surfaces, shapes of spatial streamlines, and the distribution of flow parameters, such as velocity and pressure. As the first step in solving the real three dimensional flow field, the approximate hypothesis that the S sub 1 flow surface is a surface of revolution is applied. The solution obtained is basically still the quasi three dimensional solution. The next step is to eliminate the hypothesis that the S sub 1 surface is a surface of revolution in order to obtain the solution of a real three dimensional flow field. Then the curvature of S sub 1 flow surface can be calculated. Author

EXPERIMENTAL INVESTIGATIONS OF GAS TRANSPORT SYSTEMS [EXPERIMENTELLE UNTERSUCHUNGEN AN GAS-TRANSPORT-SYSTEMEN]
A. J. Hautojaervi (Helsinki Univ.) and W. J. Hiller Dec. 1980 31 p refs In GERMAN
(MPIS-30/1980; ISSN-0436-1199) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 7,65

The supply of single radioactive atoms or molecules (with gas as a carrying agent) to measuring instruments is discussed. Gas transport systems are of simple construction. When half life of the product is shorter, the transport time from reaction chamber to collection film has to be decreased. The carrying particles often get stuck in the tube wall because of its turbulent oscillation motion. The fast gas transport system and the current path for compressible and viscous medium and transport time measurements with electrically charged aerosols is pointed out. It is shown that the expected transport efficiency of radioactive particles and the strong yield changes in the relationships of transport time with half life time is an interesting method for calculating the separation process in two phase flow. APPLICATION OF THE ESCIMO THEORY TO THE OXIDATION OF METHANE IN A STIRRED REACTOR M.S. Thesis - London Univ.
M. E. Sherrington Sep. 1979 243 p refs
(HTS/79/14) Avail: NTIS HC A11/MF A01

An investigation into the reaction between methane and air under turbulent conditions in a stirred reactor is proposed. Problems arising in the modeling of turbulent flows involving exothermic chemical reaction are outlined and different approaches to a solution are reviewed. The ESCIMO theory is described. A computer code which applies the ESCIMO theory to the biographic features of the multistep hydrogen-oxygen reaction is outlined and the changes necessary for program adaption to methane-air reaction are discussed. Experimental studies on the chemical kinetics and flame propagation of the methane-air system are reviewed. Results from computer simulations on near stoichiometric methane-air mixtures reflect the existence of laminar flame speed control, stretching control, and chemical kinetics control burning regimes. Grid independence tests and step size control tests carried out on stretching regime indicate a cross stream grid of 40 nodes is acceptable. Author (ESA)

DENSITY MEASUREMENTS IN GAS PARTICLE FLOWS
L. Lourenco and M. L. Riethmuller May 1981 30 p refs
(VKI-TM-32) Avail: NTIS HC A03/MF A01

Concentration distribution measurement of the particulate phase in suspension of solid particles, having diameters > 100 microns, is discussed. An analog method which uses the linear proportionality law existing between the attenuation of a narrow light beam when crossing a particle cloud and particle density is compared with a digital method which counts particles crossing a control surface (a narrow light beam) per unit time. The digital method is best for a low particle density, the analog for high density. Neither method can measure local concentration values. An automatic gain amplifier improves the digital method accuracy. Author (ESA)

PROGRAM FINSUP: STEADY AND UNSTEADY SUPERSONIC FLOW IN CASCADES BY A FINITE ELEMENT METHOD
D. S. Whitehead 1981 27 p
(PB82-114612; CUED/A-TURBO/TR-105-1981; ISSN-0309-6521) Avail: NTIS HC A03/MF A01 CSCL 20D

The program runs in three sections. The first section generates the mesh, the second section calculates the steady flow through the cascade, and the third section calculates unsteady pressure distributions, force coefficients and moment coefficients due to translational and torsional motion of the blades. These sections are linked by a control program. Since the program assumes potential flow it cannot deal with wakes coming from upstream and shock waves are smeared. Flow round the leading edges of thick blades is correctly handled, and the program also allows for acoustic waves propagated upstream and downstream. GRA

BIFURCATING INSTABILITY OF THE FREE SURFACE OF A FERROFLUID Ph.D. Thesis
Evan Eugene Twombly 1981 73 p
Avail: Univ. Microfilms Order No. 8126459

A slab of ferro-fluid bounded below by a fixed boundary and above a vacuum was considered. If the fluid was subjected to a vertically directed magnetic field of sufficient strength, surface waves appeared. Equations which descibe this phenomena were derived. In the physical space no natural Banach space structure was available due to the free surface. A transformation of coordinates was made, mapping the surface flat. In the new coordinate system the equations define an operator between Banach spaces. The minimum eigenvalue of the linearized operator is the critical magnetic field strength where the planar surface loses stability. Using a generalized inverse of the Frechet derivative of the operator and the Implicit Function Theorem, the existence of a nontrivial branch of solutions was proved. A local stability criterion was also obtained and applied to three periodic structures: rolls, squares and hexagons. Dissert. Abstr.

A DIGITAL FIELD STRENGTH MEASURING RECEIVER FOR L. F. AND M. F.
A. P. Robinson and J. H. Causebrook Nov. 1981 12 p refs
(BBC-RD-1981/7) Avail: BBC, Kingswood Warren, Tadworth, Surrey, England

The measuring receiver gives a direct reading of field strength in decibels relative to 1 micro V/m for both the electric and the magnetic field components in the l.f. and m.f. broadcast bands. Digital techniques are used extensively to give simple and reliable operation. The receiver is suitable for making measurements on the move in a car, and an omni-directional magnetic field detector is provided. T.M.

HOLOGRAPHIC INTERFEROMETRY OF TRANSPARENT MEDIA WITH REFLECTION FROM IMBEDDED TEST OBJECTS
I. Prikryl and C. M. Vest Oct. 1981 26 p refs
(Grant NAG2-118)
(NASA-CR-168395; INTFL-8103) Avail: NTIS HC A03/MF A01 CSCL 14E

In applying holographic interferometry, opaque objects blocking a portion of the optical beam used to form the interferogram give rise to incomplete data for standard computer tomography algorithms. An experimental technique for circumventing the problem of data blocked by opaque objects is presented. The missing data are completed by forming an interferogram using light backscattered from the opaque object, which is assumed to be diffuse. The problem of fringe localization is considered. J.D.H.

ACOUSTIC GROUND IMPEDANCE METER
Allan J. Zuckerwar Dec. 1981 16 p refs Presented at the 102nd Meeting of the Acoustical Soc. of Am., 3 Dec. 1981
(NASA-TM-83227) Avail: NTIS HC A02/MF A01 CSCL 14B

A compact, portable instrument was developed to measure the acoustic impedance of the ground, or other surfaces, by direct pressure-volume velocity measurement. A Helmholz resonator, constructed of heavy-walled stainless steel but open at the bottom, is positioned over the surface having the unknown impedance. The sound source, a cam-driven piston of known stroke and thus known volume velocity, is located in the neck of the resonator. The cam speed is a variable up to a maximum 3600 rpm. The sound pressure at the test surface is measured by means of a microphone flush-mounted in the wall of the chamber. An optical monitor of the piston displacement permits measurement of the phase angle between the volume velocity and the sound pressure, from which the real and imaginary parts of the impedance can be evaluated. Measurements using a 5-lobed cam can be made up to 300 Hz. Detailed design criteria and results on a soil sample are presented. T.M.

A VELOCITY VECTOR MEASURING SYSTEM WITH 13 ASYMMETRIC WEDGE TYPE YAWMETERS
Teruomi Nakaya, Hideo Hoshio, and Masayoshi Noguchi Jun. 1981 20 p refs In JAPANESE; ENGLISH summary
(NAL-TR-674; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

In order to survey the flow field around the empennage of the NAL STOL research aircraft model in the 6m low speed wind tunnel, a velocity vector measuring system with 13 asymmetric wedge type yawmeters was developed. The rotational angle of the 13 probes and the setting angle of this system are automatically controlled following the sequence previously programmed into a minicomputer system. The hardware, control modes, data reduction, and data processing are described. The accuracy of the flow angle measurement turned out to be satisfactory, but measurements of dynamic pressure and static pressure were less accurate. An example of measurements taken of the flow field around the empennage of the STOL research aircraft model is included. A.R.H.

DEVELOPMENT OF A SIMPLE, SELF-CONTAINED FLIGHT TEST DATA ACQUISITION SYSTEM Progress Report
Ronald R. L. Renz Feb. 1981 208 p refs
(Grant NsG-4019)
(NASA-CR-168438; KU-FRL-407-6) Avail: NTIS HC A10/MF A01 CSCL 14B

A low cost flight test data acquisition system, applicable to general aviation airplanes, was developed which meets criteria for doing longitudinal and lateral stability analysis. Th package consists of (1) a microprocessor controller and data acquisition module; (2) a transducer module; and (3) a power supply module. The system is easy to install and occupies space in the cabin or baggage compartment of the airplane. All transducers are contained in these modules except the total pressure tube, static pressure air temperature transducer, and control position transducers. The NASA-developed MMLE program was placed on a microcomputer on which all data reduction is done. The flight testing program undertaken proved both the flight testing hardware and the data reduction method to be applicable to the current field of general aviation airplanes. A.R.H.

HIGH RESOLUTION 3-D WAVELENGTH DIVERSITY IMAGING Final Report, 1 Aug. 1980 - 31 Jul. 1981
N. H. Farhat 25 Sep. 1981 62 p refs
(Grant AF-AFOSR-0281-80; AF Proj. 2305)
(AD-A107832; EO/MO-4; AFOSR-81-0731TR) Avail: NTIS HC A04/MF A01 CSCL 20/3

A physical optics, vector formulation of microwave imaging of perfectly conducting objects by wavelength and polarization diversity is presented. The results provide the theoretical basis for optimal data acquisition and three-dimensional tomographic image retrieval procedures. These include: (a) the selection of highly thinned (sparse) receiving array arrangements capable of collecting large amounts of information about remote scattering objects in a cost effective manner and (b) techniques for 3-D tomographic image reconstruction and display in which polarization diversity data is fully accounted for. Data acquisition employing a highly attractive AMTDR (Amplitude Modulated Target Derived Reference) technique is discussed and demonstrated by computer simulation. Equipment configuration for the implementation of the AMTDR technique is also given together with a measurement configuration for the implementation of wavelength diversity imaging in a roof experiment aimed at imaging a passing aircraft. Extension of the theory presented to 3-D tomographic imaging of passive noise emitting objects by spectrally selective far field cross-correlation measurements is also given. Finally several refinements made in our anechoic-chamber measurement system are shown to yield drastic improvement in performance and retrieved image quality. Author (GRA)

CALIBRATION OF PYROELECTRIC RADIOMETERS FOR INFRARED FLARE MEASUREMENTS Final Report, Mar. 1978 - Sep. 1979
William E. Parish and Carl E. Dinerman 1 Aug. 1981 41 p refs
(AD-A107648; NWSC/CR/RDTR-144) Avail: NTIS HC A03/MF A01 CSCL 14/2

This report describes a set of pyroelectric radiometers which have recently been set up, successfully checked out, and are now in use for infrared flare plume radiation measurements. These radiometers meet the criteria of system linearity, fast rise time, complete commercial availability (no modification of electronics required, for example), ambient temperature operation, and reasonably flat spectral response from the visible to mid-infrared (about 15 micrometers). The instruments are presently being used (with the addition of bandpass filters) in the 3.0-4.0, 3.0-5.0 and 4.3-5.0 micrometer regions. Calibration procedures for these radiometers are described. The basis of the calibration procedure is an Electrically Calibrated Pyroelectric Radiometer (ECPR) which is traceable to the National Bureau of Standards. The ECPR is used only as a laboratory calibration device, and is a different instrument than the set of pyroelectric radiometers used for measurement of flare radiation. The ECPR is used to calibrate a blackbody. The ECPR is fitted with the band filter identical to the filters to be used with each pyroelectric radiometer. The blackbody is then used to calibrate each pyroelectric radiometer. These measurements are plotted to obtain a voltage versus irradiance calibration curve for each band being used with the pyroelectric radiometer system. Author (GRA)

DEVELOPMENT AND LABORATORY TESTING OF A THERMAL EMISSION VELOCIMETER FOR APPLICATION TO AN EROSION NOSE TIP TEST FACILITY Final Report, Jul. 1979 - Nov. 1980
James D. Trolinger and M. J. Houser Wright-Patterson AFB, Ohio AFWAL Aug. 1981 23 p refs
(Contracts F33615-76-C-3145; F33615-79-C-3030; AF Proj. 2404)
(AD-A107713; SDL-80-6526; AFWAL-TR-81-3080) Avail: NTIS HC A02/MF A01 CSCL 14/2

A thermal emission velocimeter concept was explored and a system was developed for use in measuring particle velocities up to 5,000 meters per second in a reentry erosion facility. The particles, ranging from 10 to 100 micrometers in diameter, are generated to study reentry nose tip erosion and ablation. The approach passively utilizes optical components of a laser transit anemometer coupled to a microprocessor data management system. The system was laboratory tested and has inherent characteristics which should produce quality data in the severe and noisy environment of a reentry test facility. The system sensitivity has been calculated to measure velocity of micrometer sized particles whose temperature are minimally 1700 K. Author (GRA)

A DURABLE, INTERMEDIATE TEMPERATURE, DIRECT READING HEAT FLUX TRANSDUCER FOR MEASUREMENTS IN CONTINUOUS WIND TUNNELS Final Report, 1 Oct. 1980 - 30 Jun. 1981
C. T. Kidd AEDC Nov. 1981 66 p refs
(AD-A107729; AEDC-TR-81-19) Avail: NTIS HC A04/MF A01 CSCL 14/2

The design and development of a high durability, intermediate service temperature (< or = 600 F), direct reading transducer for the measurement of aerodynamic heating in the continuous wind tunnels of the von Karman Gas Dynamics Facility is described. This transducer operates on the axial temperature gradient or Schmidt-Boelter measurement concept. Considerable emphasis is placed upon the practical use of finite-element, two-dimensional heat conduction code for analysis of gage behavior rather than the indiscriminate use of invalid exact mathematical solutions. Laboratory evaluation and calibration of prototype transducers at ambient temperature levels varying from 70 to 500 F are discussed. Results of wind tunnel aerodynamic heating measurements using limited numbers of prototype Schmidt-Boelter gages are presented. Recommendations for future work efforts with regard to further development and testing of this measurement concept are discussed. Author (GRA)

HYPERVELOCITY IMPACT INSTRUMENTATION DEVELOPMENT Final Report, 1 Oct. 1978 - 30 Sep. 1979
P. H. Dugger and R. E. Hendrix AEDC Nov. 1981 29 p refs
(AD-A107852; AEDC-TR-81-33) Avail: NTIS HC A03/MF A01 CSCL 19/4

The instrumentation capabilities of the Arnold Engineering Development Center (AEDC) von Karman Gas Dynamics Facility's (VKF) aeroballistic ranges have been expanded to facilitate studies of hypervelocity impact-related phenomena. Two instrumentation systems for characterizing clouds of debris resulting from impact have been developed and put to use: (1) An extremely high-speed sequential laser photography system provides photographic data describing debris cloud growth characteristics at framing rates from 10,000/sec to 10 to the 7th power/sec. This system can resolve debris particles as small as 0.0001 in. (2) X-ray shadowgraph systems with exposure times of 30 nsec can record debris velocity and mass data and can discern aluminum particles as small as 0.063 in. and steel particles as small as 0.031 in. Electromagnetic radiation generated by hypervelocity impact can be explored in a variety of ways. GRA

LEGIBILITY OF CHARACTERS WITH DIFFERENT SEGMENTATIONS AND COLORS
Hans-Joachim Reinig 1981 5 p refs Presented at 1st European Display Res. Conf. Eurodisplay 81, Munich, 16-18 Sep. 1981 Sponsored by Deutsche Forschungsgeimschaft
Avail: NTIS HC A02/MF A01

The legibility of electronically presented information, e.g., public transport timetables, was tested. The minimal and the optimal legibility conditions of short words in 5X7 dot matrix and 14 line segment characters were compared with the legibility of continuous characters. The words were presented by screen projection with decreasing size of characters with fixed distance to the subject (minimum legibility). Optimal legibility was determined subjectively. The size of characters of negative contrast has to be increased by 20 compared with positive contrast. The 5X7 dot matrix characters are as legible as continuous letters. The 14 line segment characters must be presented 1.3 times higher for the same legibility. White characters on blue background were preferred by most subjects. Author (ESA)

SPECIFICATIONS, TOLERANCES, AND OTHER TECHNICAL REQUIREMENTS FOR WEIGHING AND MEASURING DEVICES, 1982 EDITION
Sep. 1981 224 p
(PB82-113952; NBS-HB-44-1982) Avail: NTIS HC A10/MF A01 CSCL 14B

The specifications, tolerances and other technical requirements published herein comprise, in their latest form, all of the current codes as adopted by the National Conference on Weights and Measures. The Conference Committee on Specifications and Tolerances, acting at the request of the Conference or upon its own initiative, prepares from time to time, with the cooperation of the National Bureau of Standards, proposed revisions, amendments, or additions to the material previously adopted by the Conference. Such revisions, amendments or additions are then presented to the Conference as a whole, where they are discussed by weights and measures officials and representatives of interested manufacturers and industries. Eventually the proposals of the Committee are voted upon by the weights and measures officials. All of the specifications, tolerances, and other technical requirements given herein are recommended by the National Conference on Weights and Measures for official promulgation in and use by the several states in exercising their control of commercial weighing amd measuring apparatus. A similar recommendation is made with respect to the local jurisdictions within a state in the absence of the promulgation of specifications, tolerance, anc other technical requirements by a state agency. DEVELOPMENT AND EVALUATION OF AN AMBIENT VIABLE MICROBIAL AIR SAMPLER
Kerby F. Fannin and Stanley C. Vana Sep. 1981 102 p refs Prepared in cooperation with Inst. of Gas Technology
(Grant EPA-R-805864)
(PB82-113689; EPA-600/1-81-069) Avail: NTIS HC A06/MF A01 CSCL 14B

Studies were performed to evaluate the suitability of cyclone scrubber samplers and a continuously wetted substate for detection of several types of microorganisms. The samples were evaluated in a dynamic aerosol chamber using all glass impingers as reference samplers. Comparison of a stainless steel and a glass cyclone scrubber samples for detecting Bacilius subtilis var. niger spore aerosols of about 1.1 to 3 micrometers count median diameter showed no significant differences in their relative collection efficiencies. Based upon ease of construction, present usage, and potential availability, the glass cyclone scrubber was selected for further evaluation. This sampler showed geometric mean relative collection efficiencies, for B. subtilis var. niger spore aerosols, of 52% and 68%, depending upon the composition of the disseminating fluid. Author

KINETIC PROCESSES IN HIGH PRESSURE GASES: EXCITED STATE COLLISIONS Technical Report, Dec. 1980 - Dec. 1981
Laird D. Schearer 1 Dec. 1981 35 p refs
(Contract N00014-75-C-0477; NR Proj. 343-011)
(AD-A108128; TR-14) Avail: NTIS HC A03/MF A01 CSCL 20/5

A dense sodium vapor in a high pressure buffer of argon has been simultaneously excited by short (4 ns) laser pulses from two lasers: the first tuned to one of the D line transitions at 589 nm and the second tuned to the photoionization threshold of the 3p states near 406 nm. The temporal evolution of the system was studied with and without the photoionizing laser pulses. At early times (about 100 ns) excited state populations are determined by energy transfer collisions between two laser-excited 3p atoms while the ion/electron density is controlled by superelastic heating of seed electrons followed by electron impact ionization of excited state atoms. At late times (about 1 microsecond) excited state populations are controlled by collisional-radiative recombination processes. Excitation transfer rates into the 4d, 5d, 6d, and 6s levels are measured. The optical emission spectra of a recombining Na plasma is observed. The shift and broadening of the spectral line emission due to electron collisions is observed and the electron density calculated from shift measurements. The results agree well with electron densities obtained in the same system from Saha plots of excited state densities. Author (GRA)

SUBMILLIMETER LASER AND FABRY-PEROT SPECTROSCOPY USING METALLIC MESH Final Technical Report, Jun. 1978 - Jun. 1981
C. R. Pidgeon and B. W. Davis May 1981 79 p refs
(Contract DA-ERO-78-G-074; DA Proj. 1T1-61102-BH-57)
(AD-A107939) Avail: NTIS HC A05/MF A01 CSCL 20/5

An optically pumped submillimeter laser was constructed and investigated. Optical pumping with C-12O2-16 and isotopic C-13O2-16 were demonstrated. Using the isotopic (C-13)O2 laser 17 new submillimeter emissions were reported between 78.5 microns and 917 microns. The mode properties, stability, and tuning characteristics of the CO2 laser were discussed. Such measurements were taken with heterodyne techniques. Cooling effects on the isotopic (C-13)O2 laser were described and resulted in increases in both the number of observed lines and output power from the laser. A high power CW CO2 laser was also described and used in the search for new submillimeter emissions. The submillimeter waveguide laser designed gave powers in excess of 1 mW throughout the submillimeter region. The design was flexible to permit a choice of coupling and waveguides of various sizes. ELECTRON BEAM/LASER GLAZING OF IRON-BASE MATERIALS Annual Progress Report

Peter R. Strutt, B. G. Lewis, and M. Kurup Jul. 1981 100 p refs
(Contract N00014-78-C-0580)
(AD-A107559) Avail: NTIS HC A05/MF A01 CSCL 20/5

Research on directed energy source processing of hard-iron base materials demonstrates the effect of environment, alloy chemistry and processing parameters on the nature of the crystal structure, distribution, and compositional variation of phases. In molybdenum high speed steels, for example, it is found that segregation resulting from convective and turbulent flow during glazing may either result in large scale phase separation or compositional variation within a phase. Another example of the importance of processing conditions is a clear demonstration of the effect of small oxide particles in inducing martensite during laser processing. A detailed analysis has been made to determine the effect of deflection coil parameters on the distortion of surface area glazing patterns. This is particularly important in developing techniques for preparing uniform rapidly solidified layers. In studying molybdenum base high speed steels the value of the carbon content is found to be important in determining delta ferrite formation and the peritectic reaction of this phase to uniform austenite and carbide phases. In contrast to M2 (where the carbon concentration is 0.85wt%) a homogeneous gamma/alpha phase mixture forms in materials with a carbon content of > or = 1wt%, i.e. the alloys M7, and M42. However in these two materials combined convective and turbulent flow during glazing results in a significant composition variation of the refractory elements. Tempering largely removes this inhomogeneity and results in the formation of a homogeneous tempered martensite structure. A most important effect observed in M2, M7, and M42 was the shift to longer tempering times of material glazed at moderate to high beam velocities. GRA

NOTE ON PLANAR UNDULATOR WIGGLER SINGLE ELECTRON MOTION Final Report

Robert Cawley 15 Jun. 1981 26 p refs
(ZR00001)
(AD-A108051; NSWC/TR-81-227) Avail: NTIS HC A03/MF A01 CSCL 20/5

Single particle motion in a planar undulator wiggler free electron laser magnetic field configuration is set up and examined for the construction of invariants, preparatory to specifying beam equilibria for input to a Maxwell-Vlasov analysis. Two invariants are immediately available, the energy gamma and one component of transverse canonical momentum P sub y. In an effort to find a third invariant, or a basis of determination for an advantageous approximate third invariant, which can be associated with the axial periodicity of the field, a variable change having some interesting features is reported here. The axial motion between Z = + or infinity is converted to the oscillations of a particle in an infinitely long, axially reflecting box. The transit of a half-cycle of wiggler oscillation, absolute value of Delta Z = Pi/k sub 0, corresponds to a single bounce between Z = + or - infinity, where Z is the new coordinate. Transverse coordinates and velocities are continuous at each axial reflection from infinity. Author (GRA)

MEASUREMENT OF FLUORINE ATOM CONCENTRATIONS AND REACTION RATES IN CHEMICAL LASER SYSTEMS Annual Report, 23 Jul. 1980 - 23 Jul. 1981

Alan C. Stanton Sep. 1981 18 p refs
(Contract F49620-80-C-0100; AF Proj. 2301)
(AD-A108072; ARI-RR-272; AFOSR-81-0772TR) Avail: NTIS HC A02/MF A01 CSCL 20/5

The line positions of two components of the fluorine atom ground state fine structure transition were measured with diode laser absorption spectroscopy, using a water vapor pure rotational line at 404.077/cm as a wavelength reference. These results imply a spin orbit splitting for fluorine of 404.142 + or - 0.01/cm. Further experiments planned in the program will provide data on the temperature dependent line broadening parameters for foreign gas broadening of the F atom transitions. In addition, F atom recombination rates will be studied using the diode laser measurements technique. It is anticipated that the results of this program will provide all data required for implementation of this technique as an in-situ F atom diagnostic in chemical laser systems. GRA

A 16 MUON CO2 BENDING MODE LASER SYSTEM

W. H. Kasner (Westinghouse Research and Development Center, Pittsburgh, Pa.), V. A. Toth (Westinghouse Research and Development Center, Pittsburgh, Pa.), and M. A. Akerman 2 Jun. 1981 19 p ref Presented at the Conf. on Lasers and Electro-Optics, Washington, D.C., 10 Jun. 1981
(Contract W-7405-eng-26)
(DE81-030123; K/ET-5023; CONF-810613-11) Avail: NTIS HC A02/MF A01

A 16 bending mode laser system yielding output energies of 40 to 50 mJ/pulse is described. This system uses resistor ballasted pin-pin electrodes and transverse pulsed electrical discharge excitation of cold C2:N2:He gas mixtures. DOE

N82-17499# Technische Hogeschool, Delft (Netherlands). Dept. of Aerospace Engineering.
SOME RESULTS OF NUMERICAL EXPERIMENTS ON THE COMPUTATION OF THE KOOTWIJK AND WETTZELL SATELLITE LASER RANGING STATION COORDINATES
K. F. Wakker and B. A. C. Ambrosius Sep. 1981 11 p refs Presented at 4th LAGEOS Working Group Meeting, Greenbelt, Maryland, Sep. 1981
(VTH-M-409) Avail: NTIS HC A02/MF A01

Results from a study of the effects on orbital and parameter solution of spatial, temporal, and geographical distribution of laser ranging data are presented. Data arcs from LAGEOS, Starlette and GEOS 3 are summarized. The LAGEOS solution for the Wettzell coordinates is unaffected by the selection of gravity model. The Starlette estimate varies by several meters. The best GEOS 3 result is obtained using GEM 10 B. Wettzell is placed 17m eastward of the Modified New Orleans coordinate estimate. The LAGEOS solution for the Kootwijk-Wettzell baseline agrees well with other solutions. Author (ESA)

PRELIMINARY RESULTS OF SEASAT ORBIT DETERMINATIONS FROM LASER RANGE AND EUROPEAN DOPPLER RANGE-RATE OBSERVATIONS
K. F. Wakker, B. A. C. Ambrosius, and T. vanderPloeg Sep. 1981 19 p Presented at 4th LAGEOS Working Group Meeting, Greenbelt, Md., Sep. 1981
(VTH-M-411) Avail. NTIS HC A02/MF A01

A Seasat data arc is analyzed in order to: gain experience in computing accurate orbits from laser ranging data; assess gravity and surface force model accuracy; determine the positions of five European Doppler stations relative to a global NASA ground station coordinate solution; and study the effects of European Doppler range-rate data on the orbital solution. The PGS S3 and S4 models yield better results than GEM 9 or GEM 10B. More data must be analyzed since one arc is not representative, especially considering that orbital coverage in that arc is not good. Author (ESA)

KALMAN FILTER SATELLITE ORBIT IMPROVEMENT USING LASER RANGING MEASUREMENTS FROM A SINGLE TRACKING STATION
K. F. Wakker and B. A. C. Ambrosius Sep. 1981 18 p refs Submitted for publication Sponsored by Ministry of Education and Delfts Hogenshoolfonds
(VTH-M-414) Avail: NTIS HC A02/MF A01

The accuracy of a computer program (SORKA) which uses the laser range observations acquired at one tracking station in order to provide real time position prediction updates during a pass is assessed. The program is compared with a GEODYN GEOS 1 orbit solution. State vector differences are interpreted as SORKA estimate errors and are transformed into errors in the classical orbital elements as well as into radial, cross track and along track errors. The program was also applied to simulated GEOS 3 data. Results are presented for three GEOS 1 passes. Total position errors before the processing of the first observation of the second and third pass, (primarily errors in cross track and along track direction) are so small that at the first laser firings during the second and third pass the satellite is within the laser beam. INVESTIGATION OF D2O LASER EMISSION AT 50, 66, 83, 111, AND 116 MICRONS
G. Dodel and N. G. Douglas Aug. 1981 37 p refs Submitted for publication Sponsored in part by German Academic Exchange Service
(IPF-81-6) Avail: NTIS HC A03/MF A01

The far IR laser transitions in D2O, pumped by the 9P(32) line of a multimode CO2 TEA laser, were investigated. A line at 111 microns is reported. The spectral properties of the strongest lines (66, 111, 116 microns) were studied. Strong frequency pulling at 66 microns was observed. Suppression of axial modes was below that required, e.g., by a heterodyne Thomson scattering experiment. The 50 micron transition exhibits an unexplained afterpulsing at low pressures. At 111 microns a double pulse seen at certain pressures is attributed to the double nature of the transition. The dominant component displays a smooth pulse shape, making it suitable for Thomson scattering applications if it can be scaled to the necessary power level. Author (ESA)

INVESTIGATION OF A CASCADE LASER SYSTEM: THE EXCITATIONS AND INTERACTIONS OF N SUB 2 IN THE ULTRAVIOLET AND THE NEAR INFRARED Ph.D. Thesis
John Slaven Kruger 1981 276 p
Avail: Univ. Microfilms Order No. 8125428

Optical Interactions between electronic vibrational states of the diatomic N2 molecule are studied. Laser oscillation in N2 occurs quite readily in electrical discharges on an ultraviolet and a near infrared (IR) system of emission bands, among others. While the mechanisms that produce population inversions for the uv oscillation have previously been established for the most part, the dominant mechanisms for the IR bands were not at all certain. Specific information about N2 as a lasing material was sought. It was determined that the IR laser transitions are excited partly through a cascade involving UV laser transitions. A concise theory of cascade interactions and excitations was developed to predict both spontaheous and stimulated emission strengths. A more sophisticated theory which took the electron energy distribution of the laser's excitation into account was used to predict spectra. The typical 3 level rate equation theory was extended for a pulsed laser application to a 4 level system including cascade. This research concluded that the Frank-Condon Principle is a powerful quantitative tool for analyzing interactions. Dissert. Abstr.

AN INVESTIGATION OF THE EARLY DETECTION OF DEFECTS IN BALL BEARINGS BY THE VIBRATION MONITORING
Shoji Hoshiya, Katsumi Seki, Kenji Nishio, and Toshio Miyachi Jul. 1981 21 p refs In JAPANESE; ENGLISH summary
(NAL-TR-675; Rept-2; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

Utilizing a life test rig for rolling element bearings, the time histories of the vibration of grease lubricated test ball bearings were monitored. Vibration was detected by a piezoelectric accelerometer mounted on the bearing housing and was recorded by a magnetic tape recorder which was controlled by a microcomputer. In total, twenty-seven bearings were tested, and flaking failures were generated in twenty-six of them; nineteen on the outer races, five on the inner races and two on the balls. In most cases, flakings grew gradually with obvious changes of vibration, thus enabling the early detection of the defects in the bearings. However, in some bearings, flakings were generated very rapidly, limiting the usefulness of the condition monitoring. Author

THE APPLICATION OF MECHANICAL CLAMPS TO PORTSMOUTH CONNECTORS Final Report
D. E. Glowe and S. L. Arnett 23 Nov. 1981 73 p
(Contract N00173-79-C-0129)
(AD-A107632; NRL-MR-4602) Avail: NTIS HC A04/MF A01 CSCL 13/9

The efficiency of mechanical clamps applied to the molded boot of the MIL-C-24231 (Portsmouth) underwater connector was investigated. A mission profile for underwater connectors was prepared and used to design laboratory test sequences to evaluate connector leakage. A test connector was designed that incorporated the important features of the Portsmouth connector with the addition of leakage monitors in the construction so that leakage paths in the connector could be identified during test. Construction variables of polyurethane or neoprene boots, both bonded and unbonded, clamp design and shielded or unshielded cable were investigated using factorial experimental design and analysis. A preferred clamped connector configuration was determined. Preferred test connectors were manufactured using bonded neoprene boots, shielded cable and Band-It Preform clamps and compared to a standard non-clamped polyurethane connector in accelerated life testing. It was determined that a mechanical clamp inhibits leakage in a connector. Although applying a clamp to a connector does not insure water-tight integrity, it was found that after 32 weeks of accelerated life testing, 78% fewer clamped connectors leaked than the control unclamped connectors. The data also indicated that neoprene and polyurethane bonds degrade with time but connectors made with neoprene molded boots were less likely to leak through a bond interface than those made with polyurethane molded boots. INITIAL ASSESSMENT OF SELECTED ADVANCED LUBRICATING OIL FILTERS

D. Hilyard Sep. 1981 31 p refs
(Contract DE-AC19-80BC-10256)
(DE82-002420; DOE/BC-10256/1) Avail: NTIS
HC A03/MF A01

The potential effectiveness of advanced oil filters that claim to re-refine the oil on-board a vehicle or claim either never-drain or extended drain benefits is discussed. It was concluded that so-called re-refining filters do not actually re-refine in-service motor oil nor do they prevent depletion of additives. It was also concluded that these advanced filters may remove particles smaller than a standard oil filters removes, but the benefits are questionable. DOE

FIELD DEMONSTRATION OF THE CONVENTIONAL STEAM DRIVE PROCESS WITH ANCILLARY MATERIALS Annual Report, 1 Oct. 1979 - 30 Sep. 1980

Ron Bowman Oct. 1981 133 p refs
(Contract DE-FC03-79SF-10761)
(DE82-003040; DOE/SF-10761/1; AR-1) Avail: NTIS
HC A07/MF A01

The applicability of foams to achieve mobility control and/or permeability reduction of injected steam in steam drive operations was tested. Foam chemicals were screened for thermal stability and the foam systems in porous media were emplaced. The compatibility of the emplacement techniques and the capacity of the chemical system to achieve a significant measure of mobility control over injected steam was verified. The two major reservoir problems in steam drive operations are addressed: the flow of steam through thief zones or other channels that exist at the outset of initiating operations, and the progressive increase in channelling of steam through the oil depleted, steam swept zone. DESIGN, FABRICATION, AND EVALUATION OF A SPIRAL-FLOW LETDOWN VALVE Final Report

H. J. Balhouse Sep. 1981 68 p refs
(DE82-900863; EPRI-AP-2044) Avail: NTIS
HC A04/MF A01

A letdown valve with spiral-flow trim designed for coal liquefaction plant service was designed and tested. Letdown valves in these plants have tended to fail in a very short time due to rapid erosion of the valve trim. In the spiral-flow design, erosion is reduced by keeping velocity at a low, constant level through friction loss in a long spiraling flow path. In a field test at the SRC-1 pilot plant, the valve controlled the processes flow for over 34 hours before it became inoperative as a result of plugging due to accumulation of solids in operational areas. It is concluded that in order to realize the potential advantages of the spiral-flow concept, more development effort is needed in the areas of prevention of plugging and the application of erosion-resistant materials and coatings. Directions for future work in these areas, plus application of the concept to a non-cavitating liquid letdown valve and other pressure reduction devices, are discussed. DOE

FLING-OFF COOLING OF STRAIGHT SPUR GEARS

G. J. J. vanHeijningen Nov. 1981 47 p refs In DUTCH; ENGLISH summary
(WTHD-136) Avail: NTIS HC A20/MF A01

For straight spur gear teeth, withdrawal of friction generated heat from the meshing zone was investigated. Fling-off cooling techniques include conventional intermittent cooling where oil is supplied to each tooth face once per revolution of the gear. This involves a sequence of intermittent, transient forced heat convection processes. Fling-off cooling through continuous supply of oil at the roots of the gear teeth faces, e.g., through holes connecting with a manifold inside the wheel rim, also exists in contrast to continuous fling-off cooling where root supply occurs naturally through impingement of comparatively cool droplets from oil mist in the gear casing. Theory and experiment show that in intermittent cooling even moderate supply rates of gear oil to the teeth faces suffice for attaining the limiting cooling capacity inherent in the conventional centrifugal fling-off process, except for heavy-duty gears. The cooling potential of both continuous methods is examined and compared with intermittent cooling. Author (ESA)

HC A02/MF A01

Torque measurements on a scale model of a SPOT satellite type, three axis stabilization reaction wheel were made. The sensing scheme of the command electronics and calibration of the tachometer are described. Counter-rotation torque is measured off the wheel axis of rotation. Characterization of the wheel bearings is emphasized. The magnetic bearing field configuration is shown, and transversal stiffness measurement of the rotor, high speed (2700 r.p.m.) friction torque measurement around the wheel axis of rotation, and measurement of the magnetic bearing torque at very low spin rate are depicted. Measurement results are presented. Author (ESA)

ULTRASONIC AND MECHANICAL CHARACTERIZATIONS OF FATIGUE STATES OF GRAPHITE EPOXY COMPOSITE LAMINATES Final Report
James H. Williams, Jr., Hursit Yuce, and Samson S. Lee Washington NASA Jan. 1982 26 p refs
(Grant NsG-3210)
(NASA-CR-3504) Avail: NTIS HC A03/MF A01 CSCL 20K

Eight-ply (0, + or - 45, 0)s laminates of Hercules AS/3501-6 graphite epoxy composite are fabricated using various cure pressures ranging from 0.52 to 0.86 MPa and cure temperatures ranging from 150 C to 200 C. In general, the minimum composite void volume fraction is obtained at a cure temperature of 175 C and a cure pressure of 0.86 MPa, or at 200 C and 0.86 MPa. The ultrasonic attenuation at 4 MHz was found to correlate with the composite void volume fraction. Composite specimens were tested in flexural fatigue. Beyond 10,000 fatigue cycles, the ultrasonic attenuation at 4 MHz was found to increase and the flexural stiffness was found to decrease. The ultrasonic attenuation at 4 MHz of the as-fabricated composite can be correlated with the number of fatigue cycles to failure. Author

COMPARISON BETWEEN RELIABILITY, SENSITIVITY AND ACCURACY OF NONDESTRUCTIVE INSPECTION METHODS
Eric A. B. deGraaf and Paul deRijk 31 Mar. 1981 15 p refs Presented at 13th Symp. on Nondestructive Evaluation, San Antonio, 21-23 Apr. 1981
(NLR-MP-81009-U) Avail: NTIS HC A02/MF A01

A number of inspection methods in frequent use were applied to one hundred aluminium specimens fabricated purposely by the NLR, as well as to more than 220 rejected steel components of real aircraft undercarriages. It is shown that there exists a fair amount of scatter between the results of different techniques and inspectors and also between subsequent inspections by one inspector. Corrosion has a significant influence on reliability, sensitivity, and accuracy. The results of the ultrasonic inspections turn out to be rather disappointing, whereas the results of penetrant inspections tend to depend rather heavily on the specimen configuration. Fluorescent penetrant performs far better than red penetrant. Eddy current gives good moderate results. On the steel components fluorescent magnetic ink as well as magnetic rubber achieve by far the best results, at the penalty of a fair amount of spurious indications. A.R.H.

ACCELERATED LIFE TESTING UNDER COMPETING EXPONENTIAL FAILURE DISTRIBUTIONS
John P. Klein and Asit P. Basu Jul. 1981 29 p Prepared in cooperation with Ohio State Univ., Columbus
(Contract N00014-78-C-0655)
(AD-A107626; TR-108) Avail: NTIS HC A03/MF A01 CSCL 12/1

Accelerated life testing of a product is commonly used to estimate parameters of devices with extremely long lifelines. The problem of analyzing accelerated life tests when the product can fail from any one of p independent causes is considered. For each component it is assumed that the time to failure distribution is exponential with a hazard rate which follows a 'power rule.' The method of maximum likelihood is used to obtain estimators of the power rule parameters when the life test is either type I, type II, or progressively censored. Estimators of each component's mean failure time and survival function are obtained. Estimators of system or subsystem survival functions are also obtained. Results of a simulation study are presented. Author (GRA)

(NASA-CR-159115; QTPR-6) Avail: NTIS HC A03/MF A01 CSCL 20K

The development of several types of graphite/polyimide (GR/PI) bonded and bolted joints is reported. The program consists of two concurrent tasks: (1) design and test of specific built up attachments; and (2) evaluation of standard advanced bonded joint concepts. A data base for the design and analysis of advanced composite joints for use at elevated temperatures (561K (550 deg F)) to design concepts for specific joining applications, and the fundamental parameters controlling the static strength characteristics of such joints are evaluated. Data for design and build GR/PI of lightly loaded flight components for advanced space transportation systems and high speed aircraft are presented. Results for compression and interlaminar shear strengths of Celion 6000/PMR-15 laminates are given. Static discriminator test results for type 3 and type 4 bonded and bolted joints and final joint designs for TASK 1.4 scale up fabrication and testing are presented. E.A.K.

STRESS EVALUATIONS UNDER ROLLING/SLIDING CONTACTS Final Report

J. W. Kannel and J. L. Tevaarwerk 30 Oct. 1981 54 p refs
(Contract NAS3-22808)
(NASA-CR-165561; G7782) Avail: NTIS HC A04/MF A01 CSCL 20K

The state of stress beneath traction drive type of contacts were analyzed. Computing stresses and stress reversals on various planes for points beneath the surface were examined. The effect of tangential and axial friction under gross slip conditions is evaluated with the models. Evaluations were performed on an RC (rolling contact) tester configuration and it is indicated that the classical fatigue stresses are not altered by friction forces typical of lubricated contact. Higher values of friction can result in surface shear reversal that exceeds the stresses at the depth of maximum shear reversal under rolling contact. E.A.K.

AN INVESTIGATION OF DYNAMIC-ANALYSIS METHODS FOR VARIABLE-GEOMETRY STRUCTURES Final Report

Fred Austin Dec. 1980 280 p refs
(Contract NAS9-15895)
(NASA-CR-167498; CSS-SSS-RP002) Avail: NTIS HC A13/MF A01 CSCL 20K

Selected space structure configurations were reviewed in order to define dynamic analysis problems associated with variable geometry. The dynamics of a beam being constructed from a flexible base and the relocation of the completed beam by rotating the remote manipulator system about the shoulder joint were selected. Equations of motion were formulated in physical coordinates for both of these problems, and FORTRAN programs were developed to generate solutions by numerically integrating the equations. These solutions served as a standard of comparison to gauge the accuracy of approximate solution techniques that were developed and studied. Good control was achieved in both problems. Unstable control system coupling with the system flexibility did not occur. An approximate method was developed for each problem to enable the analyst to investigate variable geometry effects during a short time span using standard fixed geometry programs such as NASTRAN. The average angle and average length techniques are discussed. A.R.H.

APPLICABILITY OF LINEAR ELASTIC FRACTURE MECHANICS TO RIGID PVC PIPE MATERIALS

A. Y. Darwish, J. F. Mandell, and F. J. McGarry Feb. 1981 22 p refs
(MIT-RR-R81-1) Avail: NTIS HC A02/MF A01

The results presented support the use of linear elastic fracture mechanics when validity criteria similar to those used for metals are applied. Failure to consider test validity may yield meaningless results in many cases. Razor blade precracking produces acceptable crack tips under these test conditions. The room temperature behavior of polyvinyl chloride (PVC) specimens in the size range tested varies from notch insensitive to K sub Ic controlled when the displacement rate is varied by 2 to 3 orders of magnitude. L.F.M.

N82-17524# Massachusetts Inst. of Tech., Cambridge. Dept. of Materials Science and Engineering.

APPLICABILITY OF PLANE STRAIN FRACTURE TOUGHNESS TESTING TECHNIQUES TO POLYETHYLENE PIPE MATERIALS

D. R. Roberts, J. F. Mandell, and F. J. McGarry Apr. 1981 28 p refs
(MIT-RR-R81-3) Avail: NTIS HC A03/MF A01

Medium density polyethylene samples were tested to determine the applicability of plane strain fracture toughness testing techniques. Variables such as notch shape, notch root radius, and specimen thickness was studied to determine empirically what requirements exist for each. Temperature and loading rate were also varied. Higher temperatures and slower loading rates fracture is controlled by the yield strength of the material. At lower temperatures and faster loading rates fracture is toughness controlled. In this latter regime valid fracture toughness measurements can be made. Predictions from these tests of burst pressure of notched, 250 mm diameter pipe were verified in large scale burst tests. S.L.

NECKING, FRACTURE AND LOCALIZATION OF PLASTIC FLOW IN METALS Ph.D. Thesis

A. S. Korhonen 1981 51 p refs
Avail: NTIS HC A04/MF A01

The basic equations of the mechanics of matter are reviewed, and examples of different constitutive equations presented. The application of the basic equations in plasticity is then discussed in more detail with special reference to the problem of localization of plastic flow. The criteria for diffuse and localized necking are presented and the possibility of delaying the necking and obtaining large uniform and limit strains is then discussed. The possibilities of applying the necking criteria in hydraulic bulging and in deep drawing are also considered. The possibility of explaining the observed ductile fracture patterns in plan stress, plane strain and under axial symmetry is studied and a qualitative agreement is found in all cases. N.W.

N82-17526# Southampton Univ. (England). Inst. of Sound and Vibration Research.

SOME ASPECTS OF THE NONLINEAR VIBRATIONS OF A CLAMPED-CLAMPED ALUMINIUM BEAM AND COMPARISON WITH A CARBON FIBER REINFORCED PLASTIC BEAM

M. M. K. Bennouna Mar. 1980 250 p refs
(ISVR-TR-108) Avail: NTIS HC A11/MF A01

The nonlinear vibration of a carbon fiber reinforced plastic beam and a clamped-clamped aluminium beam, due to large deflections of the order of double the beams thickness is examined and compared. The frequency response approach is used to study the damping and stiffness at large amplitudes. The fundamental mode shape is examined and curve fitting via polynomial approximation is used to determine the effect of large amplitude vibrations on the mode shape and its first and second derivatives. The effect of vibration amplitude is investigated via numerical integration. The harmonic distortion of flexural deflection and its effect on the mode shape estimation is examined. The bending strain, axial strain and total strain due to static loading at large deflections are examined at several stations along the length of the beam. Their harmonic distortion is also investigated as a function of position along the beam and at large deflections. A comparison between measured dynamic strains and those predicted from a simple theoretical model showed reasonable agreement between the two cases. R.J.F.

OXIDE FORMATION INSIDE A CYCLICALLY LOADED CRACK AND ITS EFFECT ON ENVIRONMENTAL ENHANCED CRACK GROWTH RATE IN 93 C WATER

G Gabetta and C Fossati 1981 27 p refs Presented at IAEA Specialists' Meeting on Subcritical Crack Growth, Freiburg, West Germany, 13-15 May 1981
(Contract ISMAT-900)
(CISE-1705) Avail NTIS HC A03/MF A01

Tests were performed in demineralized water at 93 C on pressure vessel steel with the purpose of obtaining crack growth rate data and information on the environmental mechanisms at two different temperatures. The effect of the oxygen content in water was studied: two oxygen concentrations were chosen, deoxygenated water and oxygen saturated water. Results show that an oxide layer forms inside the crack at the higher oxygen concentration and that the oxide layer causes a kind of 'crack closure'. A few thousand cycles are necessary for the formation of a detectable oxide layer. The oxide formation is probably related to the deformation rate at the crack tip. R.J.F.

IMPLEMENTATION OF ANISOTROPIC AND NONLINEAR THERMAL STRESS MODELS IN ADINA 78 Final Report, Aug. 1980 - Feb. 1981
Robert S. Dunham and Dale E. Ranta Aug. 1981 78 p refs
(Contract N00173-80-C-0385)
(AD-A108085; PT-U81-0489-Rev-1) Avail NTIS HC A05/MF A01 CSCL 13/13

This report describes the improvements made to the ADINA 78 finite element computer codes in order to permit the solution of structural response problems involving very rapid heating. A material model was added to the two- and three-dimensional continuum element types which permits the modeling of temperature dependent thermoelastic anisotropic material properties. A different material model was also added for these same continuum element types which permits the modeling of strain and temperature dependent thermoelastic anisotropic material properties. A major goal of this work was to render ADINA 78 operational on the ASC computer at the Naval Research Laboratories as well as to improve the computational efficiency of the code by vectorizing the most important loops. This work and various benchmark test cases are also described. Author (GRA)

PATCHES-III is a computer program for the analysis of general three-dimensional composite structures and materials. The program constructs solid geometry models and material distribution models using parametric cubic basis functions. Available finite elements range from the 64 node CCC element to the 4 node LLX element for axisymmetric models. The User's Manual is the dictionary or archive source for definitions of all available program options. The program determines the linear elastic response of fully anisotropic composites to thermal loads, mechanical loads and imposed displacements. Author (GRA)

A CLOSED FORM LOCAL SOLUTION OF A NONLINEAR STRUCTURAL DESIGN PROBLEM IN TERMS OF THE DESIGN PARAMETERS Scientific Report
Anthony V. Fiacco and Abolfazi Ghaemi 10 Aug. 1981 27 p refs
(Contract N00014-75-C-0729; NR Proj. 347-020)
(AD-A107669; SERIAL-T-449) Avail NTIS HC A03/MF A01 CSCL 13/13

Using the results of previous analysis of the corrugated bulkhead model, a closed form of the optimal solution of this model is easily derived as a function of the many design parameters. The analytic solution is valid over large changes in the parameters. This demonstrates the possibility of making very accurate (in this instance, exact) local estimates of a markedly nonlinear parametric solution, once one solution is found, even though the original problem statement might appear to make this prohibitive. It is shown that the local parametric solution obtained can be extended to include large changes in the parameters, particularly when the parametric perturbations are restricted and highly structured, as is typical in practical applications. Aside from the practical value of such a result, it is reported because this problem is well publicized and has been utilized for some time as a test problem. Knowledge of the precise solution for a range of parameter values provides ideal information for further studies. Author (GRA)

DISTRIBUTION THEORETIC METHODS FOR DYNAMIC ANALYSIS AND OPTIMIZATION OF MECHANISMS WITH INTERMITTENT MOTION Final Report
Edward J. Haug and Roger A. Wehage 1 Nov. 1981 9 p refs
(Contract DAAG29-79-C-0221)
(AD-A108021; ARO-16635.4-M) Avail NTIS HC A02/MF A01 CSCL 20/11

A computer aided dynamic and design sensitivity analysis technique for planar dynamic systems undergoing intermittent motion is developed and applied. Planar dynamic systems made up of multiple rigid bodies connected by joints and force elements are modeled. A constrained dynamic system approach that accounts for discontinuous velocities associated with impulsive loading and impact between bodies is developed. A new numerical integration technique for mixed differential and algebraic equations that automatically defines and integrates for independent generalized coordinates has been developed. It has demonstrated an order of magnitude improvement in computing efficiency compared to preceding techniques. Intermittent motion dynamic effects due to impulsive loading or impact have been incorporated into the dynamic simulation, using a pieced interval dynamic analysis technique in which momentum balance relations are used to determine discontinuities in velocity at logical event times. This technique has been demonstrated on multibody, multiple contact point applications in mechanisms and automatic weapons. To assist in design optimization of mechanical system dynamics an adjoint variable design sensitivity analysis technique has been developed for calculation of first and second order derivatives of dynamic response with respect to design. Numerical calculations have demonstrated that accurate first and second derivatives can be obtained for moderate scale dynamic systems. Author (GRA)

EVALUATION OF SEVERAL BONDING PARAMETERS ON THE RANDOM BENDING FATIGUE LIFE OF ADHESIVELY BONDED ALUMINUM JOINTS Final Report, Jun. 1978 - Nov. 1980
Howard F. Wolfe, Carl L. Rupert, and Herbert S. Schwartz Aug. 1981 57 p refs
(AF Proj. 2401)
(AD-A107995; AFWAL-TR-81-3096) Avail NTIS HC A04/MF A01 CSCL 11/6

Eighteen adhesively bonded aluminum coupons were tested on a vibration shaker at room temperature to determine the effects of varying the adhesive type/thickness, primer and adherend surface preparation on their random bending fatigue life. Most of the fatigue failures occurred within one million to one billion cycles, all at 900 microstrain. While neither the primer thickness nor the surface treatment seemed to influence the overall results, the coupons with thicker adhesive had a noticeable shorter fatigue life. Fractographic analyses of the failed adhesive

surfaces showed the locus of fracture for all coupons was predominantly within the adhesive. The nitrile phenolic adhesive demonstrated a better fatigue resistance than the nitrile epoxy.

STRESS ANALYSIS AND TEST PHILOSOPHY FOR WIND ENERGY CONVERTER BLADES
H. Bansemir and K. Pfeifer 1980 28 p Presented at 4th Meeting of Experts on Rotor Blade Technol. with Special Respect to Fatigue Design Probl., Stockholm, 21-22 Apr. 1980
(MBB-UD-300-80-O) Avail: NTIS HC A03/MF A01

Projected wind energy converter blades for a 5MW plant are described and analyzed. The calculation of laminate cross-section properties as well the overall behavior of the blade is considered. Special attention is given to the bolted area and to the compression stresses in the blade, because it is mainly loaded by bending moments. Tests performed in order to obtain basic data of the materials used in the design are discussed. Special components such as the bolted area are tested by static and dynamic loads. Finally the strains in the entire blade under load and the eigenfrequencies are measured.

PAST, PRESENT AND FUTURE OF SHELL STABILITY ANALYSIS
J. Arbocz May 1981 56 p refs Presented at DGLR Jahrestagung, Aachen, 12-14 May 1981
(VTH-LR-320) Avail: NTIS HC A04/MF A01

The development of the lower bound design philosophy is summarized and the theory of imperfection sensitivity is outlined. Empirical knockdown factors are applied to the results of the classical small deflection theory. The knockdown factor is chosen so that its product with the classical buckling load leads to a lower bound to all the experimental data for the shell loading configuration. By properly accounting for the effect of the initial imperfections and by taking the correct experimental boundary conditions into account, close correlation between the theoretical predictions and the experimental values is achieved. Characteristic initial imperfection distributions associated with fabrication are shown. Reliability curves obtained via the stochastic analysis of the experimentally measured initial imperfections are introduced. This concept offers a way of including the notion of imperfection sensitivity routinely into the shell design procedures.

LOAD CAPACITY OF NOTCHED COMPONENTS AS DERIVED FROM POST-YIELD FRACTURE CRITERIA [TRAGLASTBESTIMMUNG GEKERBTER BAUTEILE NACH FLIESSBRUCHMECHANISCHEN KRITERIEN]
J. S. Doltsinis and H. Wuestenberg 1980 28 p refs In GERMAN
(ISD-286; ISSN-0170-6071) Avail: NTIS HC A03/MF A01

Post-yield fracture mechanics were reviewed and elastoplastic behavior was studied, using finite element analysis. The elastic limit was derived and the analytic load capacity was established. The fracture mechanical assessment involves post-yield fracture criteria, a critical crack opening displacement computation, and a validity check of the failure assessment diagram. The numerical results are evaluated and shown to compare reasonably well with experimental data.

A DERIVATION OF THE SMALL-STRAIN INCREMENTAL THEORY OF PLASTICITY FROM THERMOMECHANICS
G. T. Houlsby 1981 27 p refs
(OUEL-1371/81; SM020/GTH/81) Avail: NTIS HC A03/MF A01

It is postulated that a material can be entirely described by two functions of kinematic variables: the specific free energy and the specific dissipation functions. For certain choices of these functions, the two phenomena of a yield surface and a flow rule are automatically derived and an elastic-plastic material is described. The flow rule and yield surface are not, however, introduced as special hypotheses. The theory has certain advantages over the conventional approach: (1) plasticity models, involving nonassociated flow, can be accommodated without the violation of any thermodynamic principles; (2) elastic-plastic coupling is treated simply and without any ambiguity in the definition of plastic strain; (3) a criterion for plastic loading arises logically; and (4) unity between elasticity, plasticity and viscosity theories is achieved. These points are illustrated by simple examples.

A CORRECTION TO THE ENGINEERING THEORY OF ELASTIC STABILITY
J. D. Renton 1981 15 p refs
(OUEL-1376/81) Avail: NTIS HC A02/MF A01

Bolotin continuum equations for the stability of isotropic, linearly elastic media are discussed. Implicit in the derivation of these equations are the usual engineering assumptions that the embedded coordinate system is not significantly different in the loaded state from that in the unloaded state and that the equations of linear isotropic elasticity relate small increments of stress to small increments of strain from the loaded state. An analysis where the first assumption is retained, strains in the elastic region being limited to very small values for structural metals, is presented. However, the relationship between the increments of stress and strain are now derived from an elastic potential expressed as a function of the Lagrangian strain. Results show that this gives rise to additional terms of the same order of magnitude as those already included in Bolotin's equations.

STRESS INTENSITY FOR INTERACTING FLAWS. PART 3: PHOTOELASTIC DETERMINATION OF MIXED

MODES: STRESS INTENSITY FACTORS FOR INTERACTING FLAWS
C Ruiz and Y P Phang 1981 38 p refs 2 Vol
(OUEL-1368/81-Pt-3) Avail: NTIS HC A03/MF A01

The photoelastic method was used to characterize the severity of interaction of cracks by evaluation of the stress intensity factors at the interacting crack tips. Existing methods for retrieving stress intensity factors from the isochromatic fringe pattern are reviewed. Since all the methods can be related to the general case of a crack subjected to both opening and sliding modes of loading, a relation between the isochromatic fringe order and the stress intensity factor was derived. None of the existing methods determines mixed mode stress intensity factors in three-dimensional bodies. A method for direct determination of K sub 1, K sub 2, and K sub 3 in a three-dimensional body is suggested. As photoelastic determination of stress intensity factors is based on modified Westergaard equations, their validity for interpreting isochromatic fringe patterns is examined. Results show that these equations are not sufficient for complete interpretation of the fringe pattern of interacting cracks; incorporation of a series stress function is necessary.

WEIGHTING OF DISTANCES IN FACTORIAL ANALYSIS [PONDERATION DES DISTANCES EN ANALYSE FACTORIELLE]
Yves LeFoll Oct. 1981 24 p refs In FRENCH Presented at Congr. de l'Assoc. des Statisticiens Univ. (A.S.U.), Jun. 1981
(ENST-C-81005) Avail: NTIS HC A02/MF A01

Similarities between factorial analysis methods and principal component analysis are pointed out. The latter is characterized by weights and distances of the points in a representation. When the weights are associated to the distances the factorial components can have quasi-ordinal, local or statistical properties. The type of extremum problems, the solution of which makes this possible, is defined. A basic problem in interpretation of the axes and principal subspaces of inertia of a Euclidean representation is solved, then discussed as a problem in proximity analysis.

INELASTIC BUCKLING OF COLUMNS OF L AND U CROSS SECTION
Rolf Zick Dec. 1981 35 p refs Transl. into ENGLISH of "Beulen von L. u. U-profilen im plastischen Bereich" Rept. DFVLR-FB-80-31 Brunswick, 1980 Original report in GERMAN previously announced as N81-22435
(ESA-TT-709; DFVLR-FB-80-31) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 12

The buckling stresses of axially compressed columns, having either U or L cross section, are determined using the Prandtl-Reuss law and the method of transfer matrices. The deflections of the cross sectional elements are described by the plate equation and the linearized differential equation for planar deformations. The results are discussed in terms of stress-strain laws and are satisfactorily compared with test measurements. Agreement is also shown with a standard method of calculation which is briefly described.

GLOBAL TECTONIC CONTROL OF SECULAR VARIATIONS IN PHANEROZOIC SEDIMENTARY ROCK/OCEAN/ATMOSPHERE CHEMISTRY Ph.D. Thesis
John Dowling Pigott 1981 211 p
Avail: Univ. Microfilms Order No. 8124979

Global changes in sea level owing to geotectonic mechanisms during the Phanerozoic have dynamically affected the partitioning of carbon and sulfur among the exogenic reservoirs. As a result, the chemistry of the Earth's surface environment has been time variant. Analyses of mineralogically homogeneous brachiopod shell material and associated micrite organics support the secular variability of whole rock isotopic data compiled from the literature. Together, the data indicate the ratio of reduced carbon to total carbon sediments is low at times of global high sea level and high at times of global low sea level. Conversely, reduced and oxidized sulfur as calculated from the del 34S values of evaporites follow opposite trends: the ratio of reduced sulfur species to total sulfur species is high at times of high sea level and low at times of low sea level. The operation of a global tectonic model of carbon and sulfur cycling described by a set of mass transfer reactions consistent with these observations is proposed.

HYDROLOGY AND HYDROGEOCHEMISTRY OF THE SOUTH FORK, WRIGHT VALLEY, SOUTHERN VICTORIA LAND, ANTARCTICA Ph.D. Thesis
Henry John Hayden Harris 1981 359 p
Avail: Univ. Microfilms Order No. 8127604

Don Juan Pond is a large, unique brine pond situated in a closed basin at the topographically lowest point of the south fork. The floor of the basin is a discharge zone for groundwater brines confined in an underlying dolerite aquifer. Rapid, transient fluctuations of fluid pressure in the aquifer were recorded at a borehole drilled in the basin. The fluctuations are explained for the behavior of fluids in stressed porous media; they are interpreted as evidence of movements in a rock glacier lying near the pond. The characteristics of the fluctuations suggest that the causative movements were small and abrupt and involved a large part of the rock glacier. The major element chemistry of the brines is controlled by phase relations in the aqueous system CaCl2-NaCl, for which the important solid phases are antarcticite, halite, hydrohalite, and ice. Evaporation which forces the precipitation of halite and antarcticite and dilution control the chemistry of the pond during the austral summer; temperatures as low as -50 C control its chemistry during winter.

THE SIGNIFICANCE OF TROPICAL CYCLONE RAINFALL IN THE WATER SUPPLY OF SOUTH FLORIDA Ph.D. Thesis
Donald Brandes 1981 163 p
Avail: Univ. Microfilms Order No. 8127418

If hurricanes fail to influence the rainfall of South Florida, either because of human intervention by weather modification or because of possible natural climatic change, the water budget is affected. The study of tropical cyclone rainfall for a sixty-year period from 1919 through 1978 reveals that the amount of rain from hurricanes declined significantly in the last several decades. This decline is discussed in relation to its effects on water supply and management in the South Florida Water Management District. Although declining supplies and increasing consumption portend severe chronic water shortages in the region, the knowledge that hurricanes do not bring as much rain as water management officials had thought should allow more effective use of surface storage reservoirs.

RATES AND IMPLICATIONS OF BLUFF RECESSION ALONG THE LAKE MICHIGAN SHOREZONE OF MICHIGAN AND WISCONSIN Ph.D. Thesis
William Roger Buckler 1981 221 p
Avail: Univ. Microfilms Order No. 8126477

Long-term Lake Michigan bluff crest recession rates at 118 widespread locations in Michigan and Wisconsin were determined by contrasting recent field measurements with those from 19th century government land office surveys. These rates are evaluated spatially and related to selected shorezone characteristics. Lake level records and serial photographic data were compared to determine recent recession rates at closely spaced case study sites in Shoreham, Michigan, and Kenosha County, Wisconsin; these provide a basis for predicting future bluff crest positions. Results of the two case studies disclose that: (1) modern recession rates vary according to the interval between measurements; (2) the highest rates tend to occur within periods that contain the greatest percentage of years when lake levels are high; and (3) modern rates are not similar to longer-term retreat values, a condition largerly attributable to increasing numbers of shore protection structures that may accelerate bluff retreat in some places. Dissert. Abstr.

N82-17549 Colorado State Univ., Fort Collins.

A METHOD OF EVALUATING LANDFORM CLASSIFICATION SYSTEMS FOR RENEWABLE RESOURCE ASSESSMENT AND PLANNING Ph.D. Thesis

Lawrence Gene Kolenbrander 1981 223 p
Avail: Univ. Microfilms Order No. 8126437

A methodology for evaluating different landform classification systems was developed based on the landform attributes, structural arrangement, and operational characteristics of a landform classification system ideally suited for natural resource assessment and planning. Eighteen morphometric, surficial materials, genetic, and combined approaches to landform classification were reviewed and evaluated in a two-stage process. All eighteen systems were examined and rated according to a conceptual testing procedure. From the eighteen systems, four systems were selected for empirical field application and testing. None of the existing landform classification systems which was examined meets the needs of natural resource assessment and planning as defined by the objectives and evaluation criteria. There is no readily identifiable method of integrating two or more of the four systems into one acceptable landform classification system. Dissert. Abstr.

SIMULATION OF ICE-COVER GROWTH AND THERMAL DECAY ON THE UPPER ST. LAWRENCE RIVER Ph.D. Thesis

Gordon Mather Greene 1981 156 p
Avail: Univ. Microfilms Order No. 8125117

Four computer models are described. The first two models are based on analytic solutions to equations describing the transfer of heat within an ice cover with uniform properties. A third model is described which combines a surface energy balance solution for a surface temperature with a finite difference implicit heat diffusion scheme that permits non-linear temperature gradients in the ice. The fourth model incorporates elements from the first three models. A surface temperature is derived from computations of the surface energy fluxes. This temperature then becomes an upper boundary condition for an analytic model that includes turbulent heat transfer beneath the ice cover. This model best approximates the observed rates of growth and decay if one assumes a frazil ice layer beneath the ice cover so that the water temperature close to the lower boundary can be set close to 0 C. Dissert. Abstr.

HELIUM PRODUCTION IN NATURAL GAS RESERVOIRS

E. B. Pereira and J. A. S. Adams (Rice Univ., Houston, Tex.) Aug. 1981 14 p refs Submitted for publication
(INPE-2214-PRE/014) Avail: NTIS HC A02/MF A01

About 11,000 published natural gas analyses of helium were used in the estimation of the average global scale accumulation and concentration of radiogenic helium in sediments. Simple lognormal statistics are employed to derive a net accumulation rate between 1000,000 to 670,000 helium atoms per cubic meter of reservoir rock per second. This accumulation rate permits an inference of an average helium concentration of non-reservoir sediments of about 67 ppm. By assuming a simple closed system model, it is shown that deep seated sources of helium are not necessary to explain the present regime of helium in sediments on a global scale, and that the accumulation rate and concentration obtained are in close agreement with existing fundamental geochemical estimates of uranium and thorium in rather average type of sediments. THE DESIGN OF A MECHANICAL REFERENCING SYSTEM FOR THE REAR DRUM OF THE LONGWALL SHEARER COAL MINER Final Report

E. William Jones and Thomas Chen-Hsing Yang 4 Jun. 1981 76 p refs
(Contract NCA8-00131)
(NASA-CR-161962; MSSU-EIRS-ME-81-4) Avail: NTIS HC A05/MF A01 CSCL 08I

The design of two systems which reference the position of a longwall shearer coal miner to the mine roof of the present cut and of the last cut are presented. This system is part of an automation system that will guide the rear cutting drum in such a manner that the total depth of cut remains constant even though the front drum may be following an undulating roof profile. The rear drum referencing mechanism continually monitors the distance from the mine roof to the floor for the present cut. This system provides a signal to control a constant depth of cut. The last cut follower mechanism continually monitors the distance from the mine roof of the prior cut to the cutting drum. This latter system provides a signal to minimize the step height in the roof between cuts. The dynamic response of this hydraulic-pneumatic and mechanical system is analyzed to determine accumulator size and precharge pressure. B.W.

SEISMIC STUDY OF THE CRUST AND UPPER MANTLE OF THE R.C.A.
P. Mourgues *In its* Bangui Anomaly 24 Nov. 1981 5 p (For primary document see N82-17556 08-43)
Avail: NTIS HC A02/MF A01

Willmore seismometers of 2.3 second natural period with a damping of 0.8 were utilized. The records were obtained by a FM multiplex recording system on magnetic tape by triggering. The apparent azimuth (AZ sub o) was obtained by triangular solution for the best records of earthquakes occurring at distances greater than 30 deg. The azimuth anomaly (Delta AZ) was obtained by difference with geographical azimuth of epicenters (AZ sub T) as: Delta AZ = AZ sub o - AZ sub T. The general shape of Delta AZ distribution, as a function of AZ sub T, indicates a dominantly westward dip of deep structure which seems to evident from 60 deg to 300 deg of azimuth. However, the null deflection observed around 0 deg azimuth shows that structure is more complex and cannot be interpreted as a single dipping structure.

SEISMIC STUDY OF THE BANGUI ANOMALY
L. Dorbath and C. Dorbath *In its* Bangui Anomaly 24 Nov. 1981 5 p (For primary document see N82-17556 08-43)
Avail: NTIS HC A02/MF A01

The seismic recording of the anomaly was made along the line which cuts the maximum magnetic anomaly seen from the satellite. Eight stations equipped with transducers and recorders were set up every 20 kilometers. The deflection of the internal clocks was checked by the daily recording of the WWV radio signals. All the gains were adjusted at 84 db. Since the operation aims mainly at recording teleseisms, the signal from the transducer was filtered through a low-pass filter with a cut off frequency of 5Hz. The locations of the stations were determined through maps to the 1/200.00 and 1/2.000 scales. The recording is made on smoked paper with a traverse speed amounting to 120 mm/mn; the thickness of the line is lower than 0.1 mm; the reading through a micrometric lamp graduated in 0.1 mm allows to evaluate the 0.05 mm with a precision of 0.25 s.

DEVELOPMENT OF SENSITIZED PICK COAL INTERFACE DETECTOR SYSTEM Final Report
R. F. Burchill [1982] 68 p
(Contract NAS8-32538)
(NASA-CR-161961) Avail: NTIS HC A04/MF A01 CSCL 08I

One approach for detection of the coal interface is measurement of pick cutting loads and shock through the use of pick strain gage load cells and accelerometers. The cutting drum of a long wall mining machine contains a number of cutting picks. In order to measure pick loads and shocks, one pick was instrumented and telemetry used to transmit the signals from the drum to an instrument-type tape recorder. A data system using FM telemetry was designed to transfer cutting bit load and shock information from the drum of a longwall shearer coal mining machine to a chassis mounted data recorder. The design of components in the test data system were finalized, the required instruments were assembled, the instrument system was evaluated in an above-ground simulation test, and an underground test series to obtain tape recorded sensor data was conducted. AN OPTICAL MODEL FOR THE MICROWAVE PROPERTIES OF SEA ICE
P. Gloersen and J. K. Larabee Nov. 1981 28 p refs Submitted for publication
(NASA-TM-83865) Avail: NTIS HC A03/MF A01 CSCL 08L

The complex refractive index of sea ice is modeled and used to predict the microwave signatures of various sea ice types. Results are shown to correspond well with the observed values of the complex index inferred from dielectic constant and dielectric loss measurements performed in the field, and with observed microwave signatures of sea ice. The success of this modeling procedure vis a vis modeling of the dielectric properties of sea ice constituents used earlier by several others is explained. Multiple layer radiative transfer calculations are used to predict the microwave properties of first-year sea ice with and without snow, and multiyear sea ice.

CHARACTERIZING USER REQUIREMENTS FOR FUTURE LAND OBSERVING SATELLITES
J. L. Barker, P. J. Cressy, C. C. Schnetzler, and V. V. Salomonson Dec. 1981 56 p refs
(NASA-TM-83867) Avail: NTIS HC A04/MF A01 CSCL 05B

The objective procedure was developed for identifying probable sensor and mission characteristics for an operational satellite land observing system. Requirements were systematically compiled, quantified and scored by type of use, from surveys of federal, state, local and private communities. Incremental percent increases in expected value of data were estimated for critical system improvements. Comparisons with costs permitted selection of a probable sensor system, from a set of 11 options, with the following characteristics: 30 meter spatial resolution in 5 bands and 15 meters in 1 band, spectral bands nominally at Thematic Mapper (TM) bands 1 through 6 positions, and 2 day data turn around for receipt of imagery. Improvements are suggested for both the form of questions and the procedures for analysis of future surveys in order to provide a more quantitatively precise definition of sensor and mission requirements.

SATELLITE-DERIVED ICE DATA SETS NO. 1: ANTARCTIC MONTHLY AVERAGE MICROWAVE BRIGHTNESS TEMPERATURES AND SEA-ICE CONCENTRATIONS, 1973 - 1976
H. J. Zwally Nov. 1981 35 p refs Submitted for publication
(NASA-TM-83812) Avail: NTIS HC A03/MF A01 CSCL 08L

A summary data set concerning 4 years of Antarctic sea-ice conditions was created and is available on magnetic tape. The data were derived from electrically scanning microwave radiometer brightness temperatures and were mapped into a polar stereographic grid enclosing the 50 deg S latitude circle. The grid size varies from about 32 by 32 sq km at the poles to about 28 by 28 sq km at 50 deg S. The microwave brightness temperatures of Antarctic sea ice are predominantly characteristic of first-year ice with an emissivity of 0.92 at 19 GHz frequency. Sea ice concentrations were calculated from the brightness temperature data for each grid element with an algorithm that uses an emissivity value of 0.92 and an ice physical temperature estimate from climatological surface air temperatures. Monthly, multiyear monthly, and yearly maps of brightness temperatures and sea ice concentrations were created for the 4 years, except for 7 months for which useable data were insufficient. Author

THE MODELLING OF SEMIFLEXIBLE CONVEYOR STRUCTURES FOR COAL-FACE STEERING INVESTIGATIONS. PART 1: SPATIALLY DISCRETE MODELS

J. B. Edwards, R. A. Wolfenden (National Coal Board), and A. M. S. R. Yazdi Apr. 1981 35 p refs Submitted for publication 2 Vol.

(RR-151-Pt-1) Avail: NTIS HC A03/MF A01

The coal-cutting machine shown is of the ranging-drum shearer type. The machine both cuts the coal from the solid face as it proceeds along the face and simultaneously loads the product onto the scraper-chain conveyor. This operation is aided by the spiral vanes around the rotating drum periphery upon which the cutting picks are mounted. The scraper-chain conveyor also has more than a single function: it not only conveys the cut product to the face-end but, because of the robust construction of its structure, it also provides a comparatively smooth track upon which the power-loader rides. Mathematical models of the steering system and the overall process are presented. Examples of predicted behavior are given. J.M.S.

REMOTE SENSING TECHNIQUES SUITABLE FOR EXPLORATION AND NAVIGATION IN AND UNDER SEA ICE

Ragnar Thoren 1981 44 p refs Presented at Intern. Colloq. of the Intern. Soc. of Photogrammetry and Remote Sensing on Spectral Signatures of Objects in Remote Sensing, Avignon, France, 8-11 Sep., 1981

(FOA-Rept-Vol-15-No-2; FOA-B-60002-M7; ISBN-91-7056-057-9) Avail: NTIS HC A03/MF A01; Research Inst. of National Defence, Stockholm Kr 9

The performance of advanced satellite navigation used aboard Swedish and Soviet icebreakers is reported. It is shown that the ships' position was obtained with very high precision in spite of frequent fog. Further development of remote sensing satellite systems for ocean monitoring, the development of LORAN C into an expanded and improved aid to navigation, and the importance of visual ice reconnaissance in combination with optical viewing systems in arctic waters are also addressed. Developments in underwater technology, including hydroacoustics, hydrooptics, laser depth sounding, underwater communication, and subsea exploratory drilling are included. J.M.S.

THE PAIGH GAZETTEER PROGRAM Interim Report

Richard R. Randall 27 Oct. 1981 9 p Prepared for Pan American Institute of Geography and History

(AD-A107549) Avail: NTIS HC A02/MF A01 CSCL 08/6

In March of 1980, PAIGH authorities approved a new program calling for the production of a series of national gazetteers. The gazetteers are to be based principally on names appearing on the PAIGH map series at 1:250,000, but will also include other names in accordance with national requirements. A meeting of a Gazetteer Working Group comprised of representatives of interested countries took place in Panama during July 1981. At that meeting, discussions centered on the development of common specifications for the gazetteers. Decisions were made regarding gazetteer format and the establishment of work and production schedules by participating nations. This paper describes the gazetteer program in detail and reports on the current status of work. Author (GRA)

AN INVESTIGATION OF THE HIGH RATE VOLUMETRIC PROPERTIES OF SNOW Final Report, 1 May 1978 - 31 Oct. 1981

R. L. Brown Nov. 1981 158 p refs

(Contract DAAG29-78-G-0089)

(AD-A108032; ARO-15413.9-GS) Avail: NTIS HC A08/MF A01 CSCL 08/12

Reported here are the results of a three year study of the high rate volumetric properties of snow. In addition to the report presented here, the project resulted with over ten publications which are included in the list of references. The constitutive behavior of dry snow is analyzed and described mathematically by means of two microdynamical models. These are then evaluated by means of previous experimental data. A number of applications are then investigated. These applications include vehicle mobility in shallow and deep snowpack, steady shockwaves, and nonsteady shockwaves. Finally, an electromagnetic stress wave generator was designed, constructed and used in a shockwave testing program on snow. Experimental results are presented and discussed. Author (GRA)

A PROJECT TO TEST FOR SHALE GAS IN OHIO Final Report

30 Apr. 1981 197 p

(Contract DE-AC21-78MC-08339)

(DE82-000916; DOE/MC-12697/T3) Avail: NTIS HC A09/MF A01

Methods to find deep zones of natural fracture in the search for viable shale gas are discussed. The measurement of seismic velocity in the shale is examined. This speed is expected to be lowered by the presence of fractures, particularly if the fractures contain gas. The seismic reflection method, which times the echoes from deep rock layers, is used to measure the speed of sound in the shale. The results of the seismic velocity analysis are summarized. Gas was obtained from two naturally fractured zones in the Chagrin shale. The well was stimulated and tested at three separate levels: the Rhinestreet shale, Huron shale, and the Chagrin. DOE

SHALE GAS IN THE SOUTHERN CENTRAL AREA OF NEW YORK STATE: PART 1. HOW TO FIND AND DEVELOP SHALE GAS IN NEW YORK STATE

Apr. 1981 71 p Sponsored in part by New York Energy Research and Development Authority
(Contract DE-AC21-79MC-12697)
(DE82-000913; DOE/MC-12697/T1) Avail: NTIS HC A04/MF A01

The economics of shale-gas exploration in New York are discussed. To date three wells have been artificially fractured in the Marcellus shale of New York, and all three appear to be producers. The chances of extracting gas are improved if geological techniques can identify zones of a suitable degree of natural fracturing in the shale. These techniques are aided by detailed structure maps of the shale units. It is concluded that the most likely source of shale gas in south central New York is the Marcellus formation. The following recommendations are made: shale gas wells should be drilled with air; the dry open hole should be logged with gamma-ray, density, temperature and noise logs; the shale should be artificially fractured using a nitrogen stimulation technique. DOE

N82-17574# Commercialization Insights, Tampa, Fla.

EVALUATION OF ALTERNATIVES IN DOWNHOLE STEAM GENERATION

Sep. 1981 82 p Sponsored by DOE
(DE82-001943; DOE/TIC-2001943) Avail: NTIS HC A05/MF A01

The development of downhole steam generators for requirements of commercialization, technical, and economic goals were evaluated. It is found that: (1) the high pressure downhole steam generator has potential for commercialization in the production of heavy oil; (2) oil yield is the critical performance parameter; (3) the downhole hydrogen/oxygen has potential for production of resources which are not unproducible or uneconomical; (4) the critical performance provided in nearly 1100 pre and posttraining forms returned by the solar and 201 stream sediment samples. Statistical and areal distributions of uranium and possible uranium related variables are displayed. Pertinent geologic factors in evaluating the potential for uranium mineralization are discussed. The high uranium values occur primarily in pleistocene delta deposits and in glacial outwash and till. Groundwater in this area is geographically associated with high values of calcium, magnesium, manganese, potassium, selenium, strontium, sulfate, and total alkalinity. DOE

N82-17575# New Mexico Inst. of Mining and Technology, Socorro. Petroleum Recovery Research Center.

DEVELOPMENT OF MOBILITY CONTROL METHODS TO IMPROVE OIL RECOVERY BY CO2 Quarterly Report, 1 Jul. - 30 Sep. 1981

J. P. Heller 1981 6 p refs
(Contract DE-AC21-79MC-10689)
(DE82-001968; DOE/MC-10689/10; PRRC-81-41; QR-8)
Avail: NTIS HC A02/MF A01

The development of foam-type mobility control agents, core flooding system, and direct thickeners consisting of polymers soluble in CO2 are discussed. The core flooding test system is operational with all components essentially complete. Foam generation was principally concerned with experiments designed to ascertain the proper operating regions for the generator. The second mobility agent is being developed for the direct thickness of CO2. A number of polymeric compounds were found which are soluble in CO2. DOE

HIGH ANGLE MINING SYSTEM TASK REPORT: SYSTEM REQUIREMENTS, PERFORMANCE SPECIFICATIONS, AND REVIEW OF STATE-OF-THE-ART TECHNOLOGY

E. G. Brown Jan. 1981 36 p
(Contract DE-AC01-80FT-14257)
(DE82-001078; DOE/ET-14257/2) Avail: NTIS HC A03/MF A01

Existing mining systems operable from the surface with at least a limited down seam capability were compared. A normal down dip limitation of 15 degrees is shown for augers. At this angle conveying performance of the auger screw decreases slightly. At about 25 degrees, borehole packing begins to occur and conveying efficiency is substantially reduced. Higher rotational speeds and a shorter screw pitch improves conveying performance. Ten foot diameter holes were accomplished. Seven feet is the largest practical size. The deepest known penetration depth for a seven foot diameter is 150 feet. The largest practical size for a twin head auger would produce a 3 foot high by 6 foot wide oval hole about 150 feet deep. The largest practical diameter for a 200 foot penetration depth is believed to be about 42 inches. The efficiency factors are derived from the horizontal tonnage capacity and the gross horsepower for each machine. All of the continuous miners discussed are capable of operating down dip to the normal pitch limit without assistance modification. DOE

CONNECTICUT COASTAL RIVER BASINS OVERVIEW: PUBLIC REVIEW DRAFT

Jul. 1981 175 p refs Sponsored in part by Water Resources Council, Washington, D.C. Original contains color illustrations (PB82-105925) Avail: NTIS HC A08/MF A01 CSCL 08H

The Connecticut Coastal River basins contain numerous small rivers and streams that drain into Long Island Sound from 1,102 square miles in Connecticut and 47 square miles in New York. The basins exhibit a continuum of development, generally decreasing in intensity from west to east along the coast and from south to north away from Long Island Sound, with the exception of the urbanized Quinnipiac River Valley. Water resource problems in the basins include insufficient public water supplies in the western coastal area, coastal flooding and erosion, limited recreation opportunities, particularly for salt water swimming, and poor water quality. DIGITAL MODEL OF THE UNCONSOLIDATED AQUIFER SYSTEM IN THE MODESTO AREA, STANISLAUS AND SAN JOAQUIN COUNTIES, CALIFORNIA Final Water-resources Investigations

Clark J. Londquist Jul. 1981 43 p refs Prepared in cooperation with City of Modesto, Calif. (PB82-102559; USGS/WRD/WRI/81-081; USGS/WRI-81-12) Avail: NTIS HC A03/MF A01 CSCL 08H

A model was developed which can be used to determine the effects of increased pumping and water use on future water levels in the aquifer system. The model is divided into two layers or units that represent the unconsolidated alluvial deposits in the area. The lower unit in the model, called unit 1, represents an aquifer that is both confined and unconfined depending on location. The aquifer is confined in the western part of the study area by a clay bed 20 to 100 feet thick. Elsewhere, the aquifer is unconfined. GRA

REVEGETATING STRIP-MINED LAND WITH MUNICIPAL SEWAGE SLUDGE Final Report, Nov. 1976 - Oct. 1979

William E. Sopper and Sonja N. Kerr Sep. 1981 162 p refs Prepared in cooperation with Pennsylvania Dept. of Environmental Resources (Grant EPA-S-804511) (PB82-102484; EPA-600/2-81-182) Avail NTIS HC A08/MF A01 CSCL 08I

Three sites representative of abandoned barren bituminous and anthracite mines were treated with various types of municipal sludge at high and low application rates and broadcast seeded with a mixture of greases and legumes. A monitoring system was installed at each demonstration site to determine the effects of the sludge applications on groundwater and soil percolate water chemical and bacteriological quality, chemical properties of the soil, and quality and growth of vegetative cover. ANALYSIS OF GEOPRESSURED AQUIFERS Annual Report, Jan. - Dec. 1980

M. G. Doherty Aug. 1981 155 p refs (Contract GRI-5011-310-0109) (PB82-103862; GRI-80/0072) Avail NTIS HC A08/MF A01 CSCL 08I

The Institute of Gas Technology undertook technical and economic analyses of the coproduction of water and gas from watered-out geopressured gas caps, hydropressured aquifers, and low-permeability geopressured aquifers for the Gas Research Institute. Out of over 100,000 wells screened in Louisiana and Texas, 489 were identified as having watered out under a strong water drive, making them possible candidates for watered-out geopressured gas cap wells. DEWATERING FLORIDA PHOSPHATIC CLAY WASTES WITH MOVING SCREENS

Luther Warren Brandt Jul. 1981 22 p refs (PB82-104373; BM-RI-8529; LC-80-607788) Avail: NTIS HC A02/MF A01 CSCL 08I

Various means of dewatering Florida phosphatic clay wastes and reclaiming mined lands were investigated and a technique to effectively dewater phosphatic clay wastes was developed. Solids in the clay waste slurry were slowly compressed by moving wire mesh screens through the system. In a typical application, the screens were moved downward, compressing solids ahead of the screens. The rate of movement of the screens is an important variable in the process. It is believed that the moving screens distort the gel structure of the phosphatic clay system and cause the release of water. Samples of 18 clay wastes, including a high-grade attapulgite from beneficiation plants of the Florida phosphate field, were studied using the method. GRA

STUDY OF AIR COMPRESSOR HAZARDS IN UNDERGROUND AND SURFACE MINES Open File Report, Nov. 1979 - Jan. 1981

Martin B. Treuhaft and B. Chope Dial Jan. 1981 93 p refs (Contract D' 3M-JO-10006) (PB82-105164; BM-OFR-122-81) Avail NTIS HC A05/MF A01 CSCL 08I

Air compressor hazards in mines are analyzed and guidelines for eliminating fires, explosions, and their operational hazards that can result when compressors are used in coal and metal nonmetal mining applications are presented. Government data bases and reports for mine accident are reviewed and examined. Foreign and domestic standards, regulations, and codes governing air compressor usage are discussed and compared industry trends toward air compressor usage are considered and their impact on compressor safety is analyzed. Recommendations are directed toward MSHA, mine management, and the Bureau of Mines regarding their involvement in accident reporting and prevention. GRA

REGIONAL PROPERTIES OF ANGULAR REFLECTANCE MODELS Ph.D. Thesis
John Michael Davis 1981 215 p
Avail: Univ. Microfilms Order No. 8126427

The inference of the reflected flux density from satellite radiance measurements requires a knowledge of the angular properties of the reflected radiance field. The angular dependence and the spatial variability of the radiance fields reflected from 30 regional atmospheric scenes were examined. The reflected radiance data set was collected from a high altitude aircraft during the Summer Monsoon Experiment using a unique multi-detector instrument which permitted an instantaneous sampling of the radiance fields from twelve angular veiwing coordinates. All of the scenes display sufficient anisotropy to conclude that neglecting the angular variation of the reflected radiances would lead to significant errors (10-100%) in the inferred flux density. Radiances over the relatively isotropic scenes converge to their regional mean values on a spatial scale which is small compared to that of the total region. Dissert. Abstr.

ADDITION OF RADIOCARBON TO THE MIXED-LAYERS OF TWO SMALL LAKES: PRIMARY PRODUCTION, GAS EXCHANGE, SEDIMENTATION AND CARBON BUDGET Ph.D. Thesis
Peter Michael Bower 1981 259 p
Avail: Univ. Microfilms Order No. 8125254

Addition of radiocarbon to the mixed layers of two small dimictic lakes made it possible to assess the validity of enclosing natural phytoplankton populations in bottles for the purpose of estimating primary production. Simultaneous determinations of daily integral primary production by the C-14 method were made by 4 and 16 hour in situ incubations, by an incubator based numerical model, and by dawn and dusk sampling of the mixed layer. Estimates of productivity from the in situ incubations averaged 0.73 and 0.87 of the whole lake results with the underestimation never more than 60%. Productivity results for the incubator model averaged from 0.77 to 0.93 of the whole lake values. Strong surface inhibition of photosynthesis was observed in the vertical profiles of production. It is argued that this strong surface depression of photosynthesis is an artifact of the stationary position of the bottles and the unnaturally long exposure to supraoptimal light. A correction for daytime respiration of C-14 incorporated on previous days suggests that whole lake productivity is significantly enhanced over that measured in bottles. Dissert. Abstr.

N82-17601 Michigan Univ., Ann Arbor.
SPECTRAL REFLECTANCES OF FRESHWATER ICE AND SNOW FROM 340 THROUGH 1100 nm Ph.D. Thesis
Stanley Joseph Bolsenga 1981 159 p
Avail: Univ. Microfilms Order No. 8125073

Measured spectral reflectances of new and moderately metamorphosed snow were generally > 80% from 340 to 950 nm. From 950 to 100 nm a characteristic dip and rise of spectral reflectances occurred. One scan over a deteriorated snow patch showed much lower spectral reflectances than fresh snow, but the shape of the curve remained similar to fresher snow. Spectral reflectances for clear ice contrasted sharply with those for snow. In general, values were < 10% and the curves lacked distinctive shape. Higher spectral reflectances, due to lighter colored ice in the measurement area, were measured at some sites. Secondary ice types (refrozen slush, pancake, brash, slush curd) revealed spectral reflectance curves similar in form to each other, but which varied significantly in the range of spectral reflectances for each ice type. All measurements were acquired with a pair of scanning spectroradiometers adapted to obtain automatically simultaneous readings of incident and reflected radiation from 340 to 100 nm. Dissert. Abstr.

N82-17602 Colorado State Univ., Fort Collins.
WATERSHED MODEL STUDY USING LANDSAT DATA Ph.D. Thesis
Tien-Po Chang 1981 331 p
Avail: Univ. Microfilms Order No. 8126421

In connection with the use of remote sensing techniques, a digital terrain model that characterizes geometric features and other terrain conditions of a watershed is necessary for watershed modeling. As a result of constructing a watershed cell system on the digital terrain model, the mathematical formation on simulated physical processes can be simplified since the mathematical expressions only handle the small-sized, well-defined and relatively homogeneous components of the physical processes within a watershed cell. Four submodels that link the processing of the remote sensed data to the watershed analysis were developed. The submodels are LANDSAT image data processing model, digital terrain model, hydrologic simulation model, and landslide-hazard potential delineation model. The structure, function, and computer programs related to these models, along with the results of watershed simulation using the models, are presented and discussed. Dissert. Abstr.

DESIGN, ANALYSIS, AND TEST VERIFICATION OF ADVANCED ENCAPSULATION SYSTEMS Interim Report, period ending 1 Oct. 1980
Alec Garcia and Chuck Minning Nov. 1981 178 p refs
Sponsored in part by DOE Prepared for JPL
(Contract JPL-955567)
(NASA-CR-168407; DOE/JPL-955567-81/4; JPL-9950-619) Avail: NTIS HC A09/MF A01 CSCL 10A

Thermal, optical, structural, and electrical isolation analyses are decribed. Major factors in the design of terrestrial photovoltaic modules are discussed. Mechanical defects in the different layers of an encapsulation system, it was found, would strongly influence the minimum pottant thickness required for electrical isolation. Structural, optical, and electrical properties, a literature survey indicated, are havily influenced by the presence of moisture. These items, identified as technology voids, are discussed. Analyses were based upon a 1.2 meter square module using

10.2 cm (4-inch) square cells placed 1.3 mm apart as shown in Figure 2-2. Sizing of the structural support member of a module was determined for a uniform, normal pressure load of 50 psf, corresponding to the pressure difference generated between the front and back surface of a module by a 100 mph wind. Thermal and optical calculations were performed for a wind velocity of 1 meter/sec parallel to the ground and for module tilt (relative to the local horizontal) of 37 deg. Placement of a module in a typical array field is illustrated. N.W.

OVERVIEW STUDY OF SPACE POWER TECHNOLOGIES FOR THE ADVANCED ENERGETICS PROGRAM
R. Taussig, S. Gross, A. Millner, M. Neugebauer, W. Phillips, J. Powell, E. Schmidt, M. Wolf, and G. Woodcock Oct. 1981 341 p refs
(Contract NAS3-22477)
(NASA-CR-165269; MSNW-1169) Avail: NTIS HC A15/MF A01 CSCL 10B

Space power technologies are reviewed to determine the state-of-the-art and to identify advanced or novel concepts which promise large increases in performance. The potential for incresed performance is judged relative to benchmarks based on technologies which have been flight tested. Space power technology concepts selected for their potentially high performance are prioritized in a list of R & D topical recommendations for the NASA program on Advanced Energetics. The technology categories studied are solar collection, nuclear power sources, energy conversion, energy storage, power transmission, and power processing. The emphasis is on electric power generation in space for satellite on board electric power, for electric propulsion, or for beamed power to spacecraft. Generic mission categories such as low Earth orbit missions and geosynchronous orbit missions are used to distinguish general requirements placed on the performance of power conversion technology. Each space power technology is judged on its own merits without reference to specific missions or power systems. Recommendations include 31 space power concepts which span the entire collection of technology categories studied and represent the critical technologies needed for higher power, lighter weight, more efficient power conversion in space. ELECTROCHEMICAL ENERGY STORAGE FOR AN ORBITING SPACE STATION
R. E. Martin Dec. 1981 61 p refs
(Contract NAS3-21293)
(NASA-CR-165436; FCR-3142) Avail: NTIS HC A04/MF A01 CSCL 10C

The system weight of a multi hundred kilowatt fuel cell electrolysis cell energy storage system based upon alkaline electrochemical cell technology for use in a future orbiting space station in low Earth orbit (LEO) was studied. Preliminary system conceptual design, fuel cell module performance characteristics, subsystem and system weights, and overall system efficiency are identified. The impact of fuel cell module operating temperature and efficiency upon energy storage system weight is investigated. The weight of an advanced technology system featuring high strength filament wound reactant tanks and a fuel cell module employing lightweight graphite electrolyte reservoir plates is defined. E.A.K.

STRAIGHT AND CHOPPED DC PERFORMANCE DATA FOR A RELIANCE EV-250AT MOTOR WITH A GENERAL ELECTRIC EV-1 CONTROLLER Final Report
Paul C. Edie Sep. 1981 58 p
(Contracts DEN3-123; DE-AI01-77CS-51044)
(NASA-CR-165447; DOE/NASA/0123-3; ERC-TR-8175) Avail: NTIS HC A04/MF A01 CSCL 10B

Straight and chopped DC motor performances for a Reliance EV-250AT motor with an EV-1 controller were examined. Effects of motor temperature and operating voltage are shown. It is found that the maximum motor efficiency is approximately 85% at low operating temperatures in the straight DC mode. Chopper efficiency is 95% under all operating conditions. For equal speeds, the motor operated in the chopped mode develops slightly more torque and draws more current than it does in the straight DC mode. E.A.K.

A NORMATIVE PRICE FOR ENERGY FROM AN ELECTRICITY GENERATION SYSTEM: AN OWNER-DEPENDENT METHODOLOGY FOR ENERGY GENERATION (SYSTEM) ASSESSMENT (OMEGA). VOLUME 1: SUMMARY
Robert G. Chamberlain and Kirby M. McMaster 15 Oct. 1981 62 p refs Sponsored by NASA and DOE 2 Vol.
(NASA-CR-168432; JPL-Pub-81-86-Vol-1; DOE/ET-20356/5) Avail: NTIS HC A04/MF A01 CSCL 10B

The utility owned solar electric system methodology is generalized and updated. The net present value of the system is determined by consideration of all financial benefits and costs (including a specified return on investment). Life cycle costs, life cycle revenues, and residual system values are obtained. Break even values of system parameters are estimated by setting the net present value to zero. While the model was designed for photovoltaic generators with a possible thermal energy byproduct, it applicability is not limited to such systems. The resulting owner-dependent methodology for energy generation system assessment consists of a few equations that can be evaluated without the aid of a high-speed computer. S.L.

N82-17613*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.

A NORMATIVE PRICE FOR ENERGY FROM AN ELECTRICITY GENERATION SYSTEM: AN OWNER-DEPENDENT METHODOLOGY FOR ENERGY GENERATION (SYSTEM) ASSESSMENT (OMEGA). VOLUME 2: DERIVATION OF SYSTEM ENERGY PRICE EQUATIONS
Robert G. Chamberlain and Kirby M. McMaster 15 Oct. 1981 100 p refs Sponsored in part by DOE 2 Vol.
(Contracts NAS7-100; DE-AI01-76ET-20356)
(NASA-CR-168433; JPL-Pub-81-86-Vol-2; DOE/ET-20356/5) Avail: NTIS HC A05/MF A01 CSCL 10B

The methodology presented is a derivation of the utility owned solar electric systems model. The net present value of the system is determined by consideration of all financial benefits and costs including a specified return on investment. Life cycle costs, life cycle revenues, and residual system values are obtained. Break-even values of system parameters are estimated by setting the net present value to zero. S.L.

PREPARATION AND EVALUATION OF ADVANCED ELECTROCATALYSTS FOR PHOSPHORIC ACID FUEL CELLS Quarterly Report, Oct. - Dec. 1981
Paul Stonehart, John Baris, John Hochmuth, and Peter Pagliaro Dec. 1981 44 p
(Contract DEN3-176; Contract DE-AI03-80ET-17088)
(NASA-CR-165594; DOE/NASA/0176-81/5; QR-8) Avail: NTIS HC A03/MF A01 CSCL 10A

Two cooperative phenomena are required the development of highly efficient porous electrocatalysts: (1) is an increase in the electrocatalytic activity of the catalyst particle; and (2) is the availability of that electrocatalyst particle for the electromechanical reaction. The two processes interact with each other so that improvements in the electrochemical activity must be coupled with improvements in the availability of the electrocatalyst for reaction. Cost effective and highly reactive electrocatalysts were developed. The utilization of the electrocatalyst particles in the porous electrode structures was analyzed. It is shown that a large percentage of the electrocatalyst in anode structures is not utilized. This low utilization translates directly into a noble metal cost penalty for the fuel cell. E.A.K.

ASSESSMENT OF TECHNICAL POTENTIAL: PROBLEMS, METHODS AND RESULTS
G. Obemair *In* Kernsforschungsanlage Implementing Agreement for a Program of Res. and Develop. on Wind Energy Conversion Systems Apr. 1981 p 17-28 (For primary document see N82-17617 08-44)
Avail: NTIS HC A06/MF A01

The technical and economic problems posed by the integration of wind energy into the electric power supply system are considered. Stability and control requirements, the efficiency of wind converters and the exclusion of technically inaccessable areas are applied to the stochastic wind field over the total area. The resulting technical potential is then reduced to an economic potential by applying an economic filter which involves competitiveness measured against other energy sources, comparative social costs and socio-economic preferences. and the actual cost and existing use of land for wind energy parks. J.D.H.

ECONOMIC EVALUATION
L. Hoffman *In* Kernsforschungsanlage Implementing Agreement for a Program of Res. and Develop. on Wind Energy Conversion Systems Apr. 1981 p 28-37 (For primary document see N82-17617 08-44)
Avail: NTIS HC A06/MF A01

The economic significance of wind energy is assessed on the basis of its potential contribution to Germany's energy supply, its competitiveness vis-a-vis other energy sources, and its social desirability, measured by its contribution to the realization of general socio-economic goals. J.D.H.

N82-17621# Regensberg Univ. (West Germany). Forschungsprojekt Windenergie.
ASSESSMENT OF THE POTENTIAL OF LWECS IN THE NETHERLANDS
W. Dub *In* Kernsforschungsanlage Implementing Agreement for a Program of Res. and Develop. on Wind Energy Conversion Systems Apr. 1981 p 41-62 refs (For primary document see N82-17617 08-44)
Avail: NTIS HC A06/MF A01

The potential of large wind energy conversion systems (LWECS) in the Netherlands is assessed. Hourly data on mean wind speeds and wind directions from 5 stations are analyzed and extrapolated up to a height of 100 m and monthly and annual mean wind speeds. The wind power conversion efficiency of wind turbines and the monthly and annual energy production of WECS 1 are calculated. The daily wind energy production of a compound system of 3 MW wind turbines and the daily percentages of the 1980 national electric power needs they would meet are determined using 1975 wind data. The number of 3 MW and 0.8 MW wind turbines required to produce 9.97 TWh per year is determined. J.D.H.

N82-17622# Regensberg Univ. (West Germany). Forschungsprojekt Windenergie.
POWER FLUCTUATIONS: TECHNICAL AND STATISTICAL ASPECTS
H. Pape *In* Kernsforschungsanlage Implementing Agreement for a Program of Res. and Develop. on Wind Energy Conversion Systems Apr. 1981 p 63-70 refs (For primary document see N82-17617 08-44)
Avail: NTIS HC A06/MF A01

Electric power output fluctuations from wind turbines occurring within minutes are considered. Means of regulating the fluctuations are discussed. A statistical proof that an increasing number of wind turbines tends to generate a more regular power output than each individual wind turbine is presented. J.D.H.

N82-17623# Regensberg Univ. (West Germany). Forschungsprojekt Windenergie.
FORECASTING WIND POWER OUTPUT
W. Dub *In* Kernsforschungsanlage Implementing Agreement for a Program of Res. and Develop. on Wind Energy Conversion Systems Apr. 1981 p 71-80 refs (For primary document see N82-17617 08-44)
Avail: NTIS HC A06/MF A01

Long term forecasts of electric energy output from wind power are presented. Periods of 2-6 hours, 6-12 hours, 12-24 hours, and 24-48 hours are considered. The prediction of wind speed is discussed. It is determined that, having a good estimator of the mean wind speed V sub T for a planning period T, the mean wind power output will be underestimated, so long as the wind speed used is the range of cut-in and rated speeds. J.D.H.

ASSURED LOAD CARRYING CAPABILITY AND CAPACITY CREDIT
H. Pape *In* Kernsforschungsanlage Implementing Agreement for a Program of Res. and Develop. on Wind Energy Conversion Systems Apr. 1981 p 81-95 refs (For primary document see N82-17617 08-44)
Avail: NTIS HC A06/MF A01

The determination of assured load carrying capability and the capacity credit for use in planning windpowered electric generation facilities is considered. Calculation of the available capacity of thermal power plants is described and compared with calculation of available capacity for wind turbines, taking into account outages caused by the unavailability of the primary energy, wind. The assured load carrying capability of power plants is defined. An operational definition of the capacity credit of wind turbines as related to a fixed time t Epsilon T is presented and extended to the period T. J.D.H.

POSSIBILITIES FOR AVOIDING STRONG VARIATIONS OF THE ELECTRICAL OUTPUT POWER OF WIND ENERGY SYSTEMS [MOEGLICHKEITEN ZUR VERMEIDUNG VON STARKEN SCHWANKUNGEN DER ELEKTRISCHEN ABGABELEISTUNG VON WINDENERGIEANLAGEN]
G. Cramer *In* Kernsforschungsanlage Implementing Agreement for a Program of Res. and Develop. on Wind Energy Conversion Systems Apr. 1981 p 96-99 refs (For primary document see N82-17617 08-44)
Avail: NTIS HC A06/MF A01

The conversion of the kinetic energy of wind into electric power through wind powered converters by the primary energy of atmospheric circulation speed is discussed. It is suggested that wind powered generators which work with the supply network should avoid overloading the installation from wind performance caused by a fast change of the blade pitch. There are possibilities to achieve numerical comparison of the temporary storage performance of kinetic energy by application of rotating masses with flywheels, which allow for rotation speed variations. Through the feed of direct or alternate current in the rotor cycle form asynchronic machines with slip rings or through the influence of the slip performance a speed of variable duty on the network is accomplished. SAFETY DESIGN CONSIDERATIONS FOR LITHIUM BATTERIES IN CF APPLICATIONS
Walter J. Moroz Feb. 1981 21 p refs In ENGLISH; FRENCH summary Presented at the 11th Meeting of the DND Directors Comm. on Res. Requirements and Develop., Sep. 1980
(AD-A107619; DREO-TN-81-11) Avail: NTIS HC A02/MF A01 CSCL 10/3

Lithium-sulphur dioxide (Li-SO2) primary cells are being introduced as power supplies into Canadian Forces applications where advantage can be taken of their high energy density characteristics and low temperature capabilities. For safety reasons the high energy capabilities of these cells must be protected against the possibility of accidental abuse. DREO has investigated and identified a number of operational problem areas associated with Li-SO2 systems. Safety design considerations are proposed for three CF applications: the PRC 515 Radio Set/Radar Transponder SST-181X applications and the AN/PRQ-501 Personal Locater Beacon. Author (GRA)

(AD-A107989; FJSRL-TR-81-0011) Avail: NTIS HC A03/MF A01 CSCL 07/4

Salts that are liquid at room temperature would provide a completely ionic electrolyte for rechargeable batteries without the penalty of high operating temperatures. We have discovered and characterized a new class of molten salts that are liquids considerably below room temperature. The new materials are mixtures of dialkyimidazolium chlorides and aluminum chloride. The solid-liquid phase diagram of one member of the class shows that the material is liquid below room temperature over its entire composition range. A proof of concept battery cell using the new electrolyte was demonstrated. Electrochemical tests show that battery anodes and cathodes will operate in the new electrolytes. By varying the ratio of the components of the new melts, the chemical and physical properties can be changed over a very wide range. Author (GRA)

(DE82-000838; DOE/ET-20611/12-Vol-1; GAI-2204-Vol-1) Avail: NTIS HC A10/MF A01

A biomass allocation model was developed to show the most profitable combination of biomass feedstocks, thermochemical conversion processes, and fuel products to serve the seasonal conditions in a regional market. This optimization model provides a tool for quickly calculating which of a large number of potential biomass missions is the most profitable mission. Other components of the system serve as a convenient storage and retrieval mechanism for biomass marketing and thermochemical conversion processing data. The system can be accessed through the use of a computer terminal, or it could be adapted to a microprocessor. A User's Manual for the system is included. Biomass derived fuels included in the data base are the following: medium Btu gas, low Btu gas, substitute natural gas, ammonia, methanol, electricity, gasoline, and fuel oil. DOE

Solar energy conversion by operation of small silicon solar cells immersed in an electrolyte is described. The current generated by the cells is used to separate the electrolyte into its constituent parts. The system consists of a solar chemical converter in which the electrolyte is separated, hydrogen storage, a fuel cell, and a heat exchanger for recovering heat from the system. Fabrication of the solar cells used in the solar chemical convertor and the storage of hydrogen as a metal hydride are discussed. DOE

CUSTOMER ATTITUDES TOWARD THERMAL-ENERGY-STORAGE HEATING
H. N. Hersh Jun. 1981 74 p refs
(Contract W-31-109-eng-38)
(DE82-003010; ANL-SPG-17) Avail: NTIS HC A04/MF A01

Attitudes among users of thermal energy storage (TES) heating systems were studied. A customer acceptance survey exploring attitudes and levels of satisfaction, face to face contacts between utility representatives and users, and a survey of pertinent published information are investigated. It is found that: (1) TES heating systems are installed for economic reasons by customers who can afford higher initial costs and understand the concept of lower total cost; and (2) attitudes toward TES are positive. The TES systems are not regarded more favorably than conventional systems, however, and it is likely that lower electric heating bills are responsible for the favorable perceptions of most TES users. The kinematics of a cantilevered, a conventional guyed, and a compliant (elastic column held by a rigid framework) tower were studied. The static layout of the towers is established, using the reactions due to different gusts which a two-bladed rotor (120 m diameter) imposes on a rigid support as external loads. The rotor blades are assumed to be inelastic. Each one has a flapping hinge and a flap-pitch coupling. Dynamic responses were calculated by the finite element method. The guyed tower is superior to the cantilevered one. A 10.4 deg inclination angle seems best for the compliant tower, but more dynamic and stability analyses are needed before undertaking further tower geometry optimization. Author (ESA)

Several rotorblades of a horizontal axis windmill are studied both nonoperating under deadweight, and under quasi-stationary loading with constant forces at rated operation, the blades of which have flap and lead-lag freedom as well as flap-pitch coupling. With a suitable mass distribution it is possible to reduce the blade bending moments in the flap direction drastically. The use of aircraft construction materials is considered. Carbon fiber reinforced plastic is the most suitable. Most of the blade models are investigated without lag hinge. The coning angle of rated operation assumed for the layout is reduced considerably for the blade models with lead-lag freedom in order to obtain sufficient centrifugal stiffness in the lag direction. (Contract BMFT-ET-4086-A)
(ISD-270; ISD-244; ISSN-0170-6071) Avail: NTIS HC A04/MF A01

The coupled flap lag motion of a single, rigid rotor blade of a wind energy converter with flap and lag hinges and a coupling of the angle of attack with the flap motion is investigated. The equations of motion are developed under the assumption of linearized quasi-stationary aerodynamic forces. Static and dynamic stability of the coupled flap and lag motion are investigated. The equations are integrated for different cases under cyclic gravitational forces in order to estimate the importance of nonlinear terms and of the error resulting from the linearization of the conservative system. The nonlinear terms can be neglected, as can the effects of cyclic stiffness resulting from gravitational force. Results for nonlinearities arising from aerodynamic forces are inconclusive. (Contract BMFT-ET-4086-A)
(ISD-271; ISD-258; ISSN-0170-6071) Avail: NTIS HC A06/MF A01

For a windmill rotor blade, a linearized system of differential equations of motion is developed, using a finite element idealization of linearized quasi-stationary aerodynamic forces. Constant rotational speed and a rigidly supported hub are assumed. For two rotor blade models, which differ only in their stiffness in lag direction, the complex eigenfrequencies are calculated. The dynamic response of the rotor blades is computed for cyclic gravity loads at rated operation, for a gust, and, in one case, for the tower wake. From the deformation of the structure the stresses at selected points along the blade are calculated. Torque and rotor thrust are determined for one model. Additional stiffness improves stability and lead-lag ancles. The coning angle is excellently stabilized by the flap-pitch coupling. Author (ESA)

STATIC AND DYNAMIC INVESTIGATIONS FOR THE MODEL OF A WIND ROTOR Final Report
J. H. Argyris, K. A. Braun, B. Kirchgaessner, and R. Walther

1980 71 p refs Transl. into ENGLISH of "Statische und dyn. untersuch. and einem windrotormodell" Rept. ISD-259 Stuttgart Univ., Stuttgart, Jun. 1979 69 p Original report in GERMAN previously announced as N81-12626 Sponsored in cooperation with International Energy Agency
(Contract BMFT-ET-4086-A)
(ISD-272; ISD-259; ISSN-0170-6071) Avail: NTIS HC A04/MF A01

A wind rotor was constructed in order to test a data acquisition/transfer system which collects experimental data from the operating model and displays it on a screen. The comparison between the experimental data and the model results is used to check the applied computation methods. The static and dynamic analyses of the rotor model are considered. An 11% difference between experimental and model results is shown. A response problem with variable stiffness in time which arose during the dynamic analysis is solved by setting the structural stiffness constant over small time intervals, diagonalizing the time interval considered and integrating. After integration the solutions of the generalized degrees of freedom are transformed back into the physical system, using the time interval eigenvectors.

LOADING CYCLES AND MATERIAL DATA FOR THE LAYOUT OF A WIND TURBINE OF SPECIAL HUB CONCEPT Final Report

J. H. Argyris and K. A. Braun 1980 38 p refs Transl. into ENGLISH of "Lastwechselzahlen und materialwerte fuer die auslegung einer windturbine spezieller nabenkonstruktion" Rept. ISD-260 Stuttgart Univ., Stuttgart, Jun. 1979 38 p Original report in GERMAN previously announced as N81-12627 Sponsored in cooperation with International Energy Agency
(Contract BMFT-ET-4086-A)
(ISD-273; ISD-260; ISSN-0170-6071) Avail: NTIS HC A03/MF A01

The number of loading cycles of a rotor blade was estimated in order to assess allowable blade stress. Fatigue strengths and allowable stresses are calculated for aeronautic construction materials. Using wind data, the number of starts and stops was estimated. With a guess for the number of revolutions necessary to reach stationary operation from standstill, the number of loading cycles was determined, using the blade aerodynamics. The number of operational hours gives the number of loading cycles for rated operation. Rotation speeds of 1.67 and 2 rad/sec are considered. For 1.67, the number of loading cycles during stationary operation = 2.06 x 10 to the 8th power; during starts and cut offs = 357,000. For 2 rad/sec, results are 2.47 x 10 to the 8th power and 463,000. Stress values, expressed in installed power/sqmm, are: aluminum alloy = 98; stainless steel = 294; glass fiber reinforced plastic = 98; and carbon fiber reinforced plastic = 147.

METEOROLOGICAL ASPECTS OF THE UTILIZATION OF SOLAR RADIATION AS AN ENERGY SOURCE, PART 1

1981 311 p refs 2 Vol.
(WMO-557-Vol-1; WMO-TN-172-Vol-1; ISBN-92-63-10557-X) Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 50

Meteorological knowledge and activities related to the harnessing of solar energy are treated. The development of the utilization of various forms of energy by human society is reviewed along with WMO activities in support of the rational use of energy, with special regard to solar radiation. Specific actions by which meteorological services can contribute to the utilization of solar energy are pointed out. User requirements for meteorological data are set; how the data is presented and where it can be obtained are shown. Techniques for the measurement of solar radiation, including the calibration of instruments and quality control of data, are discussed while other meteorological parameters required (air temperature, wind speed, humidity, cloud amount, etc.) are also considered. The retrieval of past data, interpolation methods for the estimation of solar radiation, and publishing and archiving data are dealt with.

METEOROLOGICAL ASPECTS OF THE UTILIZATION OF SOLAR RADIATION AS AN ENERGY SOURCE. PART 2: ANNEX. WORLD MAPS OF RELATIVE GLOBAL RADIATION

1981 33 p refs 2 Vol.
(WMO-557-Vol-2; WMO-TN-172-Vol-2) Avail: NTIS MF A01; print copy available at WMO, Geneva, SwFr 50

World maps are presented from which the monthly and annual global radiation can be derived, and an overall picture of the distribution of solar radiation as an energy source can be evolved. The radiation reaching the surface of the Earth in the absence of clouds and the atmosphere was calculated from pure astronomical relationships. Results are given in MJ/sq m by 5 deg of latitude. The establishment of an empirical relationship between satellite brightness data and the relative global radiation (defined as the percentage ratio of actual surface global radiation to the astronomically possible global radiation), using available surface global radiation data as reference values, is suggested.

The application of meteorological data and knowledge to the planning and operation of wind energy conversion systems (WECS) is discussed. The development of WECS and WMO activities related to energy matters, with special regard to wind energy, is reviewed. Atmospheric circulation systems of various scales, atmospheric turbulence, and the boundary layer are considered, including numerical models. Wind energy technology, i.e., the different types of wind machines (both small and large conversion systems) together with their usual possibilities of application, and the environmental impact of WECS, which should be kept in mind in the planning stage in order to reduce it to a minimum, are treated. As to wind energy meteorology, the requirements for, and the availability of, meteorological data for use in the exploratory, planning and operational phases of WECS are determined. The economic aspects of deciding on the establishment of wind energy systems are also indicated. A world map, illustrating the global distribution of wind energy potential is included.

THERMAL STRATIFICATION IN STORAGE TANKS Ph.D. Thesis
Mohammad Ali Abdoly 1981 333 p
Avail: Univ. Microfilms Order No. 8126589

The future of solar energy as a commercial source of energy critically depends on cost reduction and/or improvement in the performance of solar systems. Use of a properly designed thermocline storage tank is one factor in reducing overall solar system costs. Thermal stratification of a fluid in storage tank is a natural process that takes place due to the decreased density of the fluid at higher temperature. This natural process creates a transition zone temperature gradient between cold and hot fluid zones, called the thermocline. The percentage of recoverable heat (PHR), and thickness of the thermocline (d) are defined and theoretical relationships are found between PHR, d and different design parameters such as length of tank, radius of tank, insulation thickness, time, and initial temperature difference between cold and hot water. Dissert. Abstr.

DEVELOPMENT OF ION BEAM SPUTTERED ITO/POLYSILICON SOLAR CELL TECHNOLOGY Ph.D. Thesis
Alan Paul Genis 1981 264 p
Avail: Univ. Microfilms Order No. 8126429

Indium Tin Oxide (ITO) was successfully used in place of a metal for solar cells of the conductor insulator semiconductor (CIS) type. An evaluative study to determine whether efficient and stable ITO based solar cells could be fabricated reproducibly with large area on polycrystalline silicon substrates was performed. The development of fabrication techniques and supporting analytical studies used are described. Ion beam sputtering technology was used to fabricate the cells. It was necessary to develop sputter deposition fixturing, optimize temperature, pressure and operation time parameters and incorporate hydrogen in the sputtering gas. The more efficient solar cells apparently consist of an induced n-on-p junction in the silicon. Poorer cells with smaller barriers likely resemble Schottky barriers in that the metalurgical and electronic junctions coincide. Various electrical and optical characterizations of initially inefficient devices were used to optimize cell fabrication procedures. ITO/polycrystalline silicon solar cells were fabricated on a wide variety of substrates. Results of the study are presented. Dissert. Abstr.

SULFUR BALANCE IN OUTDOOR SMOG CHAMBERS AND RESULTING IMPLICATIONS FOR SULFUR DIOXIDE PHOTOOXIDATION STUDIES Ph.D. Thesis
Janet Stickney Meyer 1981 208 p
Avail: Univ. Microfilms Order No. 8125602

To determine the causes of SO2 disappearance in a smog chamber, sulfur balances in inert and in photochemically oxidizing atmospheres were investigated. Teflon bag, sulfur deposited on surfaces is measured using a radioactive tracer technique. Analysis of SO2 behavior in the chamber indicates that SO2 concentrations decrease due to three factors. First dilution due to sampling decreases SO2 concentrations at a rate of 1 to 3%/hr. Second, uptake of SO2 by water films and metal surfaces removes SO2 at a rate of 0 to 9%/hr, depending on surface conditions. Third, deposition on surfaces apparently increases by 10%/hr or more, in photochemically oxidizing atmospheres. The increased deposition appears to be due to heterogeneous oxidation of SO2 by nitrogen oxides. The findings of the chamber studies suggest the presence of wet surfaces which encourage the hypothesized heterogeneous reactions significantly influence the behavior of SO2 in photochemically oxidizing atmospheres. Dissert. Abstr.

INFILTRATION LAND TREATMENT OF STABILIZATION POND EFFLUENT Final Report, 15 Jun. 1975 - 17 Jun. 1979
James N. Dornbush Sep. 1981 57 p refs
(Grant EPA-R-803804)
(PB82-109919; EPA-600/2-81-226) Avail: NTIS HC A04/MF A01 CSCL 13B

A pilot rapid infiltration wastewater treatment system consisting of three 0.07 hectare basins was operated for four seasons at Brookings, South Dakota. The objectives of the study were to demonstrate the rapid infiltration land treatment could upgrade stabilization pond effluent to meet stringent effluent requirements and to identify winter operating constraints for the system. After passing through 1.3 m of the soil profile, the following quality was observed: BOD5 was less than 4 mg/l all of the time and generally less than 2 mg/l; suspended solids rarely exceeded 4 mg/l; total phosphorus rarely exceeded 1 mg/l; ammoniacal nitrogen was less than 2 mg/l and usually less than 1.1 mg/l; and nitrate nitrogen rarely exceeded 10 mg/l. Winter operation of the pilot units with intermittent applications was not practical. GRA

A COMPARISON OF IN-CLOUD HCl CONCENTRATIONS FROM THE NASA/MSFC MDM TO MEASUREMENTS FOR THE SPACE SHUTTLE LAUNCH Final Technical Report
Marvin E. Glasser 12 Apr. 1981 42 p refs
(Contract NAS8-16162)
(NASA-CR-167497) Avail: NTIS HC A03/MF A01 CSCL 13B

The Multilevel Diffusion Model (MDM) Version 5 was modified to include features of more recent versions. The MDM was used to predict in-cloud HCl concentrations for the April 12 launch of the space Shuttle (STS-1). The maximum centerline predictions were compared with measurements of maximum gaseous HCl obtained from aircraft passes through two segments of the fragmented shuttle ground cloud. The model over-predicted the maximum values for gaseous HCl in the lower cloud segment and portrayed the same rate of decay with time as the observed values. However, the decay with time of HCl maximum predicted by the MDM was more rapid than the observed decay for the higher cloud segment, causing the model to under-predict concentrations which were measured late in the life of the cloud. The causes of the tendency for the MDM to be conservative in over-estimating the HCl concentrations in the one case while tending to under-predict concentrations in the other case are discussed. (Contract NAG1-66)
(NASA-CR-168458) Avail: NTIS HC A06/MF A01 CSCL 13B

The international demand for and supply of oil between the years 1980 and 2000 is assessed and future world oil prices and their implications for the price of jet fuel are estimated. Three critical questions are investigated: (1) how long will the world supply of oil continue to keep pace with its demand under likely trends in its use and discovery; (2) at what price will demand and supply clear the world oil market; (3) what does the analysis imply about the price of jet fuel. Projection of oil price is based upon supply and demand, which is consistent with microeconomic analysis. E.A.K.

Spilled chemicals that pose a hazard to the land and water ecosystems can also provide a significant vapor hazard Although the vapors released by such chemicals may ultimately be dispersed in the environment with little long-term effects, they do pose a hazard to life and property downwind of the spill Among the vapor amelioration techniques that were considered is the use of a coolant to lower the temperature of a spill and reduce its equilibrium vapor pressure

ATTENUATION OF POLYBROMINATED BIPHENYLS AND HEXACHLOROBENZENE BY EARTH MATERIALS Final Report
R A Griffin and S F J Chou Sep 1981 60 p refs
(Grant EPA-R-804684)

(PB82-107558; EPA-600/2-81-191) Avail: NTIS HC A04/MF A01 CSCL 13B

The aqueous solubility, adsorption, mobility, and microbial degradation of polybrominate biphenyls (PBBs) and hexachlorobenzene (HCB) were studied. It is indicated that PBBs were more than 200 times, and HCB more than 2.5 times soluble in landfill leachate than in distilled water. Also, the solubilities of PBBs and HCB were higher in creekwater and landfill leachates than in purified waters. HCB showed a greater tendency for adsorption than PBBs. The PBBs and HCB were strongly adsorbed by the Ambersorb XE-348, but not by organic solvents. The PBBs and HCB remained immobile when leached with water or landfill leachate but were highly mobile when leached with organic solvents. It is found that PBBs and HCB are resistant to microbial degradation. GRA

ASSESSMENT OF OIL PRODUCTION VOLATILE ORGANIC COMPOUND SOURCES Final Report, Jan. - Sep. 1980

W. S. Eaton, G. R. Schneider, W. Unterberg, and F. G. Bush, III Sep. 1981 75 p
(Contract EPA-68-03-2648)
(PB82-108176; EPA-600/2-81-197) Avail: NTIS HC A04/MF A01 CSCL 13B

Oil and gas exploration and production drilling technology are described with emphasis on the makeup, use, and disposal of drilling fluids. A model for assessment of volatile organic compounds (VOC) emissions accompanying drilling is presented, along with an estimation of the potential VOC emissions associated with drilling activities. Emissions of volatile organic compounds from oil production in new fields were estimated, based on three types of information: (1) extent of new oil and gas fields (those that started production after 1974) in the contiguous 48 states; (2) drilling techniques used for oil and gas exploration and production wells (and their VOC potential), with specific emphasis on the drilling fluids; and (3) equipment and techniques for oil and gas production in new fields and their potential VOC sources. FEASIBILITY OF COMMERCIALIZED WATER TREATMENT TECHNIQUES FOR CONCENTRATED WASTE SPILLS Final Report

Masood Ghassemi, Kar Yu, and Sandra Quinlivan Sep. 1981 125 p refs
(Contract EPA-68-03-2560)
(PB82-108440; EPA-600/2-81-213) Avail: NTIS HC A06/MF A01 CSCL 13B

The suitability and economics of using reverse osmosis, ultrafiltration, ion exchange, wet air oxidation, high purity oxygen activated sludge process, ultraviolet ozone oxidation, and coagulation/precipitation for onsite treatment of concentrated wastes were evaluated. When used alone, none of the processes considered would be economically applicable to on-site mobile unit treatment of the variety of concentrated wastes encountered, although reverse osmosis, ion exchange, and wet air oxidation meet many of the application requirements and hence require less pretreatment and/or post-treatment. The estimated capital costs for a unit suitable for trailer mounting vary from as low as $35,000 for a 227,000 liters/day (60,000 gpd) ultrafiltration unit to as high as $1.25 to $1.5 million for a 54,000 liters/day (14,400 gpd) 2-trailer wet air oxidation unit. USE OF SELECTED SORBENTS AND AN AQUEOUS FILM FORMING FOAM ON FLOATING HAZARDOUS MATERIALS Final Report, 2-13 May 1977

Michael K. Breslin and Michael D. Royer Sep. 1981 58 p
(Contract EPA-68-03-0490)
(PB82-108895; EPA-600/2-81-211) Avail: NTIS HC A04/MF A01 CSCL 13B

The effect of sorbent materials and fire fighting foam on containment, recovery and vapor suppression of floatable hazardous materials (HM) spilled on water were determined. The devices used in both programs were the clean water incorporated harbour boom and the industrial and municipal engineering swiss OELA III skimmer. Dioctyl phthalate (DOP), octanol, and naphtha served as the hazardous materials. The sorbent materials were polyurethane foam cubes, Sorbent C and Imbiber Beads. An aqueous film forming foam (AFFF), FC-206, was used as the fire fighting foam. The type of HM, Sorbent, tow speed, and wave condition served as controlled and independent variables. Critical tow speed of the boom, HM vapor concentration, and fluid recovered by the skimmer were the dependent variables. GRA

PERFORMANCE TESTING OF THE DIPERNA SWEEPER Final Report

Michael K. Breslin Sep. 1981 44 p
(Contract EPA-68-03-2642)
(PB82-109174; EPA-600/2-81-229) Avail: NTIS HC A03/MF A01 CSCL 13B

Forty-three oil recovery tests were run. A range of best performance for an oil skimmer under various environmental conditions in light and heavy oils was established. The DiPerna Sweeper is a self-contained, floating oil skimmer that can operate in either a stationary or advancing mode. Its principle of operation is based upon drawing oil and water into a sealed container by creating a slight vacuum in the container. A floating weir serves as the inlet. The partial vacuum is created by pumping fluid from the sealed container. The container serves as an oil/water separator. Separate pumps draw water from the bottom of the vessel while others draw oil from the top. The device was able to recover over 75% of the oil presented to it in calm water at tow speed up to two knots. GRA

PERFORMANCE EVALUATION OF AN INDUSTRIAL SPRAY DRYER FOR SO2 CONTROL Final Report, Mar. 1980 - Jun. 1981

James A. Kezerle, Steve W. Mulligan, Dave-Paul Dayton, and Patricia J. Perry Aug. 1981 274 p refs Prepared in cooperation with Celanese Fibers Company, Cumberland, Md. and Rockwell International, Downey, Calif., and Wheelabrator-Frye, Inc., Pittsburgh, Pa.
(Contract EPA-68-02-3174)
(PB82-110701; EPA-600/7-81-143) Avail: NTIS HC A12/MF A01 CSCL 13B

Results of a test to evaluate the SO2 removal performance of the lime-spray-dryer/fabric-filter system treating flue gas from the stoker-coal-fired boiler are presented. Continuous monitors were used to collect data according to EPA procedures for compliance testing. Data were collected for 23 days with the boiler operating at about half load. In addition to evaluating SO2 removal by dry flue gas desulfurization, operating experience with the boiler and spray-dryer/baghouse system was obtained for 5 months. Data were reduced to express SO2 removal on a mass per unit energy input basis as prescribed by EPA. Test results showed the mean SO2 removal efficiency to be 70% (standard deviation of + or - 9%) when the sulfur content of the bituminous coal averaged 2%. T.M.

EVALUATION OF A TREATMENT LAGOON FOR COMBINED SEVER OVERFLOW Final Report, Jul. 1979 - Oct. 1980

Daniel J. Connick, William C. Pisano, and Gerald L. Aronson Sep. 1981 117 p refs
(PB82-105214; EPA-600/2-81-196) Avail: NTIS HC A06/MF A01 CSCL 13B

The effectiveness of a 143 MG facultative lagoon for treating combined sewer overflow and polishing secondary wastewater treatment plant effluent was assessed. The lagoon performance was evaluated for changes in the degree of aeration. This parameter has the dual function of mixing the lagoon and increasing the oxygen levels above that provided by natural reaeration. The pollutant removal performance of the lagoon was evaluated for different discharge levels/detention periods. The effects of the stormwater loadings on lagoon performance were assessed so as to determine the buffering capacity of the lagoon for treating volumes of highly polluted intermittent flow. A full scale 18 MGD application of state of the art disinfection technology was utilized for bacterial reduction. GRA

N82-17672# Louisville Gas and Electric Co., Ky.

PILOT FIELD STUDIES OF FGD WASTE DISPOSAL AT LOUISVILLE GAS AND ELECTRIC Final Report, May 1976 - Aug. 1979

R. P. VanNess, A. L. Plumley (Combustion Engineering, Inc., Windsor, Conn.), N. C. Mohn (Combustion Engineering, Inc., Windsor, Conn.), C. R. Ulrich (Louisville Univ., Kentucky), and D. J. Hagerty (Louisville Univ., Kentucky) 1981 314 p refs
(Contract EPA-68-02-2143)
(PB82-105479; EPA-600/7-81-155) Avail: NTIS HC A14/MF A01 CSCL 13B

The gas desulfurization (FGD) waste disposal was studied. It is shown that properly prepared landfill from FGD sludge/fly ash mixtures prevents trace element contamination of underlying groundwater. Small synthetically lined, above ground impoundments has higher concentrations of trace contaminants than subsurface impoundments. Most sites developed compressive strengths greater than the minimum required for recreational or light structural landfill. Water samples from beneath larger subsurface impoundments indicated that the filtering action of soil aids in decreasing the concentration of contaminants reaching the ground water supply. Certain mixtures under fixation reaction, reducing the permeability and minimizing the release of moisture and/or contaminants to the surrounding soil. GRA

SURVEY AND EVALUATION OF FINE BUBBLE DOME DIFFUSER AERATION EQUIPMENT Final Report, 1 Aug. 1979 - 15 Sep. 1980

Daniel H. Houck and Arthur G. Boon (British Water Research Centre, Stevenage, England) Sep. 1981 189 p refs
(Grant EPA-R-806990)
(PB82-105578; EPA-600/2-81-222) Avail: NTIS HC A09/MF A01 CSCL 13B

The oxgyen transfer performance, operation and maintenance (O&M) requirements, and proper design approaches for fine bubble dome diffuser aeration systems used in activated sludge wastewater treatment were examined. Wastewater treatment plants with dome diffuser aeration equipment were surveyed. Influent and effluent wastewater characteristics, power demand, air supply, and process parameters were compiled for a 5 yr period. It is indicated that, relative to other devices, fine bubble dome diffuser systems perform at high energy efficiency when proper design, operation, and maintenance practices are followed and when strong alpha depressing industrial wastes are absent. The O&M experience with this equipment has generally been very good, with 5-10 yrs or longer, between cleaning. Oxygen transfer performance is highly variable between the plants. GRA

DETECTION AND MAPPING OF INSOLUBLE SINKING POLLUTANTS Final Report, Jun. 1978 - Oct. 1980

Raymond A. Meyer, Milton Kirsch, and Larry F. Marx Sep. 1981 92 p refs
(Contract EPA-68-03-2648)
(PB82-105586; EPA-600/2-81-198) Avail: NTIS HC A05/MF A01 CSCL 13B

A continuous submersible monitor using a cyclically purged electrical conductivity probe capable of long term deployment even when buried in sand or silt was conceived, designed, and tested. The submersible unit, which is battery powered and has no connection to the shore based receiver, transmits the conductivity data via ultrasonic transmission. Laboratory tests show that a 200 kHz depth finder system can resolve the echoes from the surface of a 1 cm-deep layer of carbon tetrachloride (CCl4) from those returning from a hard, sandy or muddy bottom. Field tests indicate that few precursors to the bottom echo return are present that might mask or interfere with the detection of an echo from a pollutant pool. Return echoes were evaluated by 16 mm motion picture photography. A computer based comparator counter technique was developed for data management. GRA

DEMONSTRATION PHYSICAL CHEMICAL SEWAGE TREATMENT PLANT UTILIZING BIOLOGICAL NITRIFICATION Final Report, Jun. 1973 - Dec. 1976

E. Brenton Henson Sep. 1981 88 p refs
(Grant EPA-S-802719)
(PB82-101643; EPA-600/2-81-173) Avail: NTIS HC A05/MF A01 CSCL 13B

The feasibility of treating sewage with a physical chemical type of wastewater treatment plant with a biological process for nitrification was demonstrated. The system has unit processes consisting of screening, flow equalization, chemical clarification using lime, biological nitrification, filtration, and activated carbon adsorbtion. Phosphorous levels were reduced by more than 80% during the chemical clarification step. Total nitrogen concentration was reduced by up to one third during the treatment. Effluent BOD5 and suspended solids levels were significantly lower for this process than the average values obtained from seven various types of biological treatment plants. GRA

A 300 megawatt coal-fired power plant was constructed by Saskatchewan Power Corporation on the East Fork of the Poplar River about 4 miles north of the International Boundary, another 300 megawatt unit is under construction. The power plant and associated reservoir will result in a water use and will modify the transboundary flow of the Poplar River. The impacts of several flow apportionment alternatives are addressed in addition to other potential impacts of the power plant on the U.S. part of the Poplar River Basin. The Poplar River flows will be reduced under conditions of the recommended apportionment. These reduced flows result in less water available for irrigation expansion. GRA

GREAT LAKES ENVIRONMENTAL PLANNING STUDY Summary Report
Sep. 1981 25 p Sponsored by Water Resources Council
(PB82-112970) Avail: NTIS HC A02/MF A01 CSCL 13B

Valuable products of the study include: an inventory of present and anticipated mathematical modeling tools; an overview of how these models can be useful to managers; a Great Lakes nearshore water quality index; and environmental quality maps for the Great Lakes basin. More importantly, the study provided insights that will assist more effective management of the lakes in the future. GRA

CONTROL OF PARTICULATE EMISSIONS FROM ATMOSPHERIC FLUIDIZED-BED COMBUSTION WITH FABRIC FILTERS AND ELECTROSTATIC PRECIPITATORS Final Report, Dec. 1979 - Dec. 1980
D. V. Bubenick, Robert R. Hall, and John A. Dirgo Jun. 1981 77 p refs
(Contract EPA-68-02-2693)
(PB82-115528; EPA-600/7-81-105) Avail: NTIS
HC A05/MF A01 CSCL 13B

Results of a study of chemical and physical characteristics affecting the performance of particulate control equipment, based on five fly ash samples from full- and pilot-scale atmospheric fluidized-bed combustion (AFBC) units are reported. Analysis of acquired data by fabric filter (FF) and electrostatic precipitator (ESP) mathematical models illustrates how control device performance may be affected by AFBC fly ash properties. M.D.K.

(PB82-118670; EPA-600/7-81-099; EDT-121) Avail: NTIS
HC A14/MF A01 CSCL 13B

Economic evaluations of two processes: (1) the aqueous carbonate process (ACP) and the Wellman-Lord process, applied to a sulfuric acid plant, (2) the Resox process, and the coal reduction process, all for sulfur production are reported. The ACP uses a spray dryer flue gas desulfurization (FGD) system and molten salt reduction with coal to make sulfur. The ACP has a major cost advantage because it incorporates final fly ash and chloride removal as process functions. The ACP has a major advantage in annual revenue requirements because it does not need process or reheat steam. Wellman-Lord process costs are the same for all three applications. GRA

SEA GRANT MARITIME HERITAGE SERIES: THE BIGHT OF THE BIG APPLE
Donald F. Squires 1981 93 p refs Prepared for NOAA
(PB82-119439; NYSG-RS-81-00; NOAA-81082003) Avail: NTIS HC A05/MF A01 CSCL 13B

The history of the New York Bight harbors and the relationship between man and the ocean is described. The growth and development of the region has revolved around ocean resources and waterborne transport for nearly four centuries; a consequential segment of the economy is still based upon the resources of the ocean and the transport the ocean makes possible. The Bight has often been neglected resulting in enormous negative impact upon the coastal ocean. There are opportunities to rebuild the heritage, to once again enjoy those aspects of the coastal ocean that shaped the development of the region, to undo some damage that has been done. GRA

MULTI-FUEL LOW-NOx BURNER DEVELOPMENT, PHASE 2 Annual Report, Jan. - Dec. 1980

Hamid A. Abbasi, Mark J. Khinkis, and Richard T. Waibel Jan. 1981 46 p Sponsored in part by Bloom Engineerings, Hauck Manufacturing and Eclipse, Inc.
(Contract GRI-5014-342-0284)
(PB82-115494; GRI-80/0054) Avail: NTIS HC A03/MF A01 CSCL 13A

Industrial burners that incorporate various NOx control techniques while maintaining the heat transfer characteristics of the flames suitable for the particular process application were investigated. NOx control by catalytic combustion, staged combustion, and/or recirculation is incorporated in the various burners. The program had three tasks, one for each of the burners: (1) to develop a direct fired air heater burner with catalyst to determine if it can burn natural gas under the conditions required to produce ultra low Nox levels; (2) a mounting rig was designed to allow the firing angle to be varied during the baseline trials on the Hauck burner; (3) the Bloom baseline baffle burner is installed, and the prototype Bloom burner for steel reheat furnaces is designed. PERFORMANCE OF ACTIVATED SLUDGE PROCESSES: RELIABILITY, STABILITY AND VARIABILITY Final Report

Salar Niku, Edward D. Schroeder, George Tchobanoglous, and Francisco J. Samaniego Sep. 1981 165 p refs
(Grant EPA-R-805097)
(PB82-109604; EPA-600/2-81-227) Avail: NTIS HC A08/MF A01 CSCL 13B

The performance of a large number of activated sludge processes was statistically analyzed and procedures for introducing reliability and stability concepts into design and operation of treatment plants was developed. Using the log-normal distribution and a coefficient of reliability (COR), a probabilistic model and design tables and graphs were developed for predicting achievable effluent BOD and SS concentrations. The stability of various activated sludge processes was examined. The standard deviation was found to be the most appropriate indicator of stability. Correlations and regression analyses are used to investigate the cases of effluent quality variability and to identify the extend of the factors contributing to this variability. An approach that can be used to design a process stochastically when the effluent standards are deterministic in nature is presented. GRA

FIELD STUDIES ON USBM AND TOSCO 2 RETORTED OIL SHALES: VEGETATION, MOISTURE, SALINITY, AND RUNOFF Final Report, 1977 - 1980

M. K. Kilkelly, W. A. Berg, and H. P. Harbert, III Aug. 1981 120 p refs
(Grant EPA-R-804719)
(PB82-109810; EPA-600/7-81-139) Avail: NTIS HC A06/MF A01 CSCL 13B

The vegetative stabilization of processed oil shales and moisture and soluble salt movement within the soil/shale profile were investigated. Research plots with two types of retorted shales (TOSCO II and USBM) with leaching and soil cover treatments were established at two locations: low-elevation and high elevation. Vegetation was established by intensive management, N and P fertilization, seeding, mulching, and irrigation. After seven growing seasons, a good vegetative cover remains with few differences between treatments, with the exception of the TOSCO retorted shale, south aspect, which consistently supports less perennial vegetative cover than other treatments. With time, a shift from perennial grasses to dominance by shrubs is observed. GRA

HYDROGEOCHEMISTRY AND KINETICS OF SILICATE WEATHERING IN A GABBROIC WATERSHED: FILSON CREEK, NORTHEASTERN MINNESOTA Ph.D. Thesis

Donald Ira Siegel 1981 289 p

Avail: Univ. Microfilms Order No. 8126023

Results of the study indicate that Filson Creek is impacted by acid precipitation that enhances the dissolution process. For example, leaching of sulfate acidity during snowmelt increased sulfate concentrations in Filson Creek from less than 2 to as much as 12 milligrams per liter, and H + or - ion concentrations from 10 to minus 6.5 power to as much as .00001. Annual chemical budgets determined at five locations on the creek in 1977 show net losses of dissolved silica, bicarbonate, calcium, magnesium, and sodium of 30.9, 19.6, 3.8, 3.8, and 1.5 kilograms per hectare per year, respectively, and net gains of dissolved potassium and sulfate of 0.4 and 8.9 kilograms per hectare. On a molar basis, about 1.5 times as much magnesium was lost from the watershed than calcium, even though the amount of ferromagnesium minerals in till and bedrock underlying the watershed is about an order of magnitude less than the amount of calcium-plagioclase. Dissert. Abstr.

THE PLASMA ION COMPOSITION IN THE HIGH-LATITUDE MAGNETOSPHERIC BOUNDARY LAYER ACCORDING TO PROGNOZ-7 DATA

E. M. Dubinin, A. V. Zakharov, N. F. Pissarenko, R. Lundin (Kiruna Geophysical Inst., Sweden), and B. Hultqvist (Kiruna Geophysical Inst., Sweden) 1981 23 p refs Presented at the IAGA Assembly, Edinburgh, 1981

(Rept-658) Copyright. Avail: Issuing Activity

A mass analysis of the plasma in the high-latitude boundary layer (the plasma mantle) was made. Direct evidence was obtained that the ionosphere, similar to the solar wind, is a source of the plasmas in this region, filling it by ions (H+) and (O+). The number density of ionospheric ions (O+) in the mantle is usually several percent. During the disturbed periods it increases up to several tens of percent. Energies of these ions are several keV. The content of ions (O+) is usually much higher than that of ions (He+) that indicates the ionospheric but not plasmasphere origin of them. The mechanism of ion acceleration is probably such that it ensures an equal energy to all the ions independently or their mass. The content of ions (O+) correlates positively with the magnetospheric activity level. Author

N82-17698# Oregon State Univ., Corvallis.

ANALYSIS OF THE ATMOSPHERIC WATER VAPOR TRANSPORT AND HYDROLOGIC CYCLE SIMULATED IN A GLOBAL CIRCULATION MODEL Ph.D. Thesis

Jy-Tai Chang 1982 214 p

Avail: Univ. Microfilms Order No. 8126225

An atmospheric moisture balance is diagnostically analyzed from the January and July data of the atmospheric general circulation model, which was integrated for thirty-nine months of simulation with seasonally-varying sea-surface temperature and solar insolation. The model hydrologic processes analyzed for the balance include the surface evaporation, the precipitation by large-scale and cumulus condensation, the vertical transport by large-scale and cumulus mass fluxes, and the horizontal transport of water vapor. The large-scale transports include the contributions from the standing and transient components of motion. Also analyzed are the potential and stream functions of horizontal transport, and the statistics of seasonal and interannual variabilities of the global and hemispheric effects of the hydrologic processes. As a result of these analyses, the hydrologic cycle is constructed and understood for both January and July of the model. Dissert. Abstr.

N82-17699 Utah Univ., Salt Lake City.

SATELLITE SOUNDING OF CLOUD PARAMETERS AND TEMPERATURE PROFILES IN CLOUDY ATMOSPHERES FROM INFRARED AND MICROWAVE DATA Ph.D. Thesis

Hwa-Young Yeh 1981 181 p

Avail: Univ. Microfilms Order No. 8125908

The utilization of both infrared and microwave sounding channels for the simultaneous inference of the cloud parameters and temperature profiles in cloudy atmospheres is studied. The necessary parameterized equations for infrared and microwave radiative transfer were derived, and the retrieval programs were developed for the determination of the high cloud top height, high cloud thickness, low cloud top height, surface emissivities, cloud liquid water content, and temperature profile successively utilizing selected HIRS and SCAMS channels. Hypothetical error analyses were performed and it is found that the retrieval technique is theoretically rigorous and practically feasible. The retrieval technique is then applied to the Nimbus 4 HIRS and SCAMS data for a number of carefully selected cases associated with summertime convective cloud systems and wintertime large scale synoptic cyclones. Cloud parameters and temperature profiles appear to be in qualitative agreement with the available synoptic, radiosonde, surface, and radar observations. Dissert. Abstr.

N82-17700 Washington Univ., Seattle.
FORBIDDEN 5200 ANGSTROMS EMISSION BY ATOMIC NITROGEN IN A MIDLATITUDE AURORA Ph.D. Thesis
Thomas C. Washington Tyler 1981 143 p
Avail: Univ. Microfilms Order No. 8126153

The little measured emission of the forbidden radiation at N(2D) 5200 A by metastable atomic nitrogen in a mid latitude aurora were studied. A new style of modulated interference filter photometer built to measure it is described. The new photometer uses a circle of collimating lenses and slits to collect and modulate the incidence angle at a fixed filter, thereby greatly increasing the collection aperture for weak light from a small region of the sky. Line and line ratios versus time are consistent with the input of low energy primary electrons and with the geometrical limits set by two station viewing. The measurements expand the available information on this minor emission at mid latitudes, identify its source as aurora give records of substantial intensity, and relate its strength to the derived energy spectrum of incident electrons. Dissert. Abstr.

DEPOSITIONAL ENVIRONMENTS OF THE SUBSURFACE CRETACEOUS DEPOSITS OF SOUTHEASTERN NORTH CAROLINA Ph.D. Thesis
Edward Scheid Custer, Jr. 1981 221 p
Avail: Univ. Microfilms Order No. 8125569

The subsurface Cretaceous deposits of southeastern North Carolina were analyzed. Six lithologic units were recognized. These are, in ascending stratigraphic order: an unnamed Lower Cretaceous unit, Cape Fear Formation, unnamed Upper Cretaceous unit, Middendorf Formation, Black Creek Formation, and Peedee Formation. The unnamed Lower Cretaceous unit contains interbedded fine to medium grained sands, calcareous sandstones, sandy limestones and clays which were deposited in environments ranging from nearshore to fluvial. The Cape Fear Formation consists of very fine to coarse tan sands interbedded with brown and reddish clays. The Upper Cretaceous unnamed unit is composed of tan and yellow medium to coarse sands interbedded with tan and red clays deposited in braided fluvial environments. The Black Creek Formation consists of lignitic dark clays and coarse to very fine sands. Formation is composed of dark green to greenish-gray, micaceous, glauconitic clays and sands interbedded with calcareous sandstones or sandy limestones. Dissert. Abstr.

N82-17702 Illinois Univ. at Urbana-Champaign.
GEOLOGY AND GEOCHEMISTRY OF SPHALERITE IN COAL Ph.D. Thesis
James Collins Cobb 1981 220 p
Avail: Univ. Microfilms Order No. 8127568

The morphology of sphalerite vein walls in coal is investigated. Sphalerite veins postdate cleats and are often developed in cleats. Some sphalerite deposition was contemporaneous with subsidence of coal into sinkholes. Compactional features in the coal show that from 8 to 14 percent of the compaction in the coal occurred after sphalerite deposition commenced. A relationship between porosity, inherent moisture, and compaction of the host coals suggests that the sub-bituminous (B) rank achieved at the time of sphalerite deposition. Homogenization temperatures for the sphalerite fluid inclusions are nearly identical for the sphalerite from the Illinois and Forest City Basins and range from 75 to 113 C. There is a moderately high correlation coefficient (r = 75) between the vitrinite reflectance of the host coals and homogenization temperatures. This data may eliminate the possibility of fluid flow initiated by thermally-produced convection and raises the possibility of convection by compaction and loading of basin sediments. Dissert. Abstr.

N82-17703 Tulane Univ., New Orleans, La.
DEPOSITION AND DIAGENESIS OF GLAUCONITE SANDSTONE, BERRYMORE-LOBSTICK-BIGORAY AREA, SOUTH CENTRAL ALBERTA: A STUDY OF PHYSICAL CHEMISTRY OF CEMENTATION Ph.D. Thesis
Indurani Dayal Meshri 1981 178 p
Avail: Univ. Microfilms Order No. 8127777

Examination of logs, core descriptions, stratigraphic cross sections, sand-isolith and structure maps, regional geology and paleogeography reveal the depositional environments of the Glauconite Sandstone in the Berrymore-Lobstick-Bigoray area to be distributary channels, delta platform, distributary mouth bars, and interdistributary bays. Distributary channel-fill deposits are immature texturally and mineralogically. Their composition varies from submature feldspathic litharenites to immature feldspathic litharenites. Siderite, ankerite and illite are early cements. Abundant ankerite and some pyrite are found associated with the erosional base of the distributary channels with abundant clay clasts. Zones of pore-filling hematite are present as intermediate to late stage cement. Pore-lining to pore-filling kaolinite, pore-bridging illite and coarse crystalline siderite are late-stage cements. Dissert. Abstr.

CHEMICAL FLUCTUATIONS AND INCOHERENT SCATTERING THEORY IN THE TERRESTRIAL D REGION
G. Kockarts and J. Wisemberg 1981 34 p refs Submitted for publication
(Aeronomica-Acta-A-233-1981) Avail: Issuing Activity

The continuum theory of incoherently scattered electromagnetic waves is modified in order to include possible effects of thermally induced chemical fluctuations by introducing fluctuating parts in the production and loss terms of the continuity equations. An equivalent ionospheric model is developed for electrons and for negative and positive ions. A matrix formulation gives simultaneous access to fluctuating parts of each charged component. Numerical results indicate that chemical fluctuations are important over the height range where negative ions are comparable or > the electron concentration. Strong enhancements of the incoherent scatter cross section occur for frequency shifts < 20 Hz. A simple approximation is given for the contribution of chemical fluctuations. Author (ESA)

STRATOSPHERIC AEROSOL PROPERTIES FROM EARTH LIMB PHOTOGRAPHY AND MIE SCATTERING THEORY
M. Ackerman, C. Lippens, and C. Muller 1981 46 p refs Submitted for publication Original contains color illustrations
(Aeronomica-Acta-A-235-1981) Avail: Issuing Activity

A method for measuring stratospheric aerosol size distributions and density is described. Balloon-borne cameras simultaneously record various wavelengths of light from the Earth limb below the horizontal line of sight when solar elevation is low. Limb radiances are expressed in solar radiance units. The depression angles at which limb radiances are measured are related to the line of sight altitude of closest approach to the Earth surface. The measured integrated radiances can be inverted, taking into account absorption by ozone and air along the line of sight, in order to yield the in situ radiance per unit length versus altitude. The scattering angle of direct solar radiation is computed from the relation between the depression angle at which the atmospheric radiance is measured and the solar elevation angle at the time of measurement. The method is sensitive to particles of radius 0.04 to 0.4 microns. A larger number of particles of radius < 0.1 micron is estimated, compared to previous data. Author (ESA)

STRATOSPHERIC CCN SAMPLING PROGRAM Final Report, 1 Apr. 1981 - 22 Jan. 1982
C. Fred Rogers and James G. Hudson 22 Jan. 1982 59 p refs
(Grant NAG2-114)
(NASA-CR-168396) Avail: NTIS HC A04/MF A01 CSCL 04A

Two one liter grab samples of stratospheric aerosol were returned from each of six U-2 sampling missions. Cloud condensation nuclei (CCN) spectra from each sample were obtained. Interest was centered on the effects of volcanic activity. Spurious particle generation was found to be a serious problem in container 9 LFT and a much smaller problem in container 9 RT. Initial studies of an option for improved sample containers and values were completed. A CCN spectrometer, able to operate at an internal pressure of 300 mb, was designed. N.W.

EFFECTS OF MULTIPLE SCATTERING AND SURFACE ALBEDO ON THE PHOTOCHEMISTRY OF THE TROPOSPHERE Final Report, period ending 30 Nov. 1981
T. R. Augustsson and S. N. Tiwari Dec. 1981 264 p refs
(Contract NCC1-30)
(NASA-CR-168417) Avail: NTIS HC A12/MF A01 CSCL 04A

The effect of treatment of incoming solar radiation on the photochemistry of the troposphere is discussed. A one dimensional photochemical model of the troposphere containing the species of the nitrogen, oxygen, carbon, hydrogen, and sulfur families was developed. The vertical flux is simulated by use of the parameterized eddy diffusion coefficients. The photochemical model is coupled to a radiative transfer model that calculates the radiation field due to the incoming solar radiation which initiates much of the photochemistry of the troposphere. Vertical profiles of tropospheric species were compared with the Leighton approximation, radiative transfer, matrix inversion model. The radiative transfer code includes the effects of multiple scattering due to molecules and aerosols, pure absorption, and surface albedo on the transfer of incoming solar radiation. It is indicated that significant differences exist for several key photolysis frequencies and species number density profiles between the Leighton approximation and the profiles generated with, radiative transfer, matrix inversion technique. Most species show enhanced vertical profiles when the more realistic treatment of the incoming solar radiation field is included. E.A.K.

OBSERVATIONS OF LARGE SCALE F-REGION IRREGULARITIES USING AIRFLOW EMISSIONS AT 7774 DEG A AND 6300 DEG A
Y. Sahai, J. A. Bittencourt, N. R. Teixeira, and H. Takahashi Oct. 1981 24 p refs Submitted for publication Sponsored by the Brazilian Fund for Science and Technology
(INPE-2236-PRE/023) Avail: NTIS HC A02/MF A01

The measurements were made with a two-channel photometer which permitted scanning observations both along and across the magnetic meridian. Observations at 7774 A can detect large scale irregularities near the F-region peak height, whereas observations at 6300 A detect such irregularities at an altitude about 50 km to 100 km lower, depending on the F-region height. On several nights, during spread-F conditions, as indicated by an ionosonde operating at the same location, the presence of large intensity depletions of short duration were detected in both emissions. These depletions were observed to move towards the east in the east-west scans, and usually towards the south in the north-south scans. Salient features of these observations are presented and discussed. T.M.

PARTICLE PRECIPITATION AND ATMOSPHERIC X-AND GAMMA-RAYS IN THE SOUTH ATLANTIC MAGNETIC ANOMALY BY BALLOON EXPERIMENTS Progress Report, 1968 - 1981
Jose Marques daCosta Jun. 1981 10 p refs Presented at the 1st Aeronomy Workshop Brazil-Argentina, Foz do Iguacu, Brazil, 18-20 Jul. 1981 Sponsored in part by the Fundo Nacional de Desenvolvimento Cientifico e Technologico - FNDCT
(INPE-2119-RPE/343) Avail: NTIS HC A02/MF A01

Particle precipitation from the Van Allen belts into the atmosphere of the South Atlantic magnetic anomaly region, were observed with balloon-borne instrumentation. Balloons carrying onboard charged particle and X-and gamma ray detectors formed by plastic scintillators were used. Measurements of bremsstrahlung X-rays and low energy gamma rays as well as the charged particles themselves were made at the altitude of the stratospheric balloons, and simultaneous measurements of the geomagnetic variations were made by rapid run ground magnetometers. LARGE HORIZONTAL ELECTRIC FIELDS MEASURED AT HEIGHTS OF THE BRAZILIAN MAGNETIC ANOMALY AND ASSOCIATION TO LOCAL ENERGETIC PARTICLE PRECIPITATION
W. D. Gonzalez, A. E. C. Pereira, I. M. Martin, S. L. G. Dutra, O. Pinta, Jr., J. Wygant (California Univ., Berkeley), and F. S. Mozer (California Univ., Berkeley) Jun. 1981 12 p refs Presented at the 1st Aeronomy Workshop Brazil-Argentina, Foz do Iguacu, Brazil, 18-20 Jul. 1981 Submitted for publication
(INPE-2120-RPE/344) Avail: NTIS HC A02/MF A01

Large scale electric fields were measured, by balloon flights, at the Brazilian Magnetic Anomaly with double probe detectors. The results of the flight during a time interval with fair weather at the observing region and enhanced geomagnetic activity are reported. It is suggested that a BAND of precipitating energetic particles, moving equatowards with respect to the balloon, produce a conductivity enhancement down to the middle atmosphere, distorting the vertical atmospheric electric field and giving rise to the type of horizontal fields. Hot plasma observations at high and low altitudes were compared. The plasma ion composition at high altitudes outside the plasmasphere was O+. Heavy ions were also observed at low altitudes outside the plasmasphere. It is shown that at times these ions are found well below the plasmapause inside the plasmasphere. Comparisons of the low altitude plasma and dc electric fields show that the outer limits of the plasmasphere is not always corotating at the low L-shells. The corotation boundary, the estimated plasmapause boundary at the boundary of the inner edge of plasma sheet ions were at the same position. The inner edge of plasma sheet electrons is observed at higher latitudes than the plasmasphere boundary during disturbed times. The inner edge of the plasma sheaths shows a strong dawn to dusk asymmetry At the same time the inner edge of the ring current and plasma sheath also moves to high latitudes reflecting an apparent inflation of the magnetosphere E A K

SATELLITE AND SURFACE GEOPHYSICAL EXPRESSION OF ANOMALOUS CRUSTAL STRUCTURE IN KENTUCKY AND TENNESSEE
M A Mayhew (BTS, Inc), H H Thomas, and P J Wasilewski Jul 1981 29 p refs
(NASA-TM-82163) Avail NTIS HC A03/MF A01 CSCL 08N

An equivalent layer magnetization model is discussed. Inversion of long wavelength satellite magnetic anomaly data indicates a very magnetic source region centered in south central Kentucky Refraction profiles suggest that the source of the gravity anomaly is a large mass of rock occupying much of the crustal thickness The outline of the source delineated by gravity contours is also discernible in aeromagnetic anomaly patterns The mafic plutonic complex, and several lines of evidence are consistent with a rift association The body is, however, clearly related to the inferred position of the Grenville Front It is bounded on the north by the fault zones of the 38th Parallel Lineament It is suggested that such magnetization levels are achieved with magnetic mineralogies produced by normal oxidation and metamorphic processes and enhanced by viscous build-up, especially in mafic rocks of alkaline character E A K

Results from a field study with in-situ seismic measurements in crystalline rock are summarized It was found that among a few potential seismic techniques the so called cross hole method would probably provide the most powerful capability for detecting cracks and fracture zones By this method the area between two holes are systematically scanned by seismic raypaths Seismic signals are generated in one hole by microexplosions and recorded in the other at various combinations of depths A test sample of scanning data showed a rather dramatic variation of the seismic P-wave velocity (5-6 km/s) Analysis procedures like tomographic imaging was applied to this data set primarily to illustrate the kind of structural mapping such procedures can provide Author

Naturally occurring ionospheric disturbances generate structure over an extremely large range of scale sizes and intensities. To diagnose the interacting plasma processes that cause this structure continuum requires a variety of complex instruments This report describes a multiple-frequency HF backscatter radar that can measure the Doppler spectrum of structure in the scale-size region from tens of meters to meters. This structure regime is important in its own right and acts as tracer for macroscale parameters such as plasma depletions, currents, and electric fields. Author (GRA)

The results of an analysis of the various factors affecting the detection, location, and event identification capability of a single seismic station in the regional distance range are summarized. A regional seismic detection model is described and applied to the evaluation of the frequency dependent detectability of underground explosions in various source media. On the basis of these analyses it is concluded that P waves from explosions with yields as small as 1 kt should be detectable at ranges on the order of 1000 km or more over regional propagation paths characteristic of the Eastern U.S. Event location capability associated with single station seismic data is assessed. It is concluded that epicentral distance accuracies on the order of 10 to 15 km and source azimuth accuracies of better than 10 degrees are achievable using routinely available data processing procedures GRA

TOWARD GLOBAL MONITORING OF THE IONOSPHERE IN REAL TIME BY A MODERN IONOSONDE NETWORK: THE GEOPHYSICAL REQUIREMENTS AND TECHNOLOGICAL OPPORTUNITY
J. W. Wright and A. K. Paul Jul. 1981 72 p refs Original contains color illustrations
(PB82-106444; NOAA-81081803) Avail: NTIS HC A04/MF A01 CSCL 04A

Current developments in ionospheric sounders demonstrate the advantages of fully computer-interactive systems and digital data acquisition, in which all aspects of system control and real-time data processing are software-defined. Priority is being given to vertical-incidence capabilities, and particularly to automatic estimation of the electron density distribution and its time variation. Two or more such instruments can obtain measurements bistatically to sample ionospheric properties at intermediate locations. Measureable properties, whether by vertical or oblique sounding, include the time and frequency dependence of group path and phase, the signal amplitude, the echo direction of arrival and polarization. CONE PENETROMETER AND LIQUID LIMIT
1981 22 p refs
(PB82-113507; CUED/D-SOILS/TR-101-1981; ISSN-0309-7439) Avail: NTIS HC A02/MF A01 CSCL 08M

The use of the cone penetrometer to determine the liquid limit of soils is briefly discussed. Published data of shear strength at moisture contents near the liquid limit, and of penetrations of the fall cone of angle 30 degrees and weight 80gf into soils at water contents near the liquid limit, are compared. It is concluded that strength tends to decrease and cone penetration to increase with the value of the liquid limit and that consequently precise correspondence between liquid limits determined with the cone penetrometer and with the traditional Casagrande apparatus is not to be expected. The satisfactory predictive ability of a simple expression relating compression index and plasticity index is demonstrated. GRA

ON THE GEOLOGY, GEOCHEMISTRY AND GENESIS OF THE TOM Pb-Zn-BARITE DEPOSIT, YUKON TERRITORY, CANADA Ph.D. Thesis
Duncan Large 1981 161 p refs
(PB82-116708) Avail: NTIS HC A08/MF A01 CSCL 08G

The Tom Pb-Zn-barite prospect was discovered in 1951 by prospectors working for the Hudson Bay Exploration and Development Company. The prospect is located close to the border between the Yukon Territory and the Northwest Territories, Canada. The Tom deposit is still under evaluation and no decision has been made to mine the ore. To date company work has consisted of surface geological mapping, Diamond drilling and an underground exploratory drive. The recognition of the Tom as an example of sediment-hosted, submarine exhalative mineralization, and the recent discovery of further occurrences of similar mineralization at the same stratigraphic horizon within the Selwyn Basin, raises the possibility that the eastern Yukon could become a very important Pb-Zn-barite mining camp. GRA

THE SEISMICITY OF FOREARC MARGINAL WEDGES (ACCRETIONARY PRISMS) AND SEISMOTECTONICS OF CONVERGENT MARGINS Ph.D. Thesis
Tzann-Hwang Chen 1981 123 p
Avail: Univ. Microfilms Order No. 8126593

Three different types of seismic data from island arc regions were examined: teleseismically-recorded earthquakes that were reported in the literature as occurring in major arc-trench regions; local earthquakes located by combined ocean bottom seismograph and land networks in the arc-trench region in the New Hebrides and the central and eastern Aleutian Trench; and S-P intervals measured at stations on islands located on the outer ridge or at ocean bottom seismograph stations on the forearc marginal wedge. The results indicate that: primary normal faulting occurs in the top of Benioff zone underneath the active margin, primary thrust faulting occurs in the active margin of overriding plate and the angle between the axis of the compressional stress and the downdipping slab is increased with depth, and primary normal faulting is also found above the zone of thrust faulting in the shallowest part of the overriding plate in New Habrides.

PETROLOGY OF THE ULTRAMAFIC XENOLITHS ON THE KOOLAU SHIELD, OAHU, HAWAII. PART 1: LIQUIDUS PHASE RELATIONS ON THE JOIN ANORTHITE-FORSTERITE-SILICA AT 10 kBAR, PART 2 Ph.D. Thesis
Gautam Sen 1981 204 p
Avail: Univ. Microfilms Order No 8126595

On the basis of petrography and mineral chemistry, the xenoliths were classified into three major xenoliths suites: dunite, spinel lherzolite, and pyroxenite suites. Apart from these major suites, xenoliths with distinct cumulate feature, and a plagioclase-spinel lherzolite xenoliths occur. The dunites are interpreted to represent cumulates rather than residual from partial fusion. For liquid phase relations three piercing points were found: two of them are generated by the reaction curves liquid + spinel = anorthite + enstatite and liquid + forsterite = spinel + enstatite. The third piercing point represents the univariant curve along which anorthite, diopside, and a hi-quartz crystallize in equilibrium. Dissert. Abstr.

THE BIOSTRATIGRAPHY AND TAXONOMY OF MESOZOIC RADIOLARIA FROM THE SAMAIL OPHIOLITE AND HAWASINA COMPLEX, OMAN Ph.D. Thesis
Phyllis Russell Tippit 1981 403 p
Avail: Univ. Microfilms Order No. 8126594

Radiolarian biostratigraphic data confirms the hypothesis that rocks exposed in the Oman Mountains were deposited in a Mesozoic ocean basin and later tectonically emplaced in a vertical stratigraphic sequence. Radiolaria extracted from mudstones interbedded with the pillow lavas at the top of the Samail Ophiolite were Late Cretaceous (Cenomanian) in age, indicating a Cenomanian age of origin for the Ophiolite. Samples from the Haliw Formation of the Hawasina Complex were Triassic in age. No older pelagic sediments were found. These Haliw sediments, together with a Late Triassic horizon at the base of the Halfa Formation, overlie basalts and may represent deep-water sedimentation early in the basin's history. The longest sections of radiolarian chert and mudstone were deposited during another period of regional deepening and pelagic sedimentation during the Late Jurassic and Early Cretaceous. Dissert. Abstr.

ENERGY TRANSPORT WITHIN THE EARTH'S ATMOSPHERE OCEAN SYSTEM FROM A CLIMATE POINT OF VIEW Ph.D. Thesis
George Garrett Campbell 1981 167 p
Avail: Univ. Microfilms Order No. 812642

The Earth's atmosphere-ocean system is considered from an energy balance point of view. The monthly mean satellite observations of the radiation budget are discussed. In particular the Nimbus 6 Earth Radiation Budget experiment is emphasized since it contributes half of the radiation data. The many sources of measurement error are presented with the conclusion that about half of the + or - 9W/sq m errors in the net radiation comes from systematic errors. From the annual net radiation map the divergent component of the flux of energy was calculated. This vector field shows the expected equator to pole energy transport but it also shows substantial eastwest flows. The magnitude of the west-east components is about the same as the deviations from the latitude zonal mean of the north-south fluxes. The global circulation divides into an eastward and westward flow hemisphere with zero flux line at 20 deg E and 190 deg E. Dissert. Abstr.

N82-17730 Florida State Univ., Tallahassee.
THE KINEMATIC AND METAMORPHIC DEVELOPMENT OF THE TOWALIGA-GOAT ROCK MYLONITES, GEORGIA-ALABAMA Ph.D. Thesis
Willis Algeon Holland, Jr. 1981 116 p
Avail: Univ. Microfilms Order No. 8127540

The Towaliga-Goat Rock and Bartletts Ferry deformation zones are major tectonic boundaries of the southeastern Piedmont. The Towaliga zone separates the Pine Mountain Belt and the Inner Piedmont and the Goat Rock and Bartletts Ferry Zones separate the Pine Mountain and Uchee Belt. The Uchee Belt is composed of granitic gneisses and amphibolites modified by deformational phases, each represented by distinctive mesoscopic folding patterns. The earliest is a poorly developed folding of obscure compositional layering. Later leucocratic banding is folded by recumbent isoclines with subhorizontal axial plane cleavage. Intensification of cleavage to the northwest produces the southeast dipping mylonitic foliation of the Goat Rock and Bartletts Ferry Zone. Mesoscopic structural patterns is accounted for by regional compressive folding accompanied by ductile drag folding and mylonitization on the limbs of a major anticlinal structure. Dissert. Abstr.

N82-17731 Michigan Univ., Ann Arbor.
GEOLOGY, MINERALOGY, AND GEOCHEMISTRY OF THE MCCLURE MOUNTAIN ALKALIC COMPLEX, FREMONT COUNTY, COLORADO Ph.D. Thesis
Donald Henry Alexander 1981 352 p
Avail: Univ. Microfilms Order No. 8125054

The McClure Mountain alkalic complex is evolved from a consanguineous suite of gabbroic, syenitic, and lamprophyric magmas. Field, mineralogical, and chemical data suggest several differentiation hypotheses which are tested by means of linear least squares mixing models. Initially, partial melting of alkali peridotite produced parental nepheline-normative alkali basalt magma. A part of this magma ascended to shallow crustal levels along deep-seated faults and differentiated to a stratiform body of cumulitic olivine gabbros, gabbros, anorthosites, and magnetite-ilmenite ores. Petrographic studies, graphical analyses, and modeling support the hypothesis that the late lamprophyres were formed by mixing of a partly crystalline alkalic basalt magma with syenitic magma. Models rule out the hypothesis that the lamprophyres can be parental to syenite and gabbro. Progressive changes in the petrography along the strike of individual lamprophyres can be explained by differentiation during transport. Dissert. Abstr.

N82-17732 California Univ., San Diego.
THE DIAGENESIS OF MARINE CARBONATE SEDIMENTS: EXPERIMENTAL AND NATURAL GEOCHEMICAL OBSERVATIONS Ph.D. Thesis
Paul Arthur Baker 1981 153 p
Avail: Univ. Microfilms Order No. 8125435

Analysis of Sr and Ca ratios of several deep-sea carbonate sediments and porewaters shows that Sr is expelled by the solids during recrystallization and transported in solution out of the system. Quantitative treatment of these data reveals that: (1) most ancient limestones have undergone major chemical exchange only with marine pore fluids; (2) limestone cement is largely derived from within the original carbonate pile; (3) externally-imposed fluid flow is not a prerequisite for total carbonate recrystallization; (4) the values of the distribution coefficient of Sr in calcite appropriate for diagenetic studies were determined in laboratory experiments. Experimental replacement of calcite by dolomite under a variety of conditions indicates that dolomitization can take place in marine and lacustrine environments only under the following two conditions: (1) low dissolved sulfate concentrations, and (2) insubstantial contemporaneous silica diagenesis. Three sectors of North Sea Mastrichtian and Danian age chalks were studied geochemically. At one site in the Vern field, large amounts of isotopically heavy carbon, derived from microbial degradation of organic material, were incorporated into the carbonate during diagenesis. Dissert. Abstr.

GEOLOGICAL INVESTIGATIONS OF PRE-LATE JURASSIC TERRANES IN THE SOUTHERNMOST ANDES Ph.D. Thesis
Randall David Forsythe 1981 298 p
Avail: Univ. Microfilms Order No. 8125286

Pre-Late Jurassic terranes of the Patagonian Archipelago were investigated. Their regional stratigraphic and structural characteristics were surveyed. Their significance in the late Paleozoic to early Mesozoic evolution of South America were determined. Pre-Late Jurassic rocks within the archipelago are distributed in two belts. Within the outer belt the Madre de Dios Archipielago was studied in detail. Pre-Late Jurassic rocks of this area are divisibtle into three mappable units. These three units are interpreted to be part of a late Paleozoic to early Mesozoic accretionary prism that was located along the ancestral Pacific margin of the South American sector of Gondwana. Within the inner belt, the region of Peninsula Staines was studied in detail. In this region greenschist facies metamorphism and pervasive deformation fabrics prevent stratigraphic subdivision of the terrane. However the lithologies present are correlative with the outer belt suggesting that they also were part of the late Paleozoic fo early Mesozoic accretionary prism. Dissert. Abstr.

N82-17734 Washington Univ., Seattle.
THE GEOCHEMISTRY OF SULFUR AND CARBON IN BASALTIC MELTS Ph.D. Thesis
Edmond Albigese Mathez 1981 153 p
Avail: Univ. Microfilms Order No. 8126125

Submarine basaltic lavas generally erupt in a sulfide-saturated state. Concentrations of sulfur dissolved in glasses are in the range 1000 to 1800 ppm and exhibit nearly perfect covariance with iron concentration, implying that the equilibrium governing sulfide stability in basaltic magmas is FeO + 1/2S2 reversible reaction FeS + 1/2O2. The iron contents of sulfide-saturated melts control f sub S sub 2 and f sub O sub 2. However, the range of iron contents of most basalts suggests that these variables are nearly identical for tholeiitic magmas at equivalent temperatures. Crystallization of plagioclase and olivine drive residual magma compositions along paths approximately parallel to the sulfide-saturation surface. Consequently, large quantities of sulfides will not separate until the relatively late stages of fractional crystallization. Dissert. Abstr.

N82-17735 Columbia Univ., New York.
STRATIGRAPHY OF THE WESTERN NORTH ATLANTIC BASED ON THE STUDY OF REFLECTION PROFILES AND DSDP RESULTS Ph.D. Thesis
Gregory Stuart Mountain 1981 331 p
Avail: Univ. Microfilms Order No. 8125352

Three hundred thousand km of single- and multichannel reflection profiles from the western North Atlantic were examined. Basement and ten sedimentary reflectors were recognized, and type profiles for each are identified and described. Two-way travel time to all reflectors were digitized along 30,000 km of the best profiles. Regression analysis of sound velocities measured along the IPOD line provides linear equations of interval velocity vs. one-way time that are superior to those derived from sonobuoy wide-angle reflections, and three equations which describe horizontal and vertical velocity variations were derived. Using these equations, each digitized profile was converted from travel time to depth, and thickness between adjacent reflectors and total depth to basement were calculated and contoured in nine basin-wide maps. Results from 25 DSDP boreholes and 2 COST wells were integrated with the seismic stratigraphy. Dissert. Abstr.

N82-17736 Connecticut Univ., Storrs.
AN APPLICATION OF RAY THEORY TO THE INVESTIGATION OF SEISMIC HEAD WAVE POST-Pn PHASES Ph.D. Thesis
Edward Joseph Close 1981 185 p
Avail: Univ. Microfilms Order No. 8125450

At epicentral distances between 200 and 1,000 kilometers the first energy to arrive from a seismic event is generally identified as a compressional headwave, Pn. According to Snell's Law, there are eleven separate waveforms to be expected, following Pn. These are termed the post-Pn phases and are the result of various conversions upon reflection from the surface, refraction along the uppermost mantle as a compressional wave, and returning to the surface as a compressional or shear phase. These post-Pn phases are expected to arrive at the seismic station in one to twenty seconds after the Pn event and prior to the P* event, which has traveled along the Conrad discontinuity. For the shorter epicentral distances, in the 200 kilometer range, some of the post-Pn phases are seen to arrive after P*. Only the earthquakes which will have originated from a shallow, crustal focus, usually of three to twenty kilometer depth are considered. Dissert. Abstr.

TIME DEPENDENT THERMAL MODELING OF PLATE TECTONIC PROCESSES Ph.D. Thesis
Kevin Patrick Furlong 1981 149 p
Avail: Univ. Microfilms Order No. 8125899

Three dimensional evolution of convergence plate boundaries and triple junctions, coupled with time dependent thermal modeling using the Method of Lines numerical techniques is discussed. The path which subducting lithosphere follows can be broken into three regions: (1) a sub-horizontal region of nearly constant dip near the trench; (2) a region of rapidly increasing dip; (3) a region generally deeper than 125 km, again of nearly constant dip. Modeling of the thermal evolution of subducting slabs as they pass through these three regions, with the actual path simulated by appropriate time dependent boundary conditions, indicates that the geometry of the slab in region can be related directly to the thermal structure of the slab, and thus indirectly to the age and velocity of the subducting lithosphere. Rapid increase in convergence velocity can provide an enabling mechanism for back-arc spreading, while migration of the arc, uplift, enhanced heat flow, and crustal partial melt can result from the subduction of progressively younger lithosphere. Dissert. Abstr.

TERRESTRIAL HEAT FLOW OVERLYING THE ANDEAN SUBDUCTION ZONE Ph.D. Thesis
Steven George Henry 1981 204 p
Avail: Univ. Microfilms Order No. 8125124

As a result of a geothermal investigation, thirty-four new heat flow sites in the countries of Peru, Bolivia, and Brazil were established. The Andes were divided into five regions based on their apparently different uplift and erosional histories. The heat flow in each of these regions can be interpreted in terms of their past tectonic and magmatic history, which in turn is most likely related to the angle of subduction. In central Peru the heat flow is low and the angle of subduction is low, 10 to 15 deg., in southern Peru and northern Bolivia the heat flow is intermediate where the subducted plate is transition from low to higher angle subduction, and directly east of the active and recent volcanism of central and southern Bolivia the heat flow is high and the angle of subduction reaches 30 deg. Explanations for the low heat flow include the possibility that magnetic injections in regions of compression yield a relatively small thermal perturbation, and the low angle of subduction may result in an underplating of the continent. Dissert. Abstr.

Egill Hauksson 1981 161 p
Avail: Univ. Microfilms Order No. 8125301

During 1978 and 1979 radon content in groundwater from nine geothermal wells in Iceland was monitored to correlate possible precursory changes in radon content with local seismicity. Radon emission from fumaroles at Krafla volcano in north Iceland was monitored to establish a possible relationship between radon emission and ongoing epsiodic microseismicity, rifting, and volcanism. To shed light on the physical basis of anomalous radon emission as a precursor to earthquakes, world-wide radon data are interpreted in terms of recent results in rock mechanics. Dissert. Abstr.

KINEMATIC THERMAL MODELS OF THE EARTH'S MANTLE Ph.D. Thesis
Robert Thomas Langan 1981 84 p
Avail: Univ. Microfilms Order No. 8124938

The thermal evolution of the mantle geotherm under oceanic lithosphere was examined using a numerical simulation for a radially symmetric Earth. The viscosity of the mantle is assumed to be low enough to allow slabs to sink to near the core-mantle boundary. The return flow to ridges is modelled as a uniform vertical mass flux. The spreading rate and the resulting vertical mass flux are assumed to be constant over each of two major time periods in the Earth's history: from the approximate time for formation, 4.55 billion years before present (bybp), to the end of the Archean (here assumed to be 2.76 bybp) and from the end of the Archean to the present. This break is consistent with a global change in geotectonic style. Dissert. Abstr.

N82-17741 Columbia Univ., New York.
ON THE TECTONIC EVOLUTION OF THE PHILIPPINE PLATE: MARINE GEOPHYSICAL AND GEOLOGICAL STUDIES OF THE PARECE VELA BASIN, THE WEST PHILIPPINE BASIN AND THE MARIANA FORE ARC Ph.D. Thesis
Cary Louis Mrozowski 1981 214 p
Avail: Univ. Microfilms Order No. 8125353

The Parece Vela Basin, which forms much of the eastern Philippine Plate, is divided into two topographic provinces by the north-trending Parece Vela Rift. The rough western province is thinly sedimented and has a north-trending basement fabric. The eastern province is thickly blanketed by sediments derived from the West Mariana Ridge. The Parece Vela Rift is composed of discrete deeps which typically exceed 6 km in depth. Geochemical and seismic data show the basin crust to be oceanic. The oceanic West Philippine Basin forms the western half of the Philippine Plate and can be subdivided into three basins. The Mariana arc trench system is along the eastern edge of the Philippine Plate. The Mariana fore arc deepens gradually from the Mariana Ridge to the trench slope break. The sediment-smoothed seafloor is frequently offset 10 to 250 m across faults; below seafloor intrasediment and basement reflectors are also offset. The faults, which are active, are high-angle normal faults. Dissert. Abstr.

CLIMATIC INFLUENCES OF RESIDENTIAL ENERGY CONSUMPTION Ph.D. Thesis
Stewart Jay Cohen 1981 193 p
Avail Univ Microfilms Order No 8127570

A climatic index, applicable to the estimation of residential energy consumption was developed. The index is based on seasonal frequencies of upper-air (500-mb height) circulation patterns. A multivariate statical technique, principal component analysis with oblique rotation of eigenvectors was used to classify 33 years of daily 500-mb height anomaly, patterns into 30 components. Each component represents two modes, positive and inverse, thereby resulting in sixty 500-mb types. Additional aggregation procedures reduced the number of types to 48. 78% of all days were categorized by this method. Two sets of regression analyses were performed on the data base, on set using 500-mb type frequencies, the other using population weighted heating degree days (POPHDD) and unweighted heating degree days (HDD). Results show that the 500-mb type frequency is a better climatic index of long term residential natural gas consumption than either HDD or POPHDD. Dissert. Abstr.

N82-17743 Michigan State Univ., East Lansing.
MOISTURE STRESS AND MID-TROPOSPHERIC CIRCULATION PATTERNS INFLUENCING THE FOREST-PRAIRIE TRANSITION IN SOUTH CENTRAL UNITED STATES
Ph.D. Thesis
William Thomas Corcoran 1981 191 p
Avail. Univ. Microfilms Order No. 8126485

The characteristics and frequency of mid-tropospheric wind patterns controlling the distribution of climate in the south central states were investigated. Two climatic variables, vapor pressure deficit (VPD) and evapotranspiration were studied. The major findings were: (1) a strong mean VPD gradient exists coincident with the southern portion of the ecotone; (2) days having the strongest VPD gradients across the southern U.S. had 500 mb flow patterns similar to the modal 500 mb pattern; (3) drought years during the 1970's did not experience an increased frequency of the modal 500 mb pattern, but did experience increased frequency of the second most frequent pattern; drought years of the 1950's were associated with greater frequency of the modal 500 mb pattern; (4) the T-mode principal components analysis was cumbersome to use with daily data; use of raw pressure height data rather than zonal anomaly value retained excess variance not contributed by wave forms in the 500 mb pressure field. Dissert. Abstr.

INVESTIGATION OF MODELS FOR LARGE SCALE METEOROLOGICAL PREDICTION EXPERIMENTS Final Report
Jerome Spar Jan. 1982 27 p refs
(Grant NGR-33-013-086)
(NASA-CR-168415) Avail: NTIS HC A03/MF A01 CSCL 04B

Long-range numerical prediction and climate simulation experiments with various global atmospheric general circulation models are reported. A chronological listing of the titles of all publications and technical reports already distributed is presented together with an account of the most recent reseach. Several reports on a series of perpetual January climate simulations with the GISS coarse mesh climate model are listed. A set of perpetual July climate simulations with the same model is presented and the results are described. T.M.

SUBSYNOPTIC-SCALE BAROCLINIC INSTABILITY
Prakki Satyamurty, Vadlamudi BrahmanandaRao, and Antonio DivinoMoura Oct. 1981 37 p refs Submitted for publication
(INPE-2241-PRE/027) Avail: NTIS HC A03/MF A01

A linear stability of the basic states encountered in the vicinity of idealized weak thermal fronts is discussed. Vertical profiles of the basic zonal wind and potential temperature are taken to be of the hyperbolic tangent type. A Boussinesq primitive equation model with high resolution is used. Unstable modes of intermediate scales are generated when the curvature of the basic flow in the lower levels is negative. Even if the curvature in the lower levels is positive, intermediate-scale unstable modes appear for smaller static stability and shear or for certain vertical distributions of diabatic heating due to the liberation of latent heat in the lower troposphere. The amplitude of the most unstable intermediate-scale wave is confined to the lower troposphere and its growth rate increases with inclusion of diabatic heating. T.M.

THE SEVERITY OF THE BRAZILIAN FREEZE OF JULY 1981, AS MONITORED BY SATELLITE
Michael Allan Fortune Sep. 1981 20 p refs
(INPE-2231-RPE/399) Avail: NTIS HC A02/MF A01

The location and intensity of freezing temperature during very cold nights ('geadas') in Brazil is discussed using satellite infrared television image data. The data are needed to lay the groundwork for a short-term freeze forecast model, which is to be developed before winter 1982. A cold snap occurred on 20-22 July 1981, which destroyed a large part of the future coffee, sugar and other harvest is documented. The photographs of enhanced satellite images document the widespread occurrence of subfreezing temperature in the states of Parana, Sao Paulo, Mato Grosso do Sul, and Minas Gerais. These sub-tropical areas are located north of the region which usually experiences frost, and thus damage to agriculture was particularly extensive. The synoptic factor responsible for the cold was a wandering cold-core cut-off low in the upper air, and not a strong cold front. The data contained in the photographs, when combined with the meteorological observations also presented will be valuable in developing a prediction model for the occurrence of 'geadas'. R.J.F.

PROCEEDINGS OF THE TECHNICAL CONFERENCE ON CLIMATE: ASIA AND WESTERN PACIFIC
1981 454 p refs Conf. held at Guangzhou, China, 15-20 Dec., 1980
(WMO-578; ISBN-92-63-10578-2) Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The impact of the natural variability of climate on food production, availability of water and other vital resources is of increasing importance and needs to be considered in the planning and management of a wide range of activities. The acquisition of meteorological data, weather forecasting, the application of climatic data to agriculture, and the socio-economic impact of climate are discussed. For individual titles, see N82-17748 through N82-17783.

N82-17748# World Meteorological Organization, Geneva (Switzerland).
THE WORLD CLIMATE PROGRAM
Bo R. Doeoes *In its* Tech. Conf. on Climate: Asia and Western Pacific 1981 p 39 (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFR 28

This program was established in order to improve the knowledge of climate and to apply this knowledge in the planning and coordination of related activities. The extent to which climate can be predicted and man's influence on it are investigated. Methods for assessing climatic impact and the characteristics of human societies that make them especially vulnerable or resilient to climatic factors are studied. Climatological networks and the development of an international data system, which includes satellite and ground based observations is discussed. S.L.

N82-17749# Bureau of Meteorology, Melbourne (Australia).
DEVELOPMENT OF A GLOBAL SYSTEM FOR ACQUIRING AND PROCESSING CLIMATOLOGICAL DATA
D. H. Lee *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 43-69 (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFR 28

The type of data which is emphasized is what is referred to as basic long term data. That is data which are essential for the determination of the climate of a place or region. Other uses of this class of data are to assess the probability of occurrence of a specific element within a specific range of values - leading to risk assessment; or for assessing the degree of abnormality of a specific occurrence. It is essential that such basic long term data be recorded over a long period of time with homogeneous methods of observation and sampling. A global system for acquiring and processing climatological information requires that each nation provide such basic long term data. The data has to be of an acceptable level of quality and efficiently standardized so as to allow comparisons between locations in different countries. S.L.

METEOROLOGICAL PRODUCTS AND SOME APPLICATIONS OF GLOBAL METEOROLOGICAL SATELLITE (GMS) DATA
Seiichi Hatsukoto *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 85-104 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The role of satellite derived data is important for climate studies and it is required to improve its accuracy. Satellite derived and ship observed sea surface temperature data were compared and the results are presented. The water content in the air column has a large influence on estimates of the sea surface temperature, therefore, some improvements are introduced empirically for precipitable water. The resulting root mean square difference decreased considerably, to less than 1.5 C. Concerning the accuracy of wind vector estimation, various kinds of error sources are considered. Among them the assignment of wind level seems to have a critical effect. Satellite cloud wind estimate and rawinsonde measurements are compared and the results are summarized. S.L.

A SYSTEM FOR CROP/CLIMATE ASSESSMENT USING METEOROLOGICAL AND SATELLITE DATA
Augustine Y. M. Yao *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 105-126 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

A system of crop assessment using meteorological and satellite information is discussed. The suitability of a crop to climatic environment is analyzed, alternative crops are suggested, and methods of weather modification that reduce hazards and minimize yield losses should adverse weather occur are recommended. This methodology uses near real time meteorological and satellite information to assess crop growth. The assessment provides not only useful warnings for decision makers should adverse weather occur, but also is used with crop yield models to make necessary adjustments to model estimates. Meteorological and agricultural information is used to construct models that estimate crop yield. S.L.

CLIMATE MODELING
J. Smagorinsky *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 139-151 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

There is a practical end in calibrating both the real atmosphere and models. A knowledge of the natural variability is essential to estimating the sampling error when selecting a single year. For the real atmosphere this shows up, for example, in designing an observational program. For models, this shows up in comparing a single year's simulation to a long term climatological average. In trying to detect a small long term trend from observational data, it is necessary to determine if that signal is significantly large compared to the noise of natural interannual variability. Conversely, in conducting model sensitivity studies, such as a CO2 perturbation experiment, it is necessary to determine if the signal to noise ratio is sufficiently large for valid conclusions. The signal and noise levels differ for different geographical locations and with season. S.L.

TROPICAL EASTERLY JET AND CONTRIBUTION OF INTERACTING ATMOSPHERIC WAVES IN MONSOON REGION
M. P. Singh, R. K. Datta (Indian Meteorological Dept., New Delhi), and R. C. Raghava *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 167-177 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The easterly jet stream is classified into two categories. One is the type of jet stream which is sporadic in nature and occurs anywhere over the globe in the southern periphery of an anticyclone. Occassionally, during southward motion a westerly jet stream of temperature zone splits and one branch travels along the periphery of a dynamic anticyclone as northerly or northeasterly current. One flow pattern depicts a strong easterly jet associated with the establishment of a block. The flow pattern exhibiting this feature is presented. Because of the sporadic nature of this type of jet stream, they cancel out (in the mean) and, therefore, are not obviously reflected in mean conditions anywhere over the globe except that they appear only for a few days with fluctuating locations. S.L.

THE NATURE AND SCOPE OF CLIMATE APPLICATIONS

Morley K. Thomas *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 178-186 (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

'Climate applications' is defined as the knowledge of how to apply climate information for the use of mankind as an aid in solving social, economic and environmental problems. The general term 'climate applications' includes both consultative and operational activities. Archived historical and statistical climate data are used in consultation work to aid in planning where capital investment and other long term considerations are involved. Climate applications consists of more than simply the provision of climate data and information. Much consultation is usually required between the climatologist and the potential user to obtain an understanding of the relationships between climate and the various socio-economic and environmental sectors. S.L.

CLIMATE, CLIMATE DATA, AND WATER RESOURCES

James L. Irish *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 187-198 refs (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The trends and developments in the field of climate and water resources are emphasized. Water resources development is seen throughout Asia as an integral part of social and economic development. Alternatives are generally evaluated, often in a benefit cost framework, but also in the context of environmental impact and social consequences. National objectives have generally stressed a more equitable distribution of the fruits of development - not only in terms of income, but also improved access to wealth and education services. This trend is welcomed, in the orientation of financial and technical assistance given to developing countries. S.L.

CLIMATE APPLICATIONS TO AGRICULTURAL PROBLEMS

G. F. Popov *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 199-204 (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

An operational method which utilizes climatic and meteorological information for agrometeorological crop monitoring and forecasting is discussed. It is designed in such a way that it provides a first qualitative monitoring of crop conditions and allows preparation of quantitative yield assessments utilizing information from an agroclimatic data bank. The applications of the method to the following areas is discussed: (1) problems related to water (drainage, irrigation, fisheries); (2) forestry problems; (3) energy sources for agriculture; (4) analysis of past climatic data; and (5) forecasting situations influencing agricultural production and food procurement. Rainfall is cited as the single most important parameter to be considered in gathering present and future agrometeorological information. M.D.K.

METEOROLOGICAL SERVICES IN AGRONOMIC AND ECONOMIC EVALUATIONS OF RISK

Jock R. Anderson *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 205-209 refs (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Methods appropriate for reviewing new agronomic techniques are explored. The perspective is policy-oriented, towards enhancing the economic efficiency of agriculture. The focus is on the contribution to the process of evaluation that can and probably should be made by meteorology and meteorological services. Crop growth models, methods for evaluating risk in new cropping techniques, are discussed. Options for evaluation of agronomic techniques, utilizing meteorological data, are reviewed. The necessity for economic allocation for meteorological stations and the need for establishing a coarse grid of stations for enhanced economy in collection and related data processing are addressed. M.D.K.

N82-17761# Shanghai Meteorological Inst. (China).

THE STABILITY OF YIELDS IN SHANGHAI AND THE CLIMATIC CONDITIONS

Jiang De-long and Gao Shi-xiu *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 210-216 (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The effect of climatic conditions on agricultural yields in Shanghai is discussed in the context of agricultural meteorology. The stability of agricultural yields is reported in terms of climatic anomalies, interannual variations in climate, unfavorable climatic conditions in the critical growing season, and agricultural innovations necessary to account for climatic variability. Data on climatic trends is presented and considered in terms of tentative trend forecasts. M.D.K.

N82-17762# United Nations Research Inst. for Social Development, Geneva (Switzerland).

FOOD CRISES AND FAMINES: THE UNRISD FOOD SYSTEMS APPROACH

P. Spitz *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 217-226 refs (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

An enquiry into food-climate interactions was made. The relationships between society and nature food and climate were considered. The extreme case of famines and food crises triggered by climatic fluctuation was chosen as a starting point. A Food Systems approach was formulated and applied not only to countries which still have to face periodic dramatic food situation, but also to countries which have succeeded in eliminating these crises. The Food Systems approach is discussed in terms of: seasonal variations, urban versus rural circumstances, the transfer of resources, and the present state of knowledge about food crises and famines. Increased climatic knowledge is suggested as a means for the reduction of food systems vulnerability. M.D.K.

INCREASE OF ATMOSPHERIC CO2 AND POSSIBLE CLIMATIC CHANGES

Bert Bolin *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 227-238 refs (For primary document see N82-17747 08-47)

Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Numerous surveys of man's impact on climate, particularly the possible effects of an increasing concentration of atmospheric CO2 were made. A brief account summarizing the state of knowledge in this regard is made. Consideration is given to: (1) the characteristics of the carbon cycle and its response to man-made emissions to the atmosphere; (2) the climatic change that may be induced by an increasing amount of CO2 in the atmosphere; and (3) the likely developments over the next 50 years as a result of man's increasing exploitation of the global resources of fossil fuels and the terrestrial ecosystems. Analysis of the way in which the carbon cycle responds to disturbances due to man, i.e., fossil fuel combustion, deforestation and expansion of agriculture is considered to be of particular importance. M.D.K.

N82-17764# Leeds Univ. (England). School of Geography.

ENERGY AND CLIMATE IN SOUTH-EAST ASIA AND THE WESTERN PACIFIC

G. J. Lockwood *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 239-263 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Regional and global aspects of energy use were reviewed. The combined results of population increases, changing patterns of population densities, and escalating per capita energy consumption has concentrated in some regions of the world very large energy fluxes per unit area (energy flux density) when compared with the world average; consequences are considered. Climate is discussed as related to increasing energy use in three major areas: (1) climate as an energy source; (2) pollution of the atmosphere by energy use (waste heat and aerosols); and (3) climatic controls on energy use and the effects of climatic variations. Long term climatic changes and the attendant economic consequences of increased atmospheric carbon dioxide are discussed. Utilization of wind, water, and solar power as climate related energy sources is also considered. M.D.K.

APPLICATIONS OF CLIMATE INFORMATION AND THE UNITED STATES NATIONAL CLIMATE PROGRAM
Edward S. Epstein *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 264-266 (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The United States National Climate Program established with the purpose of assisting the Nation and the world to understand and respond to natural and man-induced climate processes and their implications is discussed. The basic strategy of the program is to emphasize early production of useful data and information based on existing knowledge of climate, while simultaneously expanding understanding of climate and its impacts on society. Three areas discussed in which progress should be made are: (1) understanding climate; (2) responding to impacts and policy implications of climate; and (3) providing climate products. The generation, dissemination and application of climate information and the creation and utilization of national data inventory and clearinghouse is also discussed. A summation of current activity areas within the program is presented. M.D.K.

N82-17766# World Meteorological Organization, Geneva (Switzerland).
STUDY OF CLIMATE AND ITS APPLIED ASPECTS
E. P. Borisenkov (USSR) and N. V. Kobysheva (USSR) *In its* Tech. Conf. on Climate: Asia and Western Pacific 1981 p 267-273 (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The need for a reliable scientific basis for estimating the climate effect on the economic, biological and social aspects of society is considered. The foundation of this basis should include: knowledge of the general statistical characteristics of climate and its changeability for different regions and the whole globe and the methods for their consideration when forming a long-term plan of production development; and knowledge of the effect of climatic extremes on different aspects of economic and social life. The effect of climatic change on agriculture, on agricultural energy consumption, energy production, water resource management, and consequences of climatic variations on fish industry and human health is discussed. Methods for optimal consideration of future climate in planning man's economic activities are also discussed. M.D.K.

CLIMATE CIRCULATION PROCESSES IN SOUTH-EAST ASIA DURING WINTER MONSOON
B. S. Chuchalov *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 289-301 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

In South-East Asia the principal features of weather and climate variations are associated with seasonal migrations of the subtropical anticyclone belt in the northern and southern hemispheres, of the ITCZ zones in both hemispheres and also with the migration of extra-tropical frontal zones. Some elements of circulation processes which are needed to assess the distribution of and changes in climate conditions over South-East Asia are reviewed. Basic processes governing these climate dynamics are discussed. M.D.K.

N82-17770# World Meteorological Organization, Geneva (Switzerland).
THE NATURE OF DROUGHT AND STRATEGIES TO REDUCE ITS EFFECTS
W. J. Gibbs *In its* Tech. Conf. on Climate: Asia and Western Pacific 1981 p 302-315 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Areas in which water availability is critical and drought has a major impact are considered. These include hydroelectric and other forms of power generation, manufacturing industries, large urban communities, crop yields, and the condition and number of livestock. Four aspects of the subject examined in detail are: (1) the nature of drought, (2) frequency distributions and probability of rainfall, (3) drought impacts, and (4) strategies to reduce drought impacts. The manner in which man uses available water together with the occurrence of severe rainfall deficiencies and attendant social and economic repercussions are considered. M.D.K.

THE SUMMER MONSOON RAINS OVER SOUTH AND EAST ASIA AND WEST PACIFIC
I. Subbaramayya, O. S. R. U. BhanuKumar, and S. V. Babu *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 316-333 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

A comprehensive review, intended to focus attention on some important aspects of the summer monsoon rains, is presented. Studies regarding the atmospheric circulation change in the troposphere in relation to the advance of the monsoon over India are described. Advance of the monsoon in relation to the surface circulation changes, in particular the ITCZ, as a case study during MONEX period is presented. N.W.

ANALYSIS OF DROUGHT OCCURRENCE AND LONG-TERM VARIATION OF ANNUAL STREAMFLOW IN EASTERN REGIONS OF CHINA
Chen Jiaqi and Shen Zhenrong *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 334-340 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Deficiencies of monthly rainfall at several raingauge stations are shown. A drought day is defined in the sense of agricultural production, when the soil moisture content begins with less than the required moisture for the main vegetation in certain districts. Historical accounts covering nearly 400 years were analyzed. Several regions of drought are evident. Successive water shortage periods, reflected in annual streamflow of large rivers, is found. N.W.

CLIMATIC CHANGE AND SOCIAL DISTURBANCE
Koichiro Takahashi *In its* Tech. Conf. on Climate: Asia and Western Pacific 1981 p 341-349 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The relationship between climate and society is analyzed statistically and objectively by expressing climatic change and social disturbance in terms of certain indices. Single decade mean values of middle latitude temperatures are estimated based on actual observations for recent years and on tree ring widths and historical records of famines, ice conditions, freezing, etc., for ancient periods. Social disturbances are calculated, assuming within stated limits that the relative length of historical descriptions is a measure of social upheaval. These values are then analyzed to determine the relationship between geomagnetic disturbances and air pressure. N.W.

YAKIMA (WASHINGTON) STREAMFLOW FORECAST STUDY: THE IMPACT OF AN ERRONEOUS FORECAST
Michael H. Glantz *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 350-359 (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

An erroneous streamflow forecast in which the water supply was underestimated by 50% is discussed. Benefits gained each year from 'accurate' forecasts, results suggest, might easily be overshadowed by just one erroneous forecast. Forecasters had balanced out 'return flow' with some relatively minor allocation to other irrigation projects. When they divided the available water supply based on their model outputs they did not take return flow into account as part of the water supply available for the allocation. N.W.

CHANGE OF GLOBAL CLIMATE DURING RECENT 100 YEARS
Ryozaburo Yamamoto *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 360-375 refs Sponsored by Japanese Ministry of Education (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The Northern Hemisphere mean surface air temperature of the past 100 years (including errors) is analyzed. The 30 year mean shows a warming from the late 19th century to the decade of the 1940s, and thereafter a cooling, starting about 1940. Confirmation of the cooling effects of volcanic eruptions is attempted, utilizing the year to year changes of the Northern Hemisphere mean temperature. Computation of volcanic loading in the stratosphere is made for the past 100 years. N.W.

FURTHER STUDIES ON THE CLIMATIC CHANGE DURING HISTORICAL TIMES IN CHINA
Wang Shao-wu, Zhang Pei-yuan (Academia Sinica, China), and Zhang De-er (Central Meteorological Service) *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 376-393 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

An understanding of climatic change is one of the central issues society must address. It is important to reconstruct past climate, because estimating future climate must be based upon understanding of the past. Methods used in reconstructing past climate vary with the interested time scale. Based on numerous historical material, a consistent picture of the main outline of climatic variations in China during the past 5000 years is mentioned. In China, many records about natural calamities and agricultural damages have been kept in historical writings and voluminous local historical books. Recently meteorological and scientific research institutes and universities co-operated in a systematic compilation of the vast amount of climatic material in literature written in the last 500 years. Consequently, the annual distribution maps of dryness and wetness since 1470 were constructed and a winter temperature index series has been obtained. These have made it possible to take a closer view of climatic variations during recent centuries. N.W.

REGIONALITY OF CLIMATIC CHANGE IN MONSOON ASIA
Masatoshi M. Yoshino and Kazuko Urushibara (Ashikaga Inst. of Technology, Japan) *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 394-410 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Regional differences in climatic changes are of importance to establish the counter-measure for damage by anomalous climate on agricultural production. It is not unusual to suffer floods in some regions and droughts in the nearby regions at the same time. This paper deals mainly with the regionality of climatic changes in East Asia during the recent years, using the year climate method expressed by the Koppen's system of climatic classification. Occurrence frequencies of year climate during the last 100 years were calculated for the four stations: Hong Kong, Manila, Shanghai and Tokyo. The results were compared with the distribution types of winter temperature and summer precipitation in China. A schema of the regionality of climatic fluctuation in East and Southeast Asia was given in relation to the upper-air streams. N.W.

OCEAN'S ROLE IN PROCESSES OF SHORT-RANGE CLIMATIC VARIATION FORMATION
S. A. Musaelyan *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 419-427 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Contributions of initial data and external energy sources to the numerical weather prediction over various time scales are examined, along with the oceanic heat memory and the oceanic cloud cover. The results cited show that there exists a close negative asynchronous relationship between the summer anomalies in cloudiness over the North Atlantic and the deviations from the normal winter air temperatures over the European area of the U.S.S.R. This means that the heat absorbed and accumulated by the oceanic active layer during the warm half-year is conserved in the depths of the ocean for a long time and is given back to the atmosphere in winter months. J.M.S.

THE IMPACTS OF CLIMATIC CHANGE ON HUMAN SOCIETY
Shinichi Ichimura *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 433-438 refs (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

The interrelationships between climatic conditions and human socio-economic activities are examined. A schematic presentation is given of the effects of climatic variations in temperature, wind, precipitation, and ecological balance. Primary effects are observed in four fields of human activity: agriculture, industry, household, and society. Secondary effects, or the response to climatic variations are shown to be more serious than the primary effects. These secondary effects include development patterns, demographic mobility, socio-political effects, and international relations. Emphasis is given to agricultural production and socio-political impacts and international relations. J.M.S.

N82-17782# ESCAP, Bangkok (Thailand).
EFFECT OF CLIMATE ON THE DEVELOPMENT OF NATURAL RESOURCES IN ASIA
B. X. Zhang *In* WMO Tech. Conf. on Climate: Asia and Western Pacific 1981 p 439-445 (For primary document see N82-17747 08-47)
Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 28

Since climate is considered to be a consequence of average values in the basic meteorological elements of temperature, moisture, wind, pressure, and evaporation, these average values are used to develop a general criterion for use in planning and managing the development of natural resources. Emphasis is placed on early recognition that an abnormal climatic cycle may be developing and an accurate weather forecast to pinpoint the location and geographic extent of the disaster. The interrelationships between climate and development are addressed in the following areas: human resources, animal and range resources, agricultural resources, forest resources, fishery resources, water resources, mineral resources, and energy resources. HC A09/MF A01 CSCL 04/2

During the months of January, February, and March 1981, the US Army Aviation Engineering Flight Activity (AEFA) conducted natural and artificial icing tests in the vicinity of St. Paul, Minnesota. The natural events involved exposure of a fully instrumented JUH-IH 'Huey' and a UH-60A 'Black Hawk' helicopter to extended periods of flight in supercooled stratiform clouds. The artificial portion of the testing required the same aircraft to fly in the cloud produced by the helicopter icing spray system (HISS) aboard a CH-47C 'Chinook' helicopter. The tanker cloud was sampled at various water flow rates, air speeds, humidities and temperatures. During the test period, each sampling helicopter was equipped with droplet sizing instrumentation. ANALYTIC MODELING OF SEVERE VORTICAL STORMS Final Report, 9 Jul. 1980 - 31 Dec. 1981
George Carrier, Francis E. Fendell, and Phillip Feldman Oct. 1981 58 p refs
(Contract N00014-79-C-0508)
(AD-A107706; TRW-35524-6002-UT-00) Avail: NTIS
HC A04/MF A01 CSCL 04/2

The analytic modeling of well-organized rotating convective storms is invoked to elucidate the evolution from a moderately intense one-cell vortex, characterized by low-level pressure deficits on the order of one percent of atmospheric pressure, to a very intense two-cell vortex, characterized by low-level pressure deficits on the order of ten percent of atmospheric pressure. The physical distinction between the two stages rests on the insertion of a dry, compressionally heated, nonrotating, central downdraft of originally tropopause-level air in the transition to the more severe case. The quasisteady nature description of the thermohydrodynamic structure of each vortex is being developed, and then the conditions for transition from the moderately intense to the very intense vortex will be sought. The practical motivation is to make progress toward the highly desirable, but very formidable task of being able to anticipate which tropical storms or minimal hurricanes will evolve to supertyphoons. With a description of the one-cell storm, believed adequate for present purposes, already available, description of the two-cell vortex is the current challenge. GRA

A VERIFICATION STUDY OF THE IMPROVED REGIONAL RAPID ANALOG SYSTEM (IRRAS) Final Report
L. Robin Brody Sep. 1981 54 p
(W0513CC0)
(AD-A107647; NEPRF-TR-81-05) Avail: NTIS
HC A04/MF A01 CSCL 04/2

An analog system designed to make midrange regionalized forecasts is described. The analog system uses a unique historical data base which has been formulated to reduce data handling while speeding up analog matching procedures. Tuning and verification of the system are carried out for the Greater Mediterranean region. Verification results indicate that this analog system does not perform significantly better than either persistence type forecasting or forecasts produced by the current operational FNOC (Fleet Numerical Oceanography Center) analog. Possible causes for these results are discussed. Included as an appendix is a discussion of an analog-matching technique which, using the same unique historical data base, is designed to estimate the current meteorological conditions for any possible silent data area. An experiment is described which tests the adequacy of this data base to produce matching analogs for a region covering the western U.S.S.R. Results indicate that there will have to be a substantial improvement in the historical data base if acceptable analogs are to be found. Author (GRA)

MEAN ATMOSPHERIC CONDITIONS: AUSTRALIAN TROPICAL OPERATING CONDITIONS

G. Gartrell Oct. 1981 12 p refs

(AD-A107904; ARDU-TN-Aero-72; AR-002-477) Avail: NTIS HC A02/MF A01 CSCL 04/2

The ARDU mean tropical atmosphere differs significantly from the ICAO standard atmosphere and is based upon data gathered prior to 1965. More recent data have been considered in a reassessment of the validity of the ARDU atmosphere. The new data support the retention of both the ARDU tropical atmosphere and the ICAO atmosphere to describe mean conditions in their respective regions of application. It is recommended, however, that where extreme operating conditions for the Australian region are required, reference should be made to DEF(AUST) 5168 Part II Air Operations. Author (GRA)

THE EXPLANATION OF BALL LIGHTNING [DIE ERKLAERUNG DES KUGELBLITZES]

Alfred Seeger 1 May 1981 9 p In GERMAN

Avail: NTIS HC A02/MF A01

The phenomenon and origins of ball lightning are examined. Ball lightning is an electrically activated minitornado and its interference with spacecraft and aeronautics is discussed. The thermal explosions of the conduit, the skin effect and the electric repulsion of equal charges, causes the electrical storm to separate into a nuclear storm which is carried by the heavy and positive ion atoms, and a convection current carried by the lighter negative electrons. Through rolling friction with the surrounding air, a minitornado like a ball lightning has considerable momentum, which finally absorbs its energy content. Because of the greater friction with the faster medium like air, the ball lightning moves preferably along extensive walls, until it finally replaces sizes, corners and peaks like a soap bubble with mostly absorbed energy. A STATISTICAL ANALYSIS OF MONTHLY PRECIPITATION IN DENMARK

Peter Allerup 1981 33 p refs

(DMI-CLIMATOL-PAPERS-7; ISBN-87-7478-100-1) Avail: NTIS HC A03/MF A01

Data from 44 weather stations are analyzed in an attempt to establish a statistical model which explains monthly precipitation variation throughout the country, and the variation of the precipitation in one place studied over a period of time. No comprehensive explanation is found, but the use of a normal distribution model for residual variation reveals a series of structural facts e.g., a simple additive structure in the log values, stating that the expected logarithmic precipitation at a station can be calculated as a sum of a site specific parameter and a time specific parameter which is different for different months. Author (ESA)

WORLD WEATHER WATCH TROPICAL CYCLONE PROGRAM. TYPHOON OPERATIONAL EXPERIMENT (TOPEX): AUTOMATIC WEATHER STATIONS FOR TROPICAL CYCLONE AREAS

1981 73 p

(WMO-570; ISBN-92-63-10570-1) Avail: NTIS MF A01; print copy available at WMO, Geneva

Design and operation details necessary for developing countries with suitable sites for automatic weather stations in order to obtain data for tropical cyclone detection and warning are presented. Assessment of various surface meteorological parameters for tropical cyclone monitoring is explained. Selection of sensors, associated components, and automatic weather station platforms is discussed. Automatic data transmission and remote display are covered. Utilization of satellites for data collection and transmission is also considered. Data recording and quality control objectives are mentioned. Classification procedures, supervision and systems improvement are described. Author (ESA)

AN ANALYSIS OF WANGARA MICROMETEOROLOGY: SURFACE STRESS, SENSIBLE HEAT, EVAPORATION, AND DEWFALL

B. B. Hicks Jun. 1981 43 p refs Sponsored by NOAA

(PB82-114190; NOAA-TM-ERL-ARL-104; NOAA-81081902) Avail: NTIS HC A03/MF A01 CSCL 04B

Eddy fluxes and gradients for the Wangara experiment and earlier investigation of flux gradient relations used to derive values of the sensible heat flux and friction velocity appropriate to the general area of the Wangara experiment rather than to the considerably smoother central site were reported. Friction velocities appear to be considerably greater than those developed in previous studies of the Wangara data set. Sensible heat fluxes are similar during daytime, but differ greatly from other estimates for night. Dewfall evaluations indicate a total of about 9 mm during the experiment; condensation occurred at the theoretical maximum rate of about 0.07 mm/hr. Maximum dewfall occurred under clear skies and in moderate winds. GRA

THE CHARACTERIZATION AND EVOLUTION OF CARBONATE TIDAL DELTAS, UPPER FLORIDA KEYS Ph.D. Thesis
David Samuel Charlton 1981 421 p
Avail: Univ. Microfilms Order No. 8117507

South Florida was inundated by the last sea-level rise, initiating tidal exchange between Florida Bay and the open ocean at bedrock lows along the Florida Keys. Carbonate tidal deltas, composed of mangrove peat and carbonate sediments, formed during the last 5000 years seaward and bayward of tidal channels at Snake Creek, Whale Harbor and Tavernier Creek. The carbonate tidal delta system at Snake Creek is emphasized. Six surface depositional zones of the Snake Creek bayside delta and diagnostic elements recognized in cores, representing environmental gradients from most restricted circulation to more open marine conditions are discussed. Dissert. Abstr.

N82-17797 California Univ., San Diego.
TIDAL VARIABILITY IN THE CURRENT AND TEMPERATURE FIELDS ON THE SOUTHERN CALIFORNIA CONTINENTAL SHELF Ph.D. Thesis
Alan Wayne Bratkovich 1981 129 p
Avail: Univ. Microfilms Order No. 8125436

Observations were analyzed in the tidal frequency band (.6-6 cpd). The seasonal variability of the temperature and horizontal velocity component fields for this frequency band is characterized both in terms of mean variance statistics and changes in the power spectra. Energetic tidal peaks were observed centered at frequencies of 1, 2, 3 and 4 cpd which are cuspate in appearance. The bandwidth of the peaks is approximately 0.2 cpd. Spatial patterns in the velocity and temperature fields vary in amplitude and phase over vertical and horizontal spatial scales comparable to the local depth and shelf width respectively. The vertically averaged cross shelf mass transport associated with semidiurnal and diurnal cross shelf currents is sufficient to sustain tidal sea surface elevation changes. The total cross shelf mass exchange is found to be about three times larger than the net mass flux at tidal frequencies. Dissert. Abstr.

N82-17798*# Old Dominion Univ., Norfolk, Va. Dept. of Oceanography.
THE RELATIONSHIP AMONG SEA SURFACE ROUGHNESS VARIATIONS, OCEANOGRAPHIC ANALYSES, AND AIRBORNE REMOTE SENSING ANALYSES Final Report, 16 May - 31 Oct. 1981
George F. Oertel and Terry L. Wade Dec. 1981 252 p refs
(Grant NAG1-189)
(NASA-CR-168444; TR-81-2) Avail: NTIS HC A12/MF A01 CSCL 08C

The synthetic aperture radar (SAR) was studied to determine whether it could image large scale estuaries and oceanic features such as fronts and to explain the electromagnetic interaction between SAR and the individual surface front features. Fronts were observed to occur at the entrance to the Chesapeake Bay. The airborne measurements consisted of data collection by SAR onboard an F-4 aircraft and real aperture side looking radar (SLAR) in Mohawk aircraft. A total of 89 transects were flown. Surface roughness and color as well as temperature and salinity were evaluated. Cross-frontal surveys were made. Frontal shear and convergence flow were obtained. Surface active organic materials, it was indicated, are present at the air-sea interface. In all, 2000 analyses were conducted to characterize the spatial and temporal variabilities associated with water mass boundaries. N.W.

SENSITIVITY OF A CLIMATOLOGICALLY-DRIVEN SEA ICE MODEL TO THE OCEAN HEAT FLUX
Claire L. Parkinson and Michael R. Good Jan. 1982 34 p refs
(NASA-TM-83877) Avail: NTIS HC A03/MF A01 CSCL 08L

Ocean heat flux sensitivity was studied on a numerical model of sea ice covering the Weddell Sea region of the southern ocean. The model is driven by mean monthly climatological atmospheric variables. For each model run, the ocean heat flux is uniform in both space and time. Ocean heat fluxes below 20 W m to the minus 2 power do not provide sufficient energy to allow the ice to melt to its summertime thicknesses and concentrations by the end of the 14 month simulation, whereas ocean heat fluxes of 30 W m to the minus 2 power and above result in too much ice melt, producing the almost total disappearance of ice in the Weddell Sea by the end of the 14 months. These results are dependent on the atmospheric forcing fields. E.A.K.

VARIATIONS IN THE THERMAL STRUCTURE AND WIND FIELD OCCURRING IN THE WESTERN INDIAN OCEAN DURING THE MONSOONS Technical Report, Oct. 1975 - Dec. 1979
John G. Bruce Aug. 1981 177 p refs
(Contracts N00014-74-C-0262; N00014-79-C-0262; Grant NSF ATM-74-2226; NR Proj. 083-004)
(AD-A107761; NOO-TR-272) Avail: NTIS HC A09/MF A01 CSCL 08/3

The changes occurring in the temperature field in the Somali Basin and off the Arabian coast were monitored by a time series of temperature sections obtained along the tanker sea lane offshore. The development and decay of the large eddy (up to roughly 600 km in diameter) and its smaller associated eddies were observed each southwest monsoon. Strong horizontal thermal gradients particularly in the upper 200 m occurred at the eddy boundaries; currents in this region can attain velocities up to 7 knots. Monthly wind stress clearly shows the southwest monsoon from May through September to be considerably stronger than the northeast monsoon with maximum in January. Maps of wind stress curl during the southwest monsoon show a large region of negative curl to the northeast off the Somali coast, whereas a region of a high positive curl occurs off the Arabian peninsula and in a small band off the Somali east coast north of 5 N. Sverdrup mass transports of up to 40 x 10 to the -12th g/sec to the north off the Somali coast are in rough agreement with observed values. GRA

UNDERWATER FLOW VISUALIZATION METHODS IN THE UPPER LAYER OF THE OCEAN Interim Report
J. R. McGrath, C. M. Gordon, D. Greenwalt, A. Schuetz, M. Long, and C. F. Dohne (Science Applications, Inc., McLean, Va.)
22 May 1981 67 p refs
(RR0310441)
(AD-A107919; NRL-MR-4509) Avail: NTIS HC A04/MF A01 CSCL 08/3

A unique approach to measuring shear in the ocean has been developed. The approach involves dye tracing to determine the presence and location of shear in water velocity profiles and underwater photography as the data acquisition technique. Subsequent application of photogrammetric techniques is shown to be feasible and puts the observations on a quantitative footing. The advantage of underwater flow visualization over conventional (free-fall) shear measurements is that the result provides graphic evidence of fluid motion and its subsequent evolution. This approach should lend itself to both new and/or improved models of the upper ocean. Author (GRA)

SEA STATE MEASUREMENT WITH A TWO FREQUENCY SCATTEROMETER (THEORY)
Michael Kleintz Dec. 1981 177 p refs Transl. into ENGLISH of "Seegangsbestimmung mit dem Zweifrequenz-Scatterometer (Theoretische Grundlagen)" Rept. DFVLR-FB-80-32 Oberpfaffenhofen, West Germany, May 1980 Original report in GERMAN previously announced as N81-22675
(ESA-TT-710; DFVLR-FB-80-32) Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 31,20

In the context of the Spacelab program, sea state measurements with a two frequency scatterometer are considered. A system analysis of two frequency scatterometry, especially signal analysis for stationary and airborne (aircraft; satellite) measurements, is presented, and an unambiguous method for wind direction determination is given. A statistical model of sea state, based on the frequency spectrum of the water wave height distribution, is used. The radar echo from the sea surface is characterized for a monochromatic ouptut signal. An autocorrelation function is developed, and application in consideration of the Doppler spectrum of the sea surface reflectance function is shown. Author (ESA)

ERROR ANALYSIS OF PULSE LOCATION ESTIMATES FOR SIMULATED BATHYMETRIC LIDAR RETURNS
Gary C. Guenther and Robert W. L. Thomas Jul. 1981 59 p refs Prepared in cooperation with EG and G Washington Analytical Services Center, Inc., Rockville, Md.
(PB82-109448; NOAA-TR-OTES-1; NOAA-81081101) Avail: NTIS HC A04/MF A01 CSCL 08J

A Poisson count simulator is used to generate precision and offset results for the estimated temporal location of quantum limited laser pulses. Pulse sizes, shapes, and charge integration times are varied over appropriate ranges. A number of location estimators including variations on peak, centroid, and threshold detectors are examined. Comparisons with experimental results are presented. Hardware and software design parameters of an airborne lidar hydrography system are discussed. GRA

RECOVERING OCEAN WAVEHEIGHT FROM HF RADAR SEA ECHOES DISTORTED BY IMPERFECT IONOSPHERIC REFLECTION
T. M. Georges, J. W. Maresca, C. T. Carlson, J. P. Riley, R. M. Jones, and D. E. Westover May 1981 156 p refs
(PB82-113283; NOAA-TM-ERL-WPL-73; NOAA-81081901) Avail: NTIS HC A08/MF A01 CSCL 08C

A real-time signal processing package to collect high-quality sea-echo Doppler spectra under many different ionospheric conditions found in nature was developed. Graphical displays and objective quality indices help the radar operator sort undistorted spectra from those distorted by imperfect ionospheric reflection, so that ocean wave height can be reliably estimated while the data are being collected. The package can be used either off-line on archival data or for on-line adaptive processing of radar data as part of an ocean-scanning strategy. Author (GRA)

BRINE DISPOSAL IN THE GULF OF MEXICO: PROJECTED IMPACTS FOR WEST HACKBERRY BASED ON BRYAN MOUND EXPERIENCE
Jun. 1981 90 p refs
(PB82-109513; NOAA-81080702) Avail: NTIS HC A05/MF A01 CSCL 08A

Brine discharge into the Gulf of Mexico from the Strategic Petroleum Reserve West Hackberry facility, Cameron Parish, Louisiana is investigated in terms of its environmental effects. Projected impacts on brine disposal on the nearshore marine environment are presented because of post-discharge experience and knowledge gained from the Bryan Mound, Texas brine disposal site which has been operational for one year. Based on Bryan Mound discharge experience, brine disposal at West Hackberry is projected to have minimal impact on the biota and sediment and water quality. Author (GRA)

THE THERMO-MECHANICAL PROPERTIES OF THE OCEANIC LITHOSPHERE Ph.D. Thesis
John Howard Bodine 1981 338 p
Avail: Univ. Microfilms Order No. 8125251

The oceanic lithosphere is observed to have sufficient intrinsic strength to support the weight of large seamounts, undersea volcanoes, and oceanic islands for long periods of time. The support of these features appears to be accommodated by regional isostatic compensation related to flexure of the lithosphere. While the evidence for the flexure of the lithosphere can be successfully analyzed using a simple elastic plate model, rheological considerations and observations of flexure at some trenches indicate that an elastic processes play an important role in the response of the plate. Observations of the bending of the oceanic lithosphere may be compared to flexure predicted by a model of the lithosphere in which the rheology is determined from the results of experimental rock mechanics. Model results relate the mechanical properties of the oceanic lithosphere to the thermal structure of the lithosphere. Dissert. Abstr.

AN ACTIVE SOURCE ELECTROMAGNETIC METHOD FOR PROBING THE EARTH'S ELECTRICAL CONDUCTIVITY STRUCTURE BENEATH THE OCEAN FLOOR Ph.D. Thesis
Peter David Young 1981 255 p
Avail: Univ. Microfilms Order No. 8125446

The electrical conductivity structure of the basement rocks in the area of the East Pacific Rise at 21 deg N latitude. The source was a length of cable, insulated except for bared ends, deployed on the sea floor and powered from shipboard; this antenna, once straightened and oriented by dragging on the bottom, formed an end grounded horizontal dipole source. Through this antenna were fed a number of different tailored waveforms, which between them gave transmissions at the frequencies 0.25 Hz, 0.50 Hz, 0.75 Hz, 1.50 Hz, and 2.25 Hz with roughly equal dipole strengths on the order of 25,000 ampere-meters. Results show conductivity roughly on the order of that of seawater immediately beneath the seafloor, and a fairly thick region with a conductivity less than .004 S/m no more than 1.5 kilometers under the seafloor and falling below .001 S/m at depths on the order of 5 to 8 kilometers; for greater depths a reasonable interpretation of the inversion results on the basis of geophysical arguments gives a continued rise with increasing depth.

SOME MECHANISMS OF CALCIUM TRANSPORT BY THE CARDIAC SARCOLEMMA Ph.D. Thesis

Ronald F. Ledvora 1981 80 p

Avail: Univ. Microfilms Order No. 8124733

Purified sarcolemmal membrane vesicles were prepared from frozen dog heart ventricles by a combination of differential and sucrose step gradient ultracentrifugation. The Ca ++ flux measurements were made using a rapid filtration technique. About 80 percent of the Ca(++) accumulated by Na(+)/Ca(++) exchange or Ca(++)/Ca(++) exchange could be released as free Ca(++), while up to 20 percent was probably bound. The mechanisms for Na(+)/Ca(++) exchange and Ca(++)/Ca(++) exchange are located in the sarcolemmal membrane of cardiac muscle cells. Both processes transport freely-exchangeable Ca(++) across the membrane. Electrogenic Na(+)/Ca(++) exchange may influence the excitability of the cardiac muscle cell. Both processes are probably carrier mediated transport mechanisms, although not by the same carrier. Both Na(+)/Ca(++) exchange and Ca(++)/Ca(+) exchange probably play important roles as Ca(++) homeostatic mechanisms in the cardiac muscle cell.

Dissert. Abstr.

THE STRUCTURE AND FUNCTION OF CHLOROPHYLL-PROTEINS IN PHOTOSYSTEM 1 AND THE LIGHT HARVESTING COMPLEX OF PHOTOSYSTEM 2 Ph.D. Thesis

John Emerson Mullet 1980 150 p

Avail: Univ. Microfilms Order No. 8127654

The functional units of chloroplast membranes which mediate photosynthetic electron transport from water to NADP are structurally organized into integral complexes. Two of these membrane-bound complexes, Photosystem I (PSI) and Photosystem II (PS II), consist in part of chlorophyll proteins. Photosystem I complexes were isolated by a technique which allowed purification of PSI which retained characteristics attributed to PS I in vivo. The purified PS I complexes were further fractionated by detergent treatment and PS I complexes which were depleted of chlorophyll proteins were isolated. The major chlorophyll-protein of chloroplast membranes which is structurally organizing into light harvesting complexes associated with PS II was isolated and characterized and its role in thylakoid adhesion tested. The chlorophyll-protein complex, termed LHC-II, were incorporated into lipid vesicles; this preparation was used to demonstrate the involvement of LHC-II in cross-membrane adhesion between thylakoid membranes.

IN-FLIGHT DIETS AND QUANTITATIVE ADEQUACY THEREOF TO PILOT EXPENDITURE c54

I. G. Popov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 1-13 refs Transl. into English from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 4-14 (For primary document see N82-17812 08-51)

Avail: NTIS HC A07/MF A01

Nutrition of aircraft crews in prolonged flights is discussed. Meal arrangements in flights of up to 4 hours, physiological-hygienic requirements to flight diets and, on this basis, possible improvement of crew nutrition through a better utilization of meals on the ground are addressed. The Soviet and foreign data on pilot energy expenditures and caloric value of diets in flights over 4 hours are reviewed with emphasis on potential development of excessive food intake with symptoms of acute overeating in prolonged flights.

AMINO ACID METABOLISM DURING PROLONGED INTAKE OF DEHYDRATED FOODS AND SIMULATION OF SOME SPACE FLIGHT FACTORS c52

V. P. Bychkov, I. I. Borodulina, and T. F. Vlasova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 26-29 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. Oct. 1981 p 21-23 (For primary document see N82-17812 08-51)

Avail: NTIS HC A07/MF A01

Forty-two healthy volunteers, aged 19 to 49, participated in three bed rest studies of 69 to 180 days in duration. The test subjects were kept on the diet consisting of dehydrated foods: fresh, stored for up to 2 years, and exposed to proton irradiation at a dose of 24,000 rad. Metabolism of amino acids was investigated under these conditions. It was concluded that during prolonged storage and irradiation proteins of dehydrated foods retained their biological value. This allows their use in long term space flights.

Shinkareva *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 35-38 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 27-29 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

The incidence of carriers of photogenic staphylococci among cosmonauts and candidates (applicants) for positions of crew members in spacecraft was investigated. The staphylococcal flora of carriers were assessed while they participate in space flights varying in duration. Samples of microflora were taken from people in their ordinary habitat by means of cotton swabs. To collect samples of miroflora from cosmonauts while in the cabin of a spacecraft, specially developed test tubes containing a preservative were used. The material was analyzed under laboratory conditions after delivering specimens to Earth. Pathogenic staphylococci (Staph. aureus) were identified by testing the capacity to decompose mannitol under anaerobic conditions, production of the enzymes, coagulase and lecithinase, as well as on the basis of presence and intensity of toxin production, in the isolated cultures. The strains of pathogenic staphylococci were submitted to phage typing using the international set of staphylococcal bacteriophages. J.M.S.

The activity of the sympathoadrenal system (SAS) of 12 volunteers exposed to water immersion for 7 days was studied. Before and after water immersion, six of the test subjects were exposed to acceleration of +3 Gz for 15 min. It was demonstrated that water immersion increased the hormonal activity and decreased the transmitter activity of the SAS. Exposure to acceleration stimulated the SAS, thus increasing immersion tolerance. Author

COMBINED EFFECT OF SIMULATED WEIGHTLESSNESS AND ACCELERATIONS ON ENERGY METABOLISM ENZYMES

Ye. G. Vetrova, T. Ye. Drozdova, R. A. Tigranyan, and Ye. B. Shulzhenko *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 45-49 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 34-38 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

Exposure to simulated weightlessness (7 day water immersion and 7 day head-down tilt) caused a decrease in the activity of malate (MDH) and isocitrate dehydrogenase (ICDH), and creatine phosphokinase (CPK) at the expense of its MM isoform whereas the activity of alanine (ALT) and aspartate aminotransferase (AST) and pattern of distribution of MDH isoforms remained unchanged. Exposure to acceleration of +3 Gz before and after simulated weightlessness revealed similar changes in the activity of MDH, ICDH, ALT, AST and MDH cytoplasmic fractions. However, the higher increase in the enzyme activity after simulated weightlessness may give evidence for a greater change in cell membrane permeability during acceleration effects that followed simulated weightlessness. Avail: NTIS HC A07/MF A01

Male subjects spent 16 days in a pressure chamber 24 cu m in size. The parameters of microclimate, work and test schedule, food allowance and personal hygiene resources were kept in the range inherent in manned spacecraft cabins. The results indicate that a highly dispersed phase of bacterial aerosol, represented by microorganisms that are the most probable pathogens of diseases among crews of spacecraft, is formed in the air of an airtight compartment. Elevation of the level of bipolar air ionization is a factor which has an adverse effect on the intensity of transmission of conditionally pathogenic bacteria. These findings must be taken into consideration when working out the means of removing dust and microorganisms from the atmosphere of spacecraft cabins. J.M.S.

Zybin *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 6873 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 49-53 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

Ten test subjects were catheterized and exposed to head up and head down tilts at 10, 30, and 75 deg for 5 min each to measure blood pressure in the upper bulb of the internal jugular vein and right atrium. Blood acid base equilibrium, hemoglobin content, and oxygen saturation were also determined. In the head up position at 75 deg the jugular pressure decreased, remaining positive (2.8 mm Hg) in most cases, whereas the atrial pressure fell down to reach the subatmospheric level. In the head down position the jugular pressure increases in proportion to the tilt angle, amounting to 32.2 mm Hg at 75 deg the atrial pressure changed in a different fashion: in 7 cases it increased and in 3 cases decreased. Throughout the test the oxygen arteriovenous difference in the brain and the acid base equilibrium in the outflowing blood remained essentially unchanged. This reflects autoregulation of the cerebral blood flow and its adequacy to metabolic requirements. Author

Avail: NTIS HC A07/MF A01

The use of ultrasonic Doppler cardiography (with respect to the integral values of the signal at systole) to determine efficient coronary circulation was investigated in acute dog experiments (in comparison to the electromagnetic method) and in biophysical models. On the basis of the comparative studies it is concluded that ultrasonic Doppler cardiography can be applied to measure relative changes in the efficient coronary circulation. Author

AGE RELATED DISTINCTIONS OF COSMONAUTS REGIONAL HEMODYNAMICS c52
I. D. Vasilyeva, Kh. Kh. Yarullin, and V. I. Zhuyko *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 82-90 ref Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 61-64 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

Hemodynamics of the large hemispheres of the brain, vertebral basilar system, lungs and legs of 60 cosmonauts aged 30-37 and 38-47, were investigated rheographically. Measurements were made in the morning, under conditions of basal metabolism and in the daytime, before orthostatic tests. Comparison of hemodynamic parameters recorded in the morning and at the daytime and in the two age groups showed significant differences revealing the effects of different factors, first of all psychoemotional tension, on the vasomotor regulation, and greatest resistance of cerebral and pulmonary vascular systems of older cosmonauts to those effects. These investigations emphasize great importance of studies of regional hemodynamics, especially rheoencephalography, not only before provocative tests but also under conditions of basal metabolism. Avail: NTIS HC A07/MF A01

Antiseptics were examined for their antimicrobial activity with respect to the microorganisms that are most likely to occur in the urine subject to prolonged storage. Chlorine and iodine containing compounds were found to have the highest antimicrobial activity combined with a wide spectrum of antimicrobial action. The antimicrobial effect of these compounds was mostly expressed in regard to the typical representatives of urobacteria that actively hydrolyze urea to yield ammonia during prolonged storage of urine. RAT AMINO ACID COMPOSITION AFTER FLIGHT ABOARD COSMOS-1129 BIOSATELLITE
T. F. Vlasova, Ye. B. Miroshnikova, T. A. Smirnova, and I. A. Dmitriyeva *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 95-97 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 66-68 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

Data concerning the amino acid pool of rats flown onboard Cosmos-1129 and exposed to the ground based synchronous experiment are presented. Certain changes in the amino acid pool of flight and synchronous rats were found. The changes seem to be associated with the selective rate of incorporation of free amino acids into the biosynthetic processes during acute adaptation and with alterations in the protein synthesis rate.

MYOCARDIAL PROTEIN FRACTIONS AND ENZYMATIC ACTIVITY THEREOF IN EXPERIMENTAL RATS FLOWN ABOARD COSMOS-936 BIOSATELLITE

R. A. Tigranyan, Ye. A. Nosova, Ye. V. Kolchina, N. A. Veresotskaya, L. M. Kurkina, and N. S. Kolganova *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 98-102 refs Transl. into ENGLISH fom Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 68-71 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

The effect of artificial gravity on protein fractions and their enzyme activity in the myocardium of rats flown onboard Cosmos-936 was studied. In weightless rats the content of sarcoplasmatic proteins increased at R + 0 and that of T fraction proteins decreased at R + 25. In centrifuged rats such changes were not seen. In centrifuged rats the enzyme activity of sarcoplasmatic proteins did not alter. In weightless rats ATPase activity of myosin decreased significantly, and in centrifuged rats it remained almost unchanged.

ACTIVITY OF SOME ENZYMES OF CARBONHYDRATE METABOLISM IN RAT SKELETAL MUSCLES AFTER SPACE FLIGHT

V. P. Nesterov, N. A. Veresotskaya, and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No 5, Sep. - Oct. 1981 p 108-112 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 75-78 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

Space flight factors did not influence activity of glycogen phosphorylase and adenylate cyclase in skeletal muscles of rats. Activity of glucose-6-phosphate and 6-phosphogluconate dehydrogenases increased noticeably in the most active muscles (gastrocnemius and tibialis anterior muscles). Activation of enzymes involved in the pentosephosphate pathway of glucose conversion may be associated with compensatory processes induced by muscle changes due to diminished motor activity of animals in space flight.

ULTRASTRUCTURE OF BLOOD VESSELS AND MUSCLE FIBERS OF RAT SKELETAL MUSCLES AFTER FLIGHTS ABOARD COSMOS-605 AND COSMOS-782 BIOSATELLITES

Z. F. Davik and K. D. Rokhlenko *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 113-118 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 78-83 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

Electron microscopy was used to study ultrastructures of the wall of blood vessels and muscle fibers of the red (soleus) and mixed gastrocnemius) muscles of rats flown on Cosmos 605 for 22.5 days and on Cosmos 782 for 19.5 days and sacrificed 4 to 6 hours, 48 hours and 25 to 27 days postflight. It was demonstrated that the orbital flight did not induce significant changes in the ultrastructure of blood vessels of the soleus and gastrocnemius muscles but caused atrophy of muscle fibers and reduction of the number of functioning capillaries. Readaptation of the soleus vascular system to 1 g led to degradation of permeability of capillary and venular walls and development of edema of the perivascular connective tissue. This may be one of the factors responsible for dystrophic changes in muscle fibers.

BLOOD FIBRINOGEN AS RELATED TO IMMERSION IN WATER FOR SEVEN DAYS AND SHORT-TERM SPACE FLIGHT

c52

A. N. Fomin *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 119-122 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 83-85 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

A scrutiny of the literature dealing with hemocoagulation under hypokinetic conditions revealed that blood fibrinogen was studied exclusively in conjunction with other parameters characterizing the blood clotting system. Increase in fibrinogen concentration in blood was demonstrated in individuals submitted to prolonged hypokinesia, patients restricted to bed rest and animals used in experiments with hypokinesia. Blood tests were made on six healthy men before, during, and after seven days of immersion in water as well as cosmonauts before and after seven and four day flights. The microtechnique for measuring the concentration of fibrinogen in blood is based on the phenomenon of heat denaturation of this protein at a temperature of 56 C. Results indicate that the fibrinogen increased during the four to six days of the study.

METHOD OF ASSESSING INDIVIDUAL RESISTANCE OF RATS TO HYPOXIC HYPOXIA

Yu. V. Farber, A. Yu. Grigoryev, and A. I. Yelfimov *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 15, No. 5, Sep. - Oct. 1981 (JPRS-79346) 2 Nov. 1981 p 123-125 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmich. Med. (USSR), v. 15, no. 5, Sep. - Oct. 1981 p 85-86 (For primary document see N82-17812 08-51)
Avail: NTIS HC A07/MF A01

The question of screening experimental animals according to resistance to hypoxia is addressed in view of the need to investigate individual distinctions with regard to resistance to the body to various extreme factors, including a shortage of oxygen. There are some methodological approaches to the study of this question. In particular, one determines coefficient K as the ratio of rat survival time at an altitude of 12,000 m to restitution time. Experimental data on individual reactions to acute hypoxic hypoxia, which are obtained by determining the time of retention of the postural reflex with a static load are presented.

STUDY OF HOMING PIGEONS IN BRAZIL: SOME PRELIMINARY RESULTS
R. Ranvaud Oct. 1981 16 p refs Presented at Intern. Symp. on Avian Navigation, Tirrenia, Italy, 14-18 Sep. 1981
(INPE-2248-PRE/032) Avail: NTIS HC A02/MF A01

Observations of vanishing bearings are described. The ability of pigeons to home quite well under some rather unfavorable conditions, namely with the Sun not too far from the zenith and under total overcast in relatively weakly inclined magnetic fields, as well as in cases where the inclination of the magnetic field actually reverses during the flight home is discussed. Homing in regions where the apparent diurnal motion of the Sun's azimuth reverses during the year, the midday Sun being to the north in June and to the south in December, is reported. Homing right across the so called south atlantic anomaly, at which the principal component of the Earth's magnetic field has an absolute minimum, providing a situation in which the gradient of total intensity is zero in all directions, is also reported. IMPA (Isopropyl Methylphosphonic Acid) had oral LD50's of 7650 and 6070 mg/kg in male and female rats, respectively, and of 5620 and 6550 mg/kg in male and female mice. It was not irritant to rabbit eyes. It was mildly irritant to rabbit skin but produced no systemic toxicity at a dose of 2 mg/kg. IMPA did not induce dermal sensitization in guinea pigs. No evidence of toxicity followed administration of IMPA in the drinking water at levels up to 3000 ppm to rats for 90 days. IMPA was not mutagenic to five strains of Salmonella indicator organisms in the Ames assay both with and without rat liver activation. GRA

Earlier studies have shown that intraperitoneal administration of naphthalene causes selective pulmonary bronchiolar necrosis in mice and have suggested a role for reactive naphthalene metabolites in the tissue damage. These studies have been extended to show that covalent binding of reactive naphthalene metabolites to tissue macromolecules in lung, liver and kidney is dose-dependent. High levels of covalent binding occur only after tissue glutathione levels are depleted substantially and only at doses of 200 mg/kg and above. The 200 mg/kg dose is the lowest dose at which lung lesions are observed. Piperonyl butoxide pretreatment decreases pulmonary damage and covalent binding and partially blocks glutathione depletion by 400 mg/kg naphthalene. In comparison, SKF 525 A pretreatment decreased covalent binding levels to a much smaller extent and failed to alter glutathione depletion or pulmonary damage after 400 mg/kg naphthalene. When compared to vehicle pretreated controls, phenobarbital or 3-methylcholanthrene pretreatment produced no change in the severity of lung damage after doses of naphthalene ranging from 50 to 400 mg/kg nor did these inducers alter covalent binding at doses of naphthalene of 200 mg/kg or less. Pretreatment of mice with p-xylene preferentially inactivated pulmonary cytochrome p450 and blocked naphthalene induced lung damage but failed to selectively decrease covalent binding of reactive metabolites in the lung. Current studies are continuing to examine the role of cytochrome P450 dependent metabolic activation of naphthalene in the lung in the bronchiolar damage. Author (GRA)

BIOPHYSICAL FUNDAMENTALS AND INSTRUMENTATION FOR THE ENDOVESICAL Nd:YAG-LASER APPLICATION
T. Halldorsson 5 Jun. 1981 25 p refs In GERMAN; ENGLISH summary
(MBB-UA-581-81-O) Avail: NTIS HC A02/MF A01

The laser irradiation power needed for tumor therapy was investigated. From considerations of the absorptivity of cellwater and blood as well as the multiple scattering of the radiation and heat conduction in tissue, a theoretical model was developed which enabled an accurate calculation of the temperature distribution up to the denaturation point as well as the percentage of the radiation power lost through backward and forward scattering of light. The theoretical calculations were experimentally verified in animal experiments and measurements on specimens of human bladder tissue performed with a thermocamera. According to the requirements of endoscopic laser therapy, a medical Nd:YAG laser system was developed. For the beam transport into the urinary bladder, flexible light pipes made from thin quartz fibers were used. A.R.H.

EFFECT OF COMMERCIAL FREQUENCY ELECTROMAGNETIC FIELD ON ANDROGEN FUNCTION OF RAT TESTS
A. G. Reznikov and L. V. Tarasenko *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 1-5 refs Transl. into ENGLISH from Fiz. Zh. (USSR), v. 27, no. 1, Jan. - Feb. 1981 p 121-124 (For primary document see N82-17844 08-51)
Avail: Issuing Activity

The biological effects of commercial frequency electromagnetic fields (CFEMF) generated by high voltage electric power lines on the gonads of male rats were investigated. The effect of CFEMF on the endocrine function of rat tests consists of an intensification of steroidogenetic processes and a corresponding increase in the activity of the steroid delta(5)-3 beta-o1 dehydrogenase. No appreciable changes in testosterone levels in peripheral blood plasma were observed following CFEMF irradiation for a period of four months. J.D.H.

FEATURES OF METABOLIC DISTURBANCES IN RAT MYOCARDIUM UNDER EFFECT OF ALTERNATING MAGNETIC FIELDS OF DIFFERENT PARAMETERS

F. A. Kolodub, O. N. Chernysheva, and G. I. Yevtushenko *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 6-10 refs Transl. into ENGLISH from Kardiologiya (USSR), v. 21, no. 4, Apr. 1981 p 82-85 (For primary document see N82-17844 08-51)

Avail: Issuing Activity

The effect of alternating magnetic fields of various voltages and exposures on the metabolism of carbohydrates, macroergic phosphates, and low molecular nitrogen compounds in the rat heart was investigated. The direction and degree of metabolic disturbances in the myocardium after exposure to industrial frequency alternating magnetic fields depend on the voltage of the field and the length of exposure. An alternating magnetic field with a voltage of 32 kA/m delays oxidation and phosphorylation processes without affecting their coupling, and the proportion of oxidized carbohydrates increases as compared with fatty acids. The conversion of carbohydrates and of nitrogen substances are stimulated by an alternating magnetic field with a voltage of 7.5 kA/m. J.D.H.

INFLUENCE OF ELECTROMAGNETIC WAVES IN MILLIMETER BAND ON INDUCTOPROTEIN SYNTHESIS OF PENICILLINASE BY STAPHYLOCOCCUS AUREUS

A. Z. Smolyanskaya, A. M. Makhov, E. A. Gelvich, and M. B. Golant *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 11-16 refs Transl. into ENGLISH from Biol. Nauki (USSR), no. 5, May 1981 p 24-28 (For primary document see N82-17844 08-51)

Avail: Issuing Activity

The effect of electromagnetic waves in the millimeter band on the synthesis and activity of pencillinase produced by strains of Staphylococcus aureus and Escherichia coli is examined. Experiments demonstrated that wave lengths of 6.478 and 6.468 mm inhibit the induction of the enzyme by St. aureus. However, this type of radiation does not affect the activity of the exoenzyme released from the St. aureus strain, and also does not affect the constitutive synthesis of the penicillinase by E. coli. The relationship of effect of the duration of irradiation, bacterial population, and the strength of current density is elucidated. Author

PARTICULAR FEATURES OF CONDITIONED ELECTRODEFENSIVE REFLEX IN WHITE RATS ON BACKGROUND OF CONSTANT MAGNETIC FIELD

I. V. Shust, S. I. Galantyuk, and Yu. V. Cheretyanko *In its* USSR Rept.: Life Sci. Effect on Nonionizing Electromagnetic Radiation, No. 4 (JPRS-79780) 4 Jan. 1982 p 44-50 refs Transl. into ENGLISH from Fiz. Zh. (USSR), v. 26, no. 2, Mar. - Apr. 1980 p 264-268 (For primary document see N82-17844 08-51)

Avail: Issuing Activity

The formation of a conditioned electrodefensive reflex in white rats exposed to a 1,000 Oe constant magnetic field was investigated. The influence of the vitamin preparation galascorbin on the formation of the reflex was also studied. The tenacity of the conditioned reflex was reduced by exposure to the CMF, with a greater reduction observed in the initial phase of its development. Changes in conditioned reflex activity were observed during exposure and during the aftereffect period. The threshold of the avoidance reaction initially increased, then decreased, with normalization of the indicator observed until the end of the experiment. Administration of galascorbin promoted tenacious development of the conditioned reflex, which remained more pronounced in the CMF aftereffect period. J.D.H.

MUSCLE, MOTOR CORTEX, CEREBELLAR NUCLEAR, AND SPINDLE AFFERENT DURING SLOW HOLD-RAMP-HOLD POSITION-TRACKING MOVEMENTS OF THE MONKEY'S WRIST Ph.D. Thesis
Marc Hudson Schieber 1982 469 p
Avail: Univ. Microfilms Order No. 8122756

Two Rhesus monkeys were trained to perform flexion and extension wrist movements guided by a tracking display. The monkey used a wrist position control to operate a cursor with which he pursued a visual target. The target, and therefore the monkey's wrist, moved in slow hold-ramp-hold (HRH) trajectories. By changing parameters of the target's trajectory, changes were produced in the parameters of the monkey's wrist movement. The second monkey was trained additionally to perform self-spaced alternating wrist movements and to receive occasional pulses of torque about the wrist. It is hypothesized that during slow HRH wrist movements, two parallel motor systems operated in relative dissociation. The first system included class I motor cortex neurons, alpha motoneurons, and extrafusal muscle. The second system included class II motor cortex neurons, nearly all related dentate and interposed neurons, gamma motoneurons, and spindle afferents. This system could have provided for the continuous acquisition of dynamically sensitive spindle afferent feedback constantly maintained in the face of widely varying peripheral conditions. Dissert. FACILITATED DIFFUSION OF SMALL NON-ELECTROLYTES IN THE HUMAN RED BLOOD CELL
Robert Ray Mayrand 1981 136 p
Avail: Univ. Microfilms Order No. 8125991

The design of a new simple continuous flow system for the analysis of rates of permeation of small non-electrolytes across human red cell membranes is described. With this system it was demonstrated that ethylene glycol equilibrium exchange is saturable, KM = 175 mM, and inhibitable, glycerol K1 = 1200 mM. Ethylene glycol yielded a permeability coefficient of P sub s = .000336 cm/s. Urea equilibrium exchange was also examined with the continuous flow system. Saturation was again observed, KM = 218 mM. The maximal rate of urea exchange was P sub s = .000808 cm/s. The estimated non-inhibitable (presumably through the lipid) portion of urea equilibrium exchange was .0000258 cm/s which is 3.2 percent of the maximal rate. Dissert. Abstr.

TEMPORAL INTEGRATION OF ACOUSTIC POWER FOR INTERRUPTED STIMULI AT SUPRATHRESHOLD LEVELS Ph.D. Thesis
Joyce Rodriguez-Arrufat 1981 132 p
Avail: Univ. Microfilms Order No. 8125375

Threshold and suprathreshold temporal integration data employing experimental variables were investigated. Data were collected to experimental conditions: three stimulus types, nine signal durations and four presentation levels including threshold. Subjects were three normal hearing listener who participated in 20 practice sessions and 12 test sessions of 20 minutes each. Mean threshold and point of subjective equality (PSE) values were calculated for each subject and each experimental condition. It is indicated that the constants of the function are a product of the interaction between stimulus type and intensity as incorporated in a two part linear regression model. It is suggested that critical duration decreases with intensity and is essentially independent of stimulus type at 50 db and 80 dB SPL. The slope of the function varies as a function of intensity and stimulus type, being largest for 1000 Hz and smallest for white noise. These findings are discussed in terms of Zwislocki's exponential theory of loudness summation. Dissert. Abstr.

N82-17857 Ohio Univ., Athens.
QUANTIFICATION OF PSYCHOACOUSTIC TUNING CURVE SHARPNESS: AN ANALYSIS OF FREQUENCY RESOLUTION IN CHILDREN AND ADULTS Ph.D. Thesis
Neal Alan Sloane 1981 120 p
Avail: Univ. Microfilms Order No. 8126067

Probe tone frequencies were pulsed with a rise/fall time of 50 msec., duration of 400 msec., and were delivered at 10 dB SL using a simultaneous masking paradigm. Masked threshold was determined using a modified Hughson-Westlake technique. After the first set of tuning curves was obtained, each subject returned in 24 hours to replicate the test. Results show that the main effect for age is nonsignificant, the main effect for sessions also is nonsignificant, the main effect for frequency is significant, and all possible interactions are nonsignificant. A Tukey Test, calculated for the main effect of frequency, established that all three tuning curves differ significantly from one another in sharpness, it is concluded that within the age range under study, age does not influence tuning curve sharpness. d sub 1 oct. values do not change significantly across experimental sessions, and tuning curves increase significantly in sharpness across probe tone frequencies of 500, 1000, and 2000 Hz. Dissert. Abstr.

A STUDY OF THE ACOUSTIC REFLEX AS ELICITED BY SELECTED ENVIRONMENTAL NOISE STIMULI Ph.D. Thesis
Marshall Melvin Smith 1981 114 p
Avail: Univ. Microfilms Order No. 8125790

The acoustic reflex thresholds (ARTs) for the environmental noise ranged from 78.83 through 81.78 db SPL. The ARTs for the white noise, and the pure-tone were 81.38 and 95.19 dB SPL, respectively. For all practical purposes (19%) the ARTs for the environmental noises lie within + or - 5 db of the ART for the white noise. The latency at threshold for the environmental noises ranged from 452.5 through 552.50 msec. Similarly, the latencies were 402.5 and 487.5 msec for the white noise and the pure-tone, respectively. The latency at dB SL sub R (20 dB above the threshold) for the environmental noises ranged from 152 through 180 msec. There was a decrease in latency at 20 dB SL sub R compared to that at threshold across all the stimuli. The contraction rate at 20 dB SL sub R for all stimuli ranged from .0009 through .0011 cc/msec. The contraction magnitude at 20 dB SL sub R for all the environmental noises and the white noise ranged from .669 through .816 cc. Dissert. Abstr.

STUDIES ON STRUCTURE AND FUNCTION RELATIONSHIP IN FIBRINOGEN Ph.D. Thesis
Nadia Aldyth Carrell 1981 160 p
Avail: Univ. Microfilms Order No. 8125561

The literature concerning the chemical properties of fibrinogen and the mechanisms of fibrinogen function was reviewed. The experimental work was aided by the availability of two patients with congenital molecular variants of fibrinogen and one patient with an inhibitor to fibrin polymerization. The fibrinogen level in the first patient was found to be about one third of the normal level by both coagulation and immunologic methods. The second patient had a low plasma level of clotable protein with normal antigen concentration, high amounts of fibrinogen related material in serum, and prolonged thrombin and reptilase clotting times. The third patient developed an inhibitor which markedly prolonged the thrombin and reptilase times of both patient and normal plasmas. A procedure was developed to direct chemical modifications selectively at lysine residues which function in polymerization. An assay to measure the binding of fibrinogen to fixed washed platelets was developed. Dissert. Abstr.

N82-17860 Florida Univ., Gainesville.

FORWARD MASKING OF AUDITORY NERVE (N SUB 1) AND BRAINSTEM RESPONSES (WAVE V) IN HUMANS Ph.D. Thesis

Steven John Kramer 1981 186 p
Avail: Univ. Microfilms Order No. 8127440

The influence of a response to one sound (probe) another sound (masker) when the two sounds occur simultaneously or in a temporal relation was demonstrated. The effects of forward masking on wave-V of the ABR along with N responses recorded simultaneously (on a separate channel) from the ear canal were investigated. Postmasking recovery functions were measured for different masker durations, masker levels, and masker low frequency cutoffs (high-pass masking). The effects on wave-V were different than on N1. The primary effects of forward masking on the probe responses were decreases in N1 amplitude and increases in wave-V latency. Characteristic changes in the recovery functions for variations on masker parameters were found. It is suggested that the relation between wave-V latency and N1 amplitude, along with other characteristics of underlying mechanisms include a recording of the neutral input (N1) within the brainstem pathways generating the wave-V potential. Dissert. Abstr.

HUMAN AUDITORY BRAINSTEM ELECTRIC RESPONSES TO BINAURAL AND MONAURAL STIMULI Ph.D. Thesis

Paul Alfred Lobaugh 1981 149 p
Avail: Univ. Microfilms Order No. 8126058

The auditory brainstem electric response (ABER) is recorded from electrodes attached to the scalp of humans and consists of a series of sub-microvolt peaks which occur in the 10 ms period following presentation of simple auditory stimuli such as clicks. The ABER differences due to binaural and monaural stimulation which are defined as binaural interaction are investigated. It is also possible that binaural signal processing, if reflected by the ABER, may occur in an asymmetric manner. The effects of a stimulus variable, click polarity, and a subject variable, headsize, upon the ABER are studied. Click-evoked ABERs were acquired from 44 normally hearing adolescent and adult subjects. Responses to binaural and monaural stimulation were analyzed. It is concluded that polarity of the stimulus does not affect ABERs in response to 60 and 70 dB SL clicks. For 80 dB SL stimulation, negative polarity clicks evoke shorter latency waves than do positive polarity clicks. Dissert. Abstr.

PORTABLE MEDICAL STATUS AND TREATMENT SYSTEM Final Report

Dec. 1981 25 p
(Contract NAS9-15821)
(NASA-CR-167496) Avail: NTIS HC A02/MF A01 CSCL 06E

A portable medical status and treatment system is discussed. The vital signs monitor includes electrocardiogram, respiration, temperature, blood pressure, alarm, and power subsystems, which are described. A DC defibrillator module, a radio module, and their packaging are also described. These subsystems were evaluated and the results and recommendations are presented. S.L.

PHYSICAL PERFORMANCE TASKS REQUIRED OF U. S. MARINES OPERATING IN A DESERT ENVIRONMENT

Paul O. Davis, Arthur V. Curtis, Jr., and Steven A. Bixby Nov. 1981 62 p refs
(Contract N00014-80-C-0473)
(AD-A107866; TR-7) Avail: NTIS HC A04/MF A01 CSCL 15/7

Nine representatives of the Institute of Human Performance were integrated into a marine battalion during a CAX (combined arms exercise) for the purpose of gathering descriptive and objective information regarding the nature and types of physical performance tasks encountered by marine infantrymen (MOS 0311) during desert combat. Through the use of minicassette recorders, scales, cameras and other data collection equipment, scenarios were described which typify the critical, frequent and strenuous types of tasks indigenous to marines in this environment. Distances covered on foot, loads carried, rates of travel and grades encountered are detailed and described as well as other environmental overlays which impact on troop performance. It was determined that for the most part, a mechanized, motorized combat scenario does not require high levels of physical ability; however, fire team rushes represent a critical scenario, with high levels of aerobic and anaerobic power, particularly when performed in ambient temperatures of 100-107 F. A taxonomy of physical tasks from this environment will be added to physical performance data from other Marine Corps theaters of operations for the purpose of developing a complete job analysis of activities involving strength and endurance factors. CYTOLOGIC AND BIOCHEMICAL GENETIC EFFECTS OF CHEMICAL CARCINOGENS Annual Report, 1 Jul. 1980 - 30 Jun. 1981

Ronald E. Rasmussen Wright-Patterson AFB, Ohio Aerospace Medical Research Lab. Oct. 1981 43 p refs
(Contract F33615-80-C-0512; AF Proj. 6302)
(AD-A107615; AFAMRL-TR-81-82) Avail: NTIS HC A03/MF A01 CSCL 06/20

The first project is concerned with the relationship between initiation of cancer by chemicals and the damage and repair of DNA in cells and tissues susceptible to the carcinogenic action of the chemicals. The working hypothesis is that interaction of the carcinogen with cellular DNA is a necessary step in carcinogenesis and that this interaction may cause DNA damage which is then followed by DNA repair synthesis. The second project was conducted with the cooperation of the staff of the Toxic Hazards Research Unit at AMRL, WPAFB. Rats and hamsters were exposed by inhalation to hydrazine at 750 ppm for one hour. Groups of animals which had been exposed only once or which had been exposed 10 times were shipped to UC Irvine for study. The factors studied were (1) DNA replication in the lung; (2) DNA repair synthesis in the lung; (3) Cellular replication in the lung and nasal turbinates; and (4) Metabolism of a known lung carcinogen, 3H-benzo(a)pyrene, by lung slices from the treated animals. The third project was initiated during the current year with the goal of developing an animal model in which biochemical and cytogenetic factors could be studied during the process of tumorigenesis. Range-finding studies are underway at the Toxic Hazards Research Unit (THRU) to establish the intratracheal dosage of 3-methylcholanthrene (MCA) necessary to produce a high yield of lung tumors in Fischer 344 rats within 12 months. COMPARATIVE BIOCHEMISTRY AND METABOLISM. PART 1: CARCINOGENESIS Annual Report, Jun. 1980 - May 1981

Robert C. Shank Wright-Patterson AFB, Ohio Aerospace Medical Research Lab. Oct. 1981 36 p refs
(Contract F33615-80-C-0512; AF Proj. 6302)
(AD-A107614; AFAMRL-TR-81-83-Pt-1) Avail: NTIS HC A03/MF A01 CSCL 06/20

Oral administration of the inorganic hepatotoxin, hydrazine, to male Fischer 344 or Sprague Dawley rats results in the endogenous methylation of liver DNA at the 7- and O6-positions

of guanine. At doses below the LD50 (45, 60 or 75 mg hydrazine/kg body weight), methylation levels varied little and averaged about 500 micromol 7-methylguanine/mol guanine and 20 micromol O6-methylguanine/mol guanine. At 90 mg hydrazine/kg body weight (approximately the 7-day LD50) the methylation levels were 869 micromol 7-methylguanine and 58 micromol O6-methylguanine/mol guanine 24 hours after toxicant administration. A single dose of 3 mg hydrazine/kg body weight did not result in detectable levels of methylguanines in liver DNA; however, after three or four daily administrations of hydrazine at this dose, liver damage was evident, and liver DNA contained 50-100 micromol 7-methylguanine/mol guanine, about the limit of analytical detection. Following a single oral administration of 90 mg hydrazine/kg body weight, liver DNA guanine rapidly became methylated. The time for half-maximum alkylation at 7-guanine was 30 minutes and at O6-guanine, 45 minutes. The rates of removal of these methylated bases were consistent with published values from experiments using methylating carcinogens and with values obtained in this laboratory with the model compound, 1,2-dimethylhydrazine.

HEALTH EFFECTS OF CARBON MONOXIDE AND OZONE
Jul. 1981 20 p refs Prepared in cooperation with Energy and Environmental Analysis, Inc., Arlington, Va.
(PB82-114265; EPA-AA-IMS-81-8) Avail: NTIS HC A02/MF A01 CSCL 06T

The information known about the health effects of carbon monoxide (CO) and ozone (O3) is summarized. How that information is used by EPA to set National Ambient Air Quality Standards is discussed. The sources most likely to contribute to high levels of CO and O3 and how EPA control programs will reduce emissions from these sources in the future are discussed. The health effects on humans and plants are discussed.

A MODEL FOR ESSENTIAL HYPERTENSION: METABOLIC STUDIES Ph.D. Thesis
James Patterson Church 1981 101 p
Avail: Univ. Microfilms Order No. 8126862

The extent to which blood pressures and tissue lipid levels are manipulated by dietary control of low levels of essential fatty acids in rat strains used as models of hypertensive and normotensive man were determined. Procedures included gravimetric total lipids, colorimetric cholesterol and phospholipids, fluorimetric triglycerides and gas liquid chromatographic fatty acids. Samples were taken from plasma liver and kidney. Total lipids were lower in plasma, liver, and kidney of the SHR than the WKY. Liver triglyceride and kidney cholesterol and phospholipid (PL) were lower with liver PL higher in SHR than in WKY. Total individual fatty acids in plasma and in neutral lipid and PL fractions of liver and kidney exhibited several strain and diet differences. A high metabolic rate in the SHR suggests defective transport of essential fatty acids from the liver. Dissert. Abstr.

CEREBRAL HEMISPHERIC ACTIVITY AND AUTOMONIC NERVOUS FUNCTION Ph.D. Thesis
Deborah Ann Werntz 1981 130 p
Avail: Univ. Microfilms Order No. 8125444

An otherwise unknown relationship between cerebral hemispheric activity, as exhibited by the EEG, and the autonomic nervous system as exhibited by the nasal cycle and its self-induced alteration as regulated by forced uninostril respiration is demonstrated. It is proposed that the correlation of the nasal cycle with alternating relative EEG amplitude asymmetry is indicative of and consistent with a single ultradian ocillator system. It is also proposed that the nasal cycle is controlled via a central mechanism, whereby the hypothalamus regulates the sympathetic/parasympathetic balance and the vasomotor tone throughout the body. The 'feedback' effect of nasal airflow on EEG asymmetry is mediated through the olfactory system and its connecting pathways to the hypothalamus. The data demonstrate the individual's ability to noninvasively and predictably after cortical activity and possibly other autonomic functions. Dissert. Abstr.

THE ROLE OF INTESTINAL NERVES IN THE NUTRIENT INDUCED INTESTINAL HYPEREMIA Ph.D. Thesis
Richard Arlan Nyhof 1981 124 p
Avail: Univ. Microfilms Order No. 8126536

The blood flow to the small intestine increases following a meal, and this hyperemia appears to be localized to those portions of the intestine exposed to nutrients. Evidence indicates that local intestinal nerves may participate in producing this hyperemia. The venous outflow of isolated canine jejunal segments, the arteriovenous oxygen difference, and the rate of oxygen consumption were measured before and after administration of a local anesthetic and several neurotransmitter antagonists. Intestinal nerves do not appear to play a role in the intestinal hyperemia produced by luminal placement of nutrient solutions. On the basis of the magnitude of hyperemic and metabolic responses, the hyperemia produced by glucose appears to be metabolically mediated. The oleic acid induced hyperemia more closely resembles that produced by vasodilator chemicals. The hyperemia produced by food would likely involve a combination of these mechanisms. Dissert. Abstr.

REGULATION OF CALCIUM CURRENT AND CALCIUM ACTIVITY IN HEART CELLS Ph.D. Thesis
Eduardo Marban 1981 152 p
Avail: Univ. Microfilms Order No. 8125689

The regulation of calcium current in mammalian ventricular muscle and Purkinje fibers was studied by voltage clamp technique. The effects of changes in intracellular calcium on the size of the slow inward calcium current (I sub si) were found to explain the digitalis-induced increase in this current, as well as some properties of the inactivation of I sub si. The involvement of K+ as a charge carrier of the transient outward current is shown Ca entry leads to inactivation, as previously suggested for Paramecium, Aplysia neurons, and stick insect skeletal muscle. Enhancement of I sub si is observed in association with the positive inotropic effect of digitalis. It is suggested that a rise in Na sub I leads to increased I sub si possibly through a secondary rise in Ca. Quiescent ventricular muscle, a mean free Ca2+ concentration of micro is found. During contractures, transients rising up to 10 micro are reported. In studying the effects of catecholamines on free Ca2+ and force, it is evidenced that epinephrine reduces myofibrillar Ca2+ sensitivity in heart muscle. Dissert. Abstr.

AN EVALUATION OF HELICOPTER NOISE AND VIBRATION RIDE QUALITIES CRITERIA

C. E. Hammond, D. D. Hollenbaugh, S. A. Clevenson, and J. D. Leatherwood Dec. 1981 14 p refs Presented at the Technol. for the Jet Smooth Ride, A Natl. Specialists' Meeting on Helicopter Vibration, Hartford, Conn., 2-4 Nov. 1981; sponsored by the American Helicopter Society Prepared in cooperation with Army Research and Technology Lab., Fort Eustis, Va.
(NASA-TM-83251) Avail: NTIS HC A02/MF A01 CSCL 05H

Two methods of quantifying helicopter ride quality; absorbed power for vibration only and the NASA ride comfort model for both noise and vibration are discussed. Noise and vibration measurements were obtained on five operational US Army helicopters. The data were converted to both absorbed power and DISC's (discomfort units used in the NASA model) for specific helicopter flight conditions. Both models indicate considerable variation in ride quality between the five helicopters and between flight conditions within each helicopter. T.M.

DEVELOPMENT OF THE AUTOMATED PERFORMANCE ASSESSMENT AND REMEDIAL TRAINING SYSTEM (APARTS): A LANDING SIGNAL OFFICER TRAINING AID Final Report, Sep. 1979 - Mar. 1981

Steven T. Breidenbach and Clyde A. Brictson Orlando, Fla. Naval Training Equipment Center Jun. 1981 53 p refs
(Contract N61339-79-D-0105)
(AD-A106224; NAVTRAEQUIPC-79-D-0105-1) Avail: NTIS HC A04/MF A01 CSCL 05/9

Development of the automated performance assessment and remedial training system (APARTS) is described. The APARTS is an automated training aid designed to assist the landing signal officer (LSO) in training pilots during the acquisition of carrier landing skills. The APARTS is based on general principles of learning and provides graphic displays of pilot landing technique problems for LSO evaluation and pilot feedback. The APARTS also integrates field carrier landing practice, conducted in the aircraft, with night carrier landing training (NCLT) instruction. Once landing problems are identified and feedback is provided to the pilot, remedial instruction is given in the NCLT. An improved APARTS conceptual model along with two computer programs designed to process, store and graphically display pilot performance data are described. Future APARTS developments are outlined for improved carrier landing effectiveness. GRA

TIME DOMAIN IDENTIFICATION OF AN OPTIMAL CONTROL PILOT MODEL WITH EMPHASIS ON THE OBJECTIVE FUNCTION

David K. Schmidt 1982 22 p refs Presented at AFFTC/NASA Dryden/AIAA Workshop on Flight Testing to Identify Pilot Workload and Pilot Dynamics, Edwards, Calif., 19-21 Jan. 1981
(Grant NAG4-1)
(NASA-CR-168487) Avail: NTIS HC A02/MF A01 CSCL 05H

A method for the identification of the pilot's control compensation using time domain techniques is proposed. From this information we hope to infer a quadratic cost function, supported by the data, that represents a reasonable expression for the pilot's control objective in the task being performed, or an inferred piloting strategy. The objectives for this method are: (1) obtain a better understanding of the fundamental piloting techniques in complex tasks, such as landing approach; (2) the development of a metric measuurable in simulations and flight test that correlate with subjective pilot opinion; and (3) to further validate pilot models and pilot vehicle analysis methods. INVESTIGATION AND EVALUATION OF A COMPUTER PROGRAM TO MINIMIZE THREE-DIMENSIONAL FLIGHT TIME TRACKS Final Report, 15 Sep. 1980 - 12 Aug. 1981
Frederic I. Parke 12 Aug. 1981 150 p
(Grant NAG3-101)
(NASA-CR-168419) Avail: NTIS HC A07/MF A01 CSCL 09B

The program for the DC 8-D3 flight planning was slightly modified for the three dimensional flight planning for DC 10 aircrafts. Several test runs of the modified program over the North Atlantic and North America were made for verifying the program. While geopotential height and temperature were used in a previous program as meteorological data, the modified program uses wind direction and speed and temperature received from the National Weather Service. A scanning program was written to collect required weather information from the raw data received in a packed decimal format. Two sets of weather data, the 12-hour forecast and 24-hour forecast based on 0000 GMT, are used for dynamic processes in testruns. In order to save computing time only the weather data of the North Atlantic and North America is previously stored in a PCF file and then scanned one by one. R.J.F.

SHADED COMPUTER GRAPHIC TECHNIQUES FOR VISUALIZING AND INTERPRETING ANALYTIC FLUID FLOW MODELS Final Report, Jul. 1978 - Jun. 1981
Frederic I. Parke Jun. 1981 17 p refs
(Grant NsG-3207)
(NASA-CR-168418) Avail: NTIS HC A02/MF A01 CSCL 09B

Mathematical models which predict the behavior of fluid flow in different experiments are simulated using digital computers. The simulations predict values of parameters of the fluid flow (pressure, temperature and velocity vector) at many points in the fluid. Visualization of the spatial variation in the value of these parameters is important to comprehend and check the data generated, to identify the regions of interest in the flow, and for effectively communicating information about the flow to others. The state of the art imaging techniques developed in the field of three dimensional shaded computer graphics is applied to visualization of fluid flow. Use of an imaging technique known as 'SCAN' for visualizing fluid flow, is studied and the results are presented. S.L.

INTERCOMPUTER TRANSPORTATION OF ASSEMBLY LANGUAGE SOFTWARE THROUGH DECOMPILATION
Donald L. Brinkley 15 Oct. 1981 46 p refs
(AD-A107645; NUSC-TR-6004) Avail: NTIS HC A03/MF A01 CSCL 09/2

Portability of assembly language software can be achieved in a practical way only through the use of automated translators. The fact that translation between two representations at the same semantic level is a clumsy and difficult task has frustrated the development of such technology. This clumsiness stems from the fundamental differences in the architectural structures of different machines. In its simplest form, the translation process actually becomes the process of simulating one machine or another. The goal of such translation, however, should be the generation of assembly language code for the target machine that approximates, in efficiency and in appearance, code written to perform the same task by a 'good' assembly language programmer in the target language. A translator that performs a decompilation of the source program into an intermediate representation at a higher semantic level is described. Code in the target assembly language can later be generated from this intermediate representation. This translation scheme is shown to remove most of the machine dependency from assembly language software. Author (GRA)

OPEN SYSTEMS INTERCONNECTION (OSI) REFERENCE MODEL (AUG. 1981) (ISO SECOND DRAFT PROPOSAL (DP) 7498)
Sep. 1981 113 p refs
(AD-A107644; NCS-TIB-81-1A) Avail: NTIS HC A06/MF A01 CSCL 09/2

The reference model was developed to establish a framework for the coordination of existing and future standards developed to facilitate the interconnection of information systems. The model does not specify services and protocols for interconnection. It is designed to be the common basis for the planning and coordination of consistent standard protocols and families of protocols in a hierarchical manner. Implementation of standards development in consonance with the Model should allow the exchange of information among terminal devices, computers, people, application processes, etc., that are 'open' to each other by virtue of their mutual use of applicable standards. The Reference Model has a hierarchical organization of 7 architectual layers, based on the transfer of data by telecommunication means. GRA

COMPUTER INTERPRETATION OF A DYNAMIC IMAGE FROM A MOVING VEHICLE Ph.D. Thesis

Thomas Dell Williams May 1981 297 p refs
(Contract N00014-75-C-0459; Grant NSF DCR-75-16098)
(AD-A107565; COINS-TR-81-22) Avail: NTIS HC A13/MF A01 CSCL 09/2

The goal of this thesis is the design and implementation of a computer program that constructs an interpretation of images of a natural scene, in particular one imaged while the camera is in a moving automobile. The succession of images is to be interpreted in terms of surfaces and objects in three dimensional space. The agreement between image dynamics and an internal surface model of the environment is measured by comparing a pair of temporally disparate images (two movie frames). Using the model, an image taken at one location can be transformed into a synthetic image of the scene as it would be viewed from another location. This synthesis accounts for point displacements and occlusion effects as predicted by the internal model. Differences between the real and the synthetic images are then used as an error measure in a search that refines the model. Once the model is refined, unresolved errors are used to correct the initial surface model by resegmenting the image into a better approximation of the surfaces in the environment. GRA

TWO-CHANNEL LINEAR-PREDICTIVE SPECTRAL ANALYSIS: PROGRAM FOR THE HP 9845 DESK CALCULATOR

Albert H. Nuttall 1 Oct. 1981 58 p refs
(ZR0000101)
(AD-A107634; NUSC-TR-6533) Avail: NTIS HC A04/MF A01 CSCL 12/1

A program for linear-predictive spectral analysis of two channels of data, including estimation of the auto-spectra, cross-spectrum, magnitude-squared-coherence, and the argument of the coherence, is presented in BASIC for the HP 9845 desk calculator. Timing results for the major subroutines are included, and their dependence on the fundamental parameters of the data, filter, and desired spectral resolution is indicated. This technique and program for spectral analysis are very appropriate for short data segments. In particular, a positive-definite spectral matrix estimate is guaranteed. Applications to examples including a strong tonal interference in one channel are made, and a possible shortcoming of the technique is pointed out. A suggested remedy is proposed and a philosophy for multichannel spectral analysis is suggested for further consideration.

THEORETICAL BASIC FOR CTABS80: A COMPUTER PROGRAM FOR THREE-DIMENSIONAL ANALYSIS OF BUILDING SYSTEMS Final Report

Edward L. Wilson, H. H. Dovey, and Ashraf Habibullah Vicksburg, Miss. Army Engineer Waterways Experiment Station Sep. 1981 132 p refs
(AD-A107635; WES-TR-K-81-2) Avail: NTIS HC A07/MF A01 CSCL 13/13

This report presents the theoretical basis for CTABS80, a computer program for the linear three dimensional structural analysis of multistory frame and shear wall buildings subjected to static or dynamic loadings. In CTABS80, the building is idealized as an assemblage of vertical independent frame and shear wall systems interconnected by horizontal floor diaphragms which are rigid in their own plane. The frame and shear wall systems must basically be of rectangular geometry (in elevation) with vertical columns (or piers) and horizontal beams (or spandrels). However, with special modeling techniques, very complex situations may be considered. A special shear panel element is developed to enable modeling of discontinuous shear walls and shear walls with arbitrary openings. A diagonal bracing system to model braced frames (X-braced, K-braced, or eccentrically braced systems) is also presented. The column, shear panel, and diagonal formulations include the effects of bending, axial, and shear deformations. Bending and shear deformations are also included in the beam formulation; however, the effects of axial deformations are neglected. The effects of the finite dimensions of the beams and columns on the stiffness of a frame or shear wall system are automatically included. The buildings may be unsymmetrical and nonrectangular in plan. Torsional behavior and interstory compatibility are accurately reflected in the results. GRA

AN UNDERLYING CONTEXT-FREE GRAMMAR OF ALGOL 68 PLUS

L. G. L. T. Meertens and J. C. vanVliet Jul. 1981 22 p refs
(MC-IW-171/81) Avail: NTIS HC A02/MF A01

The description of ALGOL 68+, a superlanguage of ALGOL 68, by a two-level Van Wijngaarden grammar is considered. This type of grammar is not well suited for standard parsing techniques. A method by which a context free grammar is obtained from the two-level grammar is explained. The differences introduced through this transition are discussed. When appropriate, hints are offered as to where during the parsing process these differences can be dealt with in a reasonable way. The context free grammar is presented in a self-explanatory format. Although

this grammar was developed with a very specific (top-down) parsing method in mind, it is general enough to be useful as a starting point for a wide variety of parsing algorithms.

PEP: AN INTERACTIVE PROGRAMMING SYSTEM WITH AN ALGOL-LIKE PROGRAMMING LANGUAGE
P. W. E. Verhelst and N. F. Verster (Tech. Univ., Eindhoven, Netherlands) Aug. 1981 22 p refs Submitted for publication Sponsored by Netherlands Organization for the Advancement of Pure Research (ZWO)
(MC-IW-172/81) Avail: NTIS HC A02/MF A01

Construction of an interactive programming environment which provides a better structured language than BASIC, but which retains the attractive properties of BASIC systems, is intended. A simple computer network, consisting of a central PDP 11/23 host computer and several small LSI 11 satellite computers for the control of physics experiments, was used. The main tasks of the satellite computers are data acquisition, adjusting experiment parameters, and simple numerical analysis. The system is interpreter based. The language processed by the system allows declaration of variables, constants, and procedures; it has structured statements for conditional and repetitive execution of program parts. Experience shows that the system is much more powerful than available BASIC systems. The slowness of an interpreter based system is completely compensated for by the ease with which the system can be used and by the fast response to program changes. Author (ESA)

AN OPERATOR-PRIORITY GRAMMAR FOR ALGOL 68 PLUS
L. G. L. T. Meertens and J. C. vanVliet Aug. 1981 31 p refs
(MC-IW-173/81) Avail: NTIS HC A03/MF A01

How an operator-precedence grammar for ALGOL 68+ can, through a simple right-to-left transduction scheme, be made to be of type LL (1) is discussed. If a grammar is of type LL (1), this easily leads to a parsing method for that grammar, implemented by a set of mutually recursive routines, one for each nonterminal of the grammar. The superlanguage of ALGOL 68, ALGOL 68+, is powerful enough to describe the standard-prelude. If, in addition, the grammar is an operator-priority grammar, an easy and consistent error recovery mechanism can be applied. Such an operator-priority grammar for ALGOL 68+ is given. An account of the differences between the language generated by this grammar, and ALGOL 68+, insofar as these are due to the transition to an operator-priority grammar, is given as well. These differences somehow have to be catered for during the parsing process. Author (ESA)

SOME THOUGHTS ON A TUPLE ORIENTED PROGRAMMING SYSTEM
P. Verhelst Aug. 1981 17 p refs
(MC-IW-174/81) Avail: NTIS HC A02/MF A01

The system is intended to be used as the lowest level of an interactive programming system. It is shown how abstract data types and syntax extensions may be handled in this system. A basic framework that supports the definition and manipulation of arbitrary types of objects (including programs) is presented. In the same way as is done in LISP, a translation from programs to tuples is made. The tuple processor executes these translated programs. The tuple form of programs allows manipulation of programs and, by mapping the processor state on tuples, program debugging. By defining all types of objects within this framework, the corresponding operations are automatically available in the programming language. Author (ESA)

This report is concerned with routing protocols in networks. The major result is a low bound for any oblivious routing strategy where the route of a packet depends only on the source and destination of the packet. We show that for any oblivious routing protocol for a network of n processors in which the maximum number of processors directly connected to any processor is d, there exists a permutation that requires time (sq. root of n) d (to the 3/2). For specific networks such as an n-cube we give an oblivious routing algorithm whose performance is close to this lower bound. Author (GRA)

COMPUTATIONAL THEORY OF LINE DRAWING INTERPRETATION Final Report

Andrew P. Witkin Hampton, Va. NASA. Langley Research Center Dec. 1981 31 p refs
(Contract NAS1-16282)
(NASA-CR-165804) Avail: NTIS HC A03/MF A01 CSCL 09B

The recovery of the three dimensional structure of visible surfaces depicted in an image by emphasizing the role of geometric cues present in line drawings, was studied. Three key components are line classification, line interpretation, and surface interpolation. A model for three dimensional line interpretation and surface orientation was refined and a theory for the recovery of surface shape from surface marking geometry was developed. A new approach to the classification of edges was developed and implemented signatures were deduced for each of several edge types, expressed in terms of correlational properties of the image intensities in the vicinity of the edge. A computer program was developed that evaluates image edges as compared with these prototype signatures. E.A.K.

STOCHASTIC CONTROL SYSTEM PARAMETER IDENTIFIABILITY

Chih-hsiao Lee and Charles J. Herget May 1975 141 p refs
(Contract NCAR-304-402)
(NASA-CR-166300; ISU-ERI-AMES-75134) Avail: NTIS HC A07/MF A01 CSCL 09B

The parameter identification problem of general discrete time, nonlinear, multiple input/multiple output dynamic systems with Gaussian white distributed measurement errors is considered. The knowledge of the system parameterization was assumed to be known. Concepts of local parameter identifiability and local constrained maximum likelihood parameter identifiability were established. A set of sufficient conditions for the existence of a region of parameter identifiability was derived. A computation procedure employing interval arithmetic was provided for finding the regions of parameter identifiability. If the vector of the true parameters is locally constrained maximum likelihood (CML) identifiable, then with probability one, the vector of true parameters is a unique maximal point of the maximum likelihood function in the region of parameter identifiability and the constrained maximum likelihood estimation sequence will converge to the vector of true parameters. CONTROLLER DESIGN FOR UNKNOWN MULTIVARIABLE SYSTEMS USING MONOTONE MODELING ERRORS

D. H. Owens and A. Chotai Feb. 1981 52 p refs
(Grant SRC-GR/B/23250)
(RR-144) Avail: NTIS HC A04/MF A01

The problem of controller design for an unknown discrete or continuous multivariable system in the frequency domain based on open-loop step response data alone is considered. The approach is based on the use of simple approximate plant models possessing the property that the resulting error in modeling the plant open-loop step response is both monotonic and sign definite as a function of time. In such circumstances the frequency domain properties of the approximating feedback system and the error involved in predicting steady state characteristics is sufficient data to predict the stability of the real feedback system. If integral controller elements are included, the results also provide sufficient conditions for exact tracking of step demands. Under certain circumstances, the technique has strong connections with the well-known inverse Nyquist array design method and can be regarded in part as a modification and generalization of that technique to cope with unknown interaction dynamics. CQNA: CLOSED QUEUEING NETWORK ANALYZER

Mauro Brizzi and Davide Grillo Sep. 1980 16 p refs Presented at Tech. Conf. on Meas., Modeling and Evaluation of Computer Systems, Juelich, West Germany, 23-25 Feb. 1981
(FUB-48-1980) Avail: NTIS HC A02/MF A01

The package CQNA-2 allows the computation of metrics related to queueing networks. The networks that can be analyzed belong to a subset of the well known BCMP class, main characterizations being fixed population size ('closed network' assumption), state independent service rates, and stations with one of the following service disciplines: FCFS, LCFS-PR and RR-PS. The package is an extended and thoroughly revised edition of CQNA-1. The use of the package requires mapping of the queueing network to be investigated into its CQNA-2 counterpart. The mapping is quite straightforward and guidelines and examples are reported. Keys for controlling the degree of detail associated to the production of metrics are made available. J.M.S.

QUASI-NEWTON METHODS CONVERGE AT THE GOLDEN SECTION RATE

J. Barzilai Aug. 1981 13 p refs
(Contract N00014-75-C-0569; NR Proj. 047-021)
(AD-A106683; CCS-RR-403) Avail: NTIS HC A02/MF A01 CSCL 12/1

Newton's method for the minimization of f: R to the n power yields R requires computation and inversion of the Hessian matrix at each iteration. Quasi-Newton methods approximate the Hessian or tis inverse by first order (i.e., gradient) information. These methods extend the classical secant (of False Position) method for $n > 1$. They are known to converge to the solution superlinearly. Thus, it is commonly accepted that the price paid for the approximation of the Hessian by gradient information is a reduction from second order to superlinear convergence. It is proven that the rate of convergence of a class of quasi-Newton methods, without line search and without restart, is given by the golden section ratio. J.D.H.

A DISCRETE-TIME MULTIVARIABLE CRITERION FOR LIMIT CYCLE PREDICTIONS

B. Kouvaritakis and R. Cameron (Bradford Univ., England) 1981 13 p refs Sponsored by Science and Engineering Research Council
(OUEL-1369/81) Avail: NTIS HC A02/MF A01

The use of circulant matrices in the study of the steady state response of discrete time systems to periodic inputs is discussed. System description applied to a nonlinear feedback configuration enables the derivation of simple sufficient conditions for the nonexistence of limit cycles. Application of the usual loop transformation to scalar systems recovers the classical circle criterion. The approach can also be applied to multivariable systems. However, instead of circulant matrices, circulant block matrices which are not normal are dealt with; the loop transformation is no longer straightforward. Suitable bounds on the numerical range of the loop transformed linear operator in terms of bounds on the numerical range of the original system are proposed. It is then possible to derive a multivariable circle type criterion with a Nyquist interpretation. Author (ESA)

RIEMANNIAN FIBRATIONS OF EUCLIDEAN SPACES Ph.D. Thesis

I-Ping Chu 1981 42 p
Avail: Univ. Microfilms Order No. 8127105

Local and global properties of Riemannian fibrations of flat euclidean space over some complete Riemannian manifold were studied. It is proved that every Riemannian fibration of R(n) over M(n-k), with connected fibers, has a totally geodesic flat fiber in R(n). All Riemannian fibrations of R(n) are classified in terms of group representations of R(k) in the orthogonal group O(n-K). Furthermore, it is shown that Riemannian foliations with 1 dimensional leaves, are fibrations and in one-one correspondence with (non-vanishing) Killing fields of R(n). Dissert. Abstr.

STOCHASTIC ASPECTS OF CLIMATIC TRANSITIONS: RESPONSE TO PERIODIC FORCING
C. Nicolis 1981 31 p refs Submitted for publication Sponsored in part by Inst. Internationaux de Physique et de Chimie
(Aeronomica-Acta-A-234-1981) Avail: Issuing Activity

The effects of a long time scale on climate dynamics are examined. The time dependent properties of the Fokker-Planck equation corresponding to a zero-dimensional climate model, showing bistable behavior and subject to a weak external periodic forcing, are analyzed. Conditions under which the response is amplified are found analytically. The 100,000 year eccentricity variation of the Earth's orbit, connected with glaciation cycles, was simulated. Although the amplitude of the forcing was small, response amplitude changed dramatically in the presence of fluctuations due to changes in climatic potential and the time scale related to the variance of the fluctuations. Theoretical and numerical analyses of glaciation cycle periodicity agree well. Author (ESA)

TWO THEOREMS ON THE DECOMPOSITION OF A PARA-UNITARY FUNCTION INTO A SUM OF TERMS WITH UNIFORM ARGUMENT
Plinio Tissi Sep. 1981 8 p refs Submitted for publication
(INPE-2217-PRE/015) Avail: NTIS HC A02/MF A01

The design of band separation networks is based upon the decomposition of a rational paraunitary (RPU) function q(s) into a sum of terms which possess, at each frequency s = iw, the same argument phi(w). The first theorem presents a sufficient condition on q(s) for the existence of such a decomposition. The second theorem presents the general solution to the problem of finding q(s), when the cross over frequencies and the respective asymptotic slopes are given. S.L.

REGULARIZATION PROCEDURE FOR STRING FUNCTIONALS
T. Filk Sep. 1981 53 p refs
(HE-81-16; ISSN-0172-8733) Avail: NTIS HC A04/MF A01

A regularization for the partition function of string models, i.e., theories for fields defined on two dimensional manifolds, is proposed. One and two-loop contributions are shown to be finite in a large class of theories and no counter terms are required although these theories are nonrenormalizable in the sense of the usual power counting arguments. Plausibility arguments are given that even in higher corrections a large class of graphs, if not all, might turn out to be finite. Author

(AD-A107631; NRL-MR-4559) Avail: NTIS HC A03/MF A01 CSCL 12/1

A method of finding complex roots in described, applicable to the situation where the given equation depends on a parameter in such a way that there exists a real root for a certain value of this parameter. This real root should be determined first by a real root finding routine. By incrementing the parameter by adjustable steps to the desired value, the progression of the corresponding root can be followed from the real axis into the complex plane. Alternately, this method can be applied to the case where it is desired to refine an approximate complex root obtained by other means, or track its progression through the complex plane when a parameter of the equation is varied. The method is a two dimensional counterpart to the one dimensional technique whereby the change of sign of the pertinent function delimits the location of a root. The complex root is similarly enclosed in a nested set of squares of diminishing size. The method is illustrated by a typical example, the dispersion relation for the propagation of straight crested waves in a homogeneous plate. GRA

DUAL CONVEX CONES OF ORDER RESTRICTIONS WITH APPLICATIONS
Richard L. Dykstra Sep. 1981 25 p refs
(Contract N00014-78-C-0655)
(AD-A108126; TR-111) Avail: NTIS HC A02/MF A01 CSCL 12/1

The concept of closed convex cones in finite dimensional Euclidian space and their duals has proven to be a useful construct. Here dual cones are exhibited for specific closed, convex cones including those pertaining to starshaped orderings and concave (convex) functions. Applications include finding projections involving starshaped orderings, generalizations of Kimball's inequality, an inequality for concave (convex) functions and a characterization of certain kinds of positive dependence. ROBUST PRINCIPAL COMPONENTS AND DISPERSION MATRICES VIA PROJECTION PURSUIT
Zhonglian Chen and Guoying Li Sep. 1981 19 p refs
(Contract N00014-79-C-0512; Grant NSF MCS-79-08685)
(AD-A107827; PJH-8) Avail: NTIS HC A02/MF A01 CSCL 12/1

This paper discusses a new kind of robust procedure for estimating covariance/correlation matrices and their principal components. Robust eigenvectors and eigenvalues of a covariance matrix are obtained by the projection pursuit method (PP) with robust variance as a projection index. Monte Carlo simulation results show that the best of the three projection pursuit type procedures introduced in this study compares favorably with approaches based on M-estimators of covariance: the estimate obtained by the new procedure has about the same bias and variance as the best M-estimators, and a somewhat better breakdown point. Author (GRA)

PROJECTION PURSUIT
Peter J. Huber Aug. 1981 24 p refs
(Contract N00014-79-C-0512; Grant NSF MCS-79-08685)
(AD-A107817; PJH-6) Avail: NTIS HC A02/MF A01 CSCL 12/11

Projection pursuit (PP), which goes back to Kruskal and Friedman and Tukey, is discussed from a conceptual point of view. Originally, it was merely concerned with finding 'interesting' projections to aid the visual analysis of high dimensional data. It will be argued that there is a very general concept behind PP, having a much broader scope than anticipated by its originators. In its most important aspect it is concerned with finding least normal projections of the data, and it has ramifications reaching into topics as varied as robust covariance estimation, factor analysis, nonparametric signal detection, computer tomography and Hilbert's 13th problem. (Contract N00014-79-C-0598)
(AD-A107738; TR-81-4) Avail: NTIS HC A03/MF A01 CSCL 12/1

With the advent of the Singularity Expansion Method (SEM) there has been a great interest on the identification of a linear time-invariant system by a sum of complex exponentials. In this paper the suitability of the exponential functions for modelling a finite time domain impulse response is examined. More specifically, we address the question of how long a data set does one need so that the record length behaves as if it were infinite. In other words, what is the minimum length of record required to resolve the various components of decaying exponentials. The answer to this question may yield data for a meaningful analysis. GRA

RATIONAL MODELING BY PENCIL-OF-FUNCTION METHOD

Vijay K. Jain (Univ. of South Florida, Tampa), Tapan K. Sarkar, and Donald D. Weiner (Syracuse Univ., N.Y.) Nov. 1981 34 p refs

(Contract N00014-79-C-0598; NR Proj. 371-014)

(AD-A107741; TR-81-7) Avail: NTIS HC A03/MF A01 CSCL 20/3

Pole-zero modeling of signals, such as an electromagnetic-scatterer response, is considered in this paper. It is shown by use of pencil-of-functions theorem that (a) the true parameters can be recovered in the ideal case (where the signal is the impulse response of a rational function H(z)), and (b) the parameters are optimal in the functional dependence sense when the observed data are corrupted by additive noise or by systematic error. Although the computations are more involved then in all-pole modeling, they are considerably less than those required in iterative schemes of pole-zero modeling. The advantages of the method are demonstrated by a simulation example and through application to the electromagnetic response of a scatterer. The paper also includes very recent and promising results on a new approach to noise correction. In contradistinction with spectral subtraction techniques, where only amplitude information is emphasized (and phase is ignored), we propose a method that (a) estimates the noise spectral density for the data frame, and then (b) performs the subtraction of the noise correlation matrix from the Gram matrix, of the signal. Author (GRA)

APPROXIMATION BY A SUM OF COMPLEX EXPONENTIALS UTILIZING THE PENCIL OF FUNCTION METHOD

Tapan K. Sarkar, Donald K. Weiner (Syracuse Univ.), and Vijay K. Jain (University of South Florida, Tampa) Nov. 1981 23 p refs

(Contract N00014-79-C-0598, RR0210101)

(AD-A107742; TR-81-8) Avail: NTIS HC A02/MF A01 CSCL 12/1

The approximation of a function by a sum of complex exponentials, in general, is a nonlinear optimization problem. The optimization problem, however, is linearized through the application of the pencil of function method. This noniterative method yields the best exponential approximation for a given order of approximation. The method differs radically from the classical Wiener least squares approach in the sense that exponents calculated by the pencil of function method are directly proportional to the integrated squared error in the approximation. As the integrated squared error approaches zero, the exponents calculated by the pencil of function method approach the best least squares exponents in a continuous fashion. Among the advantages of the method are its natural insensitivity to noise in the data and explicit determination of the signal order. Examples are presented to illustrate the stability of this technique especially when noise is present in the data. GRA

TWO PAPERS ON RECURSIVE EVALUATION OF COMPOUND DISTRIBUTIONS

William S. Jewell and Bjorn Sundt Jul. 1981 48 p refs

(Grant AF-AFOSR-0122-81; AF Proj. 2304)

(AD-A107912; ORC-81-20) Avail: NTIS HC A03/MF A01 CSCL 12/1

The first paper, entitled further Results on Recursive Evaluation of Compound, is discussed. A recent by Panjer provides a recursive algorithm for the compound distribution of aggregate claims when the counting law belongs to a special recursive family. In the present paper we first give a characterization of this recursive family, then describe some generalizations of Panjer's result. The second paper, entitled Improved Approximations for the Distribution of a Heterogeneous Risk Portfolio, is discussed. A traditional actuarial method for the difficult task of finding the exact distribution of a heterogeneous portfolio approximates the distribution with a compound Poisson law with identically distributed risks. This paper shows that a Binomial compound law provides a better match to the second moment of the distribution, thus giving a better approximation, while retaining a simple, recursive algorithm for calculating the distribution. A modified Binomial compound law further refines the approximation, with slight additional work. GRA

A SIMPLE HEURISTIC APPROACH TO SIMPLEX EFFICIENCY

Sheldon M. Ross Aug. 1981 12 p refs

(Grant AF-AFOSR-0122-81; AF Proj. 2304)

(AD-A107913; ORC-81-21) Avail: NTIS HC A02/MF A01 CSCL 12/1

Consider the standard linear program: Minimize c x-subject to: A x = b, x greater than or equal to 0, where A is an m x n matrix. The simplex algorithm solves this linear program by moving from extreme point of the feasibility region to a better (in terms of the objective function c x) extreme point (via the pivot operation) until the optimal is reached. In order to obtain a feel for the number of necessary iterations, we consider a simple probabilistic (Markov chain) model as to how the algorithm moves along the extreme points. At first we suppose that if at any time the algorithm is at the jth best extreme point then after the next pivot the resulting extreme point is equally likely to be any of the j - 1 best. Under this assumption, we show that the time to get from the Nth best to the best extreme point has approximately, for large N, a Poisson distribution with mean equal to the logarithm (base e) of N. We also consider a more general probabilistic model in which we drop the uniformity assumption and suppose that when at the jth best the next one is chosen probabilistically according to weights wi, i = 1, ..., j - 1. SMOOTHING AND COARSE GRID APPROXIMATION PROPERTIES OF MULTIGRID METHODS

W. J. A. Mol Aug. 1981 23 p refs
(MC-NW-110/81) Avail: NTIS HC A02/MF A01

Smoothing processes, which are used in multigrid methods, are analyzed with the smoothing analysis of Brandt. The smoothing processes are applied to model problems: the Poisson, anisotropic diffusion and convection diffusion equations. An estimate is given of the Galerkin coarse grid approximation. These and other theoretical results, in comparison with experiments with multigrid methods, are remarked on. Numerical experiments show that these methods are efficient and robust in the sense that they do not need to be adapted to the problem at hand.

APPLICATION OF MULTIGRID METHODS FOR INTEGRAL EQUATIONS TO TWO PROBLEMS FROM FLUID DYNAMICS

H. Schippers Aug. 1981 27 p refs Submitted for publication
(MC-NW-111/81) Avail: NTIS HC A03/MF A01

Multigrid methods are applied in order to efficiently solve the nonsparse systems of equations that occur in the numerical solution of two problems: (1) calculation of potential flow around bodies; and (2) calculation of oscillating disk flow. Problem (1) is reformulated as a boundary integral equation of the second kind that is approximated by a first order panel method resulting in a full system of equations. This method is in widespread use for aerodynamic computations. Problem (2) is described by Navier-Stokes and continuity equations. By means of the von Karman similarity transformations, these equations are reduced to a nonlinear system of parabolic equations which are approximated by implicit finite difference techniques. From the periodic conditions in time, a nonsparse system of equations is obtained. For both these problems, the fast convergence of multigrid methods for integral equations is established by numerical experiments. Author (ESA)

ON THE CONTRACTIVITY OF A COMPLEX RUNGE-KUTTA SCHEME

J. G. Verwer Oct. 1981 7 p refs Submitted for publication
(MC-NW-112/81) Avail: NTIS HC A02/MF A01

An attempt to break the order barrier p < or = 1 for contractive Runge-Kutta schemes with a special Runge-Kutta scheme of order 2, containing a complex parameter, is made. The implicit Runge-Kutta method is recalled and a previous result is cited, i.e., if the method is contractive with respect to all f belonging to the class of all differential systems (y' - f (t, y), t > or = 0, y (0) = y sub 0) with respect to a given norm, where the given norm may be arbitrary, then its order of accuracy p is not > 1. Taking a complex backward Euler scheme as an example, the order barrier p < or = 1 is found to be in fact unavoidable. This is proven by a counter example. Author (ESA)

RIGOROUS HIGH SPEED SEPARATION OF ZEROS OF RIEMANN'S ZETA FUNCTION

J. vandeLune, H. J. J. teRiele, and D. T. Winter Oct. 1981 40 p refs
(MC-NW-113/81) Avail: NTIS HC A03/MF A01

The Riemann hypothesis was numerically investigated, using a FORTRAN/COMPASS program executed on a CDC system of two CYBER 750 computers. The strategy for finding the required number of sign changes of Z (t) in a Gram block of length L > or = 2 is explained. Computation of Z (t) and error analysis are discussed. The program is given. Results, obtained by extensive computations, show that the first 200,000,001 zeros of the Riemann zeta function, zeta (s), in the critical strip are simple and lie on the line Re (s) = 1/2. This extends Brent's previous bound of 156,800,001. Author (ESA)

ANOTHER PROOF FOR THE COMPLETENESS OF A RULE FOR THE FAIR TERMINATION OF GUARDED COMMANDS AND ANOTHER RULE FOR THEIR JUST TERMINATION

Daniel Lehmann (Hebrew Univ.) Sep. 1981 9 p refs Submitted for publication
(MC-IW-178/81) Avail: NTIS HC A02/MF A01

An iterative guarded command C of the type: * open brackets d'Alembertian operator i belongs to I for B sub i tends to C sub i close brackets, where I is a set of indexes, the B sub i's are Boolean expressions (without side effects), and the C sub i's are commands, is considered. There is no assumption of fairness for the successive executions of each C sub i. The assumption of fairness at the outer level is made by assuming that if, in the course of executing C, an infinite number of times at the beginning of the body of the loop with B sub i being true is obtained, then the command C sub i, is chosen for execution an infinite number of times. The completeness of a rule for fair termination is proved. The result is an almost immediate consequence of a previous completeness result. Another completeness result suggests a rule for proving just termination of loops. It is different from a proposed proof rule dealing with fairness. It is also shown to be sound and complete.

PRINCIPAL COMPONENTS BIPILOTS AND ALPHA AND BETA DIVERSITY

Cajo J. F. terBraak Jan. 1981 19 p refs
(Contract IWIS-TNO-07.6.17806)
(IWIS-A-81-ST-23-15) Avail: NTIS HC A02/MF A01

Noncentered principal components analysis (PCA) on proportion data are used in order to give site ordinations that display approximate alpha diversities of sites and beta diversities of groups of sites, as measured by Simpson index and mean squared Euclidean distance. Species centering gives a better approximation to beta diversities; alpha diversities can still be visualized, if the true origin is projected into the plane of the ordination. The approximate species composition of each site can be visualized if the site ordination is combined with a species ordination. Noncentered and species centered distance biplots of diatom samples taken from pools in the 1920's and 1978 are compared. These plots show the approximate change in the pools since the 1920's: impoverishment in species composition and decrease in alpha diversity of pools as well as in beta diversity among pools. Species centered PCA yield more accurate approximations. Distortion is least in low diversity samples.

THE ITERATIVE SOLUTION OF A NON-LINEAR FREDHOLM INTEGRAL EQUATION ARISING FROM A CHEMICAL REACTOR PROBLEM

G. A. Evans, J. Hyslop, and A. P. G. Morgan Mar. 1981 17 p refs
(MATHS-Res-156) Avail: NTIS HC A02/MF A01

Material balance equations for tubular reactors with axial diffusion are discussed. For a Fredholm equation, the equation for the residual at any stage of the iteration is reduced to a linear integral equation for the required perturbation, using Newton's method. This equation is then solved by using a low order expansion in terms of Chebyshev polynomials. The numerical integrations required in the basic iterative process are carried out by the Clenshaw-Curtis quadrature prescription. Results are compared with conventional solutions of the parent differential equation and also with attempts at direct iterative solution of the integral equation by standard Neumann-Liouville series. The method is rapid and accurate in areas where conventional algebraic approaches are difficult. Author (ESA)

COMPLEX ALIGN: A TECHNIQUE FOR THE CHARACTER-

ISTIC LOCUS METHOD OF DESIGN
B Kouvaritakis Jul 1981 14 p refs Sponsored by Science and Engineering Research Council
(OUEL-1366/81) Avail NTIS HC A02/MF A01

Eigenvector alignment techniques which play an important role in the characteristic locus design of commutative controllers for multivariable systems are considered. The effectiveness of this design procedure depends on the degree of commutativity between the open loop transfer function matrix operator, G (s), and the construction of a controller, K (s), at some specific frequency of interest, s = s sub 0. This in turn depends on the degree of success of the least squares algorithm, ALIGN, which generates the real vector approximations to the eigenvectors of G (s sub 0). In order to extend the flexibility and effectiveness of the technique, the approximation of eigenvector pairs by constant complex conjugate vectors is examined. The COMPLEX ALIGN algorithm for the optimum design of the real and imaginary part of the eingenvector approximations is proposed.

TWO ESTIMATION METHODS FOR NONSTATIONARY SPECTRA [DEUX METHODES D'ESTIMATION DE SPECTRES NON STATIONNAIRES]
Yves grenier Oct. 1981 16 p refs In FRENCH
(ENST-D-81006) Avail: NTIS HC A02/MF A01

The methods are the Burg method where the identified model has the structure of a grid filter and the Prony-Pisarenko method where the model is a null input system whose output is distorted by observation. Both methods make the hypothesis that the model parameters to be identified evolve in a space generated by a small number of time functions f sub o (t)... f sub d (t). The theoretical framework of evolutive spectrum estimation is described and an algorithm that permits calculation of the estimator is given for each method. Author (ESA)

THE STABLE PEDIGREES OF CRITICAL BRANCHING POPULATIONS
Olle Nerman 1981 29 p refs Sponsored by Swedish Natural Science Research Council
(CTH-Math-1981-15) Avail: NTIS HC A03/MF A01

The asymptotical sizes and compositions of critical general branching processes conditioned on nonextinction were treated. Results for processes counted with random characteristics allowed to depend on the whole daughter processes are given. These are used to derive conditional limit theorems for the pedigrees of randomly sampled individuals among populations counted with 0-1-valued characteristics. The limiting stable pedigrees have independence structures and are derived from the original branching laws. Author (ESA)

A STUDY OF ORDERS IN QUATERNION ALGEBRAS
J. Brzezinski 1981 28 p refs
(CTH-Math-1981-16) Avail: NTIS HC A03/MF A01

For each A-order Lambda in a generalized quaternion algebra H over the field of fractions F of a Dedekind ring A, its Gorenstein closure is defined. This is a Gorenstein A-order G (Lambda) in H such that Lambda is the least A-order containing (b underlined) (Lambda) G (Lambda) for an ideal (b underlined) (Lambda) in A. A list of all Gorenstein orders (and consequently of all orders) in quaternion algebras over a complete A is given where for each Gorenstein A-order Lambda is a construction of a minimal chain of Gorenstein orders begining with A and ending with a hereditary order. ON L SUB P-DECAY AND SCATTERING FOR NONLINEAR KLEIN-GORDON EQUATIONS
Philip Brenner 1981 42 p refs
(CTH-Math-1981-17) Avail: NTIS HC A03/MF A01

Previous results on scattering and decay are extended to a larger class of nonlinearities and to dimensions > 3. In particular, for nonlinearities of the type (modulus u) (sup rho-1) (u) the existence of scattering states is proved for 1 + 4/n < rho < 1 + 4 gamma sub n/(n-2), where gamma sub n = 1 for < or or = 10 and gamma sub n = n/(n+1) for n > 10. No quantitative restrictions are placed on the data. Earlier results of this type were only known for n = 3 and 8/3 < rho < 5.

ASYMPTOTIC BEHAVIOR OF THE BOLTZMANN EQUATION WITH INFINITE RANGE FORCES
Leif Arkeryd 1981 13 p refs
(CTH-Math-1981-18) Avail: NTIS HC A02/MF A01

Previously obtained existence results for the space-homogeneous, nonlinear Boltzmann equation for a class of encounters with infinite range, including inverse Kth power molecules with k > 3, are considered. These solutions are proved to converge in the weak L sup 1 sense for k > or = 5 to Maxwellian distributions when t tends to infinity. Also, the higher moments converge to those of the relevant Maxwellian. The method of proof relies on nonstandard techniques. Author (ESA)

EXACT DISTRIBUTION OF CERTAIN GENERAL TEST STATISTICS IN MULTIVARIATE ANALYSIS Ph.D. Thesis
Jen Tang 1981 108 p
Avail: Univ. Microfilms Order No. 8127345

In multivariate analysis, many statistics and likelihood ratio test (LRT) criteria are distributed as products of several independent tests random variables. The exact distribution of the type B variable is obtained in general forms as a mixture of weighted gamma distributions as well as a mixture of beta distributions. Some important cases are studied in detail. The exact distribution of Bartlett's test statistic for equality of variances of normal populations is obtained. The problem for equal sample sizes case of the corresponding multivariate Bartlett's test was completely solved by obtaining the exact distribution in an easily computable form and providing tables of its percentage points. The exact distribution of a statistic with Box's (1949) generalized moment function is obtained. Dissert. Abstr.

PARAMETER ESTIMATION IN A REPRODUCING KERNEL HILBERT SPACE FOR LINEAR HEREDITARY SYSTEMS Ph.D. Thesis
Stephen Lewis Benz 1981 86 p
Avail: Univ. Microfilms Order No. 8126926

Often a model for a physical system contains parameters that must be adjusted to obtain a best fit to observed data. Two methods are presented here for the estimation of coefficient and delay parameters in linear hereditary systems. The models h = f + B gamma h and h = A gamma f for linear hereditary systems are studied within the following context. The input output pair (f,h) is approximated by functions from the space of Hellinger integrable functions which is shown to be a reproducing kernel Hilbert space. Using properties of this space, representations for the operators B gamma and A gamma are developed in terms of the unknown vector of parameters gamma. A discretization of each of the models is then introduced on a finite dimensional subspace of the space of Hellinger integrable functions. The discretization permits the development of suitable estimation methods based on the observations. It is shown that under appropriate conditions the discrete models converge to the continuous models. Dissert. Abstr.

DERIVATION OF QUASI-NEWTON UPDATES FOR NONLINEAR EQUATIONS AND UNCONSTRAINED OPTIMIZATION Ph.D. Thesis
Douglas Edward Salane 1981 102 p
Avail: Univ. Microfilms Order No. 8126236

The derivation of quasi-Newton algorithms for solving nonlinear equations and unconstrained optimization problems is discussed. The use of those iterative methods to derive some of the well known quasi-Newton updates used in algorithms for solving nonlinear equations is demonstrated. The same techniques are then shown to provide a unified derivation of the symmetric minimum norm updates used in unconstrained optimization algorithms. A modification to existing quasi-Newton updates which is designed to improve the performance of these methods when they are used to minimize functions which deviate from quadratic behavior is examined. The modified update present reduces to a classic quasi-Newton update when applied to a quadratic functional and is locally and superlinearly convergent when used to minimize a suitably restricted nonlinear functional. Numerical evidence suggests that the new methods are competitive with existing quasi-Newton algorithms. Dissert. Abstr.

MULTIGRID METHODS FOR DIFFERENTIAL EIGENVALUE AND VARIATIONAL PROBLEMS AND MULTIGRID SIMULATION Ph.D. Thesis
John Wilbur Ruge 1981 87 p
Avail: Univ. Microfilms Order No. 8126450

The use of multigrid methods for solving a wide variety of problems efficiently is increasing. Application of multigrid to each new class of problems yields new information about the method itself which can extend to other areas. Work on both the practical and the theoretical aspects of the method is presented. A method for finding the first several eigenvalues of a self adjoint, elliptic differential operator is discussed. The numerical experiments indicate that this method is very efficient. A proof of convergence for a class of variational problems is studied. The proof is quite simple, and it is hoped that it will help close the gap between provable and observed convergence rates. A simple program simulating multigrid which is a powerful tool for the study of multigrid and is application to more complex problems is discussed. It can be used in place of conventional relaxation or solution schemes within target programs and, although less efficient than multigrid, can give an indication of how multigrid would perform in that context. Dissert. Abstr.

FINITE ELEMENT METHODS FOR PERIODIC SOLUTIONS OF DYNAMICAL SYSTEMS Ph.D. Thesis
Mohamed Shendy El-Mandouh 1981 130 p
Avail: Univ. Microfilms Order No. 8126497

The problem of computing the normal modes of nonlinear Hamiltonian systems is discussed. The normal modes are assumed to exist and depend continuously on the total energy E for E in some range. The finite element method, in which the time variable is discretized, is applied to such systems and transforms the mathematical problem that is governed by nonlinear differential equations into one governed by a set of nonlinear algebraic equations which is to be solved for various values of E. The main contribution was to establish the existence of solutions of the nonlinear algebraic finite element equations by a contraction mapping argument. This was done by relating the Jacobian of the discrete problem to that of the exact problem. Furthermore, if the exact problem has an isolated branch of solutions for some E in a neighborhood of E sub 0 then, correspondingly the finite element solution that exists for E sub 0 is also isolated and can be uniquely continued, for small mesh size, in a neighborhood of E sub 0. Algorithms for implementing the numerical work are discussed and some illustrative numerical results are also presented. Dissert. Abstr.

N82-17936 Michigan Univ., Ann Arbor.
F-PURITY AND RATIONAL SINGULARITY Ph.D. Thesis
Richard Scott Fedder 1981 65 p
Avail: Univ. Microfilms Order No. 8125109

Singularities which are F-pure (respectively, F-pure type) are investigated. A ring R of characteristic p is F-pure if for every R module M,O yields direct product of M and R yields direct product of M and (1)R is exact where (1)R denotes the R-algebra structure induced on R by the Frobenius map. F-pure type is defined in characteristic 0 by reducing to characteristic p. When R = S/I is the quotient of a polynomial ring S, it is proven that R is F-pure at the prime ideal Q. Known results about rational singularities are paralleled. Classifying F-pure singularities for complete interaction ideals, it is also proven, can be reduced to classifying such singularities for hypersurfaces. Dissert. Abstr.

N82-17937 North Carolina Univ. at Chapel Hill.
COMPOUND FUNCTION AND LINEAR MODEL METHODS FOR THE MULTIVARIATE ANALYSIS OF ORDINAL CATEGORICAL DATA Ph.D. Thesis
Kofi Alavi Semenya 1981 226 p
Avail: Univ. Microfilms Order No. 8125618

A well recognized aspect of the analysis of ordinal categorical data is that a considerable gain in efficiency is, in principle, feasible for tests which use the information in the scale of the categories rather than the conventional Pearson Chi-Square test of homogeneity. A broad class of hypotheses involving subpopulation differences is expressed in terms of generalized mean scores and/or parameters of underlying parametric models and generalized measures of association. Estimates of these quantities are formulated in terms of functions of the observed data. The proportional hazards model is discussed. A set of rank scores are developed which are analogous to those corresponding to the Mantel-Haenszel test for survival data. Recommendations are given regarding the relative advantages and disadvantages of the respective methods for a range of potential applications. Dissert. Abstr.

A METHOD OF NONPARAMETRIC SURVIVAL ANALYSIS FOR DOUBLY CENSORED DATA Ph.D. Thesis
Dianne Madelyn Schwartz Finkelstein 1981 109 p
Avail: Univ. Microfilms Order No. 8125110

A model and method of analysis for survival time data which can be right and/or left censored is presented. The covariates are treated as random variables. Nonparametric estimates are found for the survival distribution, G(s) = P(s>s). The estimates are computed using a general E-M algorithm. This method generalizes easily to left or right censored and tied data, and offers an alternative to the widely accepted Cox proportional hazards model. This approach yields a broadly applicable methodology for nonparametric estimation of the survival distribution. Dissert. Abstr.

N82-17939 North Carolina Univ. at Chapel Hill.
A CONTINUOUS SHADING SCHEME FOR TWO-VARIABLE MAPPING Ph.D. Thesis
Laurence William Carstensen, Jr. 1981 177 p
Avail: Univ. Microfilms Order No. 8125563

A continuous-tone approach to bivariate mapping is presented and tested. The key is made much simpler with a logic that is easy to internalize. In the testing performed, the continuous-tone monochrome map allowed better subject estimates of the encoded data, and better estimates of the relationship between the two variables portrayed than the U.S. Bureau of the Census maps which used a four by four color classification scheme. In regionalization tests using the monochrome maps, subjects performed at more than adequate levels. Overall, the results of the study validate the hypothesis that continuous shading can represent bivariate distributions, and call for further research into the information content-simplification balance which is so critical to two variable mapping. Dissert. Abstr.

ACCELERATED CONVERGENCE IN THE SIMULATION OF COUNTABLY INFINITE STATE MARKOV CHAINS
George S. Fishman Sep. 1981 34 p refs
(Contract N00014-76-C-0302)
(AD-A107869; TR-81-4) Avail: NTIS HC A03/MF A01 CSCL 12/1

This paper describes a method of obtaining results from the simulation of a countably infinite state positive recurrent aperiodic Markov chain at a cost considerably below the cost required to achieve the same accuracy with pure random sampling. By reorganizing k independent epochs or tours simulated serially into k replications simulated in parallel, one can induce selected joint distributions across replications that produce the cost-saving benefits. The joint distributions follow from the use of rotation sampling, a special case of the antithetic variate method. The chains considered are of the band type so that for the state space S = (0,1,2,...) there exists an integer, delta, such that transition from a state i can move no further than to states i - delta and i + delta. The paper shows that an estimator of interest has variance bounded above by O(delta squared (ln k) to the 4th power/k squared) when using rotation sampling, as compared to a variance O(l/k) for independent sampling. Moreover, the mean cost of simulation based on rotation sampling has an upper bound O((delta ln k) squared) as compared to at least O(k) for independent sampling. The paper also describes how one can exploit special structure in a model together with rotation sampling to improve the bound on variance for essentially the same mean cost. GRA

PERSON-BY-PERSON OPTIMAL SOLUTION TO THE DECENTRALISED LQG STOCHASTIC CONTROL PROBLEM WITH CONTROL SHARING INFORMATION PATTERN
H. M. Tan 1981 46 p refs
(PB82-113457; CUED/F-CAMS/TR-212-1981;
ISSN-0309-765X) Avail: NTIS HC A03/MF A01 CSCL 12A

The decentralized LQG stochastic control problem with control sharing information pattern, whereby controllers exchange controls but not observations, is considered. Previous work and their shortcomings are examined, and a person-by-person optimal solution is obtained. This solution is seen to be unique and linear in the information variables and represents the first feasible and complete solution satisfying the necessary conditions for optimality of this control sharing problem. GRA

N82-17945 Washington Univ., Seattle.
PROPORTIONAL HAZARDS MODEL WITH TIME-DEPENDENT COVARIATES: LARGE SAMPLE THEORY AND RELATED TOPICS Ph.D. Thesis
Steven Glenn Self 1981 124 p
Avail: Univ. Microfilms Order No. 8126142

The proportional hazards (PH) model is a regression model widely used in the analysis of failure time data. The estimator for the regression coefficients in the PH model most commonly used is the maximum partial likelihood estimgtor (MPLE). However, its consistency and asymptotic normality have been demonstrated only heuristically. Recently, Liu and Crowley and Tsiatis rigorously established the strong consistency and asymptotic normality of the MPLE for the special case of time-independent, almost-surely bounded covariates. Using the theory of weak convergence, the approach of Tsiatis was extended to rigorously demonstrate the strong consistency and asymptotic normality of the MPLE in the general case of time-dependent covariates. Approaches for outlier detection, residual plots and robust testing/estimation procedures for the PH model are also discussed. Dissert. Abstr.

N82-17946 Michigan Univ., Ann Arbor.
HYPOTHESIS TESTING IN CONTINGENCY TABLES WITH SMALL SAMPLES Ph.D. Thesis
Jean Lambert 1981 330 p
Avail: Univ. Microfilms Order No. 8125152

Solutions to the problem of small samples for hypothesis testing in a contingency table framework are presented. The impact of a variance estimator choice on the conservativeness or liberalism of the procedure with respect to the type 1 error is discussed. New continuity corrections for testing homogeneity in a (2 x 2) comparative trial with arbitrary sample sizes are proposed. These continuity corrections are based on the average interval between successive differences of binomial proportions. In a second step, unconditional of approximate exact tests for different sampling designs are derived. The sizes of these unconditional exact tests are then obtained by associating an estimated sampling distribution with an ordering criterion, i.e., a chi-squared test statistic, in order to construct an empirical cumulative distribution function on that statistic. Monte Carlo simulations are performed to study the closeness of the empirical significance level to the nominal significance level with the chi-squares corrected for the proposed continuity corrections. Formulas based on the proposed continuity corrections are derived for sample size determination. Dissert. Abstr.

N82-17947 Michigan Univ., Ann Arbor.
DIRECTION AND COLLINEARITY FACTORS IN GROWTH CURVE MODELS AND OTHER PROBLEMS IN DISCRIMINANT ANALYSIS Ph.D. Thesis
Thomas Michael Davis 1981 214 p
Avail: Univ. Microfilms Order No. 8125095

The exact direction and collinearity factors of Wilks's Lambda are extended to the growth curve model both when the discriminant function is in the space of the dependent variables and when it is in the space of the independent, or dummy, variables. The case in which only a submatrix of the parameters is of interest is dealt with, as is the case of more than one discriminant function. The hypothesis that the discriminant function is the same from one pair of populations to another is addressed. This hypothesis is equivalent to proportionally of differences in means. Exact criteria are derived for this hypothesis, for the value of a porposed constant of proportionally, and for the direction of a proposed constant of function. These criteria are generalized to the hypothesis that several pairs of groups share the same discriminant function. Dissert. Abstr.

ON COMPOSITIONS OF MULTISETS Ph.D. Thesis
Rodica Eugenia Simion 1981 145 p
Avail: Univ. Microfilms Order No. 8127075

Three aspects of the compositions of multisets are studied. The logarithmic concavity of the sequence of numbers (omicron (vector n,k)) sub k of compositions of any multiset vector n into k nonempty parts, and its consequences are found. This is proved in the setting of Sturm sequences of polynomials associated with the elements of a poset. An order relation on the partitions of integers is induced by the comparability of their corresponding vectors (omicron(vector n,k)) sub k and it is shown how this order and the position of the mode of these vectors behave with respect to other orderings, previously known, on the partitions of integers. The question of determining a multiset from its number of compositions, and two related problems are studied. The problem of poset reconstruction from 'scarce' values of the zeta function is discussed. Dissert. Abstr.

N82-17950 Arkansas Univ., Fayetteville.
FUNDAMENTAL ORDER RELATIONS ON REGULAR SEMIGROUPS Ph.D. Thesis
Simon M. Goberstein 1981 97 p
Avail: Univ. Microfilms Order No. 8127293

An order relation < or = on a semigroup S is fundamental if an ordered semigroup (S, < or =) is o-isomorphic to a semigroup of functions (= partial transformations) on some set ordered by inclusion (i.e., extension) of functions. Fundamental orders on some significant classes of regular semigroups such as completely [O-]simple semigroups, normal bands of groups, inverse semigroups, orthodox semigroups with right regular and normal bands of idempotents are studied. All stable orders on inverse semigroups considered as algebras with two operations, multiplication and inversion, are described by means of fundamental orders on these semigroups. The structure of inverse semigroups having the natural order relations as the only nontrivial fundamental order are described. Dissert. Abstr.

GENERALIZATION OF KRAMERS-KRONIG TRANSFORMS AND SOME APPROXIMATIONS OF RELATIONS BETWEEN VISCOELASTIC QUANTITIES
Henk C. Booij and Truus P. J. M. Thoone 21 Aug. 1981 23 p refs
(MS-1569) Avail: NTIS HC A02/MF A01

On the basis of some very plausible assumptions about the response of physical systems to stimuli, such as Boltzmann's superposition principle and the causality principle, it is shown that the following characteristics are obtained for the modulus and compliance functions: (1) they are analytic in the lower half of the complex frequency plane; (2) they are limited if the frequency tends to infinity; and (3) the real and imaginary parts are even and odd functions, respectively, of the frequency. It is demonstrated that the real and imaginary parts of every function satisfying these three requirements and without singularities on the real frequency axis, are interrelated by Kramers-Kronig transforms. Similar relations hold between the logarithm of the modulus and the argument of the function. Under certain conditions the Kramers-Kronig relations may be approximated by rather simple equations. For linear viscoelastic materials, for instance, approximate relations were obtained for the components of the complex dynamic shear modulus. Author

FLUID-STRUCTURE COUPLING IN LAGRANGE-LAGRANGE AND EULER-LAGRANGE DESCRIPTIONS
A. V. Jones 1981 103 p refs Submitted for publication
(EUR-7424-EN) Avail: NTIS HC A06/MF A01

The principal finite difference methods employed in solving fluid-structure interaction problems are reviewed. The chief representations of the equations of motion of the fluid and structure and of their coupling are surveyed and the Lagrange-Lagrange and Euler-Lagrange representations are examined. The necessity of treating the structure in Lagrangian coordinates and the respective merits of the Lagrangian and Eulerian representations for the fluid are explained, both for coupling between continua and for coupling between a fluid and a thin shell. Analyses of the stability and numerical dissipation of the Lagrange-Lagrange and Euler-Lagrange coupling techniques in a very simple one dimensional problem are detailed to supply indicators as to stability and dissipation in more complex multidimensional situations and to bring out the theoretical complexity of seemingly simple coupling algorithms. AN OPERATIONAL SEMANTICS FOR BONDED NONDETERMINISM EQUIVALENT TO A DENOTATIONAL ONE
R. Kuiper Jul. 1981 30 p refs Submitted for publication
(MC-IW-169/81) Avail: NTIS HC A03/MF A01

Dyadic nondeterministic choice is added to the programming language with recursive procedures used in de Bakker's monograph on program correctness. This leads to considerable changes in the operational semantics. The possible result of the execution of a program is no longer given as a single state, but as a set of possible states. Furthermore, the execution of a program is no longer given as a computation sequence, but as a set of possible computation sequences with tree-like properties. A natural operational semantics O, defined by a function Comp, where Comp yields for each program R and each state sigma a set of computation sequences, characterized by Cook equations, is presented. For this set of equations, in a topological setting, the existence of a unique solution and the equivalence of the operational semantics to the usual denotational one, defined by fixed point techniques, is proved. COMBINATORIAL MAPS Ph.D. Thesis
Andrew Joseph Vince 1981 159 p
Avail: Univ. Microfilms Order No. 8125216

A purely combinatorial generalization of a map was formulated. Besides maps on orientable and non-orientable surface, these combinatorial maps include, as special cases, polytopes, the hypermaps, certain toroidal 'complexes', and higher dimensional analogues of maps. The concept of a combinatorial map is formulated in four equivalent ways: as an incidence structure, as a labeled graph, as a set of permutations and group theoretically. An agreeable outcome of the theory is that the cellular and embedding scheme approaches are naturally unified. Particular emphasis is placed on those combinatorial maps that are highly symmetric. By using a combinatorial analogue of covering space theory, coverings of a given combinatorial map are shown to be in one-to-one correspondence with permutation representations of a combinatorially defined homotopy group. This leads to an algorithm for generating all regular combinatorial maps that are cyclic coverings of a given regular combinatorial map. Dissert. Absr.

SEMIGROUPS OF COLUMN STOCHASTIC MATRICES Ph.D. Thesis
Owen Campbell Litz 1981 54 p
Avail: Univ. Microfilms Order No. 8127299

An investigation of Green's relations for column stochastic matrices is made. Particular emphasis is placed on determining necessary and sufficient conditions for the A and L relations. This objective is achieved by dividing the set of column stochastic matrices into two categories: (1) column stochastic matrices in which negative entries are allowed, and (2) column stochastic matrices in which all entries must be nonnegative. Green's relations for column stochastic matrices of the first type and Green's relations for column stochastic matrices of the second type are discussed. Necessary and sufficient conditions for two elements of any subsemigroup of semigroup of all nxn complex matrices to be L related. Several semigroup properties are studied. Necessary and sufficient conditions for a column stochastic matrix of either type to be left or right cancellable are obtained. It is shown that the set of matrices of the first type form a regular semigroup. Finally, given a column stochastic matrix of either type, a method for finding a column stochastic rank factorization is exhibited. Dissert. Abstr.

AN ITERATIVE METHOD FOR SOLVING ELECTROSTATIC PROBLEMS

Tapan K. Sarkar and Sadasiva M. Rao Nov. 1981 21 p refs (Contract N00014-79-C-0598; NR Proj. 371-014)
(AD-A107740; TR-81-6) Avail: NTIS HC A02/MF A01 CSCL 20/3

The method of steepest descent is applied to the solution of electrostatic problems. The relationship between this method and the Rayleigh-Ritz, Galerkin's, and the method of least squares is outlined. Also, explicit error formulas are given for the rate of convergence for this method. It is shown that this method is also suitable for solving singular operator equations. In that case this method monotonically converges to the solution with minimum norm. Finally, it is shown that the technique yields as a by-product the smallest eigenvalue of the operator in the finite dimensional space in which the problem is solved. Numerical results are presented only for the electrostatic case to illustrate the validity of this procedure which show excellent agreement with other available data. Author (GRA)

THE EFFECT OF FABRIC COVERINGS ON THE ACOUSTIC PERFORMANCE OF MODULAR ABSORBERS

R. Walker and P. H. C. Legate Nov. 1981 12 p
(BBC-RD-1981/8) Avail: BBC, Kingswood Warren, Tadworth, Surrey, England

Acoustic treatment consisting of a standard size of module with different internal and front panel construction is widely used for the control of the acoustic environment of rooms such as studios, cubicles, and listening rooms. It is common practice to cover the treatment with a lightweight stretched fabric. The effects of this fabric covering on the acoustic performance of the treatment are considered. Some experimental measurements of these effects are presented. The fabric covering has no significant effect on the performance of acoustic treatment which absorbs most of the incident sound energy. However, at high frequencies some acoustic treatments are effective reflections of sound energy and, under these circumstances, the effects of the fabric covering can be significant. S.L.

ACOUSTIC INTENSITY VECTORS FROM AN INFINITE PLATE WITH LINE ATTACHMENTS

W. J. Spicer Oct. 1981 17 p refs
(AMTE(N)-TM-81086; BR80903) Copyright. Avail: Issuing Activity

Theoretically derived time averaged acoustic intensity vectors from an elastic plate with time harmonic forces, masses, masses and springs, grounded springs or displacement constraints are provided. Intensity plots of acoustic features caused by single line-force 250 Hz excitation show that radiation is very efficient. The intense near field shows areas where energy is being received by the plate. A fluid surface wave associated with the subsonic plate flexural wave is evident. A closed loop of energy circulation exists. At 2.5 kHz plate radiation efficiency increases. At 25 kHz (twice critical frequency) a leaky wave beam with low attenuation emanates from the plate surface. Author (ESA)

THE REVERBERATION AND ABSORPTION CHARACTERISTICS OF A WATER-FILLED CHAMBER WITH AND WITHOUT A PRESSURE-RELEASE WALL LINING M.S. Thesis

K. Anthony Hoover 2 Jul. 1981 66 p refs
(Contract N00024-79-C-6043)
(AD-A107876; ARL/PSU/TM-81-150) Avail: NTIS HC A04/MF A01 CSCL 20/1

The requirements for a reverberation chamber in air have been described in the appropriate standards, but there is no mention that these same requirements cannot be applied to underwater reverberation chambers. A number of acoustic measurements were made to determine the reverberation time and absorption characteristics of an underwater chamber with and without a pressure-release wall covering. The reverberation times were found to be faster than the transient response times of conventional analog equipment. Therefore, a digital computer was employed to filter the data and to determine the slope, and thus, the reverberation time by using a linear, least-squares curve fit. The pressure-release wall covering was found to reduce the average sound absorption coefficients to values acceptable for a reverberation chamber based on the standards for air acoustics. THE MASSES AND THE ELECTROMAGNETIC AND PION DECAY RATES OF PARTICLES CONTAINING ONE CHARMED OR BOTTOM QUARK Ph.D. Thesis

Dale Lee Izatt 1981 106 p
Avail: Univ. Microfilms Order No. 8127527

The masses of the S state hadrons containing only light quarks or containing a single charmed or bottom quark are calculated in a bag model using the static cavity approximation. The decay quarks are treated as point particles fixed at the center of the bag and the light quarks are treated in the usual way of being free particles confined to the bag. The MIT bag model has been extended to include center of mass corrections, asymptotic freedom, and Johnson's vacuum in applying the nonlinear boundary condition of minimizing the mass as a function of the radius, a rigorous first order approach is used that identifies and eliminates higher order terms in alpha sub s that normally appear in the expression for the mass when center of mass corrections are included. The electromagnetic and pion decay rates have also been calculated for those S state hadrons containing a single charmed or bottom quark. Dissert. Abstr.

SCATTERING OF ELECTRONS BY HYDROGENIC IONS Ph.D. Thesis
Najib Nimer AbuSalbi 1981 265 p
Avail: Univ. Microfilms Order No. 8126944

The algebraic variational method in atomic physics is applied to the scattering (both elastic and inelastic) of electrons by highly stripped (hydrogenic) atomic ions. The overall behavior of the excitation 1s to 2s and 1s to 2p cross section is investigated using a 6 state expansion (1s-2s-2p one and two p pseudo-states) of the target wave function. The close coupling calculation is carried out up to a total angular momentum L sub max, (L sub max < or = 5) and for energies ranging from just above the n = 2 threshold to 6 times threshold; otherwise the Coulomb Born approximation with exchange is used. The computed collision strengths are then fit by an analytic formula. Finally, using a large pseudostate set, resonances between the n = 2 and n = 3 thresholds are investigated and accurately traced. Resonance enhancement of excitation rates is discussed. Results are reported for electron scattering by C(5+) and O(7+). Comparison is made to other theoretical calculations. Dissert. Abstr.

CANONICAL QUANTIZATION OF NON-ABELIAN GAUGE THEORIES Ph.D. Thesis
Ralph Gregg Brickner 1981 158 p
Avail: Univ. Microfilms Order No. 8125449

Non-Abelian gauge theory in a manifestly covariant gauge is formulated as a theory of canonical field operators and embedded in an indefinite metric space. A gauge fixing field is included and every field component has a non-vanishing adjoint momentum with which it has canonical commutation (or anticommutation) relations. Faddeev-Popov fields are represented as scalar fermion fields with ghost particle excitations. A discussion is given of the relation between the existence of a subsidiary condition and the existence of pure gauge states that dynamically detach from observable states. Feynman rules are derived from the canonical formulation. Unitarity and the existence of unphysical degrees of freedom is discussed. The mechanism responsible for the fact that S matrix elements to pure gauge states vanish in non-Abelian gauge theories, is examined in detail. The pure gauge states include single particle gluon and Faddeev-Popov ghosts, and two particle combinations of gluon and Faddeev-Popov ghosts. Dissert. Abstr.

A DENSITY FUNCTIONAL APPROACH TO MANY-BODY EFFECTS IN THE OPTICAL RESPONSE OF ATOMS Ph.D. Thesis
Andrew Zangwill 1981 234 p
Avail: Univ. Microfilms Order No. 8127098

A method for calculating the optical response of finite electronic system which is accurate, computationally simple and lends itself to a ready physical interpretation of the results is presented. A time dependent local density approximation (TDLDA) represents a natural generalization of the usual local density approximation to the ground state properties of a many electron system. Using standard first order time dependent perturbation theory, a self consistent mean field theory for an effective field is derived which replaces the external field in the dipole matrix elements of the Golden Rule for photoabsorption. For photoabsorption from the rare gases and barium, i.e., closed shell atoms. It is shown that the TDLDA has the effect of redistributing the spectral oscillator strength to higher energies in such a way so that quantitative agreement is found with experiments performed using synchrotron radiation. The TDLDA is found to be more accurate than the traditional Hartree-Fock based random phase approximation with exchange. Dissert. Abstr.

QCD AND WEAK ASYMMETRIES IN LEPTON PAIR PRODUCTION Ph.D. Thesis
David James Edward Callaway 1981 165 p
Avail: Univ. Microfilms Order No. 8126086

The interference of electromagnetic and weak production mechanisms for lepton pair production violate parity and charge symmetry are discussed. These effects are generally of the order of 1 percent for dilepton masses of 10 GeV. Measurements of these asymmetries in collisions of pions with polarized protons may lead to a greatly enhanced understanding of the polarization distributions of quarks in a polarized proton. The polarization structure of the d quark is shown to be of special interest. The asymmetries are computed within the framework of the parton model. The major focus is on the asymmetries calculated with the inclusion of first order perturbative QCD effects. A parity-violating asymmetry which may occur in collisions of unpolarized hadrons is also discussed. Dissert. Abstr.

N82-17966 Louisiana State Univ. and A&M Coll., Baton Rouge.
ACOUSTIC DETECTION OF HIGH ENERGY PARTICLES Ph.D. Thesis
Stanley Dean Hunter 1981 110 p
Avail: Univ. Microfilms Order No. 8126961

The acoustic signals generated by charged particles traversing a medium offer a new technique for particle detection. Rapid thermal expansion of the medium produces an impulsive signal with a shape similar to one cycle of a sine wave. In the case of charged particles, the energy deposition results from thermalization of the particles ionization energy loss in the medium. A thermodynamic model which derives an acoutic potential for the signal produced by a given energy deposition is presented. The relationship between the acoustic potential and the signal period and amplitude is illustrated. Three nonthermal mechanisms, microbubble production, molecular dissociation and electrostriction, are discussed. The acoustic potential and pulse shapes for these mechanisms are also shown. Dissert. Abstr.

N82-17967 Yale Univ., New Haven, Conn.
HEAVY HIGGS BOSONS AND THEIR LOW ENERGY IMPACT Ph.D. Thesis
Anthony Carmine Longhitano 1981 117 p
Avail: Univ. Microfilms Order No. 8125687

Spontaneously broken gauge theories have been rather successfully in describing the electroweak interactions of elementary particles, but one of the least understood aspects of these theories is the dynamical role of the elementary scalar fields. Although they are required in order to trigger spontaneous symmetry breakdown and, thereby, generate masses for the vector bosons and fermions, their presence in the Lagrangian as fundamental degrees of freedom leads to undersirable consequences: the values of certain coupling constants must be adjusted to very high accuracy and the quadratic mass divergences which accompany the scalars force the physical mass scale to be unstable against small variations of the fundamental parameters of the theory. A solution to these problems is provided by a mass generation mechanism in which the scalars are bound states of a new species of strongly interacting fermions. Dissert. Abstr.
